some type of unilateral domestic legislation in order to allow U.S. companies to proceed with their deep-sea mining ventures. It is because of this growing consensus that I am reintroducing the Deep Seabed Hard Minerals Act today with 24 cosponsors. Various Members have indicated their sincere interest in promoting the objectives contained in this bill and Congressman BREAUX and I welcome their cosponsorship today.

### "I TAKE THEE NAVY"

**HON. BOB WILSON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BOB WILSON. Mr. Speaker, I have for years been fighting the erosion of the benefits due our servicemen, particularly in view of the fact that the serviceman endures so many more hardships in his personal life than do we as civilians.

I have often said that military service is not a 9-to-5 job, that disruption of family life is commonplace. Just as in the past, when danger is not imminent, we tend to ignore our military men and woman and the sacrifices they make routinely in the service of their country.

Recently, the chaplain of the Chula Vista, Calif., branch of the Fleet Reserve Association, Mr. Donald W. Eagleson, made a dry and most eloquent comment on service life as reflected in a proposed set of wedding vows a couple might make, if one of the members was a sailor. I believe it gently and humorously brings home an aspect of the serviceman's life that is little recognized and I commend it highly to the attention of my colleagues:

### "I TAKE THEE NAVY"

They say that marriage is a fifty-fifty proposition but you will find that a Navy wife will disagree with you. As far as she's concerned, marriage is a three-way deal with the Navy holding a full thirty-three and a third share.

We'll bet there is many a brown-bagger's wife who sometimes wishes the words used at a sailor's wedding read something like this:

"Wilt thou, Seaman, take this woman as thy lawful wedded wife, to live together insofar as the Bureau of Naval Personnel will allow? Wilt thou love her, take her to movies and return home promptly after liberty call?"

"Aye, aye."

"Wilt thou, ; take this sailor as thy lawful wedded husband, bearing in mind liberty hours, ship's schedules, watches, sudden orders, uncertain mail and all other problems of Navy life? Wilt thou serve him, love, honor and wait for him, learn to wash and fold blues, and keep the smoking lamp lit for him at home?"

"I will."

"I, seaman, take thee as my wedded wife from 1630 to 0800 as far as permitted by my commanding officer, liberty-hours subject to change without notice, for better or worse, for earlier or later, and I promise to write at least once a week."

"I, , take thee, Seaman, as my wedded husband, subject to orders of the O.D., changing residence whenever the ship

moves, to have and to hold as long as my allotment comes through regularly, and there is given my troth."

By virtue of the authority vested in Navy Regs, subject to regulations of the BuPers Manual and latest Bupers notices, I pronounce you man and wife.

### TRIBUTE TO SAUL REIDER

**HON. HENRY A. WAXMAN**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. WAXMAN. Mr. Speaker, many of us are fortunate to number among our friends one or two individuals who contribute prodigiously to their country and community, but who are so unassuming that it takes a special event to make us realize the extent of their achievements. Such a person is my good friend Saul Reider, who will be honored by the Alta Loma Democratic Club at a testimonial dinner on June 25, 1977.

Saul was born in Connellsville, Pa., on June 27, 1917, and came to California in 1921. Except for service in the Army Medical Corps from 1943 to 1946, and 2 years in the Civilian Conservation Corps, he has lived and worked in southern California. Saul met his wife Gertrude in Seattle and they were married on June 7, 1946. Gert joins with her husband in political and community activities, and they form an effective team.

Grassroots political action has formed the focal point of Saul Reider's activity. He has joined and supported Democratic clubs since 1954, becoming president of the West Beverly Democratic Club in 1960, and he has been vice president of the Alta Loma Democratic Club since 1975. He was the 61st assembly district council chair in 1959. In statewide California Democratic Council, Saul has held a number of offices. He has been a delegate to every yearly convention since 1955, a CDC "champion" since 1961, Legislative Action Committee Co-Chair, A.D. representative to the CDC board of directors, CDC director, credential committee cochair, special assistant to the president, acting southern vice president, cochair of the rules committee at the 1977 convention, where he was reelected for a second term as CDC trustee.

He is the author of the first resolution to put CDC on record, in 1965, as opposed to the Vietnam war. Saul campaigned for Mayor Tom Bradley in 1969 and 1973, for GEORGE MCGOVERN and Eugene McCarthy, and for George Brown. He organized rallies, and attended the 1972 Democratic National Convention as a delegate. He was honored with the Man of the Year Award by the Los Angeles County Democratic Central Committee in 1976, a well-deserved recognition of his years of service.

Saul's community contributions are many. He is devoted to the betterment of his fellow human beings, and is most generous with his time, effort, and money. He has been an ardent supporter

of the civil rights movement, is a commissioner of the department of animal regulation of Los Angeles, and is active in Neighbors Unlimited, Common Cause, the Westside Jewish Community Center, and Californians for Liberal Action. It gives me the warmest pleasure to join with all of Saul Reider's many friends in extending to him our congratulations and good wishes.

**TESTIMONY OF ED ROBERTS, CALIFORNIA REHABILITATION DIRECTOR**

**HON. GEORGE MILLER**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. MILLER of California. Mr. Speaker, today I received the transcripts of hearings before the Ad Hoc Committee on Section 504 Regulations that were conducted by myself and my colleague from California, Mr. PHILLIP BURTON. These hearings took place on April 15, 1977, at the HEW building in San Francisco, 10 days after the commencement of the remarkable 26-day, sit-in demonstration. The testimony of Ed Roberts, director of the California Department of Rehabilitation, is only one example of the articulate and moving statements that showed the necessity for clear and strong regulations to end discrimination against the handicapped. We should all be proud that the Carter administration has adopted strong and straightforward legislation. I would like to share with my colleagues Mr. Roberts' testimony:

**TESTIMONY BY ED ROBERTS**

Mr. ROBERTS. First of all, I would like to begin by saying thank you to the two of you who came and saw and conquered in the major battles we have had to fight over facilities and now we are down to it. We are down to the bottom line, down to the basic issue here.

Are we going to perpetuate segregation in our society? We are one of the largest minorities in the country.

I looked at the 18 points that HEW put out this morning. I have never seen a better blueprint for segregation. These kinds of issues, the issue of civil rights, of human rights, are not issues that people with disabilities can compromise any further.

It seems to me and I am speaking now both as a person who is severely disabled and who has been through some of the most traumatic kinds of experiences about my own image, about my own work, self-feelings about worth, the kinds of feelings when I was younger that were constantly reinforced of no future for a person like myself.

I can forget about being married. This is my wife next to me. I can forget about really fully participating in this society and found millions of other people with disabilities that say that my ability to move around and my ability to regain the pride in myself as a person with a living disability is one of the most important things that is coming out of what is happening here today.

To see hundreds of people with disabilities rolling, signing, using canes, the more severely retarded people for the first time joining us in this incredible struggle is one that leads me to believe that we are going to win this. We are not going to stop and tell 504, which I believe is the basic civil rights platform,

the platform that guarantees to each person with a disability in this country that they are equal in the eyes of the law and that they will have equal access to educational institutions, to hospitals so that institutions in our society which serves us all.

It seems to me that as Director of the largest Department of Rehabilitation in this country, we are more than handicapped without these laws. We are crippled, I mean in the classical sense and I will throw all the stigma I can on that word.

In fact, what we have is we are able and we are learning today how to train even the most severely disabled people, people who were largely relegated to warehouses and dumped in our society, people who are institutionalized and segregated. We now know that while we put the onus on the disability to learn, in fact, we failed as educators, as professional people, as a society to find the right methods and the right training techniques to move people, and the severely and profoundly retarded present a tremendous example of how we have essentially said and written these people off and now we know that they can learn even the most complex kinds of tasks, gives a different kind of teaching technique.

As I think about it, as the Director of the largest State agency, it is clear to me that systematically over these last how many years you want to talk about, jobs have been systematically denied to people for one reason or another.

First, it was the insurance hustle. First we can't bring you in because our insurance will be cancelled. Well, we dealt with that issue.

A second was barriers. I remember in 1962 when I entered the University of California, Berkeley as one of the first severely disabled students there, their biggest fear was I might die on them. Yet you look at what has happened here—150 people, the most severely disabled people who are showing strength, who are showing pride, who are really the heroes of this and the leaders and the reason we are here today.

I am astounded by the reaction of the new administration. I think I am more than astounded. I am incredibly disappointed. I think the President made some very firm commitments to us during the campaign. He has never spoken out any stronger on any issue, the issue of human rights.

And here we are 11 days later, no word, still struggling for incredibly basic rights that other people in our society have had to struggle for, and I want you to know and I want you to know and I want people with disabilities to know that we are going to continue this. This hearing is symbolic and we want you involved and we are going to make a change, dammit, and by making these changes, we are going to begin to acknowledge in our society that people with disabilities are people first, that we are not going to concentrate on the fact that they happen to be different.

In fact, I am proud enough now to believe that people in our society are missing a tremendous feeling by not being me, by not knowing Judy Heumann, by not knowing the other people here and the millions of other people with disabilities in our society. I think this society would be a fuller, freer place if equal rights were guaranteed.

I want to let you know very clearly that the 1973 Rehabilitation Act which we think is one of the most important laws passed and disabled know how clearly and you can see the reactions, of the nonenforcement of the regulations that really came out.

It is clear that we have gotten ourselves, as a society, dug in a very deep hole because we emphasized the disability, because we said people were worth less in one way or another in reinforcement, because by setting up large institutions, we systematically segregate millions of people with disabilities and now we are caught in a dilemma like a De-

partment of Rehabilitation which spends \$100 million a year in California alone to help people move back into the main stream of our society. The dilemma is that two people don't have the social knowledge. They are not socialized. They never mixed much with peers in their society so it takes us much longer, consequently.

We have to make up for the evils of segregation. Here we have it, the latest proposal from HEW which says we are seriously thinking about the whole damn doctrine of separate but equal. How many times are we going to have to go through this? The disabled say clearly we will not accept any doctrine of separate but equal. We will fight until that whole idea is gone and we are united in this. We believe clearly that we cannot compromise on basic issues of civil rights.

We spent two and a half years negotiating these regulations. We have given—we have worked to try to get them out. Some of the very things that were negotiated are now being questioned again. I think it is high time that we recognize that the people in our society are willing to pay that limited costs of helping to open the society up.

I am not just talking about architectural barriers because the worse barriers of all are ignorance, the kinds of attitudes that people had towards me and towards millions of people with disabilities in this country. It is the attitudes that have to change and those attitudes will not change until we have a more full integrated society, until all people in this society know people with disabilities, until they recognize the special needs of people. I think that as we get closer to that, people are going to be more and more willing to outlay the kinds of resources. I think the resource issue here is a fallacious one. The civil rights losses in the U.S., as the executives said, do cost something but it is worth it because of the basic principles we all believe in, in our society and it is high time we recognize that the economic issue is one we solved and that we talked about for the last two years, and it is a ghost being thrown up at us.

The real issue here is are we going to perpetuate segregation in our society? Are we going to put the disabled through the same kind of long-term struggle to achieve independence and to achieve our human rights?

Are we going to recognize once and for all, and I include the Secretary and the President in this and join together and reaffirm that this is a human rights struggle, and 504 must be signed, and beyond that.

This is all we are getting out of the beginning of the struggle. When we get the regulation signed, we will get the regulations and without any quantification. You and I and other public officials as well as disabled people and friends across the country will have to pay attention to the enforcement of them. That is the key element.

We have seen it time and time again. We fight to get a law and it takes years to get it enforced.

I would suggest this time because it has been such a continuing struggle and because the disabled have been literally singled out for a 3.5-year struggle for their rights, rights already guaranteed by Congress, it seems to me that we need to set up some kind of commission or task force or group or whatever you want to call it and it should have Congressional people on it, it should have some of the leading disabled people including the American Coalition of Citizens with Disabilities on it and that we should really provide some important kind of oversight.

I think unless that happens, we could get those regulations and we could be back here again in a year, two years, ten years.

There are two important points that I wanted to make. We are feeling, as a department for over 70,000 clients in this State, the kind of long-term degrading effects of segre-

gation. Thousands of our clients have not really learned yet how to move about in this society. Even when architectural barriers are removed in some cases as we have in this area, it still does not guarantee that a person will be able to move back into the society.

We have beefed up our programs like the rehabilitation program. You know, you think about it. Programs like rehabilitation are the only programs we have in the society which helps move and integrate people and it helps move people back into the main stream of society. We just got our \$6 million appropriation which means \$6 million to eat into inflation, cut into the service.

It is time we react as public officials. It was not too long ago I was thinking in a different vein but we have to really begin to say to ourselves, this disjointed, this dehumanizing system of services that has come about, this situation that perpetuates segregation, that it continues to give millions and millions of institutionalized persons, that this system be looked at, that it be looked at by all of us together, those with disabilities who would be involved and we could coordinate and begin to use our limited resources we have to maximize integration.

That should be the key term. You can call it normalization or main-streaming but the key is that people with disabilities have to come back into our society and be accepted as and seen as important, strong, as potentially important producers and employees for our industry, for a government and that we, as government leaders, have to take the strong lead in this. We have to show that it is going to be done and that any backward step, and there are a lot of theories to talk about two steps forward and one back, that is bologna.

We have taken enough backward steps in our lives and we have felt the kind of incredible feeling of segregation and we are not going to accept that anymore.

I say again we will continue the struggle until those regulations are signed and we are guaranteed they will have some teeth. We will continue to struggle to insure that they are well endorsed.

I thank you very much.  
(Applause.)

Mr. MILLER. Ed, I want to thank you for a most articulate statement, and perhaps your being here was the greatest testimony to the misnomer of disabled and handicapped. I truly appreciate the support you have given all of the people who have been here over the last 10 or 11 days.

Mr. ROBERTS. I think it is the other way around, George. We appreciate the support the people here have given to the disabled all over the country and I think they should be recognized.

#### A TRIBUTE TO REV. EDWARD VICTOR HILL

**Hon. Yvonne Brathwaite Burke**  
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES  
Tuesday, May 24, 1977

Mrs. BURKE of California. Mr. Speaker, it is indeed an honor for me to join the Brotherhood Crusade in a tribute to Rev. Edward V. Hill, in recognition of his outstanding service to our community, State, and Nation.

In addition to his pastoral duties at the Mount Zion Missionary Baptist Church, Reverend Hill has devoted countless hours working to make Los Angeles a better place to live. His activities have included president of the Los Angeles

City Housing Authority, president of the Los Angeles City Fire Commission, vice president of the Los Angeles City Planning Commission, and organizer and chairman of the board of the present Los Angeles Opportunity Industrialization Center. Truly, Reverend Hill has served his city faithfully and well.

At the same time, he has shouldered the administrative responsibilities within his church with his characteristic self-effacing manner. At present he is president of the California State Baptist Convention. He has served in the past as chairman of the Western Baptist Convention Foreign Mission Board and chairman of the National Baptist Educational Foundation.

Reverend Hill has also been a senior adviser to Gov. Edmund Brown, Sr., and was the organizer of the Freedom Fund of Houston at the time when the NAACP was outlawed in Texas.

His record is truly that of a humanitarian of the highest degree. I am proud to bring recognition to the work of this outstanding religious leader.

#### ON MILITARY ASSISTANCE TO TURKEY

**HON. DAVID E. BONIOR**

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES  
Tuesday, May 24, 1977

Mr. BONIOR. Mr. Speaker, I rise to voice my opposition to military aid in any form to the Government of Turkey until it moves to comply with the provisions of the Helsinki Final Act of 1975—which it has signed—and other basic tenets of international law.

President Carter, in his inaugural address, stated:

Because we are free, we can never be indifferent to the fate of freedom elsewhere. Our moral sense dictates a clear-cut preference for those societies which share with us an abiding respect for individual human rights.

And yet, we have included \$175 million in foreign military sales credits, \$48 million in grant military assistance, and \$2 million for military education and training to a country which consistently violates, not only the rights of Cypriots, but the Armenian and Kurd minorities within Turkey as well.

We cannot voice our outrage at Soviet violations of human rights and ignore them when they are committed by Turkey. We must make it absolutely clear that friendship with the United States does not constitute a suspension of our commitment to human dignity and basic freedoms. It must be absolutely clear that membership in NATO and opposition to socialism does not grant license for the pillage, rape, and arbitrary seizure of property reported by the U.N. Cyprus peacekeeping force and the European Commission on Human Rights. We cannot ignore the tens of thousands of Greek Cypriots who have been driven from their homes in the more prosperous northern third of the island.

Edmund Burke once said that "the

only thing necessary for evil to succeed is for good men to do nothing." Time and again, the wisdom of this statement has been brought home to us, not only in relations between governments but in the conduct of our own Government as well. To buy friendship and alliance with military assistance and acquiescence to lawlessness not only makes us vulnerable morally but will ultimately make us vulnerable militarily.

#### THE WHITE HOUSE CONFERENCE ON HANDICAPPED INDIVIDUALS

**HON. PETER H. KOSTMAYER**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES  
Tuesday, May 24, 1977

Mr. KOSTMAYER. Mr. Speaker, I rise today to remind my colleagues that the White House Conference on Handicapped Individuals convenes this week in Washington.

I think it is important that we in the Congress are aware of the goals of the conference:

First. To provide a national assessment of the problems and potentials of physically or mentally handicapped individuals;

Second. To generate a national awareness of these problems and potentials;

Third. To make recommendations to the President and Congress which, if implemented, will enable handicapped individuals to live their lives independently, with dignity, and with full participation in community life to the greatest degree possible.

Mr. Speaker, I am pleased at the action taken by Secretary Califano on April 28 of this year in issuing a regulation which implements section 504 of the Rehabilitation Act of 1973. This regulation will usher in a new era of equality for handicapped persons who too long have been ignored, or worse, burdened with unfair and discriminatory barriers.

But further action is needed, Mr. Speaker. I await the recommendations of the conference and trust that the executive and legislative branches will act as expeditiously as possible on those recommendations.

Mr. Speaker, I am especially interested in this conference, because I am represented at it by a remarkable individual from my district, Joseph McInerney of Morrisville, Pa.

Mr. McInerney is 24 years old and a student at Rider College in Trenton, N.J. What is particularly remarkable about his presence is the fact that he is a quadriplegic as the result of a swimming accident in 1972.

Joseph is a brave individual, Mr. Speaker and I am proud that he is serving as my representative at the conference. It is my hope that Joseph will help me in identifying the problems and concerns of handicapped persons, and at the same time that he will benefit from his experience and share the information he gathers here with other handicapped individuals in Pennsylvania.

I might also mention that Joseph is accompanied this week in Washington by his father, John McInerney, and his sister, Joan Potach. Mr. McInerney has been most helpful in arranging Joseph's attendance at the conference, and I thank him for his assistance. Mr. McInerney is taking time off from his duties with the Pennsbury School District to be here, as Joan is talking time from her work, and I am deeply appreciative.

#### AFL-CIO IN SUPPORT OF PRESIDENT CARTER'S HOSPITAL COST CONTAINMENT PROPOSAL

#### HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. WALGREN. Mr. Speaker, the AFL-CIO is supporting the objectives of President Carter's hospital cost containment proposal. The AFL-CIO's legislative director, Andrew J. Biemiller, testified on May 11, 1977, in support of the basic thrust of H.R. 6575, the administration measure, and suggested some amendments to the bill.

Mr. Biemiller testified at a joint hearing of the Health Subcommittees of the Ways and Means and Commerce Committees. I include a summary of his statement at this point in the RECORD and urge that my colleagues take time to read it:

#### STATEMENT OF ANDREW J. BIEMILLER

On behalf of the AFL-CIO we wish to express our appreciation for the opportunity to testify before the two subcommittees that have jurisdiction over health programs for the House of Representatives.

H.R. 6575 establishes a Federal program of hospital cost containment which is designed to place a ceiling on future increases in hospital costs. The average cost of a hospital stay has been increasing at about double the rate of the increase of the Consumer Price Index. Clearly, something must be done to contain the escalation in hospital costs.

The Administration's bill has some strengths and some weaknesses. One strength is its provisions to place a ceiling on total hospital revenues. This comprehensive approach would contain not only hospital charges but also excessive utilization of hospital beds and extravagant use of personnel and capital resources, some of which is of marginal value in diagnosing and curing disease.

However, a ceiling on hospital revenues can only be a short term solution to the hospital cost escalation problem. As time goes on, any attempt to regulate a single industry to the exclusion of others tends to build up distortions and stresses with respect to the allocation of human and capital resources. Also, even if hospital costs are contained, H.R. 6575 does nothing about the escalation of doctor fees or the increasing costs of drugs, nursing home care and home health services. Voluntary hospitals will inevitably attempt to transfer their expensive patients on to the public hospitals in order to contain their costs.

A much more effective way in which to control hospital costs would be to phase-in the principles of the Health Security Bill (H.R. 21) introduced by Congressman Corman (D-Calif.) Under this approach, the Health Security Board would be empowered

to negotiate hospital budgets on a hospital-by-hospital basis. Such an approach would provide flexibility, equity and maximum adaptation to local circumstances.

The wages of nonsupervisory employees lag behind the wages of such employees in private industry generally and in the service industry. For this reason, the wages of hospital employees should be established through free collective bargaining and not be restrained by the hospital cost containment program. In recent years, the average wages of nonsupervisory employees in hospitals have risen less than nine percent annually and, therefore, pose no threat to the nine percent increase in hospital revenues which would be allowed by the bill. In fact, a loophole in the bill allows the nonlabor costs of a hospital to rise more than nine percent. As the Council on Wage and Price Stability has emphasized it is nonlabor costs which have been the primary cause of hospital cost inflation.

A major problem with the bill is that it initially allows a minimum of six states to opt out of the Federal hospital cost containment program and operate their own program as long as such states meet the Federal criteria. However, the provisions in the Federal law which are designed to provide for free collective bargaining are not included as one of the requisites for such state administration. In addition, other states could opt out of the Federal program in future years thereby emasculating Federal controls.

The AFL-CIO strongly favors a Federal program with uniform standards and uniform administration. If, however, states are allowed to administer their own program, one criterion that should be required of the states would be that they adopt the Federal standard which would exclude nonsupervisory wages from the cost containment formula. This is implied in President Carter's health message but it is not specifically included in the bill.

Highly objectionable to the AFL-CIO is the provision in the bill which provides that the Secretary of the Department of Health, Education and Welfare would have the authority to review but one aspect of the program—the provisions relating to wages—and subsequently be able to modify or eliminate the exclusion of nonsupervisory wages. It is the position of the AFL-CIO that the Secretary should report to the Congress as to how the entire program is working within eighteen months so that Congress can take whatever action it deems appropriate. H.R. 6575 cannot be more than a temporary program since the regulation of a single industry involves many complexities and potentially serious distortions. The entire program, therefore, should be reviewed by March 31, 1979.

The disclosure requirements of the bill are completely inadequate. As stated by AFL-CIO President George Meany, "for too long, hospitals have operated under a veil of secrecy despite the fact that tax dollars are a major source of hospital income. Taxpayers have a right to know how these funds are expended." Public disclosure of each hospital's total receipts, expenses, assets and liabilities should be required. Hospitals should disclose the salaries of all highly paid employees including their fringe benefits. Detailed conflict-of-interest statements should be required of highly paid administrators and hospital trustees. In particular, the total receipts of a hospital's pathology and radiology departments should be disclosed. If anesthesiologists, pathologists and radiologists bill separately for their services, all such physicians should disclose their gross and net incomes. Additional information that the public should know would be hospital charges and whether the hospital has a preadmission certification program, whether the hospital requires a second opinion for elective surgery

and whether the hospital shares services with other hospitals to avoid duplications of services.

Voluntary nonprofit and for-profit hospitals should not be allowed to transfer their expensive and nonpaying patients onto the public hospitals. The provisions of H.R. 6575 intended to deal with this problem need to be strengthened.

The AFL-CIO favors the proposed limitation on hospital capital expenditures but would suggest prepaid group practice plans to be given a priority for such capital expenditures as HMO hospitals reduce the total need for hospital beds.

In conclusion, Mr. Chairman, we approve the basic thrust of this bill which would establish a ceiling on hospital cost increases but the burden of cost containment must not be borne by low-paid hospital employees. We strongly urge that the improvements we have suggested be incorporated into the final bill that is reported and passed by the House of Representatives.

#### DEFENSE NEEDS A PLOWHORSE, NOT B-1

#### HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mrs. SCHROEDER. Mr. Speaker, I found this column by Robert R. Denny in the Washington Star to be a simple but thoughtful commentary on our defense spending priorities and wish to share it with my colleagues. The text follows:

[From The Washington Star, May 23, 1977]

#### DEFENSE NEEDS A PLOWHORSE, NOT B-1

(By Robert R. Denny)

I love the B-1 bomber because it's beautiful. Sitting on the ramp, it is a legitimate, monumental work of art whose design perfectly expresses an exciting function.

As an ex-pilot, I would dearly love to slide the throttles forward, pull the wheel back ever so slightly and let the needle-nosed airplane catapult me into that magic upper world of clouds and stars that grubby groundlings never know.

But as a sane and sober citizen, a taxpayer and a former bomber pilot with a little knowledge of the capabilities of airplanes in combat, I have to turn my back on the temptress.

I do not think we should build the B-1 in quantity for four reasons: The cost of such a bomber fleet would be about half the total expense of the Vietnam war. The arguments advanced for the B-1 are flimsy. Its intended function can be performed better by something much cheaper. Finally, we need a totally different kind of aircraft to fill an urgent need.

The fleet of 244 B-1's requested by the Air Force is estimated to cost \$25 billion. But that's only the down payment. By the time training, replacement parts and other costs are added in, the figure will rise to more than \$100 billion. We can't afford it.

The Air Force says it needs the B-1 because it will take longer than a missile to get to its target. This extra time will provide "high visibility of national resolve" and allow "time for negotiation." The generals said recently in a syndicated news feature sent to thousands of editors. The argument sounds pretty silly when you consider that the B-1 has been designed to provide no visibility at all. Its function is to slip under the enemy radar at treetop level and make a sneak attack on Soviet targets.

(Ironically, the B-1's predecessor, the in-glorious B-70 was supposed to fly too high and fast for the enemy to reach. That illusion died when a Russian missile shot down Gary Powers in his high-flying U-2 in 1960. The B-70 promptly joined the B-36 and B-58 in the white-elephant graveyard of Air Force Edsels.)

The B-1 function of streaking to the target underneath the radar can be performed by the cruise missile. Salvos of these little nuclear-tipped jet drones can be fired by any wide-bodied airplane that "stands off" well out of firing range. The Russians have nothing to counter them.

But the Russians do have something else that's giving our strategists nightmares. It's an old nightmare that threatens to turn into solid, fearsome flesh some morning just before dawn.

The specter is a sudden tank invasion of Europe. More than 100 divisions are poised on the Soviet border—far more, as President Carter said after his inspection of NATO, than "defense" requires. A less diplomatic statement was made recently by retired Marine Gen. Lewis Walt. While reasonable men may find it easy to disagree with Walt's fulminations on amnesty, Vietnam and the volunteer army, his expertise on military hardware has to be respected.

He believes that Russian tanks could punch across the border in a dozen places and take Western Europe in two weeks. Other military men nod fearfully in agreement.

What would stop such an onslaught? Tactical nuclear weapons? Not when the enemy has penetrated your allies' cities and towns. Our own tanks and artillery? Our tanks are outnumbered three to one; our artillery by six to one. Fast-flying fighter-bombers? They go too fast to lock onto low-silhouette targets. Helicopter gunships? They're useful but they're terribly vulnerable to the mobile missile-launchers and rapid-firing cannon platforms that accompany the Russian tanks.

What remains? The Air Force has found a near-ideal weapon to stop the tank. A throwback to World War II, it's a slow, highly maneuverable single-seat airplane called the A-10. It's so heavily armored that a Russian cannon shell will bounce off its cockpit.

Sliding along the ground behind hills and buildings, it's an almost impossible target for fast, high-flying fighters. And—shades of the old West—the bulky airplane is, quite literally, built around a 20-foot-long, seven-barrel Gatling gun. This monster can fire 70 big rounds of 30 mm. cannon shells per second and punch through any tank armor.

We have a handful of these tank-killers now and could usefully spend some of the B-1 money on producing many more.

The B-1 is a racehorse at a time when we need plowhorses. It is time to give up the wild blue yonder for the dim and dubious battle down below.

#### WHO IS MINDING THE DEEP SEABED?

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. FRASER. Mr. Speaker, the sixth session of the Third U.N. Law of the Sea Conference opened in New York at U.N. Headquarters on Monday. Delegates at the session face the important task of achieving a fair and equitable international agreement. To do so, they must resolve several outstanding issues, including those on an International Seabed Authority to govern the exploitation of

mineral resources beyond the limits of national jurisdiction. This issue has also been of considerable interest to several congressional committees this spring. In an article, "Who Is Minding the Deep Seabed?" I have outlined some of the issues involved. This appeared in the New York Times, Tuesday, May 24, and I insert it in the Record at this point:

WHO IS MINDING THE DEEP SEABED?

(By Donald M. Fraser)

UNITED NATIONS, N.Y.—The United Nations Law of the Sea Conference, which resumed yesterday, was almost on the rocks when it recessed last September, but now the 158 countries seem poised for hard work and pragmatic compromise.

Members of the United States House and Senate are pleased that President Carter appointed Elliott L. Richardson as the new head of the delegation. Mr. Richardson made his debut at intersessional meetings in Geneva a few months ago. The word from foreign delegates is encouraging. He brings to the negotiations a fresh spirit, a creative and experienced mind, and the political clout to get the job done.

The large-scale, sometimes lumbering conference has been dealing with a variety of issues, among them oil and gas resources on the Continental Shelf, width of territorial waters, passage of ships through international straits, control of marine pollution, freedom of scientific research, and most controversially the deep-seabed question.

In answer to those who might ask, "What is so important about the ocean bottom?" We should look at the resources at stake.

On the deep seabed at depths to two or three miles there are tons of valuable manganese nodules. These potato-shaped crumbly accretions contain four minerals of interest to the world: nickel, copper, cobalt and manganese. One of the goals of the conference is to devise an International Seabed Authority to regulate the mining of these minerals. The nodules lie in waters that are truly international and that are beyond the limits of national jurisdiction.

Meanwhile four American-led private consortiums are preparing to begin commercial recovery of those nodules.

The United Nations in 1970 adopted a resolution that declared all the nodules to be the "common heritage of mankind." This concept was based in part on a statement by President Lyndon B. Johnson in 1966 that these minerals should be the "legacy of all human beings." The United States voted for the resolution, and in its current policy concurs with the common-heritage concept.

In my view, in the new International Authority all nations must have equal access to the nodules. Further, private corporations should be allowed to work with the Authority's proposed operating arm, known as the Enterprise, and simultaneously on their own. Some of the private profits should go to the Authority for international revenue-sharing. In order to deal with deep-sea policy, the Authority would have a Council and Assembly, which would seek to assure fair and equitable development of the resources without prejudicing the rights of private miners.

If all this sounds a bit visionary, then watch what might happen in the Congress. The consortiums have been lobbying for legislation that would authorize them to begin mining in mid-ocean before the conference reaches agreement—possibly working against the conference's aims. Three deep-sea-mining bills are now before Congress and are being considered in various committees.

Congress has been carefully monitoring the Law of the Sea negotiations. Whether or not legislation is enacted will depend largely

on the outlook for agreement on an acceptable treaty text. The Carter Administration opposes legislation now but the future is hard to predict.

A fair and equitable international agreement is infinitely better than the chaos that could result from a trend toward unilateral claims. But only some concrete progress at the conference will stave off the ocean miners.

Some of the considerations that the delegations, both ours and foreign, might wish to think about are these: Can a 25-year regime and review conference open the door to compromise? Will the world get the most benefits from cooperative mining ventures of unregulated claim-staking? Are the people of the world served best by agreement in principle or by further stalemate? Is the world best served by legal order or stalemate?

More than anything else, these diplomats should realize that a treaty is in everyone's best interest. Many, but not all, in Congress feel that way. Let us hope that the sea-law ship sails smoothly across the waves; for, if she goes down now, she may not surface again.

#### MYRON BLOOM—COLLECTOR OF ANTIQUES AND MEMORABILIA

HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BYRON. Mr. Speaker, for many years now Myron Bloom of St. James, Md., has been building a most unique collection of antiques and memorabilia. Mr. Bloom's collection is a treasure of Americana, and of our western Maryland heritage. Many, many people have enjoyed Myron's displays at functions all around the Washington County area.

Myron Bloom and his wife live in St. James, and I would like to share with my colleagues in the U.S. House of Representatives, the following article by Ms. Libbie Powell as it appeared in the Hagerstown Herald-Mail newspapers:

ANTIQUES SHOW—VETERAN COLLECTOR TELLS WHAT A LITTLE BROWSING CAN PRODUCE

(By Libbie Powell)

What started out to be an interview on a collection of music boxes belonging to Myron L. Bloom, who for many years has been "Squire" of the Post Office and Country Store at St. James, and dealer in fuel oil and other commodities, turned out to be a thoroughly enjoyable tour into the past.

The original intent was to write about the music box collection to let persons in this area know what type of things could be found at the upcoming Women's Club Antique Show, to be held today and Sunday in the ballroom of The Venice.

But so great was this collector of collectors in his personally conducted tour for Mrs. William Meyers, president of the Women's Club; and Mrs. C. Paul Jones, co-chairman of the show with Mrs. Robert Spahr, that the interview turned into an overall view of what a collector of note has garnered.

"You could not invest your money in anything better," the wise, previous schoolteacher advised the avid viewers. With his wife, Goldie, along, the tour went through the living quarters, down to the spacious lower portion of the comfortable and attractive contemporary home, and back up again. Meanwhile, the ladies were gasping at each new thing they saw, some in a pile or all

pushed together, some hanging attractively from the rafters on the ceiling, as was his interesting collection of old iron pots in varying shapes for varying uses.

Interestingly enough, most of the things that were noted can be found at the 17th Antique Show, whose hours are from 1-10 p.m., Saturday; and 12 noon to 6 p.m., Sunday, May 15. Mrs. L. L. Gerber is serving as chairman of this well known and highly regarded Antique Show on the local scene. Paul Ettline, of York, Pa., will again return as manager, bringing antique dealers with a wide range of antiques for the collector here.

#### THE MUSIC BOXES

But first, the antique music boxes. These have been previously displayed at The Miller House, and each year Myron Bloom has taken them to the Homecoming Day at Harpers Ferry, and at other spots, including the Beaver Creek School Museum. They are interesting, and run the gamut from those dating back to 1830, on to the other examples, circa 1890. The latter example is of bells, with a tinkling, hesitant harp-like melody.

Picking up a group of brass bells, known as a "troika," from a pile beside the fireplace in the downstairs quarter he said, "Doc Scheller used this on his horse and drove down N. Potomac St. with these bells ringing."

Continuing, he picked up an oversized copper frying pan with a long handle and said, "Here's a skillet that came from Independence Hall. They decided to clean house of some things and I happened to be there and bought it. This is an unusual piece for it has a copper bottom. And, I'm sure George Washington must have eaten some eggs that were fried in this skillet."

Beside this was a brass kettle, of generous proportions, inside a magnum-sized copper kettle, that the ordinary collector would have had polished and proudly placed in a living room. There is so much to Myron Bloom's collection, however, that he rather nonchalantly displays them, but with just as much pleasure.

"That copper kettle came from J. B. Roesser's Store," he advised. "They baked bread in it and made candy in it. Note the handles for they are on the side," he said.

#### B & O CHINA

Among the unusual bits of these treasures is the collection of Blue Willow type china, created for the 100th anniversary of the B & O Railroad. "What do you have, a set of eight?" Myron was asked. Then plates were counted, and it is more a set of 12. "Well, when I first started collecting this, I bought any I could get my hands on," Myron said of the plates, that have scenes of Harpers Ferry in the center, and commemorative scenes of the railway's history around the edges.

Then, he showed the first washboard, made of iron. "When your ancestors went west, they had one of these hanging from their wagon, and when they came to a stream, they used this," he said. But, though it was unique, and decorated with a moon and stars, one could only sympathize with the women whose hands were rubbed raw on that iron board.

Myron burst with pride as he led his followers into the other room to see "the oldest truck in the State of Maryland," an International. Goldie Bloom showed her special preference in the collection, a kitchen cabinet, circa 1900, with its own flour, sugar, salt and other containers. Many a person will remember some variation of this helpful kitchen device that was popular for a number of years.

Back upstairs, Goldie Bloom was displaying some of her treasures, including an exquisite white pitcher with figures on it, which she had inherited. It was Mrs. Bloom's grandfather, Henry Poffenberger, who started the first store known as Poffenbergers, at St.

James, when the Railroad came through. Her father, Harry Poffenberger, carried it on, until Goldie Poffenberger married Myron L. Bloom, and the new name took over.

#### REPROCESSING AND THE BREEDER REACTOR

#### HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. GOLDWATER. Mr. Speaker, in the next several weeks the House will consider a part of the President's national energy policy that is unique in that it involves the relegation to the back burner, if not outright termination, of an energy source that has previously been considered one of the Nation's key hopes for solving the energy problem. I am referring to the liquid metal fast breeder reactor program, and specifically to the first demonstration plant of this kind, known as the Clinch River breeder reactor. The issues surrounding the Clinch River plant are complex, involving valid concern over the possible proliferation of nuclear weapons, and equally valid concern over the need for energy and maintenance of the U.S. position in this advanced technology.

Among the several points that concern me in this debate is the fact that we too often consider only the most central or obvious issue, and do not pay sufficient attention to key associated factors. For example, the real question at hand is not simply "should we build the Clinch River reactor," but where does this reactor fit into the national breeder reactor program, what is the proliferation potential of that program, and how does this program tie in with our current and anticipated use of light water reactors, with the possible need to reprocess spent nuclear fuel, and with the entire national energy situation?

In my opinion, it would be a disservice to the subject and a failure of this distinguished body to fully discharge its responsibilities if it did not address the full scope of the issues affecting the need for the Clinch River reactor. We must not consider this plant only in the context of its proliferation aspects, just as we must consider it only from an energy supply point of view. We need to address this subject from both sides.

In its simplest form, the issue may very well come down to one of options, and whether the taking of any one path effectively precludes the ability to later proceed in some other direction. For example, if we proceed to build the Clinch River plant, will this action in itself lead to wide scale use of the plutonium fuel cycle so widely feared by those among us who are proliferation conscious? I think the answer is no. On the other hand, if we do not build this reactor, are we perhaps denying ourselves the later option to exercise world leadership in this technology, and to obtain the maximum benefits therefrom? In this case, I am afraid the answer is yes. On this basis, unless an overriding case can be made in forthcoming hearings before the Science

and Technology Committee as to the desirability of not building the Clinch River reactor, I will support the construction of this plant as an absolute necessity for the United States to retain its option to employ breeder reactors in the future, if this is found to be in the national interest at some later time.

In a similar vein, I am concerned about the position taken by the executive branch with regard to the nuclear fuel reprocessing plant at Barnwell, S.C. This plant was built for the purpose of recovering the energy value remaining in spent nuclear fuel, and represents a private investment of about \$250 million. A substantially larger amount would be required if the plant were to be built today. Due to changes in regulations regarding waste disposal and plutonium transportation, additional facilities must be constructed at the plant before it can go into operation. These facilities have been estimated to cost between \$375 million and \$575 million. The plant owners have requested that the Federal Government participate in the completion of this facility.

In his April 7, 1977, statement on proliferation, President Carter said that the Barnwell plant "will receive neither Federal encouragement nor funding for its completion as a reprocessing facility." I find this position especially ironic on two counts. First, it represents a failure to aggressively utilize a proven energy resource; namely, the 35-percent increase in uranium availability represented in spent nuclear fuel. In full operation, Barnwell would recover the energy equivalent of 1 million barrels of oil every operating day—some 300 million barrels a year. Even at the modest price of \$10 a barrel, that would be the equivalent of \$3 billion a year in imported oil. What is more, by the year 2000 the energy equivalent of the world's spent fuel will be about 97 billion barrels of oil, equal to about 6 years of production at current free world levels. How can this Nation afford to cut its options on a technology with this much yield? It does not make good energy sense, yet that is exactly what we are doing.

Second, I find it morally indefensible that the U.S. Government should completely disregard its implied commitments to the plant owners. The plant was constructed during a period when the United States actively encouraged the participation of private industry in nuclear fuel cycle activities. Substantial private investment was obtained. Now that Government policy has changed, can we just walk away leaving the owners high and dry? Think of the example this sets as the United States encourages and counts on private sector investment in other energy technologies to meet the Nation's needs as we see them today. We cannot expect investor support with this kind of cavalier behavior.

Fortunately, I think there is an approach that will let us retain the option of eventually using Barnwell for the reprocessing of spent fuel, while presently using it in support of international nuclear safeguards programs and efforts to properly manage radioactive wastes on a worldwide basis. The key to this

approach is to incorporate the site and facilities into the adjacent Savannah River Government reservation, where nuclear energy research and development has been underway for more than 20 years. This could be accomplished through sale or lease of the site and facilities to the Federal Government.

As a first step in this direction, and to assure retention of the staff resources at Barnwell, I intend to offer an amendment to the fiscal year 1978 ERDA authorization bill providing funding to maintain plant facilities and to begin studies of multinational fuel cycle center operations, safeguards, coprocessing, nuclear waste management, alternate fuel cycles, and other activities. In this manner the United States will be able to retain its option to reprocess spent fuel if this approach is found desirable, and will also present a signal to the energy and investment communities that the Government is willing to stand behind its commitments, both real and implied. Only through actions of this type can our path to a secure energy future remain open.

#### THE CASE AGAINST ELECTION DAY REGISTRATION

**HON. BILL FRENZEL**

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. FRENZEL. Mr. Speaker, apparently, the non-case for election day registration is becoming crystal clear.

In the May 22 issue of the Washington Post, David Broder has succinctly made the observation that the case has not been made for a universal registration system. There is simply no compelling reason to believe that this bill will cure the problem of the nonvoter. However, we do know that the Federal Government will assume yet another new role that rightfully belongs to the States.

I commend his editorial:

#### THE CASE AGAINST ELECTION DAY REGISTRATION

(By David S. Broder)

On the eve of his nomination last July, Jimmy Carter went before his former colleagues in the National Governors' Conference and spoke admiringly of the "new humility" he said he could discern "about the federal government's ability to legislate problems away."

That speech, full of concern about "the erosion of the role of states," provides the proper context for discussing President Carter's proposal for Election Day voter registration.

A reporter who has listened to the White House briefing on this bill, covered some of the hearings and committee drafting sessions and read most of the testimony, has trouble believing that the so-called "universal registration" bill (a misnomer) is either the godsend or the nightmare it is sometimes called.

The case has not been made by its advocates that simply allowing people to register at the polls will cure voter alienation and reverse the downturn in election turnouts that many find so disturbing. Nor have the critics proved that it is impossible to enroll

voters on election day without inviting fraud.

The evidence and arguments on both sides are, frankly, skimpy. There is more basis for belief that expanding the electorate by abolishing pre-registration requirements for federal elections would help Democratic candidates. The non-voters are disproportionately poor, young, ill educated, non-Caucasian and prone to be Democrats. But that fact neither condemns nor blesses the Carter plan in the eyes of a neutral observer.

What is most unmistakable about his proposal is that it will expand the role of the federal government in the administration of elections and affect different states and localities in very different ways.

At heart, the administration bill is one more categorical federal grant-in-aid program, an addition to the vast catalogue of Washington-mandated and financed enterprises ranging from agricultural conservation to zoological research.

It would create a new Washington bureaucracy under the administrator of voter registration in an area where states and localities so far have struggled along on their own. It would spawn new administrative, auditing and enforcement procedures, new guidelines and regulations, for carrying out its high purpose of sparing every American the burden of registering in advance to vote.

It employs the familiar federal mixture of carrots and sticks. Those states that meet its minimum requirements would get a basic financial reward from Washington—35 cents a voter. Those that do more of what Washington thinks best will get an even bigger present from Uncle Sam.

All this, of course, costs something—an estimated \$53 million for the first two years. But the greater cost, judging from the testimony, may be the disruption of normal election administration in many localities.

As Rep. Don L. Bonker (D-Wash.) observed, "Registration is neither the main bulwark against election fraud nor the engine of citizen participation in government. [It is] largely an administrative device to help election officials rationally and efficiently plan the conduct of elections."

The testimony of those officials should carry special weight. As John H. Hanly, the chairman of the Chicago Election Commissioners, told Congress: "If you enact an impracticable statute, it is the election authorities throughout the nation who will suffer the failure and all the ensuing abuse and blame."

Mr. Hanly, though a Democrat, opposed the Carter bill. So did officials from Philadelphia, Los Angeles, Monroe County, N.Y., and Rhode Island, among others.

Their concerns were practical, not philosophical. They are not wicked people trying to lock the doors to the polls. They are just local people concerned about how this new federal program will affect them.

Their critical view was not unanimous. The secretary of state of Minnesota, which has Election Day registration, endorsed it strongly, and officials of Connecticut and Montgomery County, Md., said they thought it would work well in their jurisdictions.

A sensible person reading this record would conclude that Election Day registration is an idea that suits some places much better than others. It is an idea that was tried in a handful of states in 1972. It is deserving of further experiment and likely to receive it—if the federal government does nothing.

What is totally lacking in the record is a compelling case for federal preemption of the voter registration field. This is no energy crisis requiring massive federal intervention. There is no demand here for help from local officials or citizens.

Nor is there a showing of state and local indifference to the problem of expanding the suffrage. Quite the contrary. The record clearly shows most states have made innova-

tive efforts to reduce the barriers to voting by a variety of means—including Election Day registration—that they deem suitable for their particular circumstances.

In his speech to the governors' conference, Carter said: "I believe it is time that the federal government recognize that states and localities retain a special knowledge of local problems. . . . We will," he promised, "have a government structure that encourages rather than stifles local flexibility."

Carter apparently forgot that speech when he submitted his mandatory Election Day registration bill. What's wrong with his bill is not that it is a plot to guarantee permanent Democratic control of the White House and Congress or a blatant invitation to fraud.

What's wrong is that it egregiously violates the sound principle of federalism Carter himself espoused before the governors. Where is that "humility about the federal government's ability to legislate problems away" now?

#### A TOUCH OF JUSTICE

**HON. GEORGE MILLER**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. MILLER. Mr. Speaker, I would like to bring to the attention of my colleagues the following column by George F. Will about the impact that the recently signed section 504 regulations of the Rehabilitation Act of 1973 will have on our society:

#### A TOUCH OF JUSTICE

(By George F. Will)

Handicapped persons are acquainted with disappointment, and they have experienced much of it since 1973, when Congress grandly declared that "no otherwise qualified handicapped individual . . . shall solely by reason of his handicap" suffer discrimination under any program or activity receiving federal financial assistance. In this heavily subsidized society, that can have a broad reach.

But such broad sweeps of sentiment are law only in a hollow, technical sense. They require the executive branch to make regulations that "make" the law.

The Department of Health, Education and Welfare, which is not reluctant to write regulations, wrestled with the task of giving substance to Congress' sentiments. Recently, after more than three years, it produced 48 dense pages of rules, plus 106 pages of related documents.

The significance of the regulations is that now the nation must stop rationing citizenship, almost absentmindedly allocating to the handicapped only as much as is convenient.

The regulations require an elimination of physical barriers to the handicapped wherever federal funding is involved. And they stipulate that handicapped children, regardless of the nature or severity of the handicap, are entitled to free public education appropriate to their needs.

Public education has been the distinctive American right. The extension of it, especially to the mentally handicapped, will generate legitimate controversy. Imagine, for example, the agonizing judgments required by the rule that the handicapped "must be educated with the non-handicapped in regular classrooms to the maximum extent possible."

Modern government has extended the citizen's claims of entitlement, and now the handicapped are moving toward full citizenship. This has been a long time in coming because the handicapped are a varied and

often invisible minority, invisible in part because of discrimination. This discrimination often involves a natural human failure of "imaginative sympathy," a failure by the majority to imagine how life looks to persons less fortunate.

A society deficient in "imaginative sympathy" surrounds the crippled with thoughtlessly designed facilities which provide no convenient access for wheelchairs, facilities that shout society's indifference. A society deficient in "imaginative sympathy" consigns the retarded to "education" programs that reinforce rather than ameliorate the cruel capriciousness of nature, and express through exclusions from basic rights the barbarous thought that weakness is akin of crime in the kingdom of the strong.

The new regulations announce the beginning of a costly but welcome era. Nothing the Carter administration will do in the next three years will touch so many lives ready for a touch of justice.

## DEBATE OVER DECONTROL OF THE AIRLINES

**HON. JIM WRIGHT**  
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. WRIGHT. Mr. Speaker, the current debate over decontrol of the airlines has important implications for the American people. Whether decontrol will mean more or less competition is not clear. Whether it will mean better or worse service is not clear. That the United States presently has the world's best system of air transportation is, of course, an important consideration when contemplating any change.

Last Friday in Minneapolis the Acting Chairman of the Civil Aeronautics Board, Judge Lee R. West, touched on the issue of decontrol in a candid address to the spring regional meeting of the Association of Local Transport Airlines. As a distinguished and able insider who has a vision of what can be done to improve air transportation in this country, Judge West deserves our attention when he says of abrupt and total deregulation:

The outcome could all too easily be, after a period of chaos, the monopolization of the industry by a few giant carriers, with much less real competition than we have today.

Mr. Speaker, I insert Judge West's address in the RECORD at this point:

ADDRESS BY THE HONORABLE LEE R. WEST

I am very happy to be here with you today at your Spring Meeting, even in my very transitory capacity as Acting Chairman of the CAB. I have the highest regard for your Association and for the tireless and constructive efforts of Joe Adams, your Executive Director and General Counsel. You couldn't find anyone more devoted to the field of aviation in general, and to the safeguarding of ALTA's best interests in particular. Although I don't expect to be Acting Chairman for very long, my term as a Member of the Board still has more than a year and half to run, and I am looking forward to the next period in the Board's history, which I am hoping will be a more constructive one.

Over the few years of my membership, the Board has gone through a period of considerable turmoil. My colleague, Joe Minetti, who has been 21 years on the Board, tells me

he can't remember another period of such tensions.

First, there was the unfortunate period of the "Route Moratorium" when competition and expansion were almost considered dirty words. Fortunately, this ended not too long after I arrived. However, the Board has more recently been saddled with a leadership that preferred one-man rule to a five-man consensus. You will recall the Ash Report of several years ago that recommended replacing all of the multi-member regulatory agencies with single administrators. I detected very little enthusiasm for this idea in the Congress, whose agent we are, but nevertheless we found ourselves in the past couple of years undergoing a hybrid experiment with this sort of leadership.

We found work that should have been done by the Board's own career professional staff—and I don't know of another agency that has such a superb staff—being farmed out, without the knowledge of the other Board Members, to consultants about whose qualifications we knew very little. We found "experiments" being proposed by such consultants which, after uncounted hours of comments and counterproposals, we had to pronounce impracticable to carry out, and meaningless if they had been. Actually, the "decision" to abandon the experiment was announced by the then-Chairman to selected news media people before the Board had even discussed the matter.

We also found consultant studies being presented to the Board outside the record in a major litigated case, with very little apparent appreciation of the violence this did to the requirements and the spirit of the Administrative Procedure Act.

In this regard, I may note that President Carter has only this week targeted as a managerial problem area the excessive, unnecessary, and improper use of consulting services, and has expressed particular concern about the "use of consultants to perform work of a policymaking or managerial nature which should be retained directly by agency officials."

We found our Office of Public Information reconstituted as an Office of Public Affairs and headed by a Director who ignored the fundamental collegiality of Board decision-making. His job description, approved by the then-Chairman without consultation with the Board, made him responsible to and supervised by the Chairman alone, and his efforts were to be assisted by a television expert, a position which had not previously existed, or been considered necessary at the Board. The duties of the office were similarly transformed: where once it informed the public of the actions of the Board, it became a public relations effort designed to create the appearance of accomplishment while disguising an appalling lack of action in carrying out the Board's statutory functions. These promotional efforts did much to divert the public eye from the inconsistency between a procompetitive rhetoric and an anticompetitive voting record. Convenient news "leaks" to selected media personnel occurred with regularity, compelling both a Congressional investigation and a Board investigation into CAB leaks. These investigations quickly focused on the Office of Public Affairs. However, parts of the reports of the Board investigation were denied to Board Members other than the Chairman. Shortly thereafter, the Public Affairs Director left the Board and found an employment niche elsewhere in the government, but he continues to take journalistic "cheap shots" at the Board from his new position. The situation became so bad that such reputable publications as "Fortune" have described the recent CAB Administration as a "Fifth Column" attempting to destroy the Board from within. I want to make it clear that I believe criticism of the Board, whether from within or without, is healthy, and can cer-

tainly include suggestions of CAB reform, or even abolition of the Board. But I do not believe it is proper for one who has taken a job with a regulatory agency with important duties to perform under an existing statute to dedicate his efforts to undermining and weakening the efficacy of that agency and that statute. Certainly not for the purpose of exalting a single individual or bringing the public around to his own belief that the agency should be abolished or fundamentally reorganized, or that the statute should be repealed or its direction be fundamentally reversed.

Additionally, because of floundering leadership in our International Affairs Bureau, we found the CAB unable to play its proper statutory role at a time of serious deterioration of foreign relations with our principal allies in the civil air transportation area.

Finally, we found a rather pervasive suggestion or feeling that most of what the Board has been doing in its preceding 37 years of existence had been a mistake—well-meaning, perhaps, but still a mistake. This idea no doubt explains the desire to rely on outside consultants, and to man several key positions at the Board with people who had no previous contact with or knowledge of air transportation. It probably also explains a certain unwillingness to use some of the expandable statutory tools we already have at hand, in the interests of arguing that new tools are indispensable.

What I am hoping is that we will go forward from this low point in quite a different spirit. I am hoping we will get back to an appreciation that a collegial body under effective leadership can tap the experiences and insights of all of its members, without losing the ability to act promptly and effectively. I think the consultant period is largely behind us, and that we have already gained a renewed appreciation of the superlative qualities of our career professional staff.

Most of all, I am hoping that we will return to an appreciation of what is good and valid in the Board's historic and traditional approaches to its duties under the Act. It would be foolish of me to claim that the Board, or any other human institution, is or has ever been immune from making mistakes. But, looking at our present air transportation system, and comparing it with what we find in most other countries of the world, it seems to me that we must have been doing something right over the last 37 years. I readily concede that the knowledge and devotion of the men and women who founded and who today operate our privately owned and managed airlines, together with the consumers who use them, are principally responsible for creating the world's finest air transportation system. But at the very least the Board can claim to have helped the process along, under the policy guidance given us by the Congress in our governing statute.

For the last several years we—and here I mean the whole aviation industry, and the Congress itself, not just the Board—have been going through an intense period of debate over the issues of regulatory reform. An enormous amount of the Board's time and energy has gone into debating the issues, developing proposals for legislative changes, and commenting on the proposals of others. Some of that time and energy has been wasted on false leads; much of it has been constructively employed. Most of it, regretably, has been taken away from that store of time and energy available for the continuing day-to-day work of regulating air transportation under the existing statutes.

The Board has submitted to the Congress a series of major proposals for changes in the Act which would lead to an increased reliance on the beneficial forces of competition, of enterprise, and of the marketplace

in guiding the further development of the air transportation system. Nothing stands still, and if the system we have today is a good one, as it most certainly is, what we can have tomorrow, if we act wisely, will be still better.

I have supported the Board's legislative proposals, and still do, because I believe they can lead in the direction we all desire, if carefully and sympathetically administered in the public interest by a Board that knows what it should do and should not do. I know that some of you may have questions about parts of the Board's program, but I am hoping you will come to appreciate its affirmative values.

At the same time the Board has made it clear—and I would personally like to take some credit for stressing the point—that we do not support abrupt or total deregulation of the air transportation industry, and I don't believe that anyone of mature judgment has seriously contended for such. We can't ignore the structure and the relationships which have grown up over the last four decades; and any attempt to shift suddenly to a hypothetically pure free market in air transportation could wreak enormous havoc, and would be immensely harmful to the traveling public and the commerce of the United States, as well as to the airlines, their employees, their lenders, and their shareholders. The outcome could all too easily be, after a period of chaos, the monopolization of the industry by a few giant carriers, with much less real competition than we have today. I have also been concerned about the probable loss of small community service and stressed my belief that we need—not just to retain—but indeed to improve upon a "system" which provides appropriate service for small and medium-sized communities. Air transportation should not exist only for select markets between huge cities.

What I believe, however, is that a controlled and carefully monitored transition in the direction of greater reliance on the forces of competition and enterprise can avert the perils of disruption and possible subsequent monopoly, while encouraging all that is best and most creative in the industry.

I hope that we will never forget that it is to the initiative of you here present today, and of others throughout the airline industry, that the public must look for a constantly developing and improving air transportation system. Believe me, Chairman Lorenzo, I have the liveliest appreciation for the power of "peanut" ideas! The Board's job, as I see it, is as much as possible to stand out of your way and let you try out your ideas in the marketplace, while at the same time maintaining some ground rules of order in the system, outlawing predatory practices, and protecting the rights of the traveling and shipping public.

Although I have spoken of the Board's legislative program, I want to make clear that I didn't come here primarily to make a pitch for regulatory reform legislation, whether the Board's program or any other. Instead, the point I principally want to make is that I see the Board's future role in the regulatory reform debate as being substantially reduced.

To be sure, the debate continues, and I anticipate the Board will probably be expected to comment on further proposals—Secretary Adams', Congressman Anderson's, and perhaps a revised bill by Senator Cannon—as they are introduced. But I hope that the period during which much of the Board's energy has been devoted to preparing, studying, or commenting on proposals for legislative change is behind us. I expect that hereafter the Board's main emphasis will be on carrying on the day-to-day work of regulation to the best of its ability under the existing Act—and, of course, if and when the Act

is amended, on carrying out the will of the Congress as expressed in the amendments.

I hope that you will find in us a livelier appreciation of what can be done, and what has in the past been done, under the existing Act, until such time as Congress sees fit to change it. I hope you will see a greater use of the expedited procedures we already have available, such as Subparts M and N, for removing obsolete and unnecessary certificate restrictions. I hope you will see us develop further such procedures. I hope you will see a consistently active route hearing program, somewhat akin to that of the middle 60's, and the development of a set of commonsense hearing priorities for route applications which will allow the Board to spend more time on hearing and deciding cases and less time on arguing about which cases to hear.

I hope you will see us develop a consistently more liberal policy towards fare innovation and experimentation. I hope you will see us continue to liberalize our charter rules to make this form of low-cost air transportation more widely available to the American people, while at the same time making it easier for the smaller airlines to take part in the charter markets, where they surely have a useful role to play. All these things, you will note, the Board can do under the existing statute, though some of them no doubt could be aided or expedited by well-conceived legislative changes.

The thought I want to leave with you is that the philosophy I hope and believe you should be able to expect from the Board—certainly from this one Member of the Board—certainly from this one Member of the Board—is a philosophy of evolutionary growth and improvement, not revolutionary overthrow. We have a superb air transportation system today, and can have an even better one tomorrow, not by tearing down the existing system and starting over again from scratch, but by building creatively on excellent foundations. And you are the ones who will do most of the building.

Thank you, it has been a real pleasure to be with you today.

#### LABOR DEPARTMENT ANNOUNCES "COMMONSENSE APPROACH TO THE TASK OF PROVIDING SAFE AND HEALTHFUL WORKPLACES"

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. GAYDOS. Mr. Speaker, Secretary of Labor Ray Marshall, and Assistant Secretary of Labor for Occupational Safety and Health, Dr. Eula Bingham, conducted a press conference this morning, announcing a "commonsense approach to the task of providing a safe, healthful workplace for every American."

According to the remarks of Dr. Bingham, this will involve the following:

First. An all-out effort to combat occupational illnesses and disease.

Second. Refocusing inspection efforts on the most serious health and safety hazards.

Third. Ninety-five percent of inspection efforts to be devoted to the most serious health and safety hazards, with the other 5 percent to be applied to the lower risk sectors of the economy.

Fourth. The appointment of a Special Assistant for Small Business.

Fifth. Preparation of a special small business handbook to assist small business in voluntarily complying with the law.

Sixth. A substantial expansion of the consultation program.

Seventh. Major expansion of the agency's educational program.

I believe that this new approach is most commendable, and should go a long way toward carrying out the intent of Congress in providing American workers with safe and healthful working conditions.

In the words of Assistant Secretary Bingham:

Our task is to make life safer for employees, not to make life harder for employers.

The statements of both Secretary Marshall and Assistant Secretary Bingham follow:

#### OPENING STATEMENT BY SECRETARY OF LABOR RAY MARSHALL

Since its birth in 1970, OSHA has been everyone's favorite whipping boy.

The business community has claimed that OSHA was far too restrictive, bogging them down in a series of nit-picking, petty regulations. Labor has been concerned that OSHA hasn't done enough about health problems, the kind of long-term dangers that threaten the physical well-being of many American workers.

When I became Secretary of Labor, I began an extensive study of OSHA. In order to get some first hand understanding of the program, I spent a day working as an OSHA inspector in a factory outside of Philadelphia. Working closely with Assistant Secretary Eula Bingham, I examined many of the most common criticisms of OSHA. And, I came to the sad conclusion that both business and labor were right. OSHA did have far too many petty regulations. OSHA had neglected long-term health problems in order to enforce some petty standards not directly affecting safety or health.

Today marks an important turning point in the history of OSHA. In announcing our commonsense priorities for OSHA, we are also signaling that this beleaguered agency has entered a new era.

Eula Bingham has been Assistant Secretary for OSHA for just seven weeks. In that short time, OSHA has seen more far-reaching changes than at any time in its history. We have acted vigorously to eliminate the health hazards caused by benzene. We are recruiting a staff who can deal with health hazards, as well as safety problems. And, today, we are announcing our commonsense priorities for OSHA.

It is obvious why OSHA needs to have priorities. OSHA has an enforcement staff of just 1,400 and the responsibility for regulating more than 5 million workplaces. I've calculated that even if these inspectors work over-time, they can visit no more than 2 percent of the workplaces in America. That's why we have to focus our efforts where the hazards are the most likely.

In announcing these new priorities today, we are trying to do two important things. One is to get the monkey of unnecessary and complex government regulations off the backs of small business. And, the other is to focus our limited resources on the most serious health and safety problems faced by American workers.

In short, what we are trying to do is to save lives, protect workers' health and prevent injuries, not print regulations.

Let me outline a few of the major components of this new enforcement strategy:

We are going to stop trying to regulate every detail of life in every office, store and

factory. There will be no more petty regulations like those dealing with coat-hooks in bathrooms.

We are going to simplify our regulations so that everyone can understand them. No longer will small businesses have to hire lawyers to interpret OSHA regulations. We're going to stop the absurd practice of printing 15 pages of regulations, in small type, on the safety of ladders.

Instead of regulating by fiat, we're going to stress preventative consultations with small business.

And, last, but most important, we're going to focus our efforts on the real health and safety problems which American workers face. We're going to stop fishing for minnows and start going after the whales.

Now, I'll turn to Dr. Bingham to give you the details of this new OSHA program.

#### STATEMENT BY DR. EULA BINGHAM

As Secretary Marshall has explained, we are today announcing a program which we hope will institute a common sense approach to the task of providing a safe and healthy workplace for every American.

To begin with, we are launching an all-out effort to combat occupational illnesses and disease.

To accomplish this, we are going to refocus our inspection efforts on the most serious health and safety hazards.

Since some industries—such as construction, manufacturing, transportation, petrochemical—are much more dangerous than others, it makes sense to focus our limited inspection resources in those high-risk industries.

Beginning this year, 95 percent of our inspection efforts will be devoted to the most serious health and safety hazards. The other 5 percent will go to the lower risk sectors of the economy—wholesale and retail trade, financial institutions and service industries. And even within these sectors our attention will be focused on the most hazardous workplaces—auto repair, building materials and dry cleaners—for examples.

This action will significantly relieve the burden on businesses in the nonhazardous sectors of our economy.

We are also going to significantly expand the use of "de minimis" notices for violations that have nothing to do with worker health and safety.

In regards small business, I think its time we got serious about a program of cooperation. Our task is to make life easier for employees, not to make life harder for employers. I feel certain that most business people want to protect their workers. In most small businesses employers and employees work together, often side by side. "They breathe the same chemicals, they work around the same machines—they're exposed to the same hazards."

In order to implement a real program of cooperation I am going to appoint a special assistant for small business.

We are also beginning distribution of a special small business handbook with simple check lists and self-help guides designed to assist small business in voluntarily complying with the law.

We are also planning to greatly expand our consultation program to assure that small business people have access to professional help. We are also going to list the possibility of using extension services, universities and private organizations to provide consultation services.

In line with this, we are also planning a major expansion of our education program. I believe its unconscionable that this agency spends only 7/10 of 1 percent of our budget on education. That's going to change.

I believe the keystone of a successful health and safety program is knowledgeable

workers and employers who can find and solve their own health and safety problems.

On another front, we are going to get rid of unnecessary rules and simplify our regulations.

One of the greatest sources of criticism of OSHA in the past has been the more than 5,000 consensus safety standards. These include many highly technical, overly specific and outdated regulations that have burdened employers without really protecting workers. We are now combing through these standards. We shall eliminate unnecessary regulations and we shall revise and simplify necessary standards that are needlessly detailed, complicated or unclear. And as this process gets underway, we shall immediately end penalties for violations of standards that have nothing to do with worker health or safety by expanding and clarifying the use of "de minimis" notices.

This program is, I believe, a significant step in the right direction. It will not be accomplished overnight. It's going to take time. But we are committed to taking the basic common sense actions that will assure that this agency can get back on the track and fulfill its mission of protecting the health and safety of America's working people.

#### THE CLAMSHELL ALLIANCE AT SEABROOK

#### HON. LARRY MCDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. McDONALD. Mr. Speaker, in the 18th century, a movement in England began to prevent the spread of industrialization which they believed was hazardous to their way of life. Real life soon made the Luddites obsolete. Had they prevailed we would still be living in the pre-industrial-revolution era, and none of our modern conveniences would be available.

Our modern-day Luddites fight against any development with the same 18th century fallacious arguments. The development of atomic power is a particular target of a combination of ecology freaks, leftist agitators, and assorted nuts and bolts. According to the Christian Science Monitor of May 24, 1977, the anti-nuclear-power groups claim that they are winning their fight to slow or halt the development of nuclear energy in our country. From the viewpoint of the hardcore Marxist, our energy crisis will be of great benefit to our Soviet enemy.

New Hampshire Gov. Meldrim Thompson showed both understanding and courage when the modern-day Luddites invaded a construction site at Seabrook, N.H., where a nuclear powerplant was being built. Governor Thompson ordered the arrest of the trespassers and stood firm when the bleeding hearts complained. As with so many other things, Governor Thompson won the overwhelming support of the people of his State.

The Information Digest of May 20, 1977, edited by John Rees, provided a detailed report of the incident. For the past 10 years, Mr. Rees and Information

Digest have provided valuable eyewitness reports on violence-oriented and terrorist groups. The Information Digest article follows:

#### THE CLAMSHELL ALLIANCE AT SEABROOK

The largest "civil disobedience" action in recent years in the U.S. took place in New Hampshire over the May Day weekend over the issue of using nuclear energy to generate electrical power. Organized by a local coalition and nationally supported by the American Friends Service Committee (AFSC) and the War Resisters League (WRL), the action demonstrated that nuclear energy and other "social" issues can be used for mass manipulation and that the civil authority, in this case the New Hampshire State Police, was unable to provide effective protection.

The well-organized occupation of the site of the nuclear power plant being constructed at the small New Hampshire seacoast town of Seabrook took place without violence on April 30, proceeded through a mass arrest of 1,414 demonstrators on May 1, and continued through the next week when those arrested refused to post bond and remained in state custody.

The occupation was organized by the Clamshell Alliance (CA), P.O. Box 162, Seabrook, NH [603/964-6514] and 62 Congress Street, Portsmouth, NH 03801 [603/436-5414]. The Clamshell Alliance is an umbrella group of some thirty anti-nuclear organizations active in the New England states which was founded in July 1976.

(NOTE.—Opposition to the Seabrook nuclear plant began as an environmental issue some seven years ago, and has been the subject of a series of ongoing court and regulatory board hearings.)

(The CA was formed by those impatient with the slow judicial process and who were impressed with the success of "direct action" as exemplified by the sabotage of a Massachusetts nuclear power plant facility and a multitude of anti-Vietnam actions in focusing media, public and official attention.)

(Following its formation last year, the CA organized several much smaller sit-ins at the Seabrook site, which were punished by nominal fines by the courts and adulatory treatment in the radical media. The CA quickly attracted the support of militant socialist pacifist organizations such as the AFSC and WRL and funding from Haymarket People's Fund (HPF) as a group advancing the cause of revolutionary "social change.")

On Saturday, April 30, 1977, some 2,500 demonstrators, mostly college students but with a substantial cadre of seasoned anti-Vietnam activists, professional organizers, drop-outs and alternative culture communards, moved onto the Seabrook site from four sides.

As the mass of 2,000 demonstrators approached along Route 1 from the West, planned flanking maneuvers resulted in successful occupation of the construction site by some two hundred demonstrators who had come through the marshes from the North and the South as a boat load of activists landed from the East. A lone Public Service Commission representative was there to tell the Route 1 contingents that they were committing trespass.

Once on the power plant site, the jubilant demonstrators occupied a parking lot, pitched some 500 tents, dug latrines, and set up their governing organization, the "Decision-Making Body" (DMB). The occupation was allowed to continue for 24 hours until 1 PM Sunday when the New Hampshire State Police, assisted by the National Guard and other departments brought in by invocation of a "mutual aid" clause, commenced arresting the demonstrators. (On the orders of their Governor, the Massachusetts State Police did not respond to the "mutual aid"

agreement with New Hampshire to which they were a party).

Before the arrests began, the demonstrators were allowed to leave the Seabrook site, and several hundred did. However, 1,414 remained to face charges of criminal trespass. Of those reported arrested, only 218 were New Hampshire residents; others gave addresses from thirty different states, with the majority (698) listing addresses in Massachusetts.

Detained in five New Hampshire armories, the demonstrators remained organized and refused to post bail, demanding release on personal recognizance even though almost all were non-residents of the state. Maintaining their tight discipline and organization, the defiant demonstrators were detained in the armories until May 13, when they were released on personal recognizance.

This important victory for the Seabrook anti-nuclear demonstrators was due in large part to the organization set up by the Clamshell Alliance organizers—the application of “affinity group” tactics to a mass sit-in-type demonstration. All participants were organized in affinity groups usually by residence. Individual demonstrators were discouraged from participating, and any individuals not known to an area affinity group were closely checked. All those who intended to participate were required to arrive in Seabrook a day before the demonstration in order to undergo “non-violent” tactical training involving role-playing, acting-out, and instructions in handling law enforcement officers and various situations provided by the American Friends Service Committee.

Affinity groups were kept small, numbering from ten to twenty people. The affinity group (G), which was based on geographical, political, social or sexual preference factors, chose a “spokesperson” or “spoke” who in turn attended the meetings of the DMB and brought back its decisions to the AG. By this successful decentralization of leadership, the Clamshell Alliance was able to maintain control and impose its wishes on the not unwilling demonstrators.

Since the Seabrook demonstration, the Clamshell Alliance has been taken up by both the alternative and radical media and organized Marxist-Leninist groups such as the Communist Party, U.S.A. (CPUSA) and the Socialist Workers Party (SWP) who are clearly planning to encourage the CA's expansion into a nationwide movement with the CPUSA linking the nuclear power plant issue to U.S. disarmament and detente, and the SWP using it to attack “monopoly capitalism.”

In reviewing those many and varied accounts of the Seabrook demonstration and the Clamshell Alliance's potential, an article in Boston's *The Real Paper*, [May 14, 1977, Vol. 6, No. 19] appears of significance and is excerpted below:

“... The Seabrook twin nukes are still in the works, and the occupation is over, but the effects of this action have altered the political course of the cynical Seventies, suddenly outlining a new path for radical politics that may avoid many of the pitfalls of the late Sixties.

“Seabrook demolished one of the mass media's most hoary clichés about the Seventies, the image of the complacent, job-obsessed college kid. The demonstrators were overwhelmingly young. There were college freshmen and sophomores everywhere, whole busloads from some schools, and they were not mere shock troops. The cadre that planned the occupation consisted mainly of veterans of the civil rights and antiwar movements. But once the occupation began, younger people were equally as prominent in leadership roles as the veterans. Steve Hiltgartner, who accomplished the delicate task

of marching the Boston contingent of some 800 people three miles to the site and arriving on schedule, is only 20 years old.

“Ironically, the dissolution of the 1960s antiwar movement led indirectly to the confrontation at Seabrook. The electric utilities planned many reactors out in the countryside, hoping the rubes would be too dumb to care. But Northeast Utilities made a big mistake when it announced plans for two giant plants in Montague, Massachusetts, right in the middle of a hippie farming area where burnt-out radicals from New York and Boston had fled to lead simpler lives.

“In February 1974 when Sam Lovejoy toppled the Northeast weather tower on the proposed site, he soon had people from the surrounding area ready to support his fight with Northeast. Lovejoy and his friends formed the core of the Clamshell Alliance in early 1976, together with Guy Chichester, a tough New Hampshire carpenter who was fighting a proposed Onassis oil refinery with his neighbors while Lovejoy stood trial for the tower-toppling incident. The Clamshell has tried to stay close to its geographical roots, to emphasize the need for a sense of place in the struggle against nuclear power. This emphasis has been one of the Clamshell's greatest strengths in organizing a regional movement, giving people a foundation in the land that the antiwar movement never had.

“The May Day Seabrook occupiers avoided two of the persistent problems that plagued the left in the 1960s, sexism and mindless violence. The strong emphasis on nonviolence he helped the demonstrators end the animosity between police and protestors. Instead of viewing the police as pigs to be taunted and spat upon, the Clamshell offered the police a chance to do what they had to do, but to do it in a humane manner. Two previous Clamshell actions had helped build this trust between the organization and the police. More than two-thirds of New Hampshire's state police were on duty at Seabrook, and all of the officers we spoke with expressed respect for the way the occupiers had handled themselves. The demonstrators, in turn, had almost nothing but kind words for the police.

“(Problems arose after the police turned the prisoners over to the National Guard and the courts, where Governor Thompson's hostility, through simple lack of preparation and concern, caused much unpleasantness.) State police superintendent Col. Paul Doyon was able to work out a peaceful end to the occupation with the Clamshell, despite the intense pressure to create a blood bath from Governor Thompson and William Loeb, publisher of the *Manchester Union-Leader*.

“The occupation was as nonviolent in organization and style as any such event is ever likely to be. Unlike the macho-ridden leadership of the Sixties left, the Clamshell Alliance has had women operating as equals since the formation of the original organizing committee. Even the state police implicitly recognized the equal status of women, failing to segregate the sexes at arrest, at arraignment, or initially in the armories serving as temporary jails.

“But the Clamshell planners did far more than merely avoid the pitfalls of Sixties organizing. They organized people into affinity groups in order to keep them together. Each affinity group had 15 to 20 members, all of whom were put through a four-hour training session in nonviolence. But the training also emphasized simply getting to know one's fellow group members. The affinity group creates a kind of artificial extended family, and even the early, pre-occupation reports of affinity group meetings showed that the experience was having a powerful effect on the participants. \* \* \*

“As we pointed out last fall \* \* \*, the Clamshell must expand its urban base to

succeed. Now some 50 affinity groups will be returning to the Boston area, nearly 1000 people who have shared an extremely intense experience together. For the first time the Clamshell will have the people power and the emotional commitment to begin doing meaningful urban organizing.

“The influx of people will also enable the Clamshell to reach out to two other groups that are necessary to create a truly powerful antinuke coalition, namely labor unions and consumer/utility organizing groups like Fair Share. The existing affinity groups should also provide a power base for enlarging the membership of the Clamshell itself.

“The continuing growth of the Clamshell also puts Jimmy Carter on notice that, unless he is careful, nuclear power will turn into his domestic Vietnam. The Clamshell Alliance is not buying Carter's Gulf of Tonkin-style energy message, a poorly disguised plan to expand nuclear power. \* \* \* If Carter and his pronuclear energy adviser James Schlesinger go ahead with Schlesinger's well-advertised plans to build three hundred to four hundred reactors by the year 2000, Carter will find himself facing a struggle as bitter as the one that brought down Lyndon Johnson. \* \* \*

“What was done at Seabrook will serve as a model for antinuclear activists around the country, who have been searching for a way to counter the unholy alliance of business and government that supports the expansion of nuclear power. They will be joining a movement which holds that we must act to save the future.”

From interviews with members of the Clamshell Alliance and the War Resisters League who participated in the occupation, it is possible to do some “Monday-morning quarterbacking” as to areas where avoidable mistakes were made:

1. The organization of the Clamshell Alliance and the affinity group structure virtually precluded any casual “drop-in” intelligence-gathering, and although Governor Meldrim Thompson showed a concise understanding of the nature of the CA and its affinity group structure, as well as its overall goals and strategy, the marsh-land invasion and boat landing of demonstrators was not foreseen by the state police.

2. Allowing the main CA body from Route 1 onto the site, then allowing them to dig-in and organize provided the CA leaders with a cheap, but important victory. Further, while some attempt was made to disrupt AGs, this was subsequently nullified by “free” association within the armories which enforced the unified “no bond” demand.

3. The inability of the National Guard to maintain order among those arrested in the armories, the fraternizing with the demonstrators by guardsmen and the de facto recognition of the CA leadership as speaking for each person arrested contributed to the success of the demonstration.

“EQUAL PAY FOR WORK OF EQUIVALENT VALUE”

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. FRASER. Mr. Speaker, this fall the National Women's Conference will be held in Houston. My own State of Minnesota will hold its women's conference in June.

Now is the time for analysis of the

barriers preventing women from full participation in our society.

I would like to bring to the attention of my colleagues an article by Ellen Goodman that was published in the Washington Post on Saturday, May 21, 1977. It is entitled, "Equal Pay for Work of Equivalent Value."

During the past decade, the women's movement in this country has broadened in scope to include more areas of concern, but blind spots continue. There are problem areas that are not seen—areas that neither women in more traditional roles nor those who proudly identify themselves as feminists have been able to articulate.

Ellen Goodman's article, a discussion with the new president of NOW, Ellie Smeal, deals with one of these blind spots.

Most women do not become executives, lawyers, and doctors, just as most men do not. Many women will continue to be housewives, with or without employment outside the home. Many women will continue to work in the "traditional" women's occupations such as clerical work, sales, nursing, teaching—out of choice or necessity.

Most Americans firmly believe that equal pay for equal work should be an enforced principle in our society. But women earn only 57 percent of what men do. A large part of the pay gap occurs because some of the occupations in which women work are low-status, low-pay.

Clerical work is commonly called an occupational "ghetto" with good reason. Low pay, little access to training or advancement, unstated assumptions that clerical workers are unable to do other jobs, all too often accompany the job. And in clerical work, as in many other occupations, men are clustered at the top and women at the bottom of the pay scale: 35 percent of women workers are in clerical jobs; 6 percent of men are—according to figures from the Women's Bureau, Department of Labor.

We all know that without competent clerical workers, everything would fall apart. A variety of skills are needed by clerical workers. I am not suggesting that we give roses to the people in our offices who do clerical work. I am suggesting that we carefully read Ellen Goodman's article, note again that 35 percent of women are in clerical jobs while 6 percent of men are, and consider why clerical and other "women's work" has the low pay and status that it has.

[From the Washington Post, May 21, 1977]  
EQUAL PAY FOR WORK OF EQUIVALENT VALUE  
(By Ellen Goodman)

BOSTON.—Ellie Smeal wants to get away from the concept of equal pay for equal work.

If that sounds a bit odd coming from the brand-new president of the National Organization for Women, hang in here for a minute.

For 10 years, Eleanor Marie Cutri Smeal, the youngest child and only daughter of an Italian immigrant family in Ashtabula, Ohio—"I always wished I was born in a city I could spell"—supported equal pay for equal work, and watched the wage gap between male and female workers grow into a chasm. Now, she sees that the average woman earns only 57 per cent of what a man earns, and

that women form the core of the working poor.

Finally, the 37-year-old Pittsburgh housewife believes that the women's movement has been caught in a Catch-22. Equal work was described as the same work, but few women are actually doing the same work as men. About 73 per cent of the employed women work in female-dominated job categories. "In essence we were saying that if women did the jobs that men traditionally did they deserved equal pay. If they did not do those jobs, they didn't deserve it."

Since there are thousands of clerical workers for every First Woman Firefighter, the old limited notion of equal pay hasn't helped raise the income level of the majority of working women.

"What we did innocently was to get ourselves into a trap. We talked so much about opening new doors—and we want those doors open—that we didn't talk enough about the women in traditional jobs."

It is perhaps inevitable that Ellie Smeal would be the first NOW president to place an open priority on upgrading the work of "women's" jobs. While her predecessor was a lawyer, Smeal has been a housewife and mother of three children throughout her entire adult life. The first paycheck she cashed in years came three weeks ago with her new office. As she puts it, "With my own background it's natural that I'm very interested in the jobs women traditionally do, jobs that society—not the women's movement—underrates."

In a basic way, Smeal has both symbolized and activated a shift in the attitude of the movement. "If our basic goal is economic equality, if we are trying to improve the economic conditions of the majority of the American women, we have to start upgrading the jobs they do. There's nothing wrong with being a secretary except that you're not paid well."

In this spirit, she is pushing for something called equal pay for work of equivalent value—work that is not identical to that of men, but is equal in terms of training, skills and importance.

"The jobs that women do are often complicated and highly skilled. A secretary needs training on business machines, a command of the English language, discretion, the ability to make decisions. We have to ask why she is paid on the lower end of the scale than men in less-skilled jobs."

"Most bus drivers, for example, get paid more than a licensed practical nurse. Yet they are both jobs with physical labor, life-and-death decisions, and both take special training."

Homemaking is also "work of equivalent value." While she doesn't advocate a salary for homemakers, at the very least she wants to "upgrade" and "secure" her own job category. In that regard she supports disability insurance for the sick, and a displaced homemakers bill for the widowed and divorced. She also believes that, in a one-worker home, the paycheck should be made out in the name of the family. "This would be a public recognition of the fact that the husband and wife have made an agreement to have an economic partnership."

It is, after all, economic equality that is the goal. The kind of equality that will help not just women, but families as well. "We're talking about sex discrimination, yes," says Smeal, "but we're also talking about discrimination against the average- and lower-income family. If men realize that, they will be much more supportive."

"Today the economy is demanding that two parents work for one and a half incomes. The corporations are actually getting two laborers for one and a half salaries. I think if we start thinking in those terms—two workers, doing work of equivalent value—then we will start getting some changes."

## U.S. VISA POLICIES FOR EUROPEAN COMMUNISTS

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. HAMILTON. Mr. Speaker, I would like to bring to the attention of my colleagues a recent exchange of letters I had with the State Department regarding our visa policies for Communist Party members from Europe who wish to visit the United States.

The State Department reply indicates that, despite certain recent visa rejections, there has been a slight loosening up of some previous restrictions and that our entire visa policy is under current review, "with an eye to its liberalization."

The correspondence follows:

WASHINGTON, D.C., April 20, 1977.

HON. CYRUS R. VANCE,  
Secretary of State, Department of State,  
Washington, D.C.

DEAR MR. SECRETARY: I read with interest recent press coverage of the denial of visas to Soviet trade union officials who were invited to attend a labor convention in the United States and of the apparent veto by certain American labor organizations of the granting of such visas.

I would like to know precisely: why visas were granted recently to certain Italian Communist leaders and denied to Soviet trade union officials?

—Who outside the United States government actively opposed the granting of the visas and whether or not certain labor groups vetoed the granting of visas?

—How the United States will be able to defend its visas policies vis-a-vis European Communists in light of the Helsinki Accords at Belgrade later this year?

—What national interest and foreign policy objectives are promoted by the denial of visas?

I appreciate your consideration of this letter and look forward to your early reply.

With best regards,

Sincerely yours,

LEE H. HAMILTON,  
Chairman, Subcommittee on  
Europe and the Middle East.

HON. LEE H. HAMILTON,  
Chairman, Subcommittee on Europe and the  
Middle East, Committee on International  
Relations, House of Representatives.

DEAR LEE: The Secretary has asked me to reply to your letter of April 20 concerning the recent denial of visas to certain Soviet trade union officials.

The Immigration and Nationality Act provides for the exclusion of certain classes of aliens. Section 212(a)(28) provides that members of Communist organizations are ineligible to receive visas. While the law does contain discretionary authority for waiver of this ineligibility, each application must be reviewed on a case-by-case basis.

An important factor in our consideration of whether to recommend a waiver is the purpose of the trip. The Mayor of Florence was here in connection with a sister-city relationship to Detroit. Several Italian and French Communists visited the United States as part of the Western European Union parliamentary delegation. It is the current policy of the Department to decline to recommend waivers of visa ineligibility for Soviet trade union officials on the grounds that labor organizations in the U.S.S.R. are government-controlled and such officials

should therefore not be treated in such a way as to suggest that they are in fact representatives of free and voluntary trade unions. While representatives of American labor have expressed support for this policy to the Department, neither they nor anyone else vetoed the granting of the visas.

As for the CSCE meeting in Belgrade in the fall, our record of compliance with the provisions of the Final Act is excellent in general. The U.S. is one of the few signers of the Helsinki Act which does not have a system of internal travel controls. Moreover, the President recently removed all restrictions on travel abroad by our citizens and by permanent resident aliens.

There are a number of other positive steps we have taken recently to promote freer movement of people. We have proposed to all the Eastern European countries the mutual abolition of closed zones. Our initiatives have been successful in all countries except Bulgaria. In addition, we proposed to them the reciprocal elimination of non-immigrant visa fees. To date that initiative has had no response. Unilaterally, we opened one zone previously closed to Soviet diplomats, and have invited them to reciprocate. They have not replied. I should add that our entire visa policy is currently under review, with an eye to its liberalization.

In view of the steps we have taken and the nature of our visa policies viewed as a whole, we believe we can effectively defend those policies at Belgrade.

I hope this information will clarify the position of the Department of State in this matter.

Sincerely,

WARREN CHRISTOPHER,  
Acting Secretary.

#### THE NEED FOR NEW JUDGESHIP IN THE FIFTH DISTRICT

**HON. WILLIAM LEHMAN**

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. LEHMAN. Mr. Speaker, our Federal courts have served us with distinction since their inception. Many of our concepts of law which insure our freedom come from decisions handed down by these few men working in the interests of justice. We seem to take their standards of excellence for granted. Yet, Mr. Speaker, we can no longer afford to do so. Our courts are in trouble, not from lack of caring or qualified judges, but from the increasing caseloads which threaten the quality of justice in the United States.

I will not weigh you down with the massive statistical evidence which exists showing our district and circuit courts in serious need, yet a few facts must be mentioned to illustrate the nature of the problem. The fifth circuit is in particularly dire straits. New filings are up 10, 20, even 30 percent higher than the national average. Case termination by judges of the fifth circuit have increased in similar amounts.

This increase in case termination, however, has come at a high cost. The judges of the fifth circuit have instituted a screening procedure which disposes of about half of the cases by unanimous consent without oral argument or

a written decision. Without this process, a backlog of some 5 years would today exist.

The speedy trial requirements which often make this type of disposal necessary—indeed it is the only way this caseload can be met—makes the practice of a written opinion a vanishing one.

The value of a written opinion to a free society such as ours is inestimable. It insures against the capriciousness of an arbitrary decision and enables the courts to explain their reasoning and judicial interpretation of the underlying values and principles of our laws. Furthermore, written opinions can indicate the direction our legal system will take in the future.

The custom of oral argument before a court is a fundamental right of every citizen. The belief that everyone can be heard in a court of law is a cornerstone of the legitimacy that our courts have today. The judicial system we enjoy today is our inheritance from the common laws of England. The courts are the mediators between the powers of the Government, and the rights of the people. They protect us from becoming numbers in a computerlike output of institutionalized justice. Further, the cases most likely not to be heard are civil rights and other cases not bound by speedy trial requirements.

Prospects for the future are dim. In the unlikely event that filing of new appeals remains static, some cases classified for oral argument may never be heard, even with the practice of disposing of 55 percent of all cases without such argument.

Mr. Speaker, it has been 7 years since the Congress has enacted legislation aiding the Federal courts. Population estimates for 1980—based on the last census in 1970—have long ago been surpassed in the Fifth Circuit, and with them, the estimated number of new cases filed has also gone up. The judges of the Fifth Circuit have more cases per judge than the judges of any other district, surpassing by 279 the caseload per judge recommended by the Judicial Conference.

I urge my colleagues to give their full consideration to H.R. 3685 which would relieve these severe problems not only in the Fifth Circuit, but in all areas of the country as well.

#### CONCORDE

**HON. JAMES H. SCHEUER**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. SCHEUER. Mr. Speaker, one of the most energetic public officials with whom I work is New York City Councilman Walter Ward. Councilman Ward represents in the city legislature, just as I do in Congress, the Howard Beach, Lindenwood, and Rockaway communities that surround that bastion of serenity and tranquility JFK Airport.

Councilman Ward and I have been working to reduce noise levels at Kennedy for years. We have fought together for 3 years against the incursion of the Concorde. We will not relent in our efforts to reduce the noise at JFK Airport and to keep the Concorde—the Edsel of the skies—out of our communities.

I call to the attention of my colleagues Councilman Ward's comments, spoken by a truly dedicated community leader:

SST STATEMENT SUBMITTED ON MAY 13, 1977, BY COUNCILMAN WALTER WARD TO THE ENVIRONMENT, ENERGY, AND NATURAL RESOURCES SUBCOMMITTEE OF THE HOUSE GOVERNMENT OPERATIONS COMMITTEE

If Democracy means anything at all, it means that the Will of the People is Sovereign. When the people speak, our government must listen.

Our people are against the landing of the S.S.T. at J.F.K.

Our people have spoken at rallies and demonstrated by the thousands. They have written countless letters, petitions and telegrams. Our City Council, the elected officials representing collectively the will of 8,000,000 people has passed unanimously two resolutions, banning the S.S.T. Concorde from landing at J.F.K. Airport.

Our own Congress voted against the building of the S.S.T. in America because of its noise levels. Yet foreign Countries, Britain and France, say we must allow them in and they threaten us with reprisals if we do not.

Some people say we are holding back progress?

Is it progress? Let us ask Mr. Peyer, Principal of P.S. 124 who says of the Conventional Jet Planes:

"When the planes go over the building, everything freezes—everything stops until the plane passes.—nothing happens in the classrooms. Teaching is at a stand-still. The planes come over very often, especially when the weather is good. I believe the structural damage to the building is caused somewhat by the planes."

Is it progress to Mr. Kuntzler, Engineer at P.S. 124 who says of the Jet planes:

"The school building suffers water leakage thru the exterior wall and the building is cracking. I contribute it to the vibrations of the planes. Sometimes in inclement weather, the planes pass no more than 50 feet over the roof of the building. My helper and I silently say 'God help us'."

Mr. Kuntzler is most unfortunate because when he leaves the school, he goes home to Elmont, New York, where he lives under Runway 22R. His home has cracks in the ceiling. His dishes rattle in the china closet. He feels the loudest noise come from the 707's and the D.C. 8's.

Can we add even another noisier plane... the S.S.T. . . . that is twice as noisy as the 707 and the DC 8?

Is noise pollution, fuel emissions, air pollution, damage to the ozone layer a sign of progress? Last weekend on T.V., a pilot was interviewed and he told of the effects of his exposure to the high concentrations of the ozone layer gas. He called it the Ozone Disease.

Can we burden our hard-working, tax paying residents with added health dangers and property damage?

The Commercial interests of Britain and France must be secondary to the interests and welfare of the thousands of residents who live near the airport.

Does it make sense to cause suffering to hundreds of thousands so that the few, able to pay the \$1600 round trip can save a few hours?

The choice must be in favor of the many. Any other way is a betrayal of the essence of democracy.

## STRIPES AND STARS AND STRIPES

## HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. LEGGETT. Mr. Speaker, last Saturday night it was my good fortune to speak briefly to several hundred assembled members of the Sacramento chapter of the Air Force Sergeants Association with Ken Mayo of the national office.

We were drawn together to honor the local past presidents and auxiliary of the association.

At the event, CMSGT Francis W. Roper committed a tribute to the flag in writing of significant perspective. If patriotism could be personified, the Sergeant Roper message is it.

If the flag could speak, Sergeant Roper thinks the following might be recorded:

## STRIPES AND STARS AND STRIPES

"Hello Sergeant, Good seeing you again. Remember the first time we met? It was 4th of July, and your father was holding you high on his shoulder so you could see as I led the parade down Main Street. I felt proud leading that parade, because everyone made me feel that way. They held their hands over their hearts as I passed by, to reaffirm the pledge of allegiance they had willingly given to me so many times, even as children. They made me feel proud. As I waved to all, I could actually see my stars and stripes sparkling in your eyes.

Remember, some 20 years later. My, how we both had changed. I had two more stars in my blue field, and you were wearing your first Air Force uniform. You looked great!

And now, after several years, I see you again as I look from my lofty perch in front of command headquarters. You're still looking great! I notice that you've added several stripes to your sleeve. A young woman has become a part of your life, and that little girl holding your hand shares her mother's beauty, but she has your eyes. She reminds me of you, at that 4th of July parade, long ago.

What's that I hear? Must be time for another retreat ceremony. There's the national anthem. I notice that you once again stand at attention as you salute. Your wife's saluting by holding her hand over her heart, and not to be outdone, your little girl's pressing her right hand so firmly over her heart that I can't help but swell with pride as I wave in the breeze, and salute all of you back.

But what is this I see happening? Several others in uniform came out of a building, looked at you saluting, and they turned and ran back inside. I can't believe what I'm seeing! Those who have pledged their lives to defend this country are running away as if they are ashamed of me. And look at those other men and women not in uniform, just walking along and talking while our national anthem is playing. One of them is wearing my colors on his shirt and can you believe it, one is wearing my stars and stripes as a patch for the seat of her jeans. They don't seem to know who I am. They don't seem to realize what I stand for.

Don't they know how many brave men and women have fought for the freedom they now enjoy. Don't they care how many selfless Americans have made supreme sacrifices for that which these people seemingly take for granted today? Just look at our disabled veterans, those still missing-in-action, and the memorial roll of the many who never came back from the fight to keep this country free, one nation under God. When you salute me you are saluting those principles which have made the United States of America the greatest nation on Earth.

When you salute me you are saluting a man who had a dream that people of all races and creeds could live together as brothers, and, you salute those who ask not what their country can do for them, but what can they do for their country.

I don't think the others mean to be disrespectful—they just haven't achieved the realization that the principles of freedom, equality, justice, and humanity must be continuously nurtured. Will you help others to understand that I symbolize these principles and the people of this great nation?

Let them see me in the proud way you wear your uniform. In your dedicated service to your country. Show them how to pay proper respect to their nation's flag.

Sergeant, I know I can count on you to do more than your share to keep the fires of patriotism alight. I know I can count on you to prevent our enemies from tearing me down. Because of this I know that I'll continue to fly freely over this great land and brave people.

And Sergeant, I know that you'll always make me proud to be your Flag.

## WHITE HOUSE CONFERENCE ON HANDICAPPED

## HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. FINDLEY. Mr. Speaker, the White House Conference on Handicapped Individuals is meeting this week at the Sheraton-Park Hotel. The people in attendance—most handicapped in some way—deserve our full recognition and support. There are people confined to wheelchairs, people on crutches, and some who are bedridden—all meeting at President Carter's call to "provide a national assessment of problems and potentials of individuals with mental or physical handicaps; to generate a national awareness of these problems and potentials; and to make recommendations to the President and Congress which if implemented, will enable individuals with handicaps to live their lives independently, with dignity and with full participation in community life to the greatest possible degree."

Many of us who are fortunate enough to be free of handicaps are not aware of the hardships suffered by those confined to wheelchairs or crutches.

Too often we in Congress make decisions which greatly benefit the public, but at the same time create obstacles and hazards for others. Ignorance of the special problems of the handicapped can lead to situations where even our best attempts to help go astray. For example, I learned just yesterday when I visited with Illinois delegates at the Conference that the curbs which have been lowered around the Capitol and the new Library of Congress to accommodate wheelchairs still present a serious hazard to the handicapped due to the rough, pebble texture of the ramps. Apparently, wheelchairs can catch on the textured surface of the ramp causing the owner to spill out into the street. Thus, despite the best intentions of those who designed the ramps, a serious problem remains. One of the goals of the Conference is "to generate a national awareness of these problems and potentials."

I urge my colleagues to attend the Conference or send a representative. Learn who the handicapped leaders are in your congressional district. Learn what their needs are and in what ways you as their elected representative can assist them. I can assure you, it is a heartwarming and worthwhile experience.

## HOSPITAL COSTS CAN BE REDUCED

## HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BOB WILSON. Mr. Speaker, much has been said already about Federal overregulation and the onerous bureaucratic requirements that have been placed on our society. In some way or other our Government intrudes on the life of every one of our citizens.

But generally when we talk about this problem we do so in generalities. In the following article from the Spring Valley, Calif., Heartland News, we are brought face to face with specifics, and I believe my colleagues will find these specifics a very sobering matter:

## HERE'S HOW CARTER CAN REDUCE HOSPITAL COSTS

American hospitals are being buried under an avalanche of government-created paperwork—so mountainous that it's costing patients and taxpayers an extra \$1 billion a year to pay for its handling.

In West Virginia, the cost of processing government forms adds \$13.24 per day to each patient's bill.

In Tennessee's hospitals, the cost of completing just one government form totals over \$1.3 million a year.

In New York, 164 different government agencies—each with its own forms—have some type of control over hospitals.

An estimated one-fourth to one-half of the questions asked on the forms duplicate one another.

Said Dr. David Drake, director of policy development for the American Hospital Assn.: "We're talking about \$1 billion just for filling out forms!"

The assistant director of the West Virginia Hospital Assn., Walter R. Mitchell Jr., after a study of hospital paperwork in the state, said: "The cost of the federal and state processes, on a conservative basis, is \$13.24 per patient per day."

"For Medicare and Medicaid service there are over 10,000 pages of regulations—and good grief, there's about 1,000 pages of changes on my desk right now!"

The Hospital Assn. of New York State made a study on regulation of its hospitals.

In Pennsylvania, the Hospital Assn. made a study of survey forms received by community hospitals in 1975.

Jack Wicks, a vice-president, said filling them out took a total of 50,800 man-hours and cost an average of \$1,020 per hospital! That, he stressed, was just for surveys—not the mass of federal and state forms required for each patient.

And the Tennessee Hospital Assn., in testimony before the Commission on Federal Paperwork, focused on the cost of handling just one piece of paperwork, Social Security Administration form 2552. The group stated: "The total expense to the state's community hospital system to complete this one form totals \$1,322,798.20 a year."

Who pays for it all? Declared West Virginia's Mitchell:

"The patient is paying more (and) the taxpayer is also picking up the burden under the federal program."

"My feeling is that many people are just feeding on this bureaucracy because the only way they can justify their existence is by writing a regulation today and perhaps changing it next week."

#### INSIGHT FOR THE BLIND

### HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BURKE of Florida. Mr. Speaker, in my congressional district, which includes most of Broward County, Fla., there is a splendid volunteer organization called Insight for the Blind which records books and magazines for the blind and handicapped. The master tapes prepared by this volunteer group are housed at a regional library in Daytona Beach, Fla., and are available for distribution to patrons throughout the State of Florida, 13 other Southern States, the Virgin Islands, and Puerto Rico.

We often read about the harm that some people inflict on others, so it is refreshing when we read about the good that people do for others, especially when it is without any financial compensation. Insight for the Blind has no paid employees nor does it receive any financial support from any governmental agency or from the United Way. Private citizens donate money for the facilities and volunteers give their time in the recording booths. In the first full year of operation more than 10,000 volunteer hours were recorded.

I want to commend the outstanding people from my congressional district who participate in this program, and, also share with my colleagues, a newspaper column from the Fort Lauderdale News entitled "Want To Be a True Giver?" written by Yolanda Maurer, which explains more thoroughly the operation of Insight for the Blind. The article follows:

[From the Fort Lauderdale News, Dec. 16, 1976]

#### WANT TO BE A TRUE GIVER?

(By Yolanda Maurer)

In case you're tired of hearing about organizations which raise monies through charity balls and luncheons, here's one that doesn't.

It's Insight for the Blind, a group founded in Fort Lauderdale only a year ago and sustained through private donations only. Ever since its inception, it has done wonders assisting those afflicted by one of the most severe handicaps that may strike man.

In one short year, Insight volunteers recorded 67 magazines and 11 books, including several textbooks. From a best selling novel or recipe for hushpuppies, to the latest copy of Redbook, they made the magic of the written word available to 10,000 sightless Floridians who would never have otherwise known it.

Insight has just been honored by being asked to participate in a Library of Congress pilot project. It consists of recording a digest of the nation's publications specializing in music. Only groups with a high degree of professionalism were asked to participate.

CXXIII—1053—Part 14

Carolyn (Mrs. Edward) Mansur, who started Insight with quiet dedication and determination and still presides over it, says that its growth in one short year has been almost incredible.

Over 120 volunteers put in thousands of hours of reading, monitoring or editing the requested works.

Growth is now limited only by funding, all of which has been through private donations from the very start.

The center's three soundproof recording booths, for example, have been constructed and installed by the Fort Lauderdale chapter of Telephone Pioneers of America.

Its quarters are provided by a member of the board, another board member having provided the first Telex recorder.

Much of its equipment and office furnishings have been contributed from the first day by people who care.

There are an estimated 30,000 people in Broward eligible to receive Insight's recorded material. Tapes and play-back machines are furnished to them free.

At this point, Insight needs, among other things, more soundproof recording booths to make full use of their volunteer talent.

The volunteers are here to meet those needs, the equipment is not.

Volunteers like Bob Carris, the producer of "Mr. Wizard," a longrunning TV program, came forth, to help with the new musical recording project. He even brought his bongo drums with him to illustrate his narration, says Carolyn Mansur.

Quietly, without fanfare or publicity, a board of directors comprised of most interesting individuals work steadily with Carolyn to keep the project alive.

Vice president Virginia Bishop is a talented artist listed in Who's Who of American Women, among other honors she has collected over the years.

Ted Mansur, who's a big help in the combined functions of treasurer and secretary, held a most unusual job before his retirement: He was legislative clerk for the U.S. Senate, a one-of-a-kind office that kept him close to the seats of power for over 20 years.

Also on the board is the Hon. Judge George Richardson, of the circuit court; Nan (Mrs. William) Knox, one of the most selfless philanthropists in our town; Elma (Mrs. Duncan) Berryman, a past president of the American Bonzal Society and a nationally recognized horticultural expert; attorney Joe Sasadu, whose help in getting legal matters organized was invaluable.

All these people, plus hundreds of volunteers devote untold number of hours to their favorite cause.

Even a wheelchair-bound volunteer such as Bill Rhyen, a former radio announcer gladly helps those more severely handicapped than he is by lending his beautiful voice to record for hours on end.

All that's needed now are contributions to continue the work of all those people.

They are looking now for "volunteer givers".

That's the name they've come up with for those people who prefer to give directly to a cause—rather than do so through a social function.

The question is: Are there enough of those volunteer givers in Broward to allow Insight to continue its work without resorting to a fund-raising ball or luncheon?

Hopefully, the answer will be yes.

Especially from those people who have been complaining about the over-abundance of social fund-raisers.

And especially at Christmas time, a time for loving and giving.

Not giving more trinkets to those who already have too much—as most of us do. But giving to those with real and vital needs—such as the blind.

If you are among those true givers, you

can help by joining Insight for as little as \$10.

Or you may send any amount your heart—and pocketbook—will dictate.

It's all tax deductible to: Insight for the Blind, 1935 Wilton Manor Drive, Fort Lauderdale 33305. Or call 561-5644.

#### ON OSHA'S PROPOSAL TO FUND ON-SITE CONSULTATION PROGRAMS ON A 90-10 BASIS WITH STATES

### HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. GAYDOS. Mr. Speaker, I wish to direct the attention of my colleagues to a recent proposal issued by Dr. Eula Bingham, the new Assistant Secretary for Occupational Safety and Health. The proposal—a most conscientious effort on the part of the new OSHA Administration—would give more small businesses guidance on how to comply with Federal job safety and health rules.

Under section 7(c)(1) of the 1970 Occupational Safety and Health Act, a provision is made for States to enter into contracts with the Department of Labor to provide occupational safety and health counseling services to employers. To date, the cost of those services has been shared on a 50-50 basis by State and Federal governments, and just 13 States have entered into on-site consultation contracts as provided for under section 7(c)(1).

The high cost to State governments to provide consultative services has been cited as a major factor prohibiting many of the States from offering the services. Thus, in an effort to encourage State assistance in this area, OSHA's new proposed regulations would revise the funding ratio to authorize 90-percent funding by the Federal Government—instead of the current 50-percent funding—and 10-percent funding by each State electing to develop and implement an on-site consultation program. The net effect of the proposal would be to provide an incentive to State governments to avail their businessmen of these important consultative services.

In addition, the proposed revisions would allow the 24 States or jurisdictions currently operating their own job safety and health programs to participate in the new program. As a result, every State could receive 90 percent Federal funding if the State elects to provide onsite consultation.

As chairman of the Subcommittee on Compensation, Health, and Safety, which has oversight duties with regard to OSHA, I am well aware that many employers, especially those owning small business establishments, have indicated a need for assistance in understanding and implementing OSHA's regulations. The proposed action should go a long way toward satisfying their needs, and I wish to commend the Department of Labor for its proposed action.

Regrettably, this very forthright step taken by Assistant Secretary Bingham has met with ridicule from a few sources. It is indeed unfortunate that this very

meritorious action, taken in response to requests from the small business community, is being criticized in this manner.

# TERRORISM IN NICARAGUA: HAVANA'S EXPORT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. McDONALD. Mr. Speaker, despite the claims of those promoting U.S. recognition of the totalitarian Communist regime in Cuba, Fidel Castro continues to train terrorists, provide a refuge for terrorists, and actively export revolution throughout Latin America. There is an unfortunate general tendency for journalists to avoid critical reporting on the activities of terrorists, and for government security agencies to discourage dissemination of detailed information about the backgrounds of terrorist leaders, where and by whom they were trained, their support networks, and so forth. And in at least one case a government, to counter the terrorists' demands that newspapers print pages of revolutionary communiques and propaganda, forbade even the mention of the name of any terrorist group in the media. That move did not damage the guerrillas, but did deny the public important information.

The Nicaraguan Government, however, has a much wiser policy of exposing the terrorists to the public. In 1976, the Nicaraguan counterinsurgency forces had outstanding successes against the Frente Sandinista de Liberacion Nacional—FSLN—capturing a number of top terrorists and killing others in shootouts. One of those captured was Tomas Borge Martinez, one of the four founders of the FSLN. Borge provided the Nicaraguan court at his public trial with details of the FSLN's operations, including its vicious treatment of Nicaraguan villagers, its internal purges and executions, its training in Cuba, and its relations with the official pro-Soviet Communist Party in Nicaragua which is called the Partido Socialista de Nicaragua—PSN.

The FSLN has been typical of the revolutionary operations sponsored by the Cuban Communists in Latin America, and as such its history serves to highlight the unprincipled brutality of the Marxist-Leninist "national liberation movements."

The origins of the Sandinista National Liberation Front—FSLN—go back to 1959 and the earliest Castro-backed guerrilla incursions in Nicaragua. The FSLN is named after Augusto Cesar Sandino, a Nicaraguan general who fought a 6-year guerrilla campaign—1927-33—against the U.S. military presence. Sandino was widely supported by the Communists. The 1928 Sixth Congress of the Communist International in Moscow adopted a resolution proposed by the Communist Parties of the United States

and Mexico which sent "fraternal greetings to the workers and peasants of Nicaragua, and the heroic army of national emancipation of General Sandino, which is carrying on a brave, determined struggle with the imperialism of the United States." Sandino's private secretary was the Salvadorean Communist leader Augustin Marti. Although the Communists later denounced Sandino, the Communists use his name as an anti-U.S. symbol of armed insurrection.

Carlos Fonseca Amador, the founder of the FSLN, was a professional revolutionary for 20 years until his death in a shootout with the Nicaraguan National Guard in November 1976. He was educated in Moscow at Friendship University—now called Patrice Lumumba University—which is the Soviet Union's principal indoctrination center for "Third World" revolutionaries. Its graduates include the Venezuelan terrorist Ilych Ramirez Sanchez, alias "Carlos the Jackal."

Fonseca's involvement in revolutionary "armed struggle" commenced on June 24, 1959, when a guerrilla invasion force, "El Grupo del Chaparral," met with a Nicaraguan National Guard force. The guerrilla force of Nicaraguans and Cubans suffered 7 dead and 17 wounded. The surviving 27 revolutionaries fled back into Honduras and surrendered their arms to the local authorities. Fonseca was one of those seriously wounded in that encounter.

While Fonseca was recovering from his wounds, several other guerrilla bands whose members included veterans of Castro's Sierra Maestra army unsuccessfully attempted to invade Nicaragua from Honduras and Costa Rica.

In 1960, Fonseca and the Cuban Ambassador to Nicaragua Quintin Pino Machado, organized the precursor of the FSLN, the Juventud Patriotica Nicaraguense—Nicaraguan Patriotic Youth. Fonseca and other Nicaraguan revolutionaries living in Honduras such as Tomas Borge Martinez expanded their group to include the Frente Unitario Nicaraguense, another group of Castroite Nicaraguan radicals living in Venezuela, also founded with Cuban assistance.

That year some 17 Nicaraguan revolutionaries, including Fonseca and Borge, commenced nearly a year of training and indoctrination in the Fifth District barracks in Havana. Following the 1961 Bay of Pigs fiasco, the Cuban Communists decided to give the Nicaraguan revolutionaries "a higher level" of military training. According to Borge's testimony, the FSLN cadre were told that they were the first Latin American group to receive such assistance from the Cubans. The FSLN was given an intensive 3-month course by officers who were veterans of Castro's Sierra Maestra campaign, then were sent to the remote Piedra Gata and El Portal del Inferno regions of Honduras to set up a base camp.

The initial FSLN guerrilla group consisted of some 60 men equipped with an assortment of small arms such as Garand

M-1 and M-2 rifles, hand grenades, and machineguns. Borge, however, remained in Cuba to undergo the official Cuban "militiaman's course" in tactics, combat engineering, and armaments, such as the use of Soviet and Czech weapons and the Belgian Alfal.

While in Havana, under Cuban direction, Fonseca and the Nicaraguans developed the political strategy to complement the move into armed struggle. A united Nicaraguan front set up a new Nicaragua movement to unite all the dissident groups. Fonseca made continuous travels coordinating the revolutionary groups.

In mid-1963, following a year of preparation in Honduras, the FSLN guerrillas invaded Nicaragua and set up a base at Raiti. The FSLN had expected to win the local population, Miskita Indians, to their cause; but failed because the Indians could not identify their interests with the cause of the Spanish-speaking revolutionaries.

The FSLN then demonstrated its true nature with a series of raids on small villages to steal supplies from the very people they claimed to be "liberating." The Nicaraguan National Guard sent patrols in pursuit of the revolutionaries who retreated after skirmishes back into Honduras. Most of the FSLN guerrillas were caught by a Honduran Army patrol following a raid on a mining camp. This ended the FSLN's first stage of "armed struggle."

The FSLN members and supporters remaining in at Nicaragua's National University and in Managua then made an alliance with the pro-Soviet Communist Party, the Partido Socialista de Nicaragua—PSN. Despite its illegal status, the PSN had an estimated 300 cadre members and several thousand supporters among the labor movement and students in the total population of 2 million. The FSLN underground participated in the PSN's political action front, the Republican Mobilization—MR—active in the opposition coalition, the National Democratic Union—UDN.

The FSLN participated in the Tricontinental Conference, held in Havana in January 1966, at which Castro set up his organization for the export of revolution and subversion, the Organization of Solidarity of the Peoples of Asia, Africa, and Latin America—OSPAAAL. Later that year, the FSLN broke with the PSN over whether to participate in the electoral front or whether to rely on armed struggle and terrorism as the only method for securing a revolution.

The FSLN's return to the "armed struggle" was a fiasco, suffering a heavy loss in a fight with the National Guard at Pancasan on January 22, 1967. The FSLN then decided that it needed larger forces, better training and a "broader political base"; and thus the FSLN leadership returned to Cuba for additional training. According to Tomas Borge, among those who accompanied him were Fausto Amador; Rolando Roque; Francisco Rosales; German Pomares; Victor Manuel Tirado Lopez; Olga Lopez Aviles; Oscar Turcios; Gustavo Adolfo Vargas

Lopez and his wife; Oscar Vargas Lopez; Oscar Benavides; Humberto Ortega and his wife, Rosa Argentina Gomez; and Denis Campbell.

Borge described their training as "the standard guerrilla course and certain special courses in communications, \* \* \* explosives and training in arms such as bazookas, 60mm and 90mm mortars, antitank cannon."

The FSLN returned to Latin America via travel to European countries, including Communist Czechoslovakia. Borge was arrested in Costa Rica in 1969 while attempting to make arms purchases, along with Henry Ruiz. The two were deported to Colombia where they stayed with Father Vicente Mejia, a "rebel" priest. The Colombian authorities then arrested Borge and Ruiz, held them for a month, then gave them 72 hours to leave the country.

The two Nicaraguan revolutionaries made contact with the Colombia Communist Party which provided passports and money of Cuban origin obtained via Mexico. Borge and Ruiz then went to Peru and made contact with the Communist Party before traveling on to Mexico. In Mexico the FSLN members reestablished contact and remained until 1971.

The FSLN remained inactive until 1971, when another penetration of Nicaragua was secretly carried out. The FSLN remained sporadically active in the remote rural areas until 1974, when it was decided to take hostages to force the release of FSLN terrorists in Nicaraguan prisons.

On December 27, 1974, 13 FSLN members led by Eduardo Contreras Escobar attacked a holiday party in the Nicaraguan capital, Managua, killing 3 people and holding 41 hostages including leading members of the business community and diplomats. The FSLN was granted its demands for \$1 million cash, the release of 14 jailed FSLN terrorists, and a plane to fly them all to safety in Cuba. The Cubans gave the Nicaraguan terrorists a heroes welcome, and introduced Contreras in a Havana radio interview as the man who "one day would impose a Communist regime in Nicaragua." Borge did not take part in that raid, but remained underground in Nicaragua.

The Cubans and the FSLN decided to take full advantage of the psychological offensive with a move into intensive terrorist activity. Castroite support groups in this country, such as the North American Congress on Latin America—NACLA—prepared propaganda attacks on the Nicaraguan Government which contained predictions of FSLN success. As before, however, the National Guard of Nicaragua interfered severely with FSLN plans, capturing a number of its leaders and killing not only the Moscow trained Fonseca Amador, but Contreras as well.

In February of this year, following a public trial, the Nicaraguan Government convicted 35 FSLN members held in jail of major crimes, as well as another 75 terrorists convicted "in absentia." The trial record produced evidence of some 2 dozen bank robberies and

the kidnappings and murders of over 110 people, mostly unarmed villagers, women and children, and village leaders serving as "justices of the peace."

The public record of the FSLN shows the only liberation it holds is a liberation from life into death by the most brutal and degrading methods its torturers could devise.

#### AVIATION FUEL SUPPLY THREATENED

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. GOLDWATER. Mr. Speaker, an old friend of mine recently sent me an amazing article entitled, "Aviation Fuel Supply Threatened," from Flying magazine.

The article describes why we must embark upon a program to obtain gasoline from coal and oil shales, since our oil supplies are finite. It stresses:

First of all, we should never permit the United States to become dependent upon foreign sources for its liquid fuel.

So what makes this article amazing? The fact that it was written by then-Senator J. C. O'Mahoney in April of 1944.

I present this article to my colleagues, for the sake of historical perspective:

IS AVIATION'S FUEL SUPPLY THREATENED?

By Senator J. C. O'Mahoney

There will be plenty of gasoline, enough to win this war and carry aviation and industry over into the peacetime boom already foreshadowed on the horizon—but only if the United States rapidly expands its program for the production of synthetic liquid fuels. Without such a program we shall become an importer of petroleum and thus dependent upon other lands and other peoples for the fuel supply we must have to maintain the commercial and industrial leadership which America now enjoys.

Of course, if we wanted to use every drop of oil we could drain out of existing sources without regard to economy or the building up of reserves, we could probably do a very good job of drying up our petroleum supplies within 15 to 20 years. And we wouldn't have to try very hard at that. But no one wants that to happen.

First of all, we should never permit the United States to become dependent upon foreign sources for its liquid fuel.

Second, we must be able to throw every gallon of fuel needed into the fight to bomb the axis into submission.

Third, in the post-war era, we must be prepared to meet the demands of aviation and industry within our own borders if we are to maintain our position of world leadership.

All of this takes oil. Plenty of it. Unless we are ready to meet these increasing vital demands upon this precious natural resource by supplementing it with synthetic oil from coal and oil shale, we must be prepared to face soaring liquid fuel prices, diminishing supplies and eventual dependence on foreign sources.

It would seem to the casual observer that the United States is the best situated among the warring nations as far as oil supplies are concerned. At least we are credited with supplying 95 per cent of the Allies' aviation

gasoline and we have a petroleum reserve approximating scarcely 25 billion barrels. [Recent statistics of the American Petroleum Institute credit the U.S. with supplying 85 per cent of the Allies' aviation gasoline, and give our petroleum reserve as "not exceeding 20 billion barrels."—Ed.] But that is not the whole story. The factor which many times has not been taken into account is that while the United States has been drilling and developing its oil deposits, the rest of the world has made comparatively small endeavors along the same lines. For example, the United States averages, for its total territory, about one oil well for every three square miles. The rest of the world—and I mean all the rest of it, from Guam to Greenland—averages about one oil well for every 526 square miles.

The future, so far as petroleum is concerned, belongs to Russia and the Persian Gulf, according to the best geological evidence presented to the Senate Public Lands Committee.

The oil areas of the Soviet are vast in comparison to the relatively small undeveloped areas remaining in the western hemisphere. Arabia, Iran and Iraq are equally important in undeveloped oil deposits, according to expert classification. [The American Petroleum Institute recently pointed out that "the eastern foot hills of the Andes, at present virtually unexplored from Venezuela to Argentina, will yield untold billions of barrels of petroleum, which should be more readily available to the U.S. in time of war than those of the Near East."—Ed.]

There is another point to be borne in mind. In the 300 oil fields found abroad in the past 20 years, each has an estimated average ultimate production of 100,000,000 barrels. The average oil field found at the present day in the United States does not exceed 2,000,000 barrels. I want to call attention to the fact that while these areas in the Near East and Russia are of overwhelming importance in the world's oil trade of the future, they are as far distant as possible from the United States. Bahrain, in the Near East, where there is an American refinery at present, is exactly 12,000 miles from San Francisco in either direction. To be dependent upon these foreign reserves in time of war would be very nearly catastrophic. In wartime the chief value of oil reserve or any other kind of material is accessibility—quick, safe accessibility, involving as little risk and waste of time as possible.

Obviously, the demands upon our oil reserve are stepping up rapidly with the increasing Allied strength and fury of air war. When you think of the round-the-clock bombings which our military leaders have planned and accomplished with more to come in ever increasing size, you know that the production of liquid fuel must keep pace with these plans. Our planes are being designed and built with longer and longer range to carry this war not only to Berlin but to Tokyo.

It takes the best fuel we can manufacture to score these crushing air blows against the Axis. We are supplying our military planes with 100 octane fuel—it's not the cheapest, but it's the best. Compare it with a 91 octane gasoline. The plane equipped with 100 octane fuel can develop 26 per cent more power at takeoff, maintain its maximum speed at 1,600 feet higher altitude, its maximum power at 1,200 feet higher altitude and can reach a ceiling 4,000 feet higher. The 100 octane plane can climb to 26,000 feet in 12.2 minutes. It takes the plane using 91 octane fuel 19.4 minutes to climb those same 26,000 feet. Those are the minutes that means life and death to a pilot—and the odds are with our pilots. We are giving them the best. We are burning up our precious oil reserves at a breath-taking rate and shall

continue to do so even more rapidly to bring victory at the earliest possible moment.

The new Boeing B-29 bomber has been built to travel as far greater distance than any of the long range heavy bombers now in use. The War Department has not given out the exact range of the new plane, but this we know—when the B-29 enters combat, today's long range will have become medium range and today's heavy bombers will have become light heavies.

This all means one thing—more and better gasoline will be needed. Although the War Department has not given out the actual consumption of gasoline in particular types of warplanes, it can be stated that 1,000 four-engined bombers on a single six-hour mission will consume 1,800,000 gallons of gasoline. When these mammoth-sized raids over greater distances are made in an all-out war against Japan, it is clear to anyone that civilian industries may not look for any increase in the allocation of gasoline.

Our industrial output during the war has demonstrated the truth of the phrase that production will win the war. It is also true that production will win the peace and the prosperity that is to follow the peace. The United States today leads the world in aviation. The airplane was developed here. Most of the great advances were achieved here. Our planes and flyers have encircled the globe. We have been able to do this not only because of American genius and American craftsmanship, but because we have had the liquid fuel necessary for the performance.

If we are to maintain this leadership in the years following the war we must continue to be sure of our fuel supply.

When our supply of petroleum becomes exhausted we can obtain it in one or two ways, or a combination of both. These two ways are by importation and by hydrogenation.

We've reviewed the reasons why dependence upon importation alone is not safe. That leaves us with the field of hydrogenation to explore.

Petroleum products can be made from coal, and the coal supplies in the United States are so large that we need not worry about them for the next several hundred years. Germany and England are successfully making gasoline from coal on a large scale. Here we have a known process for the manufacture of gasoline which can be improved upon by the scientists of this country.

As an insurance for the security of the nation, the manufacture of this synthetic gasoline from coal should be pushed forward as quickly as possible. Obviously, we cannot use up our present petroleum reserve for war and then attempt an overnight change to coal and oil shale when an acute emergency arises. We learned our lessons on that in the case of rubber.

Private industry cannot be expected to make the expenditures necessary to demonstrate the feasibility of the hydrogenation of coal and oil shale because private companies cannot take the risk.

In the early 1920's, oil shales were generally considered to be our chief source of supplemental oil products. During the last war German scientists developed a process for converting coal and even inferior grades of lignite to liquid fuels. Continued experimentation proved the utility of this process, and after that coal supplanted oil shale as the best source of liquid fuels.

The success of Germany and Japan in producing synthetic fuels from coal during the present war is indication enough that the United States should not lose a moment in starting on the perfection of these processes adapted to our domestic coals.

Producing liquid oil from coal isn't at all so far-fetched as perhaps it sounds. In fact it is quite logical considering that they both derive from living organisms, either plant or animal or both, according to geologic evi-

dence. Compared to normal crude oil, coal contains an excess of carbon. So, to bring it up to the grade of crude oil, hydrogen must be added. This is why the Germans called their process the "hydrogenation" of coal.

Experts have said it is possible to get 85 octane gasoline out of coal. This is about the same as we get out of petroleum until further special processing by the addition of chemicals which brings the fuel up to the level required by aviation.

Vast plants are being operated abroad for the production of gasoline and other valuable hydrocarbons. What is being proposed for the United States is a concrete study of the applications of established techniques to our own engineering economics and study of further refinements. By constructing these experimental facilities, we will, as a nation, be in a better position to cope with petroleum shortages which will face us in the not too distant future.

At the present time our technicians and scientists are somewhat familiar with the details and practices of the foreign countries in these synthetic fuel processes, but there still remains the research in adapting these facts to our numerous types of coals, as well as many factors for commercial development by these methods. We are fortunate to have oil at this crucial period while we are fighting the greatest war in history. But let us remember that we are not going to have it forever.

There is no need for alarm. By making use of our huge coal and oil shale reserves in the production of synthetic gasoline—and setting up the experimental equipment without delay—the United States can guarantee itself all the necessary supplies of liquid fuel and free itself forever from any possible dependencies upon any foreign source.

Fuel is power—and power is the basis of commercial and industrial leadership. In the modern world liquid fuel is an essential element of progress. We must not permit ourselves to run short.

#### A TRIBUTE TO IMAM ABDUL KARIM HASAN

**Hon. Yvonne Brathwaite Burke**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mrs. BURKE of California. Mr. Speaker, it is indeed an honor for me to join the Brotherhood Crusade in a tribute to Imam Abdul Karim Hasan in recognition of his diligence and foresight in guiding the growth of Masjid Muhammad No. 27.

As Resident Imam, he heads an organization that builds spiritual and emotional security while also strengthening economic independence and providing jobs. The activities that Imam Abdul Karim Hasan has fostered include bakeries, fish markets, cleaners, supermarkets, and gasoline stations. These enterprises contribute to the sense of dignity and self-confidence of members of the black community who had previously been excluded from owning and operating businesses.

Earlier in his life, Imam Abdul Karim Hasan overcame the limited opportunities of a child of struggling sharecropper parents in South Carolina to demonstrate his genius as a fiery young minister; first in Hartford, then New Haven and finally in Bridgeport, Conn. As a child, Hasan

was an ardent follower of the Honorable Marcus Garvey. From that early influence grew his sincere dedication toward improving the lives of his fellow human beings.

Today under his direction, the Muslims have moved their Los Angeles headquarters to the former Elks Hall on Central Avenue. His efforts have benefited, not only the Muslim community, but the city as a whole. I am proud to recognize the contribution that he has made to Los Angeles.

#### BUILDUP OF SOVIET NAVY

**HON. BOB WILSON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BOB WILSON. Mr. Speaker, I would like to once again reaffirm my position with respect to the growing threat posed to our country by the accelerated buildup of the Soviet Navy. It now seems that the U.S.S.R. has shifted its emphasis in submarine development from defense against carrier attack to one of sea control—attacking surface shipping.

The Foreign Affairs Research Institute has researched this shift in emphasis and in the following article by Desmond Wettern, the results of that analysis are set forth clearly and concisely:

#### THE GROWING OFFENSIVE CAPABILITY OF THE SOVIET SUBMARINE FLEET

(By Desmond Wettern)

The Soviet submarine fleet has shown a slight reduction in numbers in the past six months to 325, of which 130 are nuclear powered. But, significantly, the cuts have been confined mainly to those few, small submarines in the Soviet Navy which could be considered to have more of a defensive, rather than an offensive, capability and among some older types with a high level of hydrophonic effect—or underwater sound "signature".

The reduction in overall numbers has been more than offset by the increased potential of new submarines.

Since last August, three more Delta class nuclear powered ballistic missile submarines have been completed. These are armed with 12 SSN-8 missiles whose range of 4,200 miles would enable a submarine operating under the Arctic icecap in the Barents Sea to hit targets in North America.

A curious feature of the Soviet submarine building programme which has been puzzling Western observers for some years is the somewhat slow rate of construction of cruise missile submarines. In the past nine years, only 12 of the Charlie class and three of the slightly larger Charlie II type have been completed.

These were believed to be armed with eight SSN-7 missiles which could be launched against surface ships up to a range of 30 nautical miles. The comparatively short range of their missiles was ascribed to the Soviets' realization that a longer range weapon would require mid-course guidance by an aircraft, surface ship or another submarine, to enable the missile to be directed at a target beyond the launching submarine's radar horizon (probably no more than the missile's 30 mile range).

The Russians, it was thought, must have appreciated the weakness of a weapon which had to rely on mid-course guidance in attacking a Western aircraft carrier task

group—the original planned task of the Charlie and the earlier Echo II classes. Since the guidance vehicle would most probably be a Bear long range maritime patrol aircraft, it would be especially vulnerable to destruction by a carrier's fighters.

#### 250-MILE-RANGE MISSILE

But now NATO's Atlantic Command has indicated that the range of the Russians' latest, submarine-launched tactical missiles is 250 nautical miles. It is also believed that the Charlie class are armed with the SSN-3 missile, which has such a range, rather than the 25-30 mile range SSN-7 of which little is known, but which it has been suggested in some unofficial, although authoritative circles, was the weapon initially fitted in the Charlie class.

Apart from the obviously greater potential of a 250, rather than a 30 mile range weapon, the slow rate of building of Soviet tactical missile submarines may well have been due to a deliberate policy of waiting until a longer range weapon was available before embarking on a large submarine building programme.

Two disturbing conclusions follow from this increase in the range of Soviet submarine tactical missiles. Either the Soviet Navy's scientists and technicians are confident that they have a much more secure missile mid-course guidance vehicle such as a space satellite, or they believe that the decline in the number of Western aircraft carriers and the increased commitments these face with the global spread of Soviet naval activity, make the tactical missile submarine and long range patrol aircraft combination a much more viable weapon system.

Another conclusion which may be drawn is that the primary task of Soviet tactical missile submarines has, to some extent, been switched. Instead of being regarded as the principal defense against Western carriers these submarines may now be seen as having a wider role against surface shipping in general.

#### TARGET: WESTERN SHIPPING

The Soviet leaders may well see better opportunities in attacking, or even threatening, Western shipping lifelines than in overt moves against Western, mostly American, carrier forces. To suggest, as do some Western military academics, that there is no reason to suppose the Soviet submarine fleet is seen by the Kremlin as a weapon for interdiction on Western shipping routes and that its task is confined to countering Western carrier forces, overlooks evidence in recent years that the Soviet Navy in the Atlantic has carried out exercises in which some of its own ships have simulated convoys.

Returning to the Soviet Navy's ballistic missile submarine forces, these now have a total missile strength of 748 of which 204 are SSN-8, 4,200 nautical mile range weapons and 544 are SSN-6 weapons with a range of 1,300 nautical miles. To these may be added 110 SSN-5 missiles with a range of 650 nautical miles; but 80 of these are mounted in diesel-electric powered submarines.

The SSN-8 missiles are mounted in 17 Delta class submarines; the SSN-6s in 34 Yankee class submarines, both these types are nuclear powered; and the SSN-5s in ten nuclear powered Hotel II and III and 20 conventionally powered Golf I and II submarines.

There are 40 nuclear powered cruise missile submarines of the Charlie I and II and Echo II classes, each carrying eight missiles and a further 20 conventionally Juliet and Whisky classes of cruise missile submarines mostly carrying four missiles each.

The nuclear powered attack (or torpedo armed only) submarine force is believed to number about 36 boats of which half are of the early, and seemingly unreliable, Novem-

ber class. With twice as many strategic and tactical missile submarines powered by nuclear energy as attack submarines, the ratio in the Soviet Navy of missile to conventionally armed nuclear submarines is almost exactly an inverse of that in Western navies. (The US Navy has 41 missile submarines in service and 10 more building or authorised, but has 108 nuclear attack submarines in service or building while the Royal Navy has four missile submarines and 13 attack submarines in service, building or planned.)

Although two new, apparently nuclear powered, attack submarines are believed to be building for the Soviet Navy construction is still continuing of diesel-electric torpedo-armed submarines. No similar submarines have been built by the US Navy since 1959 nor by the Royal Navy since 1967.

Some of the more recent Soviet diesel-electric submarines are believed to be designed for training anti-submarine forces presumably because, as the Royal Navy has found, it is possible to make such submarines considerably quieter underwater than most nuclear powered types. Nevertheless, the number of diesel-electric submarines of recent vintage in the Soviet Navy is far outweighed by older and noisier boats such as the 90 Whisky class completed between 1951 and 1957. The rate of disposal of the Whisky class (about 240 were built up to 1957) and of the small, 740 ton Quebec class coastal submarines, which were also built in the 1950s, far exceeds that of the construction of new diesel-electric submarines.

#### ALL NUCLEAR POWERED IN 10 YEARS

Within 10 years, the Soviet submarine fleet is therefore likely to be an all-nuclear powered force with the exception of a few conventionally powered training boats. Yet in several NATO navies, it is recognised that nuclear submarines are far from ideal weapons in shallow or confined waters since they need depth to operate efficiently.

In the Royal Navy, the demands made on the surviving 21 diesel-electric submarines for a wide range of exercises are such that there are now serious plans for building more of these useful boats.

It must, therefore, be assumed that the Soviet submarine fleet is increasingly intended for distant deep ocean operations which hardly accords with the requirements of a Navy intended for defence of the homeland. In areas such as the Baltic, Black Sea and White Sea the ideal submarine for defensive purposes would be comparable to the 435 ton boats found in the Norwegian and West German navies—but there is nothing to indicate that the Soviet Navy has any submarines smaller than about twice the size of these Norwegian and West German types.

The disparity in the number of nuclear powered attack submarines to that of missile-armed types indicates that the Soviet Navy is less concerned than some Western experts maintain with the threat from Western strategic nuclear missile submarines. The British and American navies' concentration on the construction of nuclear powered attack submarines in recent years is because such submarines are extremely potent weapons against other submarines.

Not only are these submarines equipped, because of the enormous power resources they can generate, with the most powerful Sonar detection systems in service but also their great diving depth means that they can employ Sonar "passively"—i.e. simply as a listening rather than transmitting device—to detect another submarine. At great depths sound waves are much less susceptible to distortion caused by variations in the water temperature.

For these reasons, were the Soviet Naval leaders bent on improving defences against Western missile submarines, it would seem

highly likely that construction of nuclear powered attack submarines would take precedence over tactical missile-armed types whose primary role must be against surface targets.

Certainly, early Soviet tactical missile submarines did have a defensive role against Western aircraft carriers. But the first American strategic missile submarine has now been in service for 18 years which is quite long enough for the Soviet Navy to have appreciated this threat and to have attempted to counter it with a large-scale programme of nuclear attack submarine construction.

Any missile submarine does, of course, carry torpedoes in addition to its principal weapon, but the employment of such submarines in the anti-submarine role would be a mis-use that would probably make the hunter more at risk than its quarry. In any case it would detract from the missile submarine's primary task as an anti-surface ship weapon.

Two technical factors may also have some bearing on the comparatively slow rate of nuclear attack submarine construction in the Soviet Union. Anti-submarine warfare is a requirement that for many years was seriously neglected in the Soviet Navy largely, no doubt, because the small Soviet merchant marine did not warrant much research and development in this field.

Though a number of measures such as the introduction of anti-submarine helicopters and missiles in surface ships have been taken to remedy this deficiency, Western anti-submarine equipment and techniques are believed to be still far ahead. This may well be true in the field of underwater detection systems—Sonar—and the lack of an efficient submarine Sonar system may have discouraged the Soviet Navy developing anti-submarine submarines.

Since the principal weapon of such submarines is the torpedo, this may also account for their comparatively small numbers in the Soviet Navy. If, as seems likely, Soviet submarines carry some torpedoes of similar type to those in surface warships mistrust of these weapons by Soviet submariners would not be surprising.

The lack of an effective Sonar and the dubious reliability of some torpedoes must be peripheral factors in the slow build up of the Soviet attack submarine force. The vital importance of shipping for the West's survival, and, therefore, the need for a weapon able to attack such shipping at long range and with a good chance of escaping detection undoubtedly swayed the Soviet naval leaders more than any other factor in building up their nuclear tactical missile submarine force.

#### OFFENSIVE ROLE

To sum up:—

Apart from the nuclear ballistic missile submarines, forming part of the Soviet nuclear deterrent, the bulk of the Soviet nuclear powered submarine force has as its prime task in war the destruction of Western surface ships. Since carriers have long ceased to be a principal nuclear strike weapon in the Western armory (a fact of which the Kremlin is well aware) the assumption must be that the main purpose of the Soviet submarine fleet is the destruction of Western merchant shipping.

To suggest, as do some Western experts, that defence against Western missile submarines is the real purpose of the Soviet submarine force is not supported by the evidence available. Therefore, that force must be regarded as having an almost exclusively offensive role since neither the size of the submarines nor their equipment are compatible with what would be required for defensive purposes.

ONE MAN'S STORY OF TEACHING IN  
DETROIT'S PUBLIC SCHOOLS

HON. LUCIEN N. NEDZI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. NEDZI. Mr. Speaker, a few days ago, the Detroit News Sunday magazine published a story by James Treloar on the realities teachers confront in teaching in Detroit's public schools.

The subject is often talked about privately and occasionally written about publicly, but seldom with as much impact as this particular article.

It details the experiences of a man who was born 60 years ago in Poland to a poor Jewish family, wounded in battle, taught school in Russia and eventually made it to America. He says that more than one-half the students graduating from high school leave as functional illiterates.

The teachers are seldom to blame. Every day they face a heartbreaking lack of discipline and motivation. The roots of these attitudes, I believe, are in the home and it is virtually impossible for teachers to do much about that.

Under leave to extend my remarks in the RECORD, the article follows:

A FORMER SOVIET TEACHER TELLS WHY MOST  
DETROIT PUPILS WOULD FLUNK IN RUSSIA

(By James Treloar)

When Morko Nachtajler arrived here from Russia in 1961 he was agog.

To think an American could buy a pair of shoes with what he earns in a couple of hours. In Russia it took two weeks' pay. A suit of clothes had to last 10 years.

Before he came over Nachtajler couldn't have dreamed of owning a car—even though he held the respected and relatively well-paid position of high school principal.

Now he has his own car and drives around to marvel at our freeway system.

Yet there came a night when Nachtajler sat alone in his darkened living room and calmly contemplated suicide.

He's that distressed over what he says passes for education in the Detroit public schools.

Nachtajler (pronounced KNOCKtyler) teaches social studies at Cooley High School in Detroit, where he is recognized as a talented and conscientious worker. But he's the first to admit that precious little education is actually taking place in his classroom.

"More than half the students who graduate here this June will leave as functional illiterates," he says.

And he sees no hope—until teachers, administrators and parents stop warring and begin functioning as a team.

In Russia, Nachtajler says, "Principals are teachers first. They still teach two hours every day. They don't lose touch with what's happening in the classroom. If the principal is a social studies teacher, one assistant principal will be a language teacher and the other will be a science or mathematics teacher. That way there is always help for any teacher who has difficulties.

"At one Detroit school where I taught, the principal sat in on one of my classes and he couldn't understand what I was talking about. He didn't have the background for it.

"Still, it was unusual that he came to my class at all. In most schools today there's no time for that. Do people really believe that our school principals are supervising class-

room instruction, analyzing teacher performance, improving methods of teaching, helping inexperienced teachers, finding other jobs for incompetent teachers?

"My principal at Cooley High is a fine, intelligent man. I respect him. But he can't be an educator. He's a crimefighter. He has to use all his energy protecting students and teachers from physical violence."

Nachtajler's worst day at Cooley High came when a teen-ager barged into his classroom, grabbed one of Nachtajler's students and beat him bloody.

"I was shocked that this could happen in a school," Nachtajler says.

But for him, the beating and the disruption of his class wasn't the only awful thing.

"The other students sat there—and smiled!" he says, still wincing over an incident that happened three years ago.

That was the night the teacher from Russia went home, and in the darkness of his living room calmly contemplated taking his life.

Things are improving at Cooley High, he says, though, "just three weeks ago one of the students attacked an assistant principal."

Nachtajler was born 60 years ago in Poland to a poor Jewish family. When his sister married and came to America she began sending her parents \$10 a week. It was enough to let them live well—and to send Nachtajler to school.

In 1938, with war clouds looming, Nachtajler was taken by the Polish Army and sent to cadet school. He wasn't there a year when the German blitzkrieg struck, and Nachtajler was sent to an artillery unit near Danzig.

Then he got the luckiest break of his life—he was severely wounded by flying shrapnel. He was sent to a hospital near the Russian border. When the Russians attacked Poland he became a prisoner-of-war.

The rest of his family was taken by the Germans. They perished at the infamous Auschwitz concentration camp.

Nachtajler and 1,400 others were sent to Russia to perform war work for the Soviets. "I cradled many a dying man in my arms," he remembers.

When the Germans attacked Russia Nachtajler and his comrades were shipped to Siberia.

He was one of a half-million prisoners that Russia freed during the war. He couldn't return home to Poland—so he enrolled in a Russian college.

Soon after the war ended he became a teacher, then principal in a Russian high school near the Romanian border.

At night he would pull his shades and listen to the Voice of America. Coming here, and rejoining his sister, became a dream, then an obsession. He talked his way into getting a passport to Poland—and immediately applied for immigration to America. He hasn't regretted his move, but he can't understand American attitudes toward education.

"Education is valued in Russia—teachers are valued," he says. "Here you treat teachers worse than garbage collectors.

"On the first and last days of school every year the Russian children would bring me bouquets of flowers. Then, after school, they'd help me carry them home.

"There was no vandalism in school.

"Did you know that \$9,000 worth of textbooks were destroyed by students at Cooley High last semester alone?

"And that the taxpayers buy them new ones?

"That would never happen in Russia. The only vandalism we had was maybe once a year a broken window. And when that happened the student's father paid for it. You don't charge the taxpayers for somebody's vandalism!

"But in Russia we indoctrinated the students. Every week or two I would get on the public address system and give them a little talk about taking care of their books or showing respect for their school building.

"In the 16 years I have been in America I have never heard a principal tell his students that vandalism is wrong. That stealing is wrong. That attacking a teacher is wrong."

In Russia, Nachtajler's day began at 7:45 a.m. by greeting teachers and students as they entered the school building. He remained in the hall about 10 minutes after the 8 o'clock bell to give late-comers a chill welcome. It was a practice that made tardiness almost non-existent.

During the second hour Nachtajler taught one of his two classes for the day—American history.

At least once every day he sat in on another teacher.

"When I came in the students would all stand. Every one of them had a notebook, pencil, pen and book ready to start the lesson.

"If the teacher's lesson wasn't good, I found out why, and I helped her. If the lessons were repeatedly bad, an assistant principal was assigned to her for several weeks until she learned how to make good lesson plans or how to conduct a class discussion—whatever the problem was. If that didn't work, she was sent to a special teacher-improvement institute for the summer. And she had to go.

"Here," he says, "there is no control over the teacher in the classroom. It doesn't exist, even in the best schools. I have seen teachers who don't teach at all. They don't know what to teach or how to teach—and the principal doesn't give a damn!

"In America we have built a Chinese Wall between teachers and administrators. They even have two different unions. They aren't a team—their concerns are completely different.

"The students—they get passed along whether they know anything or not. In Russia there are no grammar lessons in high school. You must know your grammar before you get to high school—or you aren't allowed in. In high school it is time to start on literature, not to waste more time on grammar.

"But I have seen 12th-grade students here who still don't know their English grammar.

"Worse than that, I have seen 12th-grade students here who wouldn't have passed the fourth grade in Russia.

"One hour I have study hall, and a student came to me asking for help with his mathematics. He showed me the problem—'How many 45's are in 90?' That's no problem for a high school student. That's for children. But he still didn't know the answer! In Russia—and not just Russia, but in any European school—any fourth grader would have known that answer. ANY fourth-grader!

"I'm not taking anything away from the teachers at Cooley. They are one of the best teaching staffs in town, and they work hard. But the students are not prepared. They have no background for high school.

"In Russia no student can pass the first grade unless he knows his multiplication tables. No one can. So they learn it. Here I have seen 12th-graders who don't know their multiplication tables. Why should they, when they know they can graduate without learning it?

"It's this thing you call 'social promotion.' Students get passed along whether they know anything or not.

"What's so 'social' about it? Most of the crime committed in Detroit is by young people who aren't getting an education!

"Social promotions are a sickness we have in this country."

OCCUPATIONAL SAFETY AND  
HEALTH ADMINISTRATION

HON. MICHAEL T. BLOUIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BLOUIN. Mr. Speaker, yesterday I had the privilege to appear before the House Small Business Committee's Subcommittee on Energy, Environment, Safety and Research. The subcommittee is holding hearings on a subject of urgent concern to small businessmen and women throughout this country—namely, the Occupational Safety and Health Administration—OSHA.

Two small businessmen from my district appeared before the subcommittee at my request to explain their personal experiences and their personal opinions about OSHA. As I told the subcommittee, their experiences are not unique, but they are typical and they represent the type of problems which we should seek to address as quickly as possible.

If there is no objection, Mr. Speaker, I would like to enter for the RECORD the text of my prepared remarks and the testimony of my constituents before the subcommittee:

## TESTIMONY OF HON. MIKE BLOUIN

Mr. Chairman, members of the subcommittee, as you are no doubt well aware, this is a particularly appropriate time for the subcommittee to launch its oversight hearings into occupational safety and health. This is, as you know National Small Business Week—and perhaps no one has been more severely affected by OSHA regulations than the Nation's 9.8 million small businesses.

It is particularly timely from another aspect as well: Secretary of Labor Marshall only last week announced a major shift in the administration of the OSHA program, designed to eliminate or simplify complicated OSHA regulations and to concentrate on the most serious and immediate health and safety problems faced by American workers.

I want to be among the first to say—and I'm sure you will hear this again and again in the course of these hearings—that such a redirection within OSHA is long overdue. For too long, OSHA has seemed to concentrate on the implementation and enforcement of a multitude of safety standards which even its administrators admit are "Mickey Mouse." The overabundance of complex and essentially unnecessary regulations have made life almost unbearable for the Nation's small business men and women; as a result, those small business people have grown even more disillusioned—and not infrequently, disgusted—with Government's misguided and often obnoxious interference in what are basically family-owned and family-operated businesses.

I want to say, Mr. Chairman, that this subcommittee should be commended for taking the lead in helping streamline OSHA administration and regulations. Your leadership can help reorganize and redirect a program which is, in concept at least, a very important part of our effort to protect the health and safety of the Nation's working men and women. The challenge, I think, is to do that without imposing useless and unnecessary burdens on small business.

As you proceed, Mr. Chairman, I hope you will keep in mind the experiences and suggestions of these two individuals from eastern Iowa. They are by no means unique; their experiences and their impressions are typical

of small business men and women throughout Iowa and throughout the country. Like most of us, they recognize the need to insure the health and safety of working men and women, but they are confused and often angered with such efforts when they actually force small businesses to close down.

## TESTIMONY OF CHESTER SOLOMON

Mr. Chairman, I am Chester Solomon, president of Dubuque Gases and Steel Company, Dubuque, Iowa.

I want to thank you for this opportunity to speak to you today. I am here representing my own company and the Association of Steel Distributors, Inc. of which I am vice-chairman of the Government Relations Committee. The ASD is a national trade organization representing over 240 small businesses.

We have some concerns which we hope your committee will be able to address in this congressional session.

Small business has always been particularly plagued with problems with OSHA. One problem is that immediate arbitrary penalties imposed by OSHA inspectors are wrong. There should be no penalty for at least 90 days. After an OSHA inspection I feel a citation for any wrong doing should be issued and then if not corrected within 90 days a penalty could be imposed. After issuing a citation OSHA should allow the employer to figure out how to correct the infraction, because I feel many times the employer can do it faster, better, and cheaper than OSHA. OSHA inspectors should not be allowed to suggest a remedy for an infraction if that remedy has not yet been invented.

Nonpunitive OSHA inspection upon request would be helpful. We feel that OSHA's posture should be one of helpfulness rather than as a punitive force. This would be particularly helpful to small businesses who, unlike large companies, cannot afford a highly trained and knowledgeable specialist on their payroll. If expensive changes must be made which would hurt the company financially the Small Business Administration should be mandated to lend the company money at a very low interest rate (such as 4 percent) over a ten year period of time to insure that the company can meet OSHA requirements and not have to go out of business in doing so.

Another problem I have seen is that employees, not employers, do not abide by OSHA regulations. Therefore I feel a change in the law should be made to give employees citations for their carelessness.

For example, I have told employees to wear hard hats. They do so for two days. Then when I find the employee without a hard hat, his excuse is it was too hot or too cumbersome. If greater insistence is made on the issue, the ultimate conclusion is a grievance between management and union. If there is a law for employers on OSHA the same law should apply for employees. Employees should have personal responsibility for their own safety.

A third problem is the regulations of OSHA are too technical for the average individual to understand. Employers have always been concerned with safety because in the long run it benefits the company as well as the individual. As an example, workmen's compensation rates are lower for a safe operation. I feel OSHA should formulate its standards in more clear and concise language so that employers and employees unfamiliar with technical terms can understand what is required of them.

Elimination of immediate arbitrary penalties, Small Business Administration relief, nonpunitive OSHA inspection upon request, employee as well as employer responsibility, and more clear, concise, language in OSHA regulations are only a few of the more important problems that confront us.

Because of the allotted time, which I can appreciate, it is difficult for me to go into any great detail on any of these issues. I would welcome any opportunity to meet with your staff members for further discussion.

Thank you.

## TESTIMONY OF HAROLD BENGSTON

Mr. Chairman, on January 31, 1975 my company, Bengston-Carlburg Construction, was installing sewer pipe on Main Avenue and Highway 136 in Clinton, Iowa. Previously we had been using ditch jacks and cribbings to shore up the sides of this ditch which was five to six feet long at the bottom, four feet wide, and nine to ten feet deep. My procedure for laying sewer pipe is to dig a ditch five feet in length, dig down three feet deeper than the floor of the ditch is required to be in order to lay pipe, and then fill in that excess with three feet of two inch clean rock to make a firmer floor to work on. I have found that to be safer than digging longer ditches.

On this particular job we had already laid in the three feet of two inch clean rock and used ditch jacks and cribbings to shore up the walls. Due to bad weather conditions we had been away from the ditch for a few days. When we arrived on the morning of January 31, I saw immediately that a portion of one of the walls had collapsed into the ditch. Further investigation showed that the cause of the collapse was a hidden pipe above the floor of the ditch which we had previously been unaware of. I then called for someone to get a trench box, or steel box, to be used to shore up the walls of the ditch as per to OSHA regulations. While we were waiting for the trench box to arrive clean-up began on the ditch itself. The dirt that had fallen into the ditch was placed in a nearby truck, where we had also placed dirt taken from the floor of the ditch, which was removed to leave room for the three feet of two inch clean rock. Two men went into the ditch to check the grade of the pipe and check damages.

It was at this time that the OSHA inspector arrived at the job site. He measured the ditch from the top instead of from the bottom as per OSHA regulations: he took soil samples from the soil that was in the truck (where soil cleaned from the ditch that day had been placed.) He shut down the job at this time and would not listen to explanations. Bob Lyons, a Clinton city inspector who had been on the job every day with us, tried to explain to the OSHA inspector what had transpired that day, and also all the measures that I had taken to insure a safe job site. The inspector would have none of that and went to city hall to complain that Lyons was interfering with OSHA regulations.

When I went to the hearing in Des Moines I found the State of Iowa represented by five people and myself alone. The review board consisted of people that had never had contact with construction work of any kind as a job, let alone laying sewer pipe. I was not surprised when they would not listen to all the things that I had done to comply with OSHA regulations and maintain a safe job site. For your information I have copies of a letter that my insurance company wrote for me to take to the OSHA hearing and also a list of those things that I have done to try to comply with OSHA regulations. The review board in Des Moines said that everyone is supposed to do the things I have done because it is the law. It is my experience that most people do not go to the extent that I do in trying to maintain a safe job site.

The board fined me \$517 for a violation that I do not feel was justified. I have twenty-two years experience laying sewer pipe, and the inspector and the review board had none. My recommendations are as follows:

1. Those that give the inspections should undergo more extensive training to insure that they are qualified to give those inspections.

2. The review board should consist of contractors in specific fields where the violation has been cited or have a working knowledge of that area.

3. A contractor should not be penalized for an unsafe action that an employee does that he has been told and taught repeatedly not to do.

4. Adjust fines in relation to the gross corporate profit of the business—for me the \$517 fine ended up being 20 percent of my corporate profit and I feel this is wrong.

5. There is no way to cover changing a work situation in the OSHA regulations, as I was doing the morning of the 31st. Have the inspectors listen to the reasoning of the contractor involved and other experienced persons, such as the city inspector.

6. Work toward cooperation—encourage contractors to have the OSHA inspections, but do not fine them when inspection is requested to determine what is wrong at their job site. OSHA changes so much, the small businessman needs help in keeping up with the regulations.

#### PANETTA HONORS FAMILY FARMERS

#### HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. PANETTA. Mr. Speaker, I want to draw the attention of my colleagues to seven family farmers who were recently honored by the Monterey County Historical Advisory Committee for their dedication to family farming in America. Each of these families has owned and continuously operated a farm or ranch in Monterey County for 100 years or more and has actively contributed to the agricultural production of the community and the State.

It gives me great pleasure to honor these family farmers since I feel they exemplify the foundation of agriculture in this country. Their example serves as a reminder that we, too, must reaffirm our commitment to the survival of family owned farms and act decisively to encourage and protect their existence in face of the new challenges represented by the corporate invasion into agriculture.

I insert a brief description of each of the family farms which have been chosen to be honored:

**Los Lobos Ranch**, owned by Mrs. Paul Aurignac, Mr. and Mrs. Albert Aurignac, Leslie Aurignac, Mrs. Jacqueline (Aurignac) Traynor. In 1871, Justin Gotux, a soldier in Napoleon's Army in Mexico acquired 629 acres of land in Monterey County. A nephew, Eugene Pierre Jules Aurignac acquired 640 acres from the original owner in 1927 and began raising sheep, pigs, horses, and barley. Paul Aurignac, nephew to Eugene, acquired about 320 acres of the original farm in 1933. Paul was the first farmer in the area to introduce new methods of range clearing, fertilization, and seeding; to build grain tanks and to use discing instead of the plow. Paul died in 1970. Mrs. Aurignac and her children continue to operate the ranch.

**Martinus Ranch**, owned by J. H. Martinus

& Sons and Mrs. Pauline Hedden. Jan Henry Martinus immigrated to Monterey County from the Isle of Fohr in the North Sea in 1874, settling in the San Antonio Valley at Lockwood on 160 acres. In 1923, the land passed by succession to J. H. Martinus's sons Henry, Simon and Phillip with an addition of some 4,000 acres to the original holding. In 1935, the land passed to Jan Henry Martinus, the grandson of the original owner and his children. Mr. Martinus continues to handle the everyday operation of the ranch. Having developed the first irrigated farming in Lockwood, the family has a long record of association with the Agricultural Extension Service.

**Palmer Ranch**, owned by Mr. and Mrs. Nelson Palmer. Samuel Palmer migrated to the Priest Valley of Monterey County from his native state of New York in 1870, homesteading 640 acres for raising cattle, pigs and grain farming. Charles Nelson Palmer, born on the ranch in 1871, acquired the land in 1910. Nelson Palmer, the original owner's grandson, took over operation of the ranch in 1948 and has since added 480 acres to the original holdings. He and his wife continue to raise cattle, pigs, oats, and barley. Irvin J. Palmer, Nelson's son, is working the land today.

**Rail Cattle Company**, owned by Jack Reynolds. John Reynolds accompanied his father as a boy to the United States from their native England, settling for a time in New York State. At about fifteen years of age, John went to Michigan and worked for the railroad. He remained in Michigan until the outbreak of the Civil war in 1860, when he enlisted in the Union Army. He was wounded in action in late 1862 and returned to Michigan. In 1867, he married Ada H. Green and moved with the Green family to California. The Reynolds first home in Monterey County was built of oak shakes and mud on their homestead in 1868. At the death of John, his wife Ada and the children took over operation of the ranch, raising cattle, pigs and grain. Between 1909 and 1914, two sons, Arthur and Elmer, took over the operation of the farm and in 1953, Jack Reynolds, grandson of the original owner took possession and is currently raising beef and grain on the farm.

**San Bernardo Rancho**, owned by Mrs. Walter Rosenberg, Janet Lynch, Gordon W. Rosenberg, Ruth Ann Rosenberg, Mrs. Margaret Duflock, Meyer Brandenstein and a partner, Lazard Godchaux, owned and operated a slaughter house in San Francisco. As the city limits expanded, the partners needed to move their business out of the city. The San Bernardo Rancho was purchased in 1871 and consisted of 13,284 acres. Although cattle raising was the chief concern of the ranch, experiments with apples, apricots, almonds, pears, plums and Eucalyptus trees were conducted. Joseph Rosenberg, Brandenstein's son-in-law took over the ranch and operated it until his death when his son Walter assumed control of the property. By 1940, the ranch contained 20,000 acres. Today, the family raises cattle and produces tomatoes, lettuce, sugar beets, carrots, and beans.

**Smith-Copley-Taylor Ranch**, owned by Mrs. Arthur Taylor. Samuel Smith immigrated from England to America in the mid 1860's and acquired 160 acres of farmland from a squatter named McKee. Samuel Smith's children, William, Elizabeth Smith Copley and Nellie Smith Bray acquired the land by inheritance in 1918. By that time the ranch had been expanded to 400+ acres raising barley, wheat, hay and cattle. In 1969, the founder's great granddaughter, Wilma Copley Taylor inherited the ranch, expanding the operation by 1,213 acres.

**Rancho San Lucas**, owned by Julius Trescony, Louis Trescony, Mario Trescony, Julian Trescony. Alberto Trescony, a major figure in Monterey County agricultural history came

to the area as an adventurous youth and acquired the ranch in 1842. Alberto Trescony increased his original 8,800 acres during his lifetime by 31,200 acres. In 1892, Alberto's son, Julius A., acquired the land and began raising pigs and horses, in addition to the cattle and wheat raised by his father. In 1928, Julius G., the son of Julius A., acquired 11,500 acres of his father's land and has operated it since that time with his three sons Louis, Mario, and Julian.

#### CONFERENCE OF MAYORS SUPPORTS CONSUMER PROTECTION ACT OF 1977

#### HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. RODINO. Mr. Speaker, my good friend, Mayor Kenneth A. Gibson of Newark, has long been in the forefront of the effort to provide effective rights and protection for our Nation's consumers. Recently, as president of the U.S. Conference of Mayors, he wrote the members of the conference to urge their help in making known the strong support of the conference for H.R. 6118, the Consumer Protection Act of 1977. I would like to include in the Record Mayor Gibson's letter of endorsement:

U.S. CONFERENCE OF MAYORS,  
Washington, D.C., May 19, 1977.

DEAR MAYOR: In 1972 at our 40th Annual Conference in New Orleans, the United States Conference of Mayors expressed its strong support for efforts directed at preserving consumer rights. At that time, such endorsement was in the form of a resolution calling for increased consumer-related services by the Federal government to local governments. Once again, the Conference is voicing its concern regarding consumer awareness by supporting the Consumer Protection Act of 1977—a bill establishing a non-regulatory independent federal agency to advance the interests of consumers before Federal agencies and to provide the public with information about consumer matters (H.R. 6118 and S. 1262).

On April 20, 1977, on behalf of the Conference, our colleagues, Mayors John D. Krout of York, Pennsylvania and Richard Hatcher of Gary, Indiana testified before Congressman Jack Brooks' Subcommittee on Legislation and National Security of the House Government Operations Committee in support of the establishment of this agency. Mayor Krout noted that the proposed agency would do much to eliminate prevalent "overlapping" Federal agency jurisdictions and activities, and would cut through the duplication and red tape that we all experience when dealing with Washington. Mayor Hatcher endorsed the bill calling it a "giant step" towards providing more efficient and responsive government by bringing under one umbrella those consumer-related activities now assumed by an inordinate number of Federal agencies. The Conference believes that passage of this legislation would improve lines of communication between consumers and businesses by providing for citizen participation, a vehicle for informal dispute settlements, a better climate for the honest businessman or woman, and by protecting our constituents' interests in controlling price increases on federally-regulated goods and services, such as natural gas, heating oil, airfares, and generic drugs. Through the Con-

sumer Protection Act of 1977, Congress is giving us the opportunity to help in shaping federal policies and regulations before they are handed down by Washington.

In a message to the Congress, President Carter recommended the creation of this consumer protection agency. For your information, I have enclosed a copy of that statement. The Conference wants very much to assist President Carter in making the Consumer Protection Agency a reality. However, this cannot be done without your assistance.

As Mayor Krout testified before the Congress, the area of consumer awareness is one whose "time has come," and where governments at all levels must respond. Here is our opportunity.

We expect that this bill may be considered by both Houses of Congress as early as June 1, 1977. Therefore, as President of the Conference, I am asking that you contact the Senators and Representatives from your state and urge that they support the Consumer Protection Act of 1977.

Thank you for your cooperation in this important issue.

Sincerely,

KENNETH GIBSON,  
President,  
Mayor of Newark.

#### THE BICENTENNIAL CELEBRATION OF WASHINGTON, MASS.

#### HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. CONTE. Mr. Speaker, even as the Nation's capital recovers from last year's Bicentennial celebration, another Washington will be commemorating its 200th birthday during the summer. A year ago, the small New England town of Washington, Mass., joined the rest of the country in the remembrance of its heritage and history. This summer the same town, one of the first named for one so important in our Nation's struggle for independence, will be concerned with the celebration of its own history and heritage. Among the many activities which have been planned are a Bicentennial Ball, a family day, a parade, and an arts and crafts fair.

Like most of western Massachusetts, Washington, derives much of its beauty and brilliance from the Berkshires. Situated in the Green Mountain range, at the eastern end of Berkshire County, the township is blessed by all of nature's adornments: hills and valleys, streams and ponds. The town had various owners and proprietors, and various names before it was incorporated as Washington on April 12, 1777. Much like the surrounding countryside, Washington's history has had its peaks and its valleys. The late 18th and early 19th centuries saw the town develop into a successful farming and mill community. But between 1810 and 1820, over one-fifth of the town's 949 inhabitants abandoned their prosperous farms for the promise of greener pastures to the west. Washington rebounded in the 1830's, when it served as one of the major rest areas on the main road from Pittsfield to the east. The

population increased to 1,000 during this period, and by 1855, the successful cattle ranches and sawmills had made Washington a wealthy and prosperous community. But prosperity brought its perils—the railroad ruined the local farmers by providing western New England with beef which undersold the local product, while the forests, which supplied the mills, were soon depleted. This resulted in an exodus which reduced the town's population to 250 soon after the turn of the century.

Today, Washington has a population of over 400 devoted citizens. It is one of the many areas of which we in western Massachusetts are very proud. Several historic buildings have been dutifully preserved in Washington. Most notable among these are the old school house, the old town meeting house, and the 78-year-old St. Andrew's Chapel. Within the limits of the town is the 11,000-acre October Mountain State Forest, which provides welcome refuge for campers, vacationers, and sightseers.

At a time when many people in other areas of the country have a misconception of New England as just one part of the northeastern megalopolis, which stretches from Boston to the District of Columbia, I believe it is important to single-out towns like Washington, Mass. True to form, there are skyscrapers in Washington, Mass., but these skyscrapers are the Berkshires themselves, rising into the heavens in all their beauty. It is the scenic small town, like Washington, Mass., that makes New England the beautiful place that it is. On the occasion of Washington's 200th birthday, I send the town my heartiest congratulations, and my best wishes for a successful and exciting summer celebration.

#### HEARINGS ON THE ARTS IN EDUCATION

#### HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BRADEMAS. Mr. Speaker, as chairman of the Subcommittee on Select Education, I wish to announce that hearings will be held by the subcommittee on Wednesday, May 25, on the subject of the role of the arts in education.

The hearings will focus discussion on a report on the significance of the arts for American education to be published this week by a panel headed by David Rockefeller, Jr.

The report, "Coming To Our Senses," the result of a 2-year research effort by a group of 25 prominent educators, artists, businessmen, and scientists, calls on the Nation to emphasize the arts as "basic to individual development since they more than any other subject awaken all the senses."

Witnesses at the hearings will be David Rockefeller, Jr., chairman, the Arts, Education and Americans Panel; Barry Bingham, Sr., editor, Louisville Courier-Journal; Peggy Cooper, founder, Workshops for Careers in the Arts, Washing-

ton, D.C.; and Edward K. Hamilton, president, Griffenhagen-Kroeger, Inc., public management consultants, San Francisco, Calif., and former deputy mayor, New York City.

In addition, the subcommittee will hear testimony from Pearl Bailey, entertainer; Lorin Hollander, concert pianist; Norris Houghton, dean emeritus and professor of theater arts, State University of New York, college at Purchase; Elizabeth J. McCormack, Special Assistant to the President, Rockefeller Brothers Fund and former president, Manhattan College; James A. Michener, author; Glenn T. Seaborg, professor of chemistry, University of California, former chairman of the U.S. Atomic Energy Commission and coreipient, Nobel Prize for Chemistry, 1951; and John Calkin, director of medical studies, new studies, New School of Social Research, New York, N.Y.

The hearings will be held in room 2175 of the Rayburn Building on Wednesday, May 25, beginning at 9:30 a.m.

#### SHAMEFUL PERFORMANCE BY THE HOUSE ON H.R. 10 AS OBSERVED BY REPRESENTATIVE KOST- MAYER

#### HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. KOSTMAYER. Mr. Speaker, while I have served in this House for only 135 days, I must sadly say that for the first time I found the performance of the House last Thursday evening to be shabby and shameful.

The manner in which we considered H.R. 10 during the late hours of that session reflects discredit on every Member on both sides of the aisle.

The effort to cut off debate was uncalled for and is almost always inappropriate in my opinion. But our consideration of a half dozen amendments to an important bill in only a matter of minutes, caused confusion and chaos on the floor and compelled me and other Members to vote present on two amendments.

I will not pass judgment, either affirmative or negative on legislation which is considered in the manner those amendments were considered last Thursday night. I sympathize also with those Members who simply voted "no" in protest of the manner in which we were conducting ourselves.

Our performance here last Thursday evening gives credence to the old adage that there are two things one should never watch being made—sausage and legislation.

During the discussion of those amendments no more than a handful of my colleagues knew what the amendments stated.

I will continue to vote present under such circumstances, and I honestly hope that we will never again be faced with such a situation as we were last Thursday.

# CONSTITUTIONAL AMENDMENT FOR BALANCED BUDGET

## HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. FINDLEY. Mr. Speaker, last week I voted against the budget resolution. I did so with a heavy heart because I had truly hoped that I might be able to support the first budget resolution to come through Congress.

Six years ago I became convinced that what was needed in order to control ever rising national debt and budget-busting deficits was greater discipline in spending on the part of the Congress of the United States. I felt that if only Congress were required to plan a budget for the entire country the way American families plan their own budgets, spending and income would automatically come into balance.

In the past, the practice was for Congress to pass individual appropriation bills without ever comparing them to total revenues or even adding them up to see what total Federal spending would be. In addition, "back door" financing was common. Congress had completely lost control of the purse strings of Government. Federal deficits grew each year and with them the danger of inflation.

Finally, in 1974 the United States underwent a disastrous period of double-digit inflation followed by the worst economic setback since the Great Depression of the 1930's.

Mindful of the dangers posed by uncontrolled Federal deficits, early in 1973 I introduced the first budget control bill which was designed to require the Congress to establish a budget for the entire Federal Government before beginning the appropriations process. Similar legislation was subsequently enacted into law and this year, for the first time, Congress will enact a budget for fiscal 1978 that sets strict ceilings on all major categories of Federal spending.

There is only one problem. This budget calls for a planned deficit of \$66.2 billion. It is the third largest deficit in our Nation's history, including the war years. Worse yet, it follows on the heels of budget deficits for fiscal 1976 and 1977 which were the two worst in history. It does nothing to cure the growing cancer of deficit spending and the resulting inflation. That was the primary reason Congress set up these elaborate budget procedures. Measured against that standard, it must be admitted that Congress has failed miserably in its purpose. In fact, some will think that this new budget procedure tends to legitimize such extraordinary deficits and that in some way lessens the danger of inflation. But they are wrong.

Once again, renewed inflation is surging through the American economy. In February, consumer prices rose a full percentage point, equal to the double digit annual rate of only 2 years ago. Food prices increased by 2 full percentage points in 1 month alone. In March, inflation continued at a rate of .6 percent for

the month. According to the Department of Labor, a family of four must have over \$10,000 a year just to maintain an austere living standard, without any frills whatsoever. In many areas of my congressional district, the average family income is much less than that.

At the same time, Government continues to grow unabatedly. Regardless of which administration is in power, new Federal programs are enacted with their plethora of new rules and regulations and Federal employees to enforce them. President Carter, who campaigned on a promise to cut the White House staff, has instead permitted it to increase substantially. His predecessors fared little better. The inexorable growth of Government at all levels is without question the most serious and least understood of all problems facing our Nation today. If it is not brought under control, it will bring the United States to its knees. Already Federal, State, and local governments are spending 40 percent of our national income. More than any other factor, this uncontrolled spending is responsible for our stagnant economy.

With the threat of renewed double-digit inflation and the primary cause, deficit spending, still unchecked despite the existence of the new budget procedures, it is apparent that even stronger measures are called for.

Therefore, I am today introducing a constitutional amendment which requires the Congress to balance the budget except when three-quarters of the Members of each House determine that a national emergency exists. Further, my constitutional amendment provides that over a period of 20 years, receipts would have to exceed expenditures by 5 percent each year so that the Federal indebtedness, instead of continuing to grow, could actually be reduced.

This is unquestionably strong medicine. There is no question that it would require a major restructuring of the way in which Congress and the American people look at Federal programs. Many would have to be cut back.

But I think that the danger of uncontrolled inflation and inexorable Government growth pose the greatest threat to our economic security, indeed to the personal liberties we all cherish. And I have reluctantly come to the conclusion that nothing short of a constitutional amendment will stem the swelling tide which threatens to engulf us all.

Text of constitutional amendment follows:

Joint resolution to amend the Constitution of the United States to provide for balanced budgets and elimination of the elimination of the Federal indebtedness

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within three years after its submission to the State for ratification:

### "ARTICLE —

"Sec. 1. During the first fiscal year beginning after the ratification of this article and

for each succeeding year thereafter, total outlays of the Government shall not exceed total receipts.

"Sec. 2. During the second fiscal year beginning after the ratification of this article and for the next nineteen succeeding fiscal years thereafter, the total receipts of the Government shall exceed outlays by an amount equal to 5 per centum of the Federal indebtedness during each fiscal year.

"Sec. 3. In the case of a national emergency, Congress may determine by a concurrent resolution agreed to by a roll-call vote of three-fourths of all the Members of each House of Congress, that total outlays may exceed total receipts: Provided, however, that outlays shall never exceed receipts by more than 10 per centum.

"Sec. 4. Thereafter, whenever the Congress determines under section 3 that an emergency exists and authorizes outlays to exceed receipts, any indebtedness ensuing therefrom shall be extinguished within three fiscal years of being incurred.

"Sec. 5. The Congress shall have power to enforce this article by appropriate legislation."

## JIM WRIGHT RECEIVES HUMANITARIAN AWARD

### HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. SCHEUER. Mr. Speaker, our distinguished majority leader, JIM WRIGHT, received the Humanitarian Award of the Union of Orthodox Jewish Congregations at a dinner in the grand ballroom of the New York Hilton Hotel in New York City on May 15, 1977. In accepting the award, he gave a speech that is stirring in its quality and inspirational in its tone. I was in the audience and observed how JIM's remarks deeply moved the large audience of over 1,000 people. JIM WRIGHT's thoughts echo my own and I commend them to you:

### REMARKS OF JIM WRIGHT

To be invited to share this occasion with the Union of Orthodox Jewish Congregations is a gracious and moving compliment.

To be chosen as the recipient of your Humanitarian Award is undeserved and overwhelming.

It reinforces my conviction that humanity is one.

When we contemplate the thread of compassion so inseparably interwoven into the sometimes tattered fabric of our common civilization, those superficial differences between Christian and Jew disappear like hot breath in a looking glass before the cooling breeze of reason.

As a youth I thought that the Golden Rule was distinctively Christian in origin. And then I read from the Jewish scholar Hillel who taught:

What is hateful to you, do not to your neighbor.

This is the whole Torah. All else is commentary.

And that is our common heritage.

In the intervening two millennia, much as they had before, men have acted as though this were not so. Where we should have built bridges of understanding, we have erected walls of separation. We have constructed artificial barriers of alienation and hostility between the nations, between the ethnic races, between the social classes, between the economic strata, between the generations of

man, and between those who pursue diverse paths to serve the same God.

Each of us has listened to the shrill voice of his own self-aggrandizement until, like the inheritors of the Tower of Babel, we seem at times to have lost the one thing that sets man above beast—the capacity to communicate with one another.

We speak words, but the words do not convey thought because each of us wants so much to be understood and cares so little to understand.

How sad—how infinitely sad—that throughout the world in conflicts between close neighbors and ancient kin both sides claim the right to such terms as "liberation" and "self-determination," yet neither can hear the heartbeat of the other above the frenzied chatter of machine guns and the whine of bombs and mortars. And because they do not sit together and talk, men go on dying and infants crying at mothers' breasts that ooze blood instead of milk.

And yet how hopeful that together tonight we celebrate the eve of Jerusalem Day. Ten years ago the holy city was reunited and re-established as the world's symbolic City of Peace.

As in so many celebrations, happiness is tinged with sadness. Ten years ago, Jerusalem lay in a rubble of ruin. Even as prayers went up from the Western Wall, the city's desolation lay all about. Thirty-four of Old Jerusalem's 35 synagogues had been destroyed. Where students once had studied justice, there spread the cruel reminders of man's inhumanity to man.

Today, ten years later, the rebuilding goes on. I am particularly gratified to note that your Guest of Honor, Mr. Falk, and the recipient of your Distinguished Service Award, Mr. Stollman, are leading your fine organization, the Union of Orthodox Jewish Congregations of America, in building your own Seminar Center in Jerusalem. The light which illumines mankind has been rekindled, and with it a solemn pledge.

As humanity is one, so Jerusalem is one. It must never again be divided.

Ten years ago, just weeks before the Six Day War, I visited Israel. With sudden clarity I perceived the meaning of those words from Deuteronomy: "Thou shalt become an astonishment!"

There I saw the works of peace which in two short decades had reclaimed the barren desert and made it bloom. I saw the reforestation of its once eroded hillsides and smelled the blossoms from the citrus groves made possible by the desalination of water and the sweat of a dedicated people.

I marvelled at the shining structures of modernity which arose to sparkle against the backdrop of that ancient civilization like newly cut diamonds in a setting of old gold. It was, and is, an astonishment!

Israel has given to the world its most convincing modern demonstration of the indomitable spirit of man to triumph over an inhospitable environment.

It has provided our most recent proof that this thing we call Democracy still works—and can survive as an oasis of reason and hope, even surrounded by a desert of unremitting hostility.

And at Entebbe its thrilling heroism has reminded us again that civilized humanity need not cower in fear and submission before the retrogressive inhumanity of mindless terrorism.

For all of these things, mankind owes to Israel a debt.

Short days ago, I was astonished again when from the Finance Minister of Israel I received the shattering realization that fully 66 percent of the entire domestic product of that land and its people must be consumed in taxes merely to defend the continued existence of this inspiring experiment in human decency.

That is a sustained burden much more than twice our own. It is a burden which would be thought intolerable by a majority of Americans. And that is a burden which Israel has borne for all humanity.

As I think back over the years of my adulthood, there are a few stirring declarations of conscience which come to mind, transcending the confinements of race and geography.

I recall the words of Winston Churchill when he said "I am a Zionist." And who ever can forget the conscious self-identification of John F. Kennedy when, standing in the shadow of that hideous Berlin wall which symbolizes the unreasonable fear of freedom, he said "I am a Berliner!"

And so, in a much simpler and less heroic way, there are those of us in the United States Congress who, mindful of the deeds and sacrifices of an intrepid people and conscious of what they mean to the future of the values we hold dear, by the mute process of our votes can say: I am an Israeli.

When that small bastion of freedom, so unsparing of its own resources, looks to America for the tools of its survival, those tools must be forthcoming.

To the extent we can contribute to fashioning the foundations of peace, we must insist that peace means peace.

President Carter said it for us when he said:

"The first prerequisite of a lasting peace is a recognition of Israel by her neighbors; Israel's right to exist; Israel's right to exist permanently; Israel's right to exist in peace...."

A settlement must be rooted in reconciliation—not measured by land, but by normalized relations—the borders open to travel, to trade, to tourism and to cultural exchange.

As a conciliator in the search for peace, our country has the responsibility to seek a peace which America could accept for itself. For peace, like Jerusalem, is indivisible. It cannot exist in fragments. Barbed wire cannot run through its heart.

Our own nation once was divided—and it has taken us 100 years to heal the scars of that division.

When I was young it was common to refer to the United States as a "melting pot." While drawing inspiration from the simile I have come to realize that it is not precise. From a melting pot the product of the various ores comes out in a single stream of sameness. And, for all our mixing, we are not all identically the same—nor should we be.

I grew up believing that there was no such thing as a hyphenated American, and I still believe that as an article of faith. To separate and divide ourselves one against another must never be the fate of any people which proclaims itself "One nation under God indivisible."

Yet I have seen that there are strands of different colors woven into the tapestry of our society and that the beauty of the whole piece gains something distinctive and important from each thread.

A better description of our American society might liken us to a fruitcake, rather than a melting pot, in which the raisins and the cherries, the apples and pecans retain an element of individual identity while giving flavor to the whole.

The Jewish culture in our midst has provided a resilient strength to our national alloy, a subtle beauty to our tapestry and a better flavor to our cake.

What you have provided to this nation is unique and distinct—the sense of shared humanity, of which other nations to their own downfall and disgrace have sought to purge themselves.

It has been said that one of the reasons God chose the Jews was that 400 years of servitude in Egypt had stripped them of the human arrogance of other cultures and made

them receptive to the divine will. I do not know that this is true.

But it is true that no other people have known a longer heritage of suffering. From Babylon to Buchenwald the Jews have learned about injustice and cruelty, servitude and bestiality, and all the other woes inflicted by one people upon another.

And perhaps this very fact has kept alive the imperishable seed of human togetherness through all the long centuries of geographic dispersal as an enduring inspiration to this jaded and cynical world.

I do know that the Jews have added strength and richness and diversity to the American character.

A Christian theologian, Karl Jaspers of Germany, once wrote:

"By their uncomfortable presence which keeps raising doubts about Christian dogma; by the greatness of their suffering and sacrifice, in which the fate of Jesus seems really to repeat itself as it first appeared to them in Isaiah's servant of God; by their lack of illusions, which does not try to talk evil out of existence with false comfort or stoical rigidity—by all of this, the Jews may yet become the saving thorn in the Western soul."

Many of your works have gone unsung. I think of the case of Haym Salomon. I suppose you know of him. Most Americans, unfortunately, do not.

This virtually anonymous American Jew and patriot in Philadelphia repeatedly and almost single-handedly saved the cause of the American Revolution when it tottered again and again on the verge of bankruptcy.

Haym Salomon is not mentioned in Boatner's Encyclopedia of the American Revolution nor in the histories of that period written by Alden and Trevelyan.

The documentation of his sacrifice is recorded for us in the diary of Robert Morris, Superintendent of Finance for this fledgling nation. On no fewer than 75 occasions between 1781 and 1784 Morris went to Haym Salomon to borrow funds to keep the nation's finances from ruin. The only collateral was rooted in the speculative and highly questionable possibility of this nation's future. On each occasion, Salomon provided the money—the hard cash to pay the troops, to buy the ammunition, to make American independence a reality.

Beyond that, he extended personal funds, without interest and probably without expecting repayment, to sustain scores of prominent men holding important government positions. Madison and Monroe were among them.

When Salomon died in 1785, his estate was bankrupt, and to our everlasting discredit the nation did nothing to compensate his widow and children for the legal and moral debts it owed this incomparable man.

It is a little late, but I would like to nominate Haym Salomon for a posthumous Humanitarian Award. His dedication to this struggling nation and its people, collectively and singly, proves that the humanitarian idea existed long before the word was a part of our language.

That sense of dedication still is with us, taking many forms. As a lawmaker I am aware of the contributions made to our society by such organizations as the Union of Orthodox Jewish Congregations, the American Jewish Committee, the Anti-Defamation League of B'nai B'rith, and all the rest which have fought untiringly to embed the humanitarian ideal in our national conscience.

I think of the support given by the Jews of the South to the cause of racial justice. And I think of the persecution they received as a direct result.

I think of the active involvement of the American Jewish community in the civil rights reforms of the past two decades.

I think of the consistent stand you have taken throughout the years to protect the separation of church and state and to fight off attacks upon our Bill of Rights.

By speaking out forcefully and fearlessly on issues which touch deeply held religious convictions and the vital interests of Jewish Americans, the UOJC has performed an important service, both for the American Jewish Community, and for myself and my colleagues in Washington.

It takes a special kind of courage to stand up and be counted on issues which are often unknown or unpopular—a courage that is characteristic of the Jewish people—and a courage that the Union of Orthodox Jewish Congregations of America has never lacked.

I think of the support you have given to a whole range of programs to help the poor, to provide medical assistance to the elderly, to establish and extend social security, to improve public education and in numberless other ways to make this a better country for us all.

The quality of education in this country is a concern to every government official, indeed to every citizen. The innovative programs and concepts of your youth movement, the National Conference of Synagogue Youth, have inspired tens of thousands of young American Jews with the value and uniqueness of their Jewish heritage—making them better Jews and better Americans.

There still is much to be done. Imperfections abound in our culture. Perhaps they always will.

But tonight on the eve of Jerusalem Day, we take heart that the struggle still goes on.

As a non-Jew, I have learned to identify with the spirit that you typify. I like to think that I share in your sense of compassion—and your occasional sense of outrage. I admire you for the way you can endure suffering and handle grief. I respect your intellectual integrity, your toughness of mind and your moral courage. I envy your sense of mission.

In a very real sense, you are the humanitarians. And while you honor me tonight, it is I who should honor you. I thank the God who is creator of Jew and Gentile alike for making you so vital a part of the life of this nation and for your shimmering pillar of light in the sometimes darkness of the world.

## FREEDOM FOR SOVIET JEWS

### HON. MORGAN F. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. MURPHY of Illinois. Mr. Speaker, the new House vigil for Soviet Jews, "Helsinki's unfulfilled promise," has begun. In recognition of the vigil, I would like to speak in behalf of Ilya Solomonovich Goldin, a talented and courageous young man who is not being allowed to emigrate from Russia to Israel.

Ilya has been denied a visa because of his prior service in the military, even though he did not hold a sensitive position and had no access to secret information.

Ilya first applied for a visa in 1972, an act which cost him his job. In spite of this, he has persisted in his efforts to emigrate.

Ilya, 27, is single and currently employed as a mechanical engineer. He lives with his father and mother, who also applied for visas in 1972 and, like Ilya, lost their jobs as a result.

This young Soviet Jew is deeply committed to his religion, and wishes to worship and develop his Jewish identity in freedom. Ilya has diligently studied Jewish customs and history, despite the efforts of Soviet authorities to stop him. To prepare for emigration, Ilya has taught himself both Hebrew and English.

Mr. Speaker, it is my sincere hope that Ilya Goldin will someday live in freedom. With the help of Ilya's friends and the support of the U.S. Congress, I believe this young man's dream of freedom can become a reality. I call on concerned Americans everywhere to join me in supporting freedom for Soviet Jewry.

## A NOTE ON FREEDOM AND CONSTRAINTS

### HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mrs. HECKLER. Mr. Speaker, I would like to insert in the RECORD the commencement address of the Honorable Juanita M. Kreps at Duke University for review by my colleagues in the House. Mrs. Kreps, the first woman Secretary of Commerce, since the post was created in 1913, served on the Duke University faculty as a labor economist since 1955 and was appointed as the vice president for academic affairs in 1973. Her address, entitled "For the Class of 1977: A Note on Freedom and Constraints," questions the validity of the goals of our economic system as it is presently oriented. I believe her comments are worthy of the attention of all, not only the Duke University class of 1977.

The article follows:

FOR THE CLASS OF '77: A NOTE ON FREEDOM AND CONSTRAINTS

(By Juanita M. Kreps)

Mr. President, members of the Board of Trustees, the faculty, parents and friends—most of all, those of you who are graduating today.

Thank you for sharing your day with me.

When your invitation came, I wondered whether you wanted a major policy statement from Washington, or more personal remarks to students whom I have watched grow for four years.

There is some temptation to focus on the State of the Union; to rattle off the accomplishments of the first hundred days. But a hundred days is too brief a time to judge either an administration or a student; both need their four years to set the record. And in any event, this is not a political day for you or me. It is a day for drawing together those people who have touched your lives, fired your thoughts, heightened your senses. And for this hour when you stand between two worlds, you are surely allowed to direct your thoughts not to the condition of the world but rather to your role in that world; not to how a new administration views its challenges but to the way you see your own.

With this in mind—and with a special affection for those of you whom I have come to know so well during our years at Duke, I offer this brief comment on freedom and constraints.

All Commencement addresses, like all Gaul, are divided into three parts: predictions, promises, and pleas. The prediction heralds the coming of a bigger and brighter world;

the promise is that you will run that world; the plea is for you to do a better job than your parents.

This is no time to go against tradition; there is precious little left, and we should honor it. Yet I confess that in candor I cannot come to the same safe conclusions.

## PREDICTIONS

Past forecasts have had one thing in common. All have predicted that things would get easier, safer, bigger, faster. As a result, we would be able to do more and have more. Implicit in these forecasts was the assumption that we would be happier for it.

In reality, progress as measured by material goods has consistently exceeded even our most optimistic projections. Half a century ago, when this University was having its first Commencement, speakers looked forward to the day when each American family would own an automobile; when highways would link every part of the nation to the other.

We know what has happened. Automobile production and rising incomes have enabled us to have more cars than parking space, to our utter frustration, and highways allow us to go anywhere we want to go—though there are many days when we don't know where that is.

The past half century has brought more than cars and expressways, however. Science has made it possible for us to know almost instantly what is happening throughout the world; to explore the moon and Mars; to grow taller and live longer. Yet few of these important developments were being forecast fifty years ago.

It gives one pause in making predictions, for it is clear that in looking ahead we often look at the wrong things. Concerned with growth and its power to raise material levels of living, we have failed to focus on the correlates: greater scientific knowledge and understanding of the world and its peoples, better health, more equitable treatment for all persons. Indeed, we have taken material welfare so seriously that we have developed ways to measure each inch of progress. Yet we have not thought it necessary to find an index of human welfare that takes into account more significant but nonmaterial changes in the quality of life.

With this caveat in mind, what can one say of your future world?

Here I should like to break with the past. For I cannot argue that continued high rates of growth are possible or necessarily desirable. I cannot believe that the cost of growth in resource depletion and environmental destruction are always worth paying. Nor do I think that the American people will continue past consumption patterns, once they understand the implications of those patterns for their children and grandchildren.

Scientific and technological breakthroughs can of course postpone the rate of resource depletion. And there will be many starts and stops along the way, with some people arguing that full exploration of the world's resources will produce such quantities that we need not worry. But even as such exploration occurs, threats to the environment mount. Costs rise. Consumption has to decline in the face of higher prices. International pressures, moreover, press against the wealthy nations as never before. Living standards measured in the usual way—by real output per person—are simply not going to grow as fast as in your parents' day.

But a slower, material pace is not likely to be a disturbing prediction to those of you graduating today. You come from relative affluence—affluence is always relative, actually—and you are in a good position to question whether, as the rate of real growth slows, some alternative goals may not be even more desirable.

This perspective was not characteristic of previous generations. Parents here today remember a strikingly different world. We spent our childhood in an era of economic col-

lapse and depression, and our youth struggling with the shortages that come with total war. It is not surprising that we approached our careers with aspirations for financial success and the economy with expectations of unprecedented growth.

In both respects, our hopes have been fulfilled. And that ought to mean that we are happy with the way things turned out. There is some evidence that contentment, even with such success, is spotty: heart attacks are on the rise; the incidence of depression is high; stress is a greater problem than heretofore; the suicide rate is up and civility is on the decline. But the goal we set for ourselves was success—success as our parents had defined it, measured in power, income, and material goods. And the world cooperated, for we would not let it do otherwise.

You did not grow up in an environment of scarcity, however. You were children of plenty. And just as your parents' aspirations were honed by the times of their lives, so, too, are yours. Lacking the pressure that comes from doing without, secure in the knowledge that material needs can be met fairly easily and with only a part of one's time and effort, then, what goals do you set for yourself?

Since goals are sensibly set only with due regard to what it is realistic to expect, one is led to the question of promise. What has the world to offer you?

#### PROMISES, PROMISES

On graduating, the speaker says, the world is yours. Of course you are not taken in by that grand gesture because you realize that it isn't the speaker's world to give; because those who control things will pass on the power to you only a number of years later and even then, perhaps, with reluctance; and anyway, you probably don't want the world today—next week, perhaps, but not today.

Short of inheriting the earth, what is yours to claim in the new life? If not great growth in material wealth—bigger houses, bigger cars—what are you to expect? If the rate of material expansion is to be slower than in your parents' lives because the resource base is limited, because we need to conserve and protect, will there not be an important change in both our national and personal values?

Surely there can be no doubt that such changes are occurring. To begin your professional lives with personal aspirations or societal goals appropriate to another era is to invite frustration. To struggle against the impediments of the past is to dilute the strength needed to solve the problems of today. And to ascribe to your world the parameters traditionally assumed is to lose sight of the greatest promise of all. Galbraith once chided the nation for living with goals applicable to an earlier time and "as a result," he said, "We do many things that are unnecessary, some that are unwise, and a few that are insane."

To be not unwise or insane, but instead to be in tune with one's future—indeed, to help invent it—we need to accept the restrictions imposed by the post-industrial world, and to embrace its freedoms. Under the heading of restrictions, we have to view conservation as a goal that is at least as important as growth. We have to develop different tastes, different attitudes. We have to admire economy and criticize waste.

If we are able to modify our personal values, the linkage between value, income, and material wealth may be broken. We may develop qualitative measures of worth. Numbers for gross national product which lump Fritos and Faulkner into one aggregate to tell us how we are doing as a society may become less important.

As this happens, the new freedoms available to us will more than counterbalance the new restrictions. For if we cease to accept the notion that we are doing well only if we are making more and more money, we will be able to do many things which we denied ourselves in the past. Once we repeal the instruction that we cannot afford to think about anyone else because there is no profit in it—that we cannot take pleasure in another's success because life is a zero-sum game in which no one can gain except at the expense of someone else—we may find that we have a much wider range of options. And lest we fear that such abandon will lead to economic chaos and personal bankruptcy, it is well to remember that your living standards will always be relatively high; that more attention to earning pursuits could result in greatly improved human welfare.

In short, the promise of your tomorrow is different from that offered your parents. Whereas we who came into maturity following that second war to end wars were promised the material progress that our era so desperately needed, you are today being offered a world that yearns for compassion and human dignity; a world that offers great freedom of choice and expression and lifestyles; a world in which the good life is accessible to people who in earlier times were excluded. The promise of such freedom is a gift never before rendered to a generation of students.

#### A PLEA

Enter now the plea.

If there is one thing I could wish for you, it would be that you sense the freedom and be sensitive to the constraints that the forces of history throw in your lap. Because you face a different world, I would further hope that you feel uninhibited by the expectations of others, remembering that their notions of success or failure are not necessarily appropriate to your time and place.

I shall not exhort you with clichéd challenges to build a better world; to correct the mistakes we made. In fact, I find it offensive to deprecate the achievements of previous generations. It was their efforts that moved this nation and a large part of the world to a position in which such a large proportion of us enjoy education and freedom of choice. In retrospect, many who preceded you would do some things differently, just as each of you in time will mourn past mistakes. But know how easy it is to avoid making mistakes; one has only to do nothing.

Nor shall I urge you to love thy fellow-person, for that would be presumptuous. Yours is not a generation that lacks the capacity to care for others. What is more troublesome is finding ways to rationalize that sense of caring with the competitiveness and ambition that seems to be demanded of leaders in any field: business, the professions, government. And since we at Duke have encouraged your leadership qualities, you will surely feel some conflict between the selfless and the selfish.

To this conflict there is no ready resolution. I, too, observe the need to be aggressive if one would lead and dogmatic if one would persuade. But I observe further that in the world of commonsense experience, the only substitute for shouting is substance. Dwell, then, on knowing what you are about, for a knowing mind will ultimately win out, if anything can, against a loud voice.

Finally, I offer a plea that you treat yourself, as well as others, with respect, for you too are a special person. In accord with the familiar "Desiderata", "Beyond a wholesome discipline, be gentle with yourself." Hold on to what it was that brought you here and all that you have added to it. Laugh as often and cry as little as possible. And know, always, that we care about you.

#### THE ADMINISTRATION'S ENERGY CRISIS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. CRANE. Mr. Speaker, the following article, written by University of Georgia economics Prof. R. H. Timberlake, which appeared in the May 21st edition of the Atlanta Journal deserves to be read by each and every one of my colleagues as we struggle with the administration's national energy plan. His premise—that the United States is not running out of energy supplies but is smothering them with excessive governmental regulations and price controls—is amply documented. Dr. Timberlake's characterization of the President's plan as "totalitarian" is one which cannot be taken lightly. I commend this eye-opening commentary to all of my colleagues, and especially to Dr. Timberlake's fellow Georgian, President Jimmy Carter:

#### "THE PROFESSOR"

CARTER PROGRAM DISTORTS FULL ENERGY PICTURE, SUBSTITUTING POLITICS FOR FREE MARKET

(By R. H. Timberlake Jr.)

(NOTE.—R. H. Timberlake, Ph.D., is a professor of economics at the University of Georgia, Athens, who teaches courses in money and banking principles, economic thought, monetary theory and policy, and has written two books on money and banking.)

The Carter administration's "energy program" opens yet another hole in the dike that restrains government intervention, and protects the constitutional rights of individuals.

Probably the most important element of this program is the administration's delusion of the public into believing total amounts of traditional energy sources—petroleum, natural gas, coal, and nuclear fuel—are nearing exhaustion, and an energy "crisis" is impending.

The facts of the matter are very different. Before discussing the facts, however, two concepts of energy "reserves" must be distinguished. One is proven reserves of a given energy source; the other is absolute reserves. Proven reserves are an economic phenomenon. They are the reserves that have been verified as commercially available within the time frame in which energy companies feel certain they can operate as cost-recovering enterprises. The proving of reserves is costly. It requires both real resources and an outlook of confidence and certainty toward the future operations of the enterprise. The energy industries, therefore, can only be interested in proving a limited amount of the earth's total energy capacities at any one time; and the more they are harassed by government regulations, restrictions and constraints, especially in the form of taxes and money price controls, the less interested they can be in proving future sources of commercially available reserves.

Absolute reserves are a geologic subject. They may be defined as the total amount of reserves in existence. Since no one has any good reason for proving absolute reserves, estimates for these values must be very problematic.

Another factor contributing to the uncertainty of their measure is current ignorance of what might be a recoverable energy process:

For example, geopressurized water. This water is at temperatures between 150 degrees and 180 degrees. It is trapped in deep sedimentary basins at high pressure. The pressure is created by methane, which is the main ingredient of natural gas. At least 375 years worth of natural gas at current consumption rates would seem to be certain of recovery from this source. (Access to Energy, May 1977.)

Other estimates for absolute reserves of conventional energy reserves are, for coal, about 3,000 years; for natural gas from ordinary sources, at least 1,000 years (Wall Street Journal, April 27, 1977); for petroleum, just from high-grade shale in the Green River area of Colorado, Utah and Wyoming, 2.6 trillion barrels, or enough for 300 years! (D. T. Armentano, U.S. Energy Crisis: The Real Story). This estimate does not include Alaskan oil, coastal oil from sedimentary rock basins along the Eastern and Western shores of the United States, or secondary and tertiary recoveries from "depleted" wells in the conventional oil-producing states. These sources would add at least another 100 years supply.

A final note on nuclear fuel reserves: At Oak Ridge, Tennessee, there are 200,000 tons of Uranium 238 stored and packaged in steel containers above ground. (Access to Energy, May 1977.) This material is what remains after Uranium 235 has been extracted. It can be bred into plutonium fuel by means of the liquid-metal fast breeder reactor that the Carter administration has arbitrarily declared "verboten" on the flimsiest of pretexts. If used as fuel, this packaged material would supply the U.S. with energy at current rates of consumption for 100 years! And the remaining 3.5 million tons of as yet unmined uranium ore would supply U.S. needs for an additional 1,750 years, or until the year 3727!

These infinite quantities of energy sources only become "shortages" when government intervenes.

The "shortages" are shortages of proven reserves, not of absolute reserves. They appear most noticeably when government imposes money price controls on the purchase and sale of products. These policies have been especially destructive with respect to natural gas, where proven reserves between 1963 and 1972 declined from a 20-year supply to a 10-year supply. (See Robert B. Helms, Natural Gas Regulation, American Enterprise Institute.) Effects on U.S. production of petroleum have been similar if less dramatic.

When a ceiling is imposed on the money price of a product, it will, if effective, increase the flow of the commodity demanded and decrease the flow supplied. These results have largely been avoided by industries producing energy products, because energy companies have been able to produce higher quality products at lower prices over the decades when left unmolested by government butchers.

However, in the presence of inflation, an event wholly caused by government monetary-fiscal practices, the legally fixed money prices become lower real prices. Since 1967, for example, money prices generally have increased from 100 to 177. So if you paid \$.32 for a gallon of gas in 1967, you are paying the same real price today when the price is \$.57 a gallon. Thus, government price controls in the presence of government-induced inflation do not "stabilize" prices. They force real prices to go lower and lower. Since money costs in the affected industries are not controlled, and in fact have been significantly increased by government regulatory policies, real production both for the present and the future is actively discouraged. Each admin-

istration that comes to power in Washington takes its turn at making matters worse.

In truth, the problems of the economy are not economic but political. And the Carter energy program reflects this development. It is another example of government politicizing the economy. Consider the details. First, it calls for an additional excise tax on gasoline of 5 cents per gallon per year. This tax would increase the price of gasoline constantly over the foreseeable future. Yet, the restrictive price ceilings on gasoline and other petroleum products have been imposed allegedly to keep prices down. What kind of economic "philosophy" has the price being forced down and forced up at the same time? The tax would also return revenues to the government rather than to the beleaguered petroleum industry. The government would use these revenues to increase the bureaucracy and effect further counter-productive policies. The oil companies, on the other hand, who have been enjoined from absorbing any such "excessive" revenues, would use this money for exploration and development of more petroleum.

The second detail is the tax on "guzzling" cars. This imposition is the most insufferable kind of moralistic hypocrisy. It is outrageous chauvinism. Anyone who drives a larger-engined car has weighed the advantages and disadvantages to him and his family of using such a machine. He has considered the full consumption along with the greater safety, the greater durability, the greater comfort, the smoother ride, etc. All of these factors affect "efficiency." Efficiency is a subjective matter. It is not objectively determined by the President of the United States, nor by a board of ecologists, nor by a city council. It is a process of weighing up of competing benefits at the margin by individuals who have free market prices as guides for their decisions.

A much greater source of the "inefficiency" that Carter and his gauleiters could be concerned about is the use of elevators. Here is a machine weighing several thousand pounds frequently used to carry healthy people weighing only a few hundred pounds up (and even down!) a few floors. Virtually all passenger elevators that move less than five floors involve a complete waste of time and of electrical energy. In addition, they contribute to the debilitation of human physique. Yet, the "concerned" politicians, ecologists, humanists and other Pharisees, who drive their small-engined cars—which frequently have cost much more in total resources than the big-engined cars driven by "poor" people, never hesitate to step into an elevator and push the button that takes them from the third floor to the coffee lounge on the first floor. As if economy begins and ends with the cubic inch displacement of internal combustion engines!

Bushwah!

Another tax in the Carter program would be on domestic oil at the wellhead. Already, governmental policy has significantly discouraged domestic production by fixing the price of domestic "old" oil at only 50 percent of the price paid to foreigners on any oil. Now, the Carter plan would burden the oil industry with yet another tax, which would incidentally provoke a yet greater proportion of petroleum imports, and the proceeds of which would again go to government. The same argument applied to the tax on gasoline at the gas pump and to the tax on large-engined cars also applies here: The revenue would be used to enhance government bureaucracy; prices of petroleum products would rise; the production of petroleum would be further discouraged.

Gasoline rationing authority, also asked for by the administration on a stand-by basis, would surely be forthcoming. Here is another example of counter-productive in-

efficiency that would further extend the role and scope of government bureaucracy.

In a free market, prices ration goods. Each person then can choose the mixture of goods and services that best fits his needs; and he is surely a better judge of these needs than an official Pooh-Bah in Washington.

Some people have argued that "poor" people—this ubiquitous category that has taken the place of widows and orphans in politician prose—could not "afford" higher prices on gasoline or other energy products. If they could not, why are three or four new taxes being proposed that would significantly raise prices, the alleged rebates notwithstanding? In any case, neither the petroleum industry, nor the medical industry, nor the automobile industry, nor any other industry can afford to act like a private charity without jeopardizing its existence. If people are "poor" then they can become "rich" by getting jobs and producing something other people want.

(Here, too, government policies in the form of minimum wages and welfare payments have made matters worse by discouraging employment and production, and by encouraging profligacy and idleness. Government policies in the form of income tax legally stealing the fruits of people's efforts.)

In no case, however, can private industry laws then discourage production further by be shouldered with welfare responsibilities that result from public policies. If people are truly poor and their poverty is made a public issue, it must be tackled as a general problem of low income, not as the inability to afford this or that particular good or service.

The Carter program is totalitarian. It obfuscates and distorts the real facts of energy logistics, energy prices, and energy profits. It is yet another attempt to substitute politics for the free market. It is grossly counterproductive. It is omnipotent busy-body government at its worst.

At the very least, the Congress should reject it and allow government to make its maximum contribution to production by getting out of the way. Laissez faire policy toward the U.S. energy industry has resulted in unequalled production and benefits at every level of society more than 177 years ago.

Why abandon the principles upon which this splendid record was achieved?

#### RODINO PAYS TRIBUTE TO FRONTIERS CLUB AND HONOREES

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. RODINO. Mr. Speaker, I am pleased to bring to your attention and that of my colleagues the 20th annual awards breakfast of the Frontiers International Club of Newark which was recently held at Thomm's Restaurant in my home city of Newark.

The breakfast was in honor of my very good friends, Newark Mayor Kenneth A. Gibson; Mr. David S. Rinsky, president of the Newark Chamber of Commerce; and Ms. Bernice Bass, broadcaster for WNJR-Radio, for their outstanding accomplishments and service to the community.

The Frontiers Club of Newark was formed in November 1952 as a civic association dedicated to the betterment of

our community. Each member carries a spirit of fellowship, faith, and determination to achieve the organization's objectives and goals to better our society.

Indeed, we, the residents of Newark, are fortunate to have individuals such as these committing themselves to strengthening our communities, and it is with great pleasure that I salute the entire membership of the Frontiers Club and their honorees for their outstanding service to the city of Newark.

#### ELKHART NATIVE TO HEAD RESEARCH INSTITUTE

#### HON. JOHN BRADEMÁS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BRADEMÁS. Mr. Speaker, Dr. William E. Evans, a native of Elkhart, Ind., in the district I have the honor to represent, was recently appointed director of the Hubbs-Sea World Research Institute in San Diego, Calif.

This event is another milestone in the illustrious career of the 46-year-old marine biologist. The institute, established in 1963 as the Sea World Research Institute, has been engaged in a broad range of marine environment research activity. Dr. Evans has been associated until early this year with the Naval Undersea Research Center as head of the Bioanalysis Group, Undersea Sciences Department.

In 1972, he was responsible for "Project Gigi," a well-known year long study of a young California gray whale in a controlled environment. This study developed valuable scientific data relating to the feeding habits, behavior, and migration patterns of the gray whale, an endangered species.

Dr. Evans' civilian scientist career with the Navy included pioneering investigations of marine mammal acoustics and zoology. In one assignment, he conducted research on navigation and orientation behavior of marine mammals, using radio telemetry. It was the work initiated by Dr. Evans and several of his colleagues that quantified the phenomenal ability of certain marine mammals, like dolphins and whales, to navigate by sonar. Additionally, his research efforts have been applied to systems development for undersea observation and data acquisition missions. Through the use of the Sea-Bee, developed by Dr. Evans in 1967, he initiated studies on the behavior of wild populations of pelagic marine vertebrates. Dr. Evans also helped develop aerial survey techniques applied to population studies of marine mammals during a 12,500-mile scan of the eastern tropical Pacific Ocean.

Dr. Evans, who was educated at Bowling Green State University and Ohio State University before receiving his Ph. D. from the University of California, is the author of more than 40 published technical papers, coauthor of several books and holder of three patents for marine systems used in tagging and tracking marine mammals and for an oceanographic platform and habitat.

A member of the United Nations Advisory Committee on Marine Resources Research, Dr. Evans has lectured at Tokai University in Japan and was a member of a joint United States-Japan Conference on Utilization of Marine Resource. In 1971, he was listed in the American Men of Science. Presently, his international scientific affiliations include membership on the Steering and Program Committee of the United States-U.S.S.R. Environmental Protection Agreement.

On May 24, Dr. Evans will participate in the official dedication ceremonies of the Hubbs-Sea World Research Institute, named in honor of Dr. Carl Hubbs, famed ichthyologist, biologist, and naturalist at the Scripps Institution of Oceanography.

Mr. Speaker, I am sure Dr. Evans' wife, Phyllis, and his two sons, John and Tim, are as proud of his many accomplishments as are his many friends and relatives in Elkhart. He is truly, Mr. Speaker, an "American Man of Science."

#### ENERGY: THE VIEW FROM SOUTH DAKOTA

#### HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. ABDNOR. Mr. Speaker, South Dakotans share the concern of the rest of the Nation over our future energy supplies. They recognize there is a problem which may demand some tough answers. They also are a very practical people and recognize that solutions which might be ideal for one part of the country, may not work at all in others.

These views from South Dakota have been well expressed by a number of our State's editors. I would like to share their observations with my colleagues:

[From the Timber Lake (S. Dak.) Topic]

IT SEEMS TO ME . . .

(By Mary Byington)

Using grain alcohol as fuel for vehicles is not a new idea.

Ken Reed brought over an article he found in one of the publications reaching his desk at the Moreau-Grand Cooperative. The University of Nebraska at Lincoln chemical engineering department has concocted an automotive fuel, which has been dubbed "gasohol." It's a blend of plant-derived anhydrous (water-free) alcohol and unleaded gasoline. Two groups of Department of Roads vehicles have been participating in tests. One group has been using only gasohol, the other, commercial unleaded gas. At the million-mile mark the two groups interchanged fuels. Researchers are watching six things: consumption, cylinder wear, exhaust emissions, condition of valves and valve seats, spark plugs and exhaust systems.

In the two-year test, gasohol has produced no adverse effects, anywhere, and several favorable things. The gasohol-powered cars registered from five to eight miles more per gallon mileage increase; it did not "separate" at extreme temperatures like other alcohol-blend fuels, such as methanol; and it costs no more than unleaded gas.

A service station in Holdrege, Neb., was furnished with 20,000 gallons of gasohol, with the stipulation that any left after a year must be destroyed. It was gone in two weeks. The

station pumped 90,000 gallons of the fuel in 10 weeks. Customers receiving questionnaires, returned a surprising 50 per cent favorable reply, saying they would buy gasohol.

Ninety gallons of unleaded gasoline mixed with 10 gallons of pure ethyl alcohol produces 100.25 gallons of gasohol. The University has been experimenting with it for five years. The beautiful part of the alcohol is that it can be made from wet, moldy grain, unfit for human or animal consumption, and it's estimated there is enough such low-grade grain to supply a 20-million gallon a year alcohol plant in Nebraska alone. Alcohol is cheap to make. At today's efficient methods, two and a half gallons can be derived from a single bushel of mildewed corn. Furthermore, carbon dioxide, usable by industry in such things as soft drinks, and high protein cattle feed are useful by-products. Unused protein in the feed can be extracted for possible use in deficient diets of underdeveloped nations.

It will be a while yet, before the fuel becomes available. At that, it will probably be regional, since the grain belt cannot supply the nation. But it could save about 10 per cent of national consumption of gasoline.

Alcohol is much more volatile than gasoline. Husband Jim asks, "What's to keep it from exploding." One should at least be careful not to light a match near the gas tank!

[From Hill City (S.D.) Prevaler May 5, 1977]

A STATEMENT OF OPINION BY JOHN J. GERKEN

If you have a feeling of being confused on a national energy program, you can join a great many other Americans, including this writer.

President Carter has gone to great lengths to convince Americans there is a crisis and a great deal of effort to sell us on his program. The explanations and the technical details of the plan are mind boggling and almost beyond comprehension.

The general appeal to Americans to conserve and the general information that we have a problem seem appropriate. We find no quarrel with a President leading his nation by putting out the information that problems exist and the degree that he views them and his urging citizens to accept his analysis.

But the plan to correct them seems to us to be just another big government boondoggle.

Oil prices will be increased so they are all the same at the wellhead. There is considerable difference between those now being charged for previously discovered or developed wells. That difference is to go into the US Treasury and then is to be parceled back out to citizens.

What citizens? How much to each? Does it relate to your present usage? Or will it be returned by what you save? And what about the comment that they consider using some of it for some other purposes such as social services?

Those are but a few of the unanswered questions involved.

But, never forget the biggest factor of all. The Bureaucracy.

A new bureau will have to be established to figure all this out. More employees on board to handle the paper work on the incoming, more on the formula, more on the outgoing.

Immediately you can see that if they collect an extra dollar at the wellhead there will be much less than that coming back.

Not only do we believe that this program lacks merit, we feel it is just another way of letting government grow, another way of collecting more taxes under thinly veiled subterfuge, just another way in which the poor citizen will suffer some more.

The simplest solution is always the best.

Technicians will determine that his proposal is actually a solution. We say it is far from being simple.

Mr. Carter, please, we would rather you broke your campaign promises than to try and keep them by actions that will hurt us all. If you feel you must feel the pulse of America, please come to our area and live in the land of distances. Feel our pulse.

It is getting weaker all the time.

[From Huron (S.D.) Daily Plainsman,  
May 6, 1977]

#### ENERGY AND JOBS

Forgetting for the moment the impact on fuel consumption and altered lifestyles that will result from whatever energy package is produced in Washington, what is the effect likely to be on the national economy? We have heard much about the average American's love affair with his auto, but how dependent is the economy upon it?

Fortune magazine has just published its annual list of the nation's 500 largest corporations, in terms of sales, for 1976. The top five companies last year were Exxon, General Motors, Ford Motor Co., Texaco and Mobil Oil. Several other oil companies and auto industry-related corporations were included in the top 10.

That ranking gives some indication of the scope of the petroleum and automotive fields in the economy. For each of the giants there are hundreds of suppliers, sometimes dependent entirely, sometimes only partially, on the primary industry for their existence.

What it boils down to are millions of jobs, hundreds of billions of dollars in annual sales; in short, as strong a backbone to the economy as one can find. That is why tinkering with the energy and transportation fields is not an endeavor to be undertaken lightly.

At the same time that House and Senate conferees were putting the finishing touches on a June 1 tax cut measure, designed to give the taxpayer and the economy a boost, statistics on car sales were being released showing a big jump in the sale of imported automobiles as a result of the energy conservation measures proposed by President Carter.

Along with the tax cut, Congress is finalizing a \$4 billion jobs bill, designed to create somewhere between 150,000 and 400,000 jobs. This bill is also intended to give the economy a boost. But President Carter has admitted that the government alone cannot handle the unemployment problem. The bulk of new jobs will have to be provided by private industry. But with some of the giants of industry under pressure from the energy programs, they may be forced to reduce employment rather than add jobs.

As the energy argument progresses it would be easy to visualize a spirited argument between environmentalists, who seek to hold down production, and labor interests who seek to expand the job market. With more and more evidence of the connection between environmentalism and unemployment it may be a timely confrontation.

[From: McLaughlin (S. Dak.) Messenger]

#### THE ENERGY PLAN

President Jimmy Carter last week outlined his proposals for energy. It is up to congress to decide what form these proposals will take in law.

Carter generally seeks to force conservation of energy by using taxes to make gas and oil expensive. His theory is fuel will cost so much people will cut down on its use.

We doubt if it will work out that way in the long run. The price of non-essentials like tobacco and alcoholic drinks have been pushed up and up by taxes and people keep right on using them. There has been no dramatic drop in the use of coffee although the cost of that product has risen astoundingly in the last year.

It is more likely people will continue to use the same amount of gas but will pay more for it. It will be a regressive form of tax because it will hurt the people with low incomes while it will not be such a burden to those who have a lot of money. Both have to use fuel to get to their jobs, churches, schools and stores.

For some time the Hate Business people have been putting penalties on the oil producing companies. They have discouraged exploration by cutting down on tax incentives for exploration. We are now paying the fiddler for those policies to the tune of fuel shortages.

England, on the other hand, has encouraged exploration. They have now found huge quantities of oil under the North Sea and drilling to put it to use. They expect not only to fill their own needs in a matter of a few years but to have enough left over to export.

Increased production of power is the most feasible long-range solution.

Efforts can be increased to develop heat and power from the wind and sun. We are going to have to use more coal and spend more money to restore the environment once that coal is mined. Alternate ways may be found to power cars, such as electricity. Our surplus grain might be turned into alcohol to be used as fuel or as an additive to stretch the petroleum fuels.

We are fearful the proposals of the president will simply mean people are going to spend more money. This contributes to inflation and the demands on the government printing presses to crank out more dollars.

#### AUTOMOBILE EMISSIONS AND THE WARRANTY QUESTION

##### HON. JAMES T. BROYHILL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BROYHILL. Mr. Speaker, in spite of, or perhaps because of all the information which has been circulated regarding the Dingell-Broyhill amendment to H.R. 6161, there still is considerable confusion about the warranty section of our substitute and the effects it would have on clean air, consumers, and the automobile industry.

The purpose of the warranty provisions in our substitute is to protect independent parts manufacturers and service and repair outlets from a possible parts and service "monopoly" by auto manufacturers and their franchised dealers. The Dingell-Broyhill substitute amends the Clean Air Act to insure that automobiles may be serviced, maintained, and repaired by independent operators, using rebuilt or replacement parts, without danger of voiding the car owner's warranty.

There are two key differences between our amendment and the Rogers committee bill. Dingell-Broyhill requires that any warranty work which is the responsibility of the automobile manufacturer be performed by the manufacturer or an authorized representative. This pertains only to repair work which is a direct result of a manufacturing defect either in parts or in workmanship. Our provision in no way restricts the ability of the independent parts, repair, or service outlet to service or maintain an automobile in order to keep a warranty valid, or to perform nonwarranty repair work.

As with any warranty, whether it relates to any large consumer product, the manufacturer has the right to specify who may do the work for which it bears both the cost and the responsibility for repair. This is not only consistent with the concepts of the Moss-Magnuson Warranty Act, but is also supported by the trade associations which represent more than 166,000 aftermarket repair firms.

Chairman ROGERS' bill would force auto manufacturers to pay independent garages and service stations for "recall" or warranty work. They would have absolutely no control over work cost or quality. On March 16, 1977, the Justice Department addressed this very question when it reported:

If the manufacturer were required to honor a performance guarantee regardless of the identity of the repair shop, supply costs of the warranty would be expected to inflate rapidly . . . the manufacturer would be put in a situation in which it could exercise no effective cost control . . . the repair shop could charge, in effect, anything it wanted for services rendered . . . and, at the very least under these conditions, the price of new vehicles would skyrocket.

The second difference between the Dingell-Broyhill amendment and the committee bill is perhaps even more essential to the survival of the independent repair services and the aftermarket industry as a whole. Because some of the anticompetitive effects of the warranty program are inevitable, Dingell-Broyhill reduces the length of the performance warranty from 5 years/50,000 miles to 18 months/18,000 miles. This type of reduction was recommended by both the Justice Department and the Small Business Committee in the 93d Congress.

Mr. Rogers eventually recognized the anticompetitive and anticonsumer problems inherent in the 5-year and 50,000-mile warranty provisions contained in his bill, so he adjusted the committee bill accordingly. He reduced the warranty period to 18 months and 18,000 miles so as to conform to the Dingell-Broyhill amendment.

The committee bill, however, reduces the warranty period for 3 years only, after which time it reverts back to the anticompetitive 5 years and 50,000 miles warranty duration. The reduction in warranty length is essential to the aftermarket industry and to the survival of the small, independent businessman. I have worked for such a reduction for 3 years, and was pleased to see the Justice Department recommendations of March 16, 1977. By mandating a return to the longer warranty period after 3 years, the committee chairman contradicts himself, for he would have the law revert to a situation which he now realizes is anticompetitive, anticonsumer, and anti-small-business. It is difficult to understand why Mr. ROGERS asserts that he is attempting to protect the consumer and the automotive aftermarket industry, when his bill at best provides only very temporary relief.

There are two questions which are foremost in our minds when debating the warranty provisions. Unfortunately, these are the questions which have become most distorted. The first is whether Dingell-Broyhill will assure that vehicle

manufacturers will continue to produce durable and consistently effective auto emissions systems. The second question is whether Dingell-Broyhill will really protect the automotive aftermarket industry and the consumer from the adverse effects which accompany implementation of some of the Clean Air provisions.

Under Dingell-Broyhill, vehicle manufacturers will still be required to produce a durable system in order to pass the 50,000-mile EPA certification test under the production warranty. We propose no change in the length of the production warranty. Under the production warranty, the EPA not only certifies that the car's emission control system will last for 50,000 miles, but if a substantial number of systems fail during their on-the-road operation, the EPA can recall the entire lot for repair at the manufacturers' expense.

In order to assure that emissions control systems continue to meet standards throughout their effective life, the Dingell-Broyhill substitute includes a mandatory vehicle inspection and maintenance provision, to be administered by the EPA. Our amendment also makes it a prohibited act, subject to civil penalty, for a manufacturer to refuse to honor its warranty.

In response to the second question, our amendment guarantees the automotive aftermarket the right to perform all routine service and maintenance, using replacement parts, without danger of voiding the manufacturers' warranty. Our amendment also permanently reduces the performance warranty to 18 months and 18,000 miles. This will not affect actual operation of the emissions system, but rather only the length of time for which the manufacturer is directly responsible for the actual repair of defects in parts or in workmanship. Both of these provisions are supported by virtually every aftermarket firm in the United States, and virtually every aftermarket firm in the United States supports the Dingell-Broyhill amendment.

In conclusion, the Rogers' bill would result in additional costs to the consumer, additional burdens to the independent businessman, and little, if any, gain in repair quality or convenience. The Dingell-Broyhill amendment will insure that small repair facilities will continue to operate in a competitive environment and will enable the car owner to obtain reasonable, reliable, and effective auto servicing while automobiles continue to meet Federal emissions standards.

I urge my colleagues to support the Dingell-Broyhill substitute when it is offered to H.R. 6161 on the floor of the House.

H.R. 6502

HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. SKUBITZ. Mr. Speaker, yesterday, I cast a nay vote on H.R. 6502, a bill to provide an automobile assistance allow-

CXXIII—1054—Part 14

ance and automotive adaptive equipment to veterans of World War I.

This bill was called up very suddenly, Mr. Speaker, and the report thereon was not available at the time the bill was considered on the floor. It was difficult, therefore, to determine the principal thrust of this complex measure. Had I been aware of the fact that it would have extended entitlement to an automobile assistance allowance and automotive adaptive equipment to veterans of World War I who had suffered the loss or permanent loss of use of one or both feet; the loss or permanent loss of use of one or both hands; or the permanent impairment of vision of both eyes to a central visual acuity of 20/200 or less, all as the result of service connected disability, then I would have quickly and unhesitatingly voted in the affirmative.

My voting record over the years in which I have been a Member of this body will bear out the statement that I have always placed the highest priority upon the needs of the Nation's service-connected war veterans. Additionally, I have always supported the legitimate needs of veterans of World War I. Since H.R. 6502 will authorize equitable treatment for service-connected amputees from World War I, I am heartily in favor of it and regret the negative vote I had earlier cast.

## TECHNOLOGY FOR THE BLIND

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. TEAGUE. Mr. Speaker, your Committee on Science and Technology recently conducted a study, via a panel of expert consultants, on research programs to aid the handicapped. This study pointed out a number of significant findings, too many to enumerate and elaborate on here.

One of the findings, however, was the need to inform the public, particularly the professional communities serving the disabled and the disabled individuals themselves, about the results of our national research and development efforts. Many great innovations have never reached the marketplace and the intended handicapped users because of the lack of communication regarding these developments.

Fortunately, the intended user population of handicapped individuals is small compared to the general consumer population; however this creates a problem in that the usual marketing techniques become cost prohibitive when added to the often high costs of production for a rather limited number of sophisticated, high-technology devices.

For this reason, I am happy to bring to the attention of my colleagues an article which appeared April 17, 1977, in the Washington Post, Parade magazine, entitled "New Devices to Help the Blind and Near-Blind." I congratulate the Washington Post for publishing this article, thereby bringing these advancements of benefit to the visually impaired

to public attention; and I commend this article to my colleagues:

## NEW DEVICES TO HELP THE BLIND AND NEAR-BLIND

(By Lawrence Galton)

In a Philadelphia suburb, a blind man today gets around as he never could before—with the aid of a laser cane that probes the environment for him.

Resembling an ordinary cane, the device, with its three built-in lasers, sends out thin beams of light that not only tell him when there's an obstacle directly ahead—they warn him with auditory and tactile signals when he's approaching a dropoff such as a curb or down stairway and also when he is nearing a low-hanging tree branch, awning or sign. When the cane is silent, he knows there is an open path he can safely travel.

Daily now in Chicago, a blind World War II veteran uses his laser cane—it weighs only one pound—to go from the end of the city where he lives to the end where he works as an X-ray darkroom technician. He has to take the elevated train and two buses. "For the first time," says his wife, "I feel at peace when he leaves home."

## NOW MASS-PRODUCED

The result of 25 years of Veterans Administration-sponsored development by Bionic Instruments, a Bala Cynwyd, Pa., bioengineering firm, the laser cane now is being produced in quantity. Its cost is \$1950. Thirty to 40 hours of training in its use over a period of two weeks are needed. The Mobility Foundation of North Wales, Pa., has been formed with the primary objective of providing laser canes for those who need, want and are not financially able to purchase them.

The cane is one of a series of developments that promise to improve the lives and opportunities of many of the blind and the near-blind.

## Reading machines

It's called the Optacon—for optical-to-tactile conversion. In one hand, a user holds a miniature camera about the size of a small pocketknife to read printed material and convert it into impulses. And with the index finger of his other hand, the user can feel the letters and numbers via a 1' x 1/2" tactile array of 144 miniature vibrating rods contained in a portable, battery-operated electronics section about the size and weight of a portable cassette tape recorder. For example, as the camera moves across an "E," the user feels a vertical line and three horizontal lines moving beneath the finger.

Selling for \$2895, the Optacon was developed with federal aid by a team headed by Dr. James D. Bliss of Telesensory Systems, Inc., Palo Alto, Cal., which now produces it, and Dr. John G. Linvill of Stanford University, whose own blind daughter has also been involved in the project since 1964.

As of now, more than 3200 of the machines have been produced. With the ability to read print directly, their users can independently carry out many everyday tasks—reading their letters, bank statements and bills, following cookbook recipes, and enjoying books and magazines.

And many users have been helped to advance in jobs and enter vocations previously closed to them. Various accessories increase the Optacon's occupational usefulness. For example, accessory lenses allow a blind computer programmer to read displays on a computer video terminal and a blind secretary to read what she is typing, make corrections, and fill out preprinted forms.

## Soon it will talk

The Optacon in its present form is hardly the last word. Its top reading speed now is 80 to 90 words a minute. But well within the next five years, it's expected, new accessory equipment will let the machine speak

out in words and phrases, making reading speeds of up to 200 words a minute possible. And, in fact, the text-to-speech technology is well along in development by Dr. Jonathan Allen at the Massachusetts Institute of Technology.

Meanwhile, a machine that reads aloud to the blind has been developed by a brilliant, 28-year-old inventor, Raymond Kurzweil, president of Kurzweil Computer Products in Cambridge, Mass. It consists of a reading unit that resembles a tabletop copying device and a small keyboard.

When a user places a printed page face down on the unit's glass top, a camera scans it line by line, converting light into electronic signals much like a photocopier. A miniature computer groups letters into words, determines how they should be pronounced according to a preset program, then produces speech sounds, enunciating words into sentences with stresses and pauses in a metallic but understandable voice at a rate of about 150 words a minute. At the push of a button, the user can repeat or skip passages, or mark a point on the page he wants to come back to later.

Half a dozen of the machines have been built for practical testing—with promising results—in the Perkins School for the Blind, West Virginia Rehabilitation Center, Boston school system and elsewhere. At this stage, the cost of a machine is \$50,000. But, with further development and volume production, it's expected to sell for about \$5000 within a few years and eventually to be as portable as a briefcase.

#### Talking calculator

In 1976, a hand-held, battery-powered calculator that talks was chosen as one of the most significant new products of the year by *Industrial Research magazine*.

Called Speech Plus and developed by Tele-sensory Systems, makers of the Optacon, the \$395 machine, weighing 17 ounces and measuring 1½" x 4½" x 7", can add, subtract, multiply, divide, sub-total, do square root and percentage calculations. Its numeric keys are arranged like a push-button phone because the blind are more familiar with this configuration. And the device lets the operator hear every key he presses in a clear machine voice so he knows he is making no mistakes as he goes along.

#### Electronic eyes

Two systems now under development could hold even greater promise for the sightless.

At the Smith-Kettlewell Institute of Visual Sciences, Pacific Medical Center, San Francisco, Dr. Paul Bachy-Rita and a research team are working with a Tactile Vision Substitution System (TVSS).

TVSS uses a tiny battery-powered TV camera worn in the frame of a pair of glasses which picks up images, serving much like the normal lens of the eye. The camera transmits visual images to an elastic garment that fits over the abdomen and has sewn into it more than 1,000 tiny electrodes. As images from the camera, translated into electrical impulses, activate the electrodes, the wearer feels vibrations on his skin in the pattern of the original images; so the skin, in effect, serves somewhat in the same way as the retina of the eye.

#### OBJECTS RECOGNIZED

Wearers of the experimental system have quickly learned to recognize drinking glasses, telephones and other common objects and to wend their way through tables, chairs and other obstructions in a room. A blind psychologist at the institute can move around obstacles at the rate of two feet a second, far faster than with a cane.

The institute team also developed a similar stationary system in which the camera is attached to a microscope and, instead of wearing an electrode pack, the user presses his abdomen against a bench-mounted elec-

trode array. Using the system, one man is able to assemble small components at an electronic plant as quickly and accurately as sighted workers.

The stationary system may become available for wide use within a year or two; the portable system, still being refined, may become available a few years after that.

In an entirely different approach, Dr. William Dohelle and a research team at the University of Utah's Institute for Biomedical Engineering are working toward a system which only a few years ago would have seemed inconceivable: one that would stimulate visual centers in the brain to let the blind see.

In experiments with a 33-year-old volunteer, blind from a gunshot accident, they have implanted a plastic strip with an array of electrodes against the visual cortex at the rear of the brain, with wires emerging through the skin above and behind an ear.

As electrical signals reach the electrodes, they're seen as spots of light, or phosphenes. In one experiment—with electrodes connected to a TV camera which sent images to a computer to be simplified and then transmitted as electrical impulses—the volunteer could see horizontal and vertical lines in the pattern of phosphenes. In another experiment, with the system hooked up to transmit Braille images, he could read words in phosphene for five times faster than with his fingertips.

Dohelle and his colleagues foresee a miniature system that the blind could wear and use constantly. It would consist of a small camera implanted in an eye socket. The camera would transmit light electronically to a tiny computer built into an eyeglass frame which would, in turn, translate the light into electrical impulses to be sent to the implanted electrodes in the visual cortex. With such a system, a wearer could perceive people and objects as well as read.

#### Help for the nearly blind

In addition to the totally blind, half a million Americans are legally blind, with 20/300 visual acuity or with normal acuity but field of vision sharply restricted to 20 degrees or less.

Effective new devices to help them are coming out of laboratories—in particular, from the nonprofit National Institute for Rehabilitation Engineering (NIRE) in Pompton Lakes, N.J. There, a team of ophthalmologists, optometrists and engineers develops means for individual patients to make best use of their remaining sight.

#### CORRECTS TUNNEL VISION

Not long ago, a 42-year-old man was referred to NIRE because an eye disease, retinitis pigmentosa, had left him with tunnel vision so severe that he retained only two degrees of the normal visual field, causing him to bump into objects and restricting his activities. The institute's staff designed and built for him "field expander glasses" mounted on a conventional eyeglass frame. By looking alternately through the regular lens and the field expander, he can now see a full 180 degrees. The field expander glasses now offer full-field vision, too, for people blind in one eye or with half-vision in each eye as the result of brain injury or stroke.

At NIRE, special wide-angle magnifying telescopic spectacles in bifocal form are made for people with impaired central vision or poor visual sharpness, enabling them to see clearly at a distance and drive a car again.

Strong reading spectacles with long working distances are made to help people who have been able to read only by holding print to the face. With the spectacles, they can read at a comfortable distance of 10 to 14 inches.

Miniaturized electronic devices that can be held in the hand or worn on the head are helping people unable to see adequately in dim light.

Among the remarkable achievements of NIRE are cross-vision glasses for people blind in one eye. Through technical legerdemain, the glasses provide full-field, high-acuity vision by detecting images on the blind side and conveying them to the brain through the normal optic pathways on the sighted side without causing double vision or confusion. One of those wearing the glasses is Israel's Gen. Moshe Dayan, who never expected to regain the ability to see on his left side.

Nothing can ever take the place of the priceless gift of normal sight. But increasingly now technological developments promise to help many of the partly sighted and the totally blind to gain, literally, a new outlook on the world.

## UP AGAINST THE STONE WALL

### HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. DRINAN. Mr. Speaker, it is distressing that more than 27,000 requests made under the Freedom of Information Act were denied in 1976. The amendments to the Freedom of Information Act which became effective in February 1975 were designed to reduce many of the obstacles to access to Government records. But the implementation of that measure appears to be less than satisfactory.

An excellent and comprehensive analysis of the present state of the Freedom of Information Act was published in the *Nation* magazine for May 21, 1977, by Martin Michaelson, an able Washington attorney, who has handled many FOIA cases. The article is based on a paper which Mr. Michaelson delivered at a seminar in honor of Prof. H. H. Wilson at Princeton University on May 3, 1977.

The article follows:

#### UP AGAINST THE STONE WALL

(By Martin Michaelson)

Freedom of access to government information, the youngest and perhaps most precarious freedom, is, like freedom of speech, not absolute. In fact, it is so "unabsolute" that, according to Harold C. Relyea's "The Administration of the Freedom of Information Act" (a Congressional Research Service monograph), United States departments and agencies in 1975 denied some 27,300 requests lodged under that Act. And, though final figures are not yet available, it appears that considerably more than 27,000 requests were denied in 1976. Observers having even a passing interest in human rights would presumably be shocked at disclosure of an annual rate of government-ordered abridgments of speech exceeding 27,000 instances; denials on a comparable scale of the right to speak have qualified regimes as totalitarian. Why, then, is there no outcry against these rampant refusals by the government to disclose its records to the public?

To understand why the country apparently tolerates this situation, it is useful to review some history. First, the United States lacks a tradition of free access to government records. This was an element of the more broadly accomplished government secrecy which reached its zenith—more properly, its nadir—in the period that will forever be known as Watergate. Watergate drove home dramatically the extent to which the government kept its domestic and foreign operations secret. From the reformer's point of view, it was powerful medicine with which

to arouse the public, dressing up as it did the banality of most government secrecy in a flood of titillating episodes. But the public was evidently more aroused by Watergate's symptom than by the secrecy disease of which it gave notice.

To suggest that the pervasive government secrecy which the Watergate disclosures intimated was purely a product of the Nixon White House does that administration too much credit. Government secrecy goes far back. Henry Steele Commager has noted the Founding Fathers' inconsistent attitudes about government openness. On the one hand, their theme was that "the people have the right to know":

This was the reason for . . . freedom of the press; this was the logic behind Jefferson's famous statement that given a choice between government without newspapers and newspapers without a government he would choose the latter; this was the philosophy that animated that passion for education expressed by most of the Constitution makers: that without enlightenment about politics and information about government, democracy simply would not work.

On the other hand, Commager continues (*The New York Review of Books*, August 19, 1973), "the Constitution itself was drawn up in secret session." A strong tradition of government openness would have made most unlikely a massive secrecy scandal which implicated, in addition to the President and his advisers, the CIA, Justice Department, Defense Department, Internal Revenue Service, FBI, and other units of the government.

Second, Congress was about 177 years too late in seriously addressing the problem of access to government records. When in 1966 the legislators did legislate for freedom of information in a comprehensive way, they compromised the principle, euphemistically calling limitations on disclosure "exemptions," and making them broad enough to protect massive quantities of secrets. It sometimes appeared—at least until Freedom of Information Act Amendments went into effect in 1975—that the exemptions had consumed the principle.

Third, growth of the federal bureaucracy, proliferation of government agencies, and a staggering increase in the accumulated volume of government paper made government policy on access to records itself inaccessible. For example, until last year there was no way to measure the extent to which the government refused to comply with requests for its records, and even now the data are incomplete.

Fourth—and possibly the most basic explanation of why such widespread nondisclosure of government records continues to be tolerated—many people believe that the government is so large, complex and unfathomable that access to its records would not be particularly helpful. Even the unrelenting efforts of Ralph Nader and the rise of consumerism seem to have made but small inroads on public apathy and alienation.

In light of the foregoing, it is less surprising that the Freedom of Information Act (FOIA) is so limited than that it exists at all. Access to government records was the doing of a relatively few conscientious souls who labored for years against dogged executive branch resistance. It happened like this:

In 1789, Congress enacted a "housekeeping" law which authorized federal agencies to set up files and maintain records. That began the problem. Eighty-five Congresses later, H.R. 2767 was introduced by Rep. John Moss (D., Calif.) to amend the ancient statute in ways that would inhibit the withholding of such files and records. The Moss law, enacted with little notice in 1958, was the product of Congressional hearings and studies begun in 1955 which established that federal agencies were hostile to requests by citizens for information. The 1958 law declared that "This

section [the 'housekeeping' statute] does not authorize withholding information from the public or limiting the availability of records to the public."

Unfortunately, this well-intentioned law had very little effect. Indeed, 1972 hearings of the House Foreign Operations and Government Information Subcommittees revealed that, despite enactment of the Moss law fourteen years earlier, federal agencies still relied on the 1789 "housekeeping" statute as authority to withhold information.

To justify their wholesale refusals to disclose records, federal agencies also routinely cited the gigantic loopholes in the Administrative Procedure Act of 1946. Although the law purported to state a policy of disclosure, its Section 3 authorized the agencies to keep information secret if "held confidential for good cause found," or where secrecy was in "the public interest," or where the information had a bearing on "any matter relating solely to the internal management of an agency." In the unlikely event that the requested information could not be made to fit any of those nebulous categories, an agency was required to furnish it only to "persons properly and directly concerned." In practice, Section 3 was constrained as a charter for government secrecy.

Thus, it became evident in the early 1960s that a law more potent than the 1946 and 1958 statutes was needed to overcome executive branch resistance to disclosure. Congress considered numerous proposals, but passed none until the 1966 Freedom of Information Act. That landmark bill, although complicated and riddled with exceptions, amended the 1946 statute to establish the principle that "any person" was entitled to access to government records without having to demonstrate a need or even a reason. Most important, the 1966 Act provided that the burden of justifying a refusal was on the agency; the requester no longer had to prove his right to the information.

Shifting the burden of proof had practical litigation effects, with which lawyers are familiar. But litigation is an inefficient tool with which to achieve broad compliance with a social policy, and the shift had a more basic significance. The right of access to government information now took on an essential characteristic that the constitutional freedoms enjoy: the onus is on the government to show that a recognized freedom should be denied in a particular case, not on the citizen to show entitlement to it.

The 1966 Act was debated in and passed by Congress with almost no support from the executive branch. Not a single executive branch spokesman endorsed the bill while it was under consideration, and President Johnson's view of its merits was uncertain until he signed it into law. Moreover, the Executive's glowing praise of the Act was belied by persistent obstruction of its implementation. Pen in hand on July 4, 1966 (the law went into effect one year later), President Johnson orated: "I signed this measure with a deep sense of pride that the United States is an open society in which the people's right to know is cherished and guarded." In a similarly high-sounding endorsement, Atty. Gen. Ramsey Clark, writing his June 1967 explanatory memorandum on the Act to the agencies of government, asserted that "disclosure is a transcendent goal." Other government officials echoed the rhetorical theme.

Perhaps the agencies took Ramsey Clark too literally. In any event, they succeeded so well in transcending the goal that they plainly missed it. A House Government Operations Committee report of 1972 cited six major problem areas in implementation of the Act, which I summarize:

(1) Bureaucratic delays in responding to information requests were grossly excessive. Initial response delays average thirty-three days, and major agencies took an average of

fifty days or more to process agency reviews of initial decisions.

(2) Agencies charged exorbitantly for records, as a device to withhold information.

(3) The judicial remedy for improper denial of access was cumbersome, costly and time-consuming, frustrating vindication of rights under the Act.

(4) Key decisions at federal agencies as to whether information would be disclosed were made by political appointees.

(5) News media personnel, often stymied by bureaucratic delays, took inadequate advantage of access rights.

(6) In too many cases, information was withheld, overclassified or otherwise hidden from the public to avoid disclosure of administrative mistakes, waste of funds, or politically embarrassing facts.

Some noteworthy progress in honoring the principle of freedom of information was made by the courts after 1966, but the case-by-case approach prescribed by the 1966 law was slow and difficult in the early years. For example, only eight cases were decided in 1970, twenty in 1971, twenty-eight in 1972 and sixteen in 1973. Litigants seeking access were challenged by the full legal resources of the U.S. Government, which almost invariably appealed lower court decisions that upheld disclosure. In addition, persons seeking disclosure usually had to pay substantial legal fees, even when they won their cases. Furthermore, the Supreme Court, out of what history is likely to judge an excessive deference to the Executive, held in *Environmental Protection Agency v. Mink*, 410 U.S. 73 (1973), that the Executive's decision to classify a document secret was virtually unreviewable; to determine whether classification of a document was proper, the courts could look no further than to the self-serving affidavits of the executive branch officials who had classified it. The judiciary thus barred itself from examining classified documents in FOIA cases.

Added to these off-putting factors was the inordinate complexity of the 1966 Act, which seemed even to lawyers to resemble the proverbial committee-drawn sketch of a horse. In fact, there had been more than one committee. Searching inquiry was required just to figure out what Congress had in mind. A 1968 *Fordham Law Review* article commented that the legislative history of the 1966 Act "is even more confusing than the Act itself."

It must be said that it was genuinely difficult to determine what information should properly be withheld under the Act's exemptions. There was and is no touchstone to determine which government records comprise bona fide private proprietary information (disclosure of which would be anti-competitive), or which investigative material should not be made public, or which intra-agency memos are of a privileged nature, or which secrets are actually necessary to the national security, to cite only a few illustrations. Hard cases, it is said, make bad law, and many of the early FOIA cases were certainly hard.

All these difficulties—cost, delay, statutory ambiguity, lack of precedent, uncertainty of outcome and, above all, agency hostility—often confronted the unwary requester of government documents head-on. In a very sober understatement, Rep. William Moorhead (D., Pa.), reviewing application of the Act during its first seven years, concluded that "No law is self-enforcing, least of all a law designed to help the citizen in a contest with the government." One study of 2,200 instances in which access to government documents had been denied found that fewer than 300 appeals were taken within the denying agencies, and in only about 100 of these instances did the disappointed individual go to court. The

odds were too great. The bureaucracy was, for the most part, in charge of the outcome.

Changes to the 1966 Act were necessary if freedom of information was to survive as much more than a boast. Congress again held hearings, and amendments were proposed in the House and Senate. Again, not a single executive branch representative testified in support. Indeed, some departments and agencies claimed, in effect, that their decisions on disclosure questions were so intelligent that review outside the agency would hardly be appropriate. For example, the acting general counsel of the Defense Department argued in a February 20, 1974 letter to the chairman of the House Government Operations Committee that:

No system of security classification can work satisfactorily if judges are going to substitute their interpretations of what should be given a security classification for those of the government officials responsible for the program requiring classification.

The generals, in short, held themselves unaccountable to the federal judiciary.

Former Atty. Gen. Elliot Richardson defined the obstacle to disclosure in his testimony before the Senate Administrative Practice and Procedure Subcommittee. "The problem," he said, "in affording the public more access to official information is not statutory but administrative. . . . The real need . . . is to improve compliance." Richardson was largely right, but how, without legislating, could Congress obtain "improved compliance" from an executive branch that had repeatedly demonstrated disinclination to comply? Legislation was the only answer.

However, it is difficult for Congress to legislate over executive branch opposition. The Ford administration, torn between its desire to appear cleansed of its predecessor's disastrous secrecy and its fear of too much public access, in the end chose secrecy. As President Ford's former press secretary, Jerald terHorst, recounted it (The Washington Star-News, November 1, 1974):

"Despite the grace period that the Congressional managers of the bill extended to Ford as a personal courtesy, no serious efforts to work out a compromise were made by the Justice Department, the FBI, the Domestic Council or other administration agencies whose leaders supposedly were now responsive to Ford.

It amounted to stonewalling, some actually preferring that Congress pass a bill which Ford would veto. . . . And Ford . . . finally did just that. . . ."

Fortunately, the political environment in Congress in November 1974, was ideal for disclosure legislation, and Congress overrode Ford's veto of the 1974 Amendments of the 1966 Act. On the same day, the Senate passed the Privacy Act of 1974, another long-overdue measure, which entitles individuals to inspect and correct many kinds of government records about themselves. The Senators were responding to Congressional review of the extent to which the government collects personal data on citizens. Studies by the Senate Subcommittee on Congressional Rights had revealed that, in 1971-73, the federal government maintained 858 data banks, containing 1.246 billion files on individuals.

The 1974 Freedom of Information Amendments, which became effective in February 1975, went a long way to reduce many of the obstacles to access to government records. They required agencies to publish comprehensive indexes on their publicly available records; imposed a ten-day limit on initial agency responses to information requests; required that agency fees for locating and copying records be uniform and moderate; authorized Civil Service Commission disciplinary proceedings against federal employees who capriciously or arbitrarily denied information requests; empowered the

courts to inspect withheld documents in camera, thus overturning the Supreme Court's decision in *E.P.A. v. Mink*, and shortened the government's time for answering complaints brought into court. They also directed the courts to expedite decision of FOIA cases; provided for recovery of attorney fees by information requesters who prevail in litigation; prohibited agencies from withholding entire documents only parts of which are exempt, by requiring disclosure of all "reasonably segregable" nonexempt portions; ordered each agency to report to Congress annually its experience under the Act, and liberalized the Act's exemptions relating to law-enforcement investigatory records and classified documents.

The urgency of improving access to needlessly classified documents was particularly great. A Princeton historian, Theodore Draper, had aptly described the security classification practices of the executive branch as "shot through with duplicity, hypocrisy and favoritism" (The New York Times Magazine, February 4, 1973). Another student of excessive security classification practices, William Florence, advised Congress that abuse of security classification was by no means limited to the government—it had polluted industry. As of July 1974, he reported, the Defense Department was maintaining industrial-facility security clearances at 1,293 facilities for Top Secret work, and 9,688 facilities for Secret work. Thus, industry classified and maintained "many millions of documents" prepared at public expense, and often needlessly held them secret. Here are a few examples of improper and excessive executive branch classification of documents in this period:

A note written by one of the Chiefs of Staff stated that too many papers were being classified as Top Secret. The note itself was classified Top Secret.

The external configuration of missiles which were standing on launch pads at Cape Canaveral where the public could plainly see them was classified Confidential.

Eleven documents classified Top Secret were introduced into evidence, and placed in the public file, during the four-month Pentagon Papers trial in 1973. Notwithstanding that the public had four months of unlimited access to the documents, the Defense and State Departments refused to remove the Top Secret classifications.

Compilations of unclassified, publicly available information, such as news clippings and bibliographies, were routinely classified.

On the basis of its review of such abuses, the House Government Operations Committee concluded that existing security classification practices had "spawned a strangling mass of classified documents that finally weakened and threatened a breakdown of the entire system." The Amendments sought to reverse this trend. After all, as Sen. Jacob Javits (R., N.Y.) remarked during floor debate, "it is not providence on Mount Sinai that stamps a document secret or top secret but a lot of boys and girls just like us who have all their own hang-ups."

Whether the purposes of the Freedom of Information Amendments will be achieved is not yet known. It is clear that the volume of requests has increased dramatically. For example, FBI Director Clarence Kelly, bemoaning the "avalanche" of FOIA requests to his agency, recently felt constrained, albeit reluctantly, to assign 400 FBI agents to process a backlog of requests requiring review of "nearly 10 million pages" of FBI records (Anthony Marro, The New York Times, March 18). However, it is far from clear that executive branch resistance to disclosure has abated. Available data are not easy to interpret. Thus, while the Justice and Defense Departments reported granting 84 and 86 percent respectively, of the FOIA requests made to them in 1975, there is no way to know how many of these requests sought truly innocuous material, such as printed

brochures, regulations and the like. What is known is that the Defense Department denied 5,197 requests in 1975 and 6,973 in 1976. Anyone who has dealt with them can testify that the gentlemen in the Pentagon do not resolve close questions in favor of information seekers.

Available reports on 1976 agency implementation of the Act are puzzling and troubling in many respects. The CIA's report to Congress on its 1976 FOIA activities attempts to excuse the agency's massive backlog of requests by stating that "the CIA has no central file or index to its record holdings" and that it takes the CIA "2-3 days to retrieve inactive records." Are these statements credible in light of a U.S. intelligence budget said to approximate \$6 billion? The Federal Trade Commission, one of the most pious of federal agencies in its proclaimed zeal to protect the public, saw fit to deny some 690 FOIA requests in 1976. The National Science Foundation, guardian of the principle that knowledge is enlightenment, denied thirty-four requests.

Still, there are signs of progress. The CIA also states that in 1976 its personnel spent 181,995 man-hours processing Freedom of Information and Privacy Act requests, and mandatory classification reviews under Executive Order 11652. FOIA requests are increasingly being directed to obscure, as well as prominent, government units. Even the little American Battle Monuments Commission got its share in 1976 and the Marine Mammal Commission—whatever that is—also duly reported its FOIA compliance policy and practices.

Perhaps the substantial rate and number of current denials of FOIA requests are not as salient as the unquestionably large rate and number of disclosures. The pessimist, it is said, describes the glass as half-empty, the optimist as half-full. However, skepticism of a real executive branch commitment to the House Government Operations Committee of its resistant attitude dating back to the earliest days of freedom of information. Analysts should remember that Congress had very good cause to shift to the government the burden of justifying nondisclosure. Vigilant Congressional oversight, and increased media attention, are the main guarantees the people have that Congress' intent will not be thwarted once again.

A vital freedom of information procedure is burdensome to all involved; it is expensive and fragile. Compliance must be constantly monitored if the freedom is not to slip away. Whether it is worth the effort is always open to debate. And yet, the belief that useful public debate itself depends on this freedom is perhaps the best argument for its indispensability. At bottom, this freedom, like all others, rests on *a priori* values. As Prof. Thomas Emerson said in *The System of Freedom of Expression*, "The validity of [these] premises has never been proved or disproved, and probably could not be." However, the unprovable, but I think undeniable, assumptions which underlie freedom of information have been described this way in Congress:

Information is essential to knowledge—and knowledge is the basis for political power. Under our government system, maximum access to information must, therefore, always reside firmly in the hands of the American people.

#### PERSONAL EXPLANATION

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. LEHMAN. Mr. Speaker, on Monday, May 23, I inadvertently missed one

of the votes on the bills which were considered under suspension of the rules. Had I been present, I would have voted in favor of H.R. 6502, to provide an automobile assistance allowance and automotive adaptive equipment to veterans of World War I.

#### LABOR BOSSES TRY TO CHANGE THE RULES

**HON. ROBERT E. BAUMAN**

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. BAUMAN. Mr. Speaker, one way to win a battle you are losing is to change the rules in a way which will guarantee victory for your side. The czars of big labor, upset by dwindling membership rolls, have been trying to do just that.

A recent editorial in the Daily Times of Salisbury, Md., has pointed out another example of the continuing campaign to change the rules of union organization in their favor—at the expense of the American worker. The bill would allow a union to be certified as sole bargaining agent for any shop in which it could “persuade” 55 percent of the workers to sign authorization cards. This process is proposed as a “reform” of the secret ballot system now employed.

When are Mr. Meany and his cohorts in the plush suites of the AFL-CIO going to learn that most Americans have had enough of the manipulation of Government agencies like the National Labor Relations Board for their own selfish interests? The Daily Times is right: This latest bill from Mr. Meany’s labor lobby must be stopped.

The article follows:

#### THEY’RE STILL AT IT

Organized labor’s legislative “spring offensive” includes a bill which has been described as “the only really important bill” coming up this year and “more important than 14b and situs picketing combined.”

The bill, HR 77, according to its sponsor Rep. Thompson (D-N.J.), will supposedly “reform” the National Labor Relations Act. Don’t you believe it!

The union-backed “reform” bill in reality would automatically certify a union as the bargaining agent whenever 55 percent of the employees involved could be “persuaded” by the union to sign authorization cards. The bill would supersede the secret balloting now required by the National Labor Relations Act.

The Orlando Sentinel Star said this about the bill:

HR 77 would expedite union growth, but it would cheat the employee of his right to express himself anonymously through the secret ballot process. Many workers, acting under peer pressure and fear of reprisal will sign a union petition but vote against it in the NLRB secret ballot system. It has happened with enough frequency to frustrate union expansion particularly in the loosely organized South which is industry’s new and largely untapped frontier.

AGC’s executive vice president, James M. Sprouse, said the union ploy was obvious: “If they can’t win under the present rules, they’ll simply change the rules until they can. This bill is more detrimental to the public than the recently defeated secondary boycott legislation. The bill would also require that elections be held within 45 days

of the union’s request even though questions concerning the appropriateness of the bargaining unit have not been settled, and it would provide for new penalties against employers, such as debarment from federal contracts and suits for treble damages by individuals discriminated against because of their union activity. This bill must be stopped.”

#### IMPORT QUOTAS ON ITEMS WHICH ADVERSELY AFFECT DOMESTIC ECONOMY RECOMMENDED BY GENERAL ASSEMBLY OF PENNSYLVANIA

**HON. JOSHUA EILBERG**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. EILBERG. Mr. Speaker, in recent weeks I have become more and more concerned about the flood of foreign-made goods coming into the American market, to the disadvantage of American businesses and American workers. I have repeatedly expressed this concern to the President, because of the pledges which this administration has made to help restore the American economy—pledges which simply are being ignored in the foreign trade decisions being made at the White House.

My concern about this problem, Mr. Speaker, is shared by the General Assembly of the Commonwealth of Pennsylvania. The position of my State’s legislature is clearly spelled out in a resolution adopted by a vote of 192 to 3 on April 26, 1977. This resolution, in the form of a memorial to the Congress and the President, calls for establishing import quotas on those foreign-made goods and commodities which are adversely affecting the economic well-being of our domestic corporations and businesses of the United States.

State Representative Jame P. Ritter, chairman of the Federal-State Relations Committee of the House of Representatives, has provided me with a copy of this important resolution, and I am making that resolution a part of the Record so that my colleagues will be aware of the position that the Pennsylvania General Assembly has taken on this matter:

#### HOUSE RESOLUTION No. 67

In the House of Representatives, March 28, 1977: Cheap labor and government subsidies in foreign countries makes it possible to produce various goods and commodities there and sell them here at prices lower than the price required for those produced in Pennsylvania and her sister states. Flooding of the markets of the United States with such foreign made items results in the loss of jobs for our workmen. The only effective way to prevent such harmful activities is to establish and enforce import quotas; therefore be it

RESOLVED, That the House of Representatives of the Commonwealth of Pennsylvania calls on the President of the United States to direct his special representative for trade to develop voluntary trade restraints in the various goods and commodities, including, but not limited to shoes, textiles, wearing apparel, mushrooms and steel. Should this fail, the House of Representatives calls on the President of the United States and the Congress of the United States to establish

quotas on the importation of the aforementioned goods and commodities into this Nation and strictly enforce the application of the quotas set for the protection of the welfare of the citizens of the United States and its industries engaged in the manufacture and production of the various goods and commodities under such quotas; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the presiding officers of the Senate and House of Representatives of the Congress of the United States and each of the Senators and Congressmen from Pennsylvania for their review and comment.

#### INDIANA SMALL BUSINESSMEN OF THE YEAR

**HON. ADAM BENJAMIN, JR.**

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. BENJAMIN. Mr. Speaker, I am delighted to inform the House that Steve Corey and Mark Corey, who own and operate the Corey Bros. Bakery in Hobart, Ind., were named Indiana Small Businessmen of the Year. Steve Corey, his lovely wife Evelyn, and their son Douglas are presently in Washington and appeared yesterday with President Carter at the White House at a ceremony held to celebrate Small Business Week.

Being a resident of Hobart myself, I am proud of their accomplishment and especially pleased to be able to relate for you the history of the bakery and the struggles these remarkable men have overcome in order to continue to serve the people of their community.

In 1955 Steve and Mark Corey started their business in Hobart, Ind., under the name of Corey Bros. Bakery. With little capital, long hours and the performance of all management functions were necessitated. After several years of struggling, the business expanded and moved to a new location and additional employees were hired.

In 1973, a substantial bookkeeping error that accumulated over a period of years was discovered. Company policy was to credit customers on returned merchandise, particularly on stale bread. The amount involved was substantial and while the easy way out for Steve and Mark would have been to close the business they felt responsible. Possessed of an integrity many today lack, the Coreys made the difficult decision to stay in business and borrow funds in order to make their customers whole.

A year later, fire devastated the bakery and completely destroyed their building. Insurance coverage was adequate to replace the structure, but a year passed before an agreement was reached on their business interruption insurance.

Despite this second burden, under which others would have faltered, Steve and Mark Corey remained resolute and continued the bakery. With the help of the Small Business Administration and after approximately 18 months from the date of the fire, the bakery was again opened, this time with 24 employees.

As sons of immigrant parents, Steve Corey and Mark Corey are outstanding examples of the perseverance and determination of the small businessman to succeed in the free enterprise system.

As the Small Business Administration said:

With two major problems that might have ended most businesses the Coreys have demonstrated an unusual talent for hard work, a strong sense of responsibility in meeting their obligations and a spirit of enterprise that marks the best attributes found in the small businessman.

Steve and Mark are a credit to themselves, their families, and to the community they serve. I am happy that they continue to do business and prosper in the district I represent and it is a privilege to draw this House's attention to their success.

#### HOUSE RESOLUTION 597

### HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. KETCHUM. Mr. Speaker, yesterday I introduced House Resolution 597, a resolution which seeks to eliminate the positions of majority and minority printer.

Both of these positions were first outlined during the term of the 78th Congress in 1943 under House Resolution 295 and were made permanent by the Legislative Branch Appropriation Act of 1945. The purpose of the legislation was to establish printing for the House majority and minority leadership at no charge. It further allowed for Members of Congress, congressional committees, State societies, and political organizations to use the facilities for a fee.

Today the offices of the majority and minority printers and their printing plants are located in the west underground garage of the House of Representatives. The printers are given their work spaces free of charge. In addition they are not required to pay for utilities.

The most striking luxury of the business, however, is the salary that both printers earn. First, each receives \$15,000 by act of Congress for the purpose of majority and minority leadership printing needs. According to a recent Government Accounting Office report, the printers then divided between them just last year \$118,870 in additional salary as well as \$104,535 in business profits. In adding these figures together as the combined income for both of these printers, the amount is staggering.

Obviously, the printing market with the House of Representatives is vast. With an annual constituent communication allowance of \$5,000 for each Member the gross amounts to \$2,225,000 for just House printing allotments alone. There are many other printers in the Washington area who would greatly value the opportunity to come into the market, but they are precluded from doing so due to the monopoly mandated by Congress.

I am appalled at this continued utter waste of the American taxpayer's money. For too long the majority and minority printers have taken a free ride while remaining under the protection of the U.S. House of Representatives. At a time when we as responsible elected officials are called upon to cut off the fat of public expenditure, we had better first take a hard look at trimming the excesses of our own House. Once we have done that, we will find that our only course is to eliminate the abusive practice that we have fostered for too long.

Under the proposals of House Resolution 597 the corrective steps to remedy this situation would be made. First, the two positions would be abolished and the authority of the majority and minority leaders to appoint such printers would be revoked. Second, their functions would be transferred to those individuals designated by the Committee on House Administration on a basis of competitive bidding, and all procedures would be determined at the discretion of the committee. Finally, any past records of the printers would be sent to the Clerk of the House.

I believe that the bill arrives at a truly workable solution to the problem. Its very foundation rests on the sound and basic principle of the free enterprise system, the cornerstone to the American economic way of life. I see no reason why our own business in the area of printing cannot be conducted under the same guise.

I urge my colleagues to fully consider what we as a body have created over the years. Only then will the serious weight of this problem be fully realized. This practice must be stopped, and it must be stopped now.

#### THE 59TH ANNIVERSARY OF ARMENIAN INDEPENDENCE

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. DERWINSKI. Mr. Speaker, May 28 marks the 59th anniversary of the Proclamation of Independence by the Armenian people from Soviet and Turkish domination. This independence, although short-lived, was achieved in the face of overwhelming odds since the Armenians were forced to struggle against both Soviet and Turkish military forces. Another factor which prevented the Armenians from maintaining their independence, was the indifference of the World War I allied powers and their statesmen who ignored the justice of the Armenian cause.

It is important to note that Americans of Armenian extraction have made tremendous contributions to our political, economic, educational, and artistic progress. As loyal Americans, they have maintained a very proper and steadfast interest in the restoration of freedom to the brave Armenian people still within the confines of Soviet bondage.

The Armenian people suffered centuries of persecution, but have maintained their unique religious, cultural, and linguistic identity. Certainly their perseverance and the great national character which it expresses will be rewarded by the restoration of freedom to the people of Armenia and to the historic land that is their birthright.

The nationalistic spirit of the people of Armenia has not been crushed by Turkish atrocities or by Soviet rule. Therefore, on this anniversary of Armenian independence, let us rededicate ourselves to the cause of the Armenians and all other peoples who are still deprived of the right of self-determination. I know the Armenian people will maintain their faith and hope in the legitimate and irrepressible restoration of their independence and freedom and historic national area.

#### TRIBUTE TO ALEX HALEY

### HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HAWKINS. Mr. Speaker, on May 4, my colleagues in the Congressional Black Caucus requested a special order for the purpose of paying tribute to and showing our immense admiration for Mr. Alex Haley. Because I was unable to be present at that time, I would like to take this opportunity to join my colleagues in honoring this most gifted and dedicated American.

Words alone cannot really express the impact Mr. Haley's book and television serialization, "Roots," has had on the American public. The true testament to his fine work lies in the reaction the American public had upon watching and reading Mr. Haley's magnificent work.

Black Americans were wrenched into experiencing the vicious, tumultuous journey our African ancestors were forced to undertake as enslaved people; made to cry as the cruel and unjust system of slavery in the United States was reenacted before our eyes through the eloquence of Mr. Haley's words; and reacted with a sense of jubilation and pride with the realization of how we have survived despite such adversity.

White Americans experienced the tragedy of the institution of slavery their forefathers perpetuated in this society, and saw and read the selfish actions of many white Americans. White Americans, also, however, were able to share the depths and heights, and experience the joys and frustrations of a black American family, dealing with its past and looking forward to its future—aspirations all peoples can relate to.

Thus, experiencing "Roots" was truly experiencing America—past and present. All Americans can thank Mr. Alex Haley for illuminating our history and heritage for us and showing all Americans that as our past was inexorably linked, so too will our future be determined.

May 25, 1977

# RESULTS OF QUESTIONNAIRE FROM FOURTH DISTRICT OF KENTUCKY

**HON. GENE SNYDER**

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. SNYDER. Mr. Speaker, I learned long ago that no matter how much we talk or how many pages of the RECORD we fill with sage comments, we are not the experts. We might like to think so, but we are not. The real experts are the people back home who have to live with the laws we dish out by the carload. They know our laws from daily experience. They know our regulations on a first-hand basis. When we do a good job, it is their success—and when we make a mistake, it is their misfortune.

This year again I asked the experts, the people of the Fourth District of Kentucky, to share their opinions with their Congressman through a questionnaire. Once again the response of the level-headed people of the fourth district evidences that they care and are concerned about the direction of their Government. Eighteen thousand of them filled out and returned the questionnaires and many of them added their own personal comments and suggestions on a wide range of topics. Their thoughtful remarks have reconfirmed my belief that we would have more answers, fewer problems, and be in much better shape if more of us took the time to listen to the people we represent.

Since the questionnaire dealt with issues which are national in scope, my colleagues should find the results interesting. It is even quite likely that the opinions of the people in Kentucky's Fourth District might reflect the views of a good many of their own constituents.

The tabulations are self-explanatory but particular attention is called to several points which are interesting. One is that appeasement does not rate too highly. The Panama Canal giveaway and the thought of financial assistance to Vietnam did not get much support. On the other hand, a good majority of those who responded is obviously concerned about our national defense—opting for continued defense spending, prohibition of military unionization, and, by a smaller margin, continued stationing of U.S. troops overseas.

Also of particular interest is the 90-percent approval of the concept of congressional veto of agency regulations. This is an indication that the people want Congress to do more than sit back and applaud while the President talks about what he is going to do. They want action and they want Congress to take an active role in pulling the regulatory monkey off their backs.

A final observation is that the Civil Rights Commission must have been wrong. According to the residents of the Fourth District of Kentucky, court-ordered busing is not working. For 97 percent of them feel that busing is not improving education. This virtual unanimity is especially interesting when you

## EXTENSIONS OF REMARKS

consider that one county in the district knows busing first hand; another has been indirectly affected by busing, and the others are not affected or emotionally involved in busing at all. Yet they nearly all came to the same conclusion: busing is not improving education. The Civil Rights Commission says otherwise, but maybe they think 2 percent is a passing grade.

Now that I have exhausted my own comments—let us look at the responses of the experts from the Fourth District of Kentucky. Questionnaire results follow:

### QUESTIONNAIRE

[All figures in percentages]

1. Do you favor Federal funding of Congressional campaigns out of tax revenues?

Yes ..... 25.04  
No ..... 71.61  
No response ..... 3.35

2. Do you believe Congress should have the right to review and veto if necessary, rules and regulations created by bureaucratic agencies?

Yes ..... 90.56  
No ..... 5.56  
No response ..... 3.88

3. Do you support a constitutional amendment prohibiting abortion on demand?

Yes ..... 47.73  
No ..... 48.15  
No response ..... 4.12

4. One of President Carter's foreign policy priorities is the swift completion of negotiations to give away the Panama Canal. Do you favor this move?

Yes ..... 3.68  
No ..... 92.83  
No response ..... 3.49

5. Do you support efforts to repeal section 14b of the Taft-Hartley Act (right to work)?

Yes ..... 15.16  
No ..... 65.22  
No response ..... 19.62

6. In light of the recent reassessments of the Russian's sustained drive for military superiority, do you favor sustained military spending to insure a healthy defense posture?

Yes ..... 87.69  
No ..... 7.81  
No response ..... 4.50

7. Should food stamps be limited to people at or below the poverty level? (Currently \$5,500 for a non-farm family).

Yes ..... 85.37  
No ..... 9.72  
No response ..... 4.91

8. Should the U.S. reduce the number of troops stationed overseas?

Yes ..... 29.57  
No ..... 58.39  
No response ..... 12.04

9. Should we provide financial assistance to rebuild Vietnam?

Yes ..... 3.73  
No ..... 93.31  
No response ..... 2.96

10. Do you think court ordered busing is improving education?

Yes ..... 1.84  
No ..... 96.99  
No response ..... 1.17

11. Should the military be allowed to unionize?

Yes ..... 2.10  
No ..... 95.78  
No response ..... 2.12

12. Do you think price control on natural gas should be lifted?

Yes ..... 35.97  
No ..... 54.52  
No response ..... 9.51

13. Divestiture of oil companies (breaking them into smaller units) is likely to be an issue this year. Do you favor such action?

Yes ..... 46.37  
No ..... 43.27  
No response ..... 10.36

14. Federal spending is viewed by some as a cure for economic problems. Others see it as the cause of the same problems. Do you feel that increasing Federal spending is the proper course?

Yes ..... 6.72  
No ..... 88.20  
No response ..... 7.08

## TAX SERVITUDE TO GOVERNMENT AS COMPILED BY TAX FOUNDATION

**HON. TOM HAGEDORN**

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HAGEDORN. Mr. Speaker, the Tax Foundation is a publicly supported, nonprofit organization engaged in non-partisan research on matters of Government fiscal policy. Their latest study concludes that the average taxpayer in 1977 will work 2 hours and 42 minutes out of every 8-hour day for some level of government, with taxes comprising, by far, the major expenditure in the average family budget.

Rather than debating and defining legislation strictly in terms of their dollar value, particularly where incomprehensible multibillion dollar sums are involved, it might be interesting to couch debate in terms of the daily work burdens being imposed upon individuals. While a \$162 billion budget figure for HEW might carry little real impact, the recognition that this would entail at least a half hour of labor every day by every individual taxpayer might better convey the magnitude of the legislation.

The clear fact is that the public sector is taking an increasingly large share of the national product and making determinations about how that money should be spent. President Carter's energy policy is a perfect example of the failure to recognize this problem. We are assured that there is nothing to worry about in the fact that so much money will be going to the Government in the form of new taxes since most of it will be returned in the form of various rebates. Yet, the bottom line remains the fact that it is the Government determining the form of the rebates and the beneficiaries of the rebates. The money may, indeed, be going back to the private sector, but not to the people who originally paid the taxes. It will be going to individuals, and toward purposes, which the Government finds worthy—not the worker who earned the income.

At this point in the RECORD, I would like to insert two charts compiled by the Tax Foundation. I believe that they make it eminently clear that those genuinely concerned about the high cost of living for the average citizen are going to have to start bringing pressure to bear on Congress, and not on the farmer, the consumer, the middleman, business, labor, or some other scapegoat:

**TAX BITE IN THE 8-HR DAY—HISTORICAL COMPARISONS**  
(WORK TIME REQUIRED TO PAY FEDERAL AND STATE-LOCAL TAXES)

| Year <sup>1</sup>       | Hours : Minutes |         |             |

| Total.....                           | 8     | 49      |

<sup>1</sup> Includes consumer expenditures for items such as personal care, personal business and private education, and savings.

Source: Tax Foundation estimates as of Mar. 15, 1977.

Mr. Speaker, figures provided by the Tax Foundation also point out that government expenditures in 1977 will average \$9,607 for each household, representing nearly half of the average mean income of the Nation's nearly 75 million households. As Nobel Prize-winning economist Milton Friedman notes, government expenditures rather than taxes provide a more accurate indication of the full weight of government upon the people because all spending, whether or not accounted for through taxes, is going to eventually be borne by the people, in some form or another. I believe that the figures compiled by the foundation on this matter will also be of interest to my colleagues:

#### FEDERAL, STATE, AND LOCAL GOVERNMENT EXPENDITURES,<sup>1</sup> SELECTED YEARS, 1950-77

| Fiscal year             | Amount (billions) |         |                 | Total per household |
|-------------------------|-------------------|---------|-----------------|---------------------|
|                         | All governments   | Federal | State and local |                     |
| 1977 <sup>2</sup> ..... | \$715.7           | \$447.3 | \$268.4         | \$9,607             |
| 1976 <sup>2</sup> ..... | 633.9             | 393.0   | 240.9           | 8,699               |
| 1975.....               | 556.3             | 339.7   | 216.6           | 7,823               |
| 1970.....               | 333.0             | 208.2   | 124.8           | 5,252               |

#### MONTHLY LIST OF GAO REPORTS

#### HON. JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. BROOKS. Mr. Speaker, the monthly list of GAO reports includes summaries of reports which were prepared by the staff of the General Accounting Office. The March 1977 list includes:

#### AGRICULTURE

Summary of GAO Reports Issued Since 1973 Pertaining to Farm Bill Legislation. CED-77-39, March 3.

Information on a Department of Agriculture Claim Against the Commonwealth of Puerto Rico. CED-77-40, February 24.

Nationwide Food Consumption Survey: Need for Improvement and Expansion. CED-77-56, March 25.

#### COMMERCE AND TRANSPORTATION

Why Urban System Funds Were Seldom Used for Mass Transit. CED-77-49, March 18.

Assistance to Nonrubber Shoe Firms. CED-77-51, March 4.

Using Aviation Resources in the United States More Effectively. LCD-76-445, March 31.

Efficient Railcar Use: An Update of the Interstate Commerce Commission's Compliance and Enforcement Program. CED-77-21, January 12.

#### LETTER REPORTS

Suggestions for improving operations of the National Weather Service. CED-77-41, March 9.

Extent of the Postal Service's use of railroads for transporting the mail. GGD-77-23, February 25.

COMMUNITY AND REGIONAL DEVELOPMENT  
Government National Mortgage Association's Secondary Mortgage Market Activities. CED-77-28, March 8.

EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

Indian Education in the Public School System Needs More Direction from the Congress. HRD-76-172, March 14.

Problems in Administration of Family Planning Programs in Region VIII. HRD-77-42, February 28.

#### LETTER REPORT

Lack of management information hampers HEW's Office of Civil Rights' ability to carry out its responsibilities. HRD-77-78, March 30.

#### GENERAL GOVERNMENT

Financial Disclosure Systems in Banking Regulatory Agencies. FPCD-77-29, March 23.

Federal Supply Service Not Buying Goods at Lowest Possible Price. PSAD-77-69, March 4.

Special Travel Benefits for Federal Employees in Hawaii, Alaska, and Similar areas Outside the Continental U.S. Should be Changed. FPCD-76-65, March 2.

Problems Found with Government Acquisition and Use of Computers from November 1965 to December 1976. FGMSD-77-14, March 15.

Review of Postal Service's Payroll System. GGD-77-37, March 15.

Need to Strengthen Financial Accountability to the Congress. GGD-77-43, March 31.

Audit of the Minority Printing Clerk, Fiscal Years Ended September 30, 1974, 1975, and 1976. GGD-77-41, March 31.

Audit of the Majority Printing Clerk, Fiscal Years Ended August 31, 1974, 1975, and 1976. GGD-77-42, March 31.

Audit of the Office of Attending Physician Revolving Fund, August 1, 1975, through September 30, 1976. GGD-77-29, March 9.

Examination of Financial Statements, Bureau of Engraving and Printing Fund for Fiscal Years 1974 and 1975, Shows Need for Statutory Authority to Increase Capitalization. FOD-76-22, March 7.

Upward Mobility Program Can be Improved. FPCD-77-2, March 21.

Proposed Moves of Certain Agencies in the National Capital Region. LCD-77-309, January 27.

#### LETTER REPORTS

How the Treasury Department can Improve its procedures for controlling, accounting for and safeguarding checks which are undeliverable or withdrawn. FGMSD-76-56, March 1.

The Civil Service Commission should require Federal agencies to develop contingency plans to deal with work disruptions which affect essential public services. FPCD-77-41, March 11.

Suggestions for Improving Federal Supply Services practices in awarding multiple schedule contracts. PSAD-77-87, March 11.

How much does the Federal Government spend to produce television commercials? LCD-77-415, March 18.

## SUPPORT FOR SMALL HYDROELECTRIC PROJECTS IN EXISTING DAMS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. OTTINGER. Mr. Speaker, yesterday I introduced legislation to promote the installation of hydroelectric capacity in existing dams throughout the country. There are 49,000 dams throughout the Nation which are 25 feet high or higher, and could be developed to produce cheap hydroelectric power. Further, there are thousands of dams even smaller, many of which could economically be developed for power production. These existing dams are located in virtually every State.

The beauty of this proposal is that it would save precious fuels and it would be environmentally compatible—both because of replacing the burning of polluting fuels and because it would involve the construction of no new dams.

There is widespread support for the idea of utilizing existing dams for power production. President Carter's National Energy Plan indicates that 14 million kilowatts of capacity could be gained by installing small, 3,000 to 5,000-kilowatt generators in existing dams. The American Public Power Commission suggested the idea to James Schlesinger back in January. Governors Carey, of New York, Grasso, of Connecticut, and Langley, of Maine, have all written to me expressing enthusiastic support. New York's Public Service Commission Chairman, Alfred Kahn responded favorably to the idea, and indicated that he has directed the New York Commission to investigate the possibility. I have also received a supportive letter from David Freeman, in the Energy Policy and Planning Office at the White House. I would like at this point to share with my colleagues these encouraging letters in support of moving ahead to develop hydroelectric facilities in existing dams.

The letters follow:

AMERICAN PUBLIC  
POWER ASSOCIATION,

Washington, D.C., January 14, 1977.

To: James Schlesinger  
From: Alex Radin  
Subject: Development of small hydroelectric generating facilities

A Federal program is needed to develop small hydroelectric generating facilities. It could produce important economic, energy, and environmental benefits.

David Lillenthal, a founding director of the Tennessee Valley Authority and the first chairman of the Atomic Energy Commission, pointed out in the New York Times last month that:

"Nuclear and coal sources will, of course,

all be required for the nation's present and future total needs. But their costs have gone out of sight. The shocking fact has not yet been faced that because of the long period for installation (eight to ten years) plus inflation, the capital and fuel costs today of new nuclear and coal-burning power plants make it clear that small water power is by all odds the most economic of all new alternate sources of electrical energy. While this does not provide a total solution of all of our energy problems, it is specific, workable, and substantial."

One recent study estimates that 14,000,000 kilowatts of generating capacity could be obtained from hydroelectric generating units of 5,000 kilowatts or less located on canals, streams, and rivers throughout the United States. Lillenthal notes that there are some 3,000 existing but virtually abandoned dams scattered through the old mill towns of the Northeast; small hydro-turbines which could be installed in a relatively few months are economically competitive, he argues.

Economic. The Federal Power Commission reports that technology exists for developing economically low-head sites using axial-flow turbines of the tubular and bulb types. Short lead-times for installation would create near-term construction jobs in a large number of communities.

Bulk orders, standardization, mass production, factory-fabrication, pre-assembly of equipment, and minimal field engineering could keep costs down and speed up delivery. Simple construction techniques are involved in installing the machines.

Economics of small hydroelectric generation are favored by the fact of inflation-free "fuel" and a 100-year plus plant life. Distributed power production facilities of this type reduce the necessity for extra-high voltage transmission corridors and costs.

Costs allocable to power could be reduced by the multiple-purpose nature of such projects, which might also provide recreation, water supply, water quality control, fish and wildlife enhancement, and flood control. Resultant power prices could aid local consumers, workers, businesses, and industries in smaller population centers, and create a means of citizen control over a portion of energy supply.

Environment. Small hydroelectric generation employs a form of solar energy and a renewable resource. It decreases the necessity of mining and moving so much coal, conserves on foreign imports or domestic development of oil and gas, and eases reliance on uranium. It does not add to air pollution.

Energy. Small hydroelectric generation has significant advantages for the nation's electric power systems. These facilities are highly efficient, lend themselves to automation, and have low operating and maintenance costs. Their low outage rate and availability in small increments contribute to system reliability. They are useful in providing startup power in the event of system-wide power failures.

Congress in 1976 recognized the desirability of re-evaluating our hydroelectric resources by directing the Corps of Engineers to make two studies of hydroelectric potential, including low head projects utilizing run-of-rivers. However, no funds were appropriated. The Federal Power Commission is preparing an inventory of undeveloped hydroelectric sites 5,000 kw or less; it will apparently list only location, installed capacity, and average annual generation. Apparently at the initiative of the Federal Energy Administration, interagency work groups are considering an assessment of small hydroelectric generation as an energy alternative.

The Carter Administration could undertake steps to advance possibilities for small hydroelectric generation:

1. Endorse optimum usable funding for implementation of the Corps hydroelectric studies.

2. Initiate through the Corps of Engineers and/or the Department of the Interior an economic study of the feasibility of wide-scale construction and operation of small hydroelectric generation, taking into account life-cycle costs of competing generation options, including capital and fuel, and using reference sites.

3. Direct the Energy Research and Development Administration to investigate opportunities for improvement of small hydroelectric generation technology, including turbines and generators, remote operation, and integration with existing transmission and distribution systems or independent operation.

4. Establish in the Department of Housing and Urban Development a community loan and/or grant program to permit towns, cities and counties to investigate the feasibility of constructing and operating small hydroelectric generation, and a revolving fund low-interest loan program for plant construction.

STATE OF NEW YORK,  
Albany, May 2, 1977.

HON. RICHARD OTTINGER,  
U.S. Representative, Cannon House Office Building, Washington, D.C.

DEAR DICK: Thank you for your letter of March 24 concerning untapped hydroelectric potential in New York and the Nation.

I am in complete agreement with you that our existing and potential hydroelectric resources should be utilized to the maximum extent economically feasible.

I know that Fred Kahn has responded to you with details of what the Public Service Commission has already under way in this area and would only add that the potential energy and cost savings make this a high priority effort.

I appreciate your offer of assistance at the Federal level and will, of course, call on you when appropriate.

Sincerely,

HUGH CAREY,  
Governor.

STATE OF CONNECTICUT,  
Hartford, May 18, 1977.

HON. RICHARD L. OTTINGER,  
U.S. Representative, State of New York, Cannon House Office Building, Washington, D.C.

DEAR CONGRESSMAN OTTINGER: Thank you for your recent letter regarding the potential within New England and New York State to use hydroelectric power.

At one point in Connecticut's past, a substantial portion of its manufacturing energy came from our rivers. Many dams were erected and textile mills and other manufacturing establishments utilized hydroelectric power to run plant machinery. Over the years as other sources of power became more practical and less expensive, the use of hydroelectric power was discontinued.

As those alternate forms of energy have become more expensive, it would obviously be in our best interest to look to the past in order to prepare for the future.

I can assure you that we in Connecticut will participate in this very worthwhile endeavor to again use constant and replenishable sources of energy, such as hydroelectric power that served our forebearers so well for so many generations.

With best wishes,  
Cordially,

ELLA GRASSO,  
Governor.

STATE OF MAINE,  
Augusta, Maine, May 5, 1977.

HON. RICHARD L. OTTINGER, Member of Congress, Cannon House Office Building, Washington, D.C.

DEAR REPRESENTATIVE OTTINGER: Thank you for your letter of April 25, 1977 and the at-

tached information on small hydro-electric development by utilization of existing dams. We appreciate your comments on this subject, and share your concern that more of these can and should be developed to ease the "energy crisis", and to reduce America's dependence on foreign oil and other exhaustible resources.

Maine's Office of Energy Resources has been actively supporting just such a project by an individual who wants to develop one or two of the available sites in Maine to demonstrate the technical and economic feasibility of such development. A small grant has been awarded by the State of Maine to defray travel costs and to implement preliminary investigations, in the hope that full funding of the project will be forthcoming from ERDA or some other source with the necessary capital resources. This same individual is also investigating the feasibility of installing hydro-electric generators in the navigational locks operated by the Corps of Engineers in his home state of Pennsylvania. We would urge the Congress to endorse and give appropriate financial support to projects of this nature.

Your fellow Member of Congress, and our Representative, Honorable David Emery of Maine, is also in agreement with your views, and has publicly endorsed such projects as opposed to larger and more controversial projects, such as the Dickey-Lincoln Dam project in Northern Maine. Congressman Emery and the entire Maine Congressional Delegation have endorsed the project that is being supported by the Maine Office of Energy Resources, and they have transmitted this endorsement to ERDA.

The State of Maine will continue to explore possibilities for small hydro-electric development, as well as all of the renewable energy resources. We will encourage the development of these resources to the maximum feasible extent. You can be assured of our continued support of your efforts in this area. I am sure that the Office of Energy Resources would appreciate any further thoughts you may have on the subject.

Again, thank you for your letter.

Very truly yours,

JAMES B. LONGLEY,  
Governor.

STATE OF NEW YORK,  
Albany, March 29, 1977.

HON. RICHARD OTTINGER,  
Member of Congress, House of Representatives, Washington, D.C.

DEAR DICK: I certainly concur enthusiastically with your speech for the Congressional Record on the importance of probing all the possible opportunities for using existing dams in the State to generate hydroelectric power.

We became aware of this possibility a year or perhaps a year and a half ago, and took steps to see that it is thoroughly explored—at least in the territory of Niagara Mohawk, which I understand is the one that has almost all this capacity. I enclose a copy of a self-serving letter that I recently sent to the New York Times, describing what we have done.

We are awaiting the report from our consultant, at which point we will evaluate it and the Niagara Mohawk survey that has recently been published.

Meanwhile I will be asking my staff whether they are certain the study of Niagara Mohawk exhausts all the possible hydroelectric potential of the State. I am going to send a copy of this letter to Jeff Cohen and the Governor, so that each of us knows what the other is doing. And I will certainly ask my people whether there is any way in which we can take advantage of your offer of assistance in Washington. As you point out, if any of this proves to be economic—and the events of the last few years should certainly push some of these

May 25, 1977

## EXTENSIONS OF REMARKS

16757

sites, at least, in that direction—we all will benefit.

With warm regards,  
Sincerely,

ALFRED E. KAHN.

EXECUTIVE OFFICE OF THE PRESIDENT,  
ENERGY POLICY AND PLANNING,  
Washington, D.C., May 19, 1977.

HON. RICHARD L. OTTINGER,  
House of Representatives,  
Washington, D.C.

DEAR MR. OTTINGER: Jim Schlesinger asked me to thank you for your letter of April 25, with its enclosures, and your encouraging words.

The press release which you sent concerning utilization of existing dams for hydro-power is a good source of quick information for us: as you have noted, this system has the President's endorsement. We will ask FPC for the publication on hydroelectric power resources which you referred to.

We very much appreciate your assistance as we attempt to develop a viable energy program for the country.

Sincerely,

S. DAVID FREEMAN.

HOWARD M. PICKING, JR.—A GENTLEMAN OF DISTINCTION

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. MURTHA. Mr. Speaker, in late April I attended the University of Pittsburgh at Johnstown's graduation. At the ceremony they presented the first President's Award. They presented it to Howard M. Picking, Jr., a long time member of the board, and an individual who was instrumental in shaping the physical facility of the Johnstown Campus of the University of Pittsburgh.

Howard Picking has long been held in high esteem. He works quietly, but with great dedication. His remarks upon receiving the award were typical of the man. He explained that he accepted it on behalf of all the people who had worked so long and so hard for the University at Johnstown.

His untiring devotion and dedication to this particular aspect of the community have made available to the young people of the area one of the finest institutions in the country. But the real accomplishment is that Howard Picking and many other people with his same dedication were able to take the University from an elementary school building in Johnstown, to a sprawling, tree-lined campus in a truly magnificent setting, with only two of the buildings being funded by the Commonwealth of Pennsylvania.

This was a joint effort by Howard Picking and a group of dedicated people, who had the foresight to realize the importance of a college education to the young people of the Johnstown area, and the importance of an institution of higher learning to all the people in central Pennsylvania.

Mr. Speaker, I am enclosing for the Record a copy of the president's proclamation honoring Howard Picking. I add my compliments and commend him for

his foresight, determination, and dedication which has been so important to the expansion of the University of Pittsburgh at Johnstown.

The presidential proclamation follows:

### PRESIDENTIAL PROCLAMATION

Because, Howard M. Picking, Jr. has been a knowledgeable, faithful and energetic member of the Executive Committee of the Advisory Board of the University of Pittsburgh at Johnstown for many years; and

Because, he has given unstintingly of his real treasure—his time and talent—his concern and his counsel; and

Because, as chairman of the Facilities Committee, he has been instrumental in achieving the growth of and the aesthetic integrity of our college campus; and

Because, as a member of the Finance Committee he has effectively aided the college in retaining autonomy sufficient to be responsive to the needs of the region; and

Because, for over a half century, as a genuine member in and leader of countless state and national business and professional organizations, civic, religious, fraternal and other organizations; and

Because, through these affiliations, he has made service to his fellow man, in the University community and in the larger community, his lifelong calling,

I, therefore, declare that his character, now so permanently etched in the form and function of what we and future generations can accomplish, also be reflected permanently in the first presidential award presented "In recognition of outstanding service to the University of Pittsburgh at Johnstown and to the community" on the twenty-third day of April, 1977.

In Witness whereof, I have set my hand and seal the day and year first above written as evidence of our esteem and affection.

### THE NORTHEAST CORRIDOR REVITALIZATION AMENDMENT

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, I am introducing a bill that has a most salutary effect on the several States that are involved in the Railroad Revitalization and Regulatory Reform Act of 1976. This act currently provides for the States to match Federal funding for the station and fencing improvements along the right-of-way of the Northeast's vital rail corridor between Washington and Boston.

The bill I am introducing today, however, would amend that act and remove the matching requirement. I am happy to join Senator CLAIBORNE PELL and my colleague, Representative FERNAND J. ST GERMAIN in calling for the earnest consideration of this House of the provisions of this bill. The major portion of Federal funds in the act would be used for fencing along the right-of-way, an improvement absolutely necessary for the safety of both the train rider and the general public. It is absolutely essential that the available finances of all the States concerned not be strained unduly, particularly in view of the present economic picture that prevails in the Northeast at the present time.

I salute Senator PELL for his vision

in authoring the idea and I call upon the Members of this body to give their most serious consideration to it.

LAWRENCE L. WHITENECK, CHIEF ENGINEER, PORT OF LOS ANGELES

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. ANDERSON of California. Mr. Speaker, on July 1 of this year the Port of Los Angeles will lose an outstanding civil servant when Lawrence L. Whiteneck retires after serving over 16 years as chief harbor engineer. Larry—as he is known to his many friends and associates—has been active throughout the period which has seen the port grow and prosper, becoming one of the world's major commercial harbors. I am sure that his expertise and leadership will be missed.

Born in Tacoma, Wash., on May 23, 1911, Larry graduated from Washington State University with a degree in civil engineering in 1934. He started his professional career with the Metropolitan Water District of Southern California immediately following his graduation, where he worked as a construction inspector and office engineer during the construction of the MWD Aqueduct.

In 1937, Larry and his family moved to the Philippines when he became an engineer for the Balatoc Mining Co., which at the time was the fifth largest gold mining firm in the world. However, when the Japanese invaded the Philippines after the start of World War II in 1941, Larry and his family were captured by the Japanese forces, and spent the rest of the war as prisoners in Manila.

After his return to the United States in 1946, Larry Whiteneck joined the Long Beach Harbor Department as senior harbor engineer, in charge of port planning and design. During his tenure Larry was responsible for a corrosion mitigation program which resulted in a reduction in depreciation costs of more than \$500,000 per year.

Larry left the Long Beach Harbor Department in 1956 when he accepted the position of vice president with the Pipeline Coating and Engineering Co. and its subsidiary, Plicoflex, Inc. In April 1959 Larry Whiteneck joined the Los Angeles Harbor Department as harbor engineer, serving as a technical and administrative adviser to the chief harbor engineer.

When the chief engineer retired, a competitive examination was held to determine his successor. As a result, Lawrence L. Whiteneck assumed the duties of chief engineer in April 1961—2 years after he first joined the department.

To date, Larry has initiated and supervised the planning, design, and construction of approximately \$120 million worth of new port facilities, including general cargo terminals, four large container terminals, a dry bulk terminal with 3 million tons per year capacity, and many other projects vital to the continued growth and health of the Port of Los

Angeles. His accomplishments will continue in the future as projects he helped to develop reach fruition.

One aspect of Larry's career deserves special mention, because it demonstrates his foresight in progressive port planning. Long before it became popular and mandated by law, Larry Whiteneck instituted an environmental management program coordinated with port maintenance. As a result of such forward planning, the twin ports of Los Angeles and Long Beach are among the cleanest in the world in terms of water quality. Marine life flourishes in almost every reach of the harbors.

As a result of Larry's knowledge and experience in port operations, he was able to see future needs of the port. Thus, he was a key element in obtaining the current Army Corps of Engineers study of San Pedro Bay and the development of a hydraulic model of the bay in Vicksburg, Miss. On many occasions, his testimony before key congressional committees has been invaluable in obtaining badly needed funds for these projects.

Larry's expertise in the field of port engineering is reflected in the many professional organizations to which he belongs, including the American Society of Civil Engineers, Waterways and Harbors Committee; The American Society for Testing Materials; the National Fire Protection Association; and the American Military Engineers. In addition, he served as the national president of the National Association of Corrosion Engineers in 1971; is director and past two-time president of the California Marine Affairs and Navigation Conference; and served as director in 1968 and 1971 of the American Association of Port Authorities. Larry has been an active member of all these organizations, often holding key positions in important committees.

Larry Whiteneck's retirement will conclude a long and highly successful career with Los Angeles Harbor, although I understand that he is planning quite an active schedule following his tenure as chief harbor engineer. In the years I have been privileged to know and work with him, Larry has always impressed me with his professionalism and extraordinary ability.

My wife, Lee, joins me in congratulating Larry on a highly successful career, and in wishing him the best of fortune in the years to come. We are positive that his lovely wife, Ruth, and their entire family must be very proud of Larry's many accomplishments.

#### PERSONAL EXPLANATION

### HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. APPLEGATE. Mr. Speaker, on Monday, May 23, 1977, I was absent from the proceedings conducted that day due to circumstances that necessitated my being in my congressional district.

I would like to state for the record that, had I been here, I would have voted in favor of the five bills that were debated under suspension of the rules. The bills included H.R. 6258, a bill extending the life of the Privacy Protection Study Commission to September 30, 1977; H.R. 1862, the Veterans' Disability Compensation and Survivors Benefits Act; H.R. 6501, a bill to increase compensation for certain disabled veterans; H.R. 6502, the Automobile Assistance for Disabled Veterans Act; and H.R. 5645, the Civil Rights Commission Authorization.

#### REGULATORY REFORM ACT

### HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, yesterday Representative JORDAN and I had the privilege of testifying before the Senate Intergovernmental Relations Subcommittee on the "Regulatory Reform Act of 1977" (H.R. 3100) which we have introduced in the House with 71 cosponsors, as a companion bill to S. 600 as introduced by Senators PERCY, ROBERT BYRD, and RIBICOFF. At this point in the Record I include the text of my testimony along with a summary of our bill. I urge those colleagues who have not yet cosponsored this legislation to join with us at this time:

STATEMENT OF THE HONORABLE JOHN B. ANDERSON ON THE REGULATORY REFORM ACT OF 1977 (S. 600) BEFORE THE INTERGOVERNMENTAL RELATIONS SUBCOMMITTEE OF THE SENATE COMMITTEE ON GOVERNMENTAL AFFAIRS

Mr. Chairman and Members of the Subcommittee: Ms. Jordan and I are grateful for this opportunity to testify today in support of S. 600, the "Regulatory Reform Act of 1977," as introduced by Senators PERCY, BYRD and RIBICOFF. We've been honored to be the principal sponsors of a companion bill in the House in this Congress and the last, and the measure we introduced this year, H.R. 3100, now has a distinguished, bipartisan group of 71 cosponsors. I've been informed that S. 600 now has 40 cosponsors, so the percentage of support here is more than double that of the House, but we hope we can more than make up for that by the degree of our enthusiasm for the legislation. I think one of the reasons this legislation is making more headway here in the Senate is the excellent groundwork which has been laid by this committee, not only in examining this particular mechanism for regulatory reform, but in your detailed studies of the whole Federal regulatory process. While a somewhat comparable effort has been going forward in the Investigations Subcommittee of the House Interstate and Foreign Commerce Committee, the link has yet to be made with our Government Operations Committee on how to systematically deal with these volumes of studies into the deficiencies of our regulatory bureaucracy.

We happen to think that the regulatory review and action-forcing mechanisms of S. 600 provide the best means devised to date to insure the kind of systematic, rational and continuing oversight of regulatory agencies and activities which is so lacking in our current treatment of such matters. As you know, the 1946 Legislative Reorganization Act

charged each standing committee of the Congress to exercise "continuous watchfulness" over the agencies and programs under their jurisdiction. The 1970 Legislative Reorganization Act updated this oversight mandate by charging "each committee to review and study on a continuing basis, the application, administration and execution of laws" under their jurisdiction and issue a report at the end of each Congress on their oversight activities. In 1973, the House formed a Select Committee on Committees to study our committee system. In its final report issued in March of 1974, it concluded that there is "a wide gap between what is required by law and what is actually done" with respect to oversight. To quote from the report: "Witnesses were virtually unanimous in acknowledging the inadequate oversight being done by congressional committees."

As a consequence, the House approved numerous new oversight mechanisms as part of the Committee Reform Amendments of 1974. These included assigning "special oversight" functions to committees not having direct legislative jurisdiction over particular matters, requiring each committee to prepare an oversight agenda at the beginning of each Congress in consultation with and coordination through the Government Operations Committee, urging all committees having 20 or more members to create oversight subcommittees, and requiring any oversight findings of the Government Operations Committee to be included in the reports of other committees on legislation.

As well intentioned as these new oversight reforms have been, their actual success has been limited, in my opinion. The "special oversight" functions assigned six committees is probably the most successful and innovative because it does provide a healthy new perspective on certain problems and a vital check on committees which have become too protective of the agencies and programs they are supposed to oversee. About half of our committees have now established oversight subcommittees, but the degree and quality of their activity varies widely. The oversight agendas prepared at the beginning of each Congress are, with few exceptions, little more than recitations of committee jurisdictions, and not the detailed oversight timetable they were intended to be. And finally, very seldom do any Government Operations Committee oversight findings appear in other committee reports. In short, while there's a minimal attempt to comply with the letter of the new oversight requirements, the spirit and the will is still lacking. Perhaps the best explanation for this is summed up in the final report of the Commission on the Operation of the Senate in the last Congress, and I quote: "Since such oversight must be systematic, it is often tedious." And yet, as the report goes on to point out, "Oversight's importance derives from the light that it may throw on the question of whether policies or programs should be continued and, if so, in what form."

Mr. Chairman, I would submit that our sporadic and inadequate oversight track record to date, and the reasons for it, argue for the kind of discipline inherent in S. 600, just as our failure to exercise adequate oversight of Federal programs argues for the approach of your "Sunset Act," and just as our inability to get a handle on government spending gave birth to the Budget Act process over which you now so adroitly preside. The fact is, this is all "tedious" work, for which there is little enthusiasm or self-motivation; and yet, it is perhaps the most essential work which must be done by the Congress if we are to make an intelligent determination of how well the programs and agencies we have spawned are working, what problems are involved, and what changes must be made.

I would further argue that a mandatory oversight action timetable is especially criti-

cal in the area of governmental regulatory activities for two major reasons: first, the so-called independent regulatory agencies and commissions are not, by their very nature, subject to the same presidential control and direction and congressional scrutiny as are the various cabinet departments and the programs which they administer; and secondly, it is becoming increasingly evident that many of these regulatory activities are impacting more on the lives of citizens and the health of our economy than are other activities which are more subject to presidential control and congressional scrutiny. Indeed, more than one observer has referred to the regulatory bureaucracy as "the fourth branch of government" which tends to exercise all the responsibilities assigned to the other three branches: it makes laws through establishing rules, it engages in various executive functions related to the administration of its mandate; and it judges violations of law through adjudication.

The findings contained in section 2 of S. 600 perhaps best express the need for the Congress and President to work together to overhaul governmental regulatory agencies and activities. To paraphrase those findings:

Government regulations can be more of a burden than a benefit to consumers, businesses and the economy as a whole;

Regulatory policies have fueled inflation without due consideration of relative costs and benefits or the competitive impact of such decisions;

Some regulatory policies harm both industry and consumers by denying competition and the lower prices it would present;

Too often regulatory agencies have squandered their resources on trivial aspects of regulation and have failed to set clear priorities or articulate cogent policies, consequently fostering bureaucratic stagnation and waste, and public frustration and confusion;

The case-by-case adjudicatory approach of most regulatory agencies has resulted in excessive paperwork and unreasonable delays for business, and impaired its ability to adapt to changing market conditions and beneficial new technology, thus contributing to price rises, inefficiencies and misallocations of resources;

Regulatory agencies have poorly served the public interest, often in disregard of their congressional mandate, by failing to take consumer and small business interests adequately into account and by arbitrarily limiting the operation of the free enterprise system.

If I might depart briefly from my prepared statement, the noted economist, Professor Murray L. Weidenbaum, director of the Center for the Study of American Business at Washington University in St. Louis, has termed Federal regulations, "the hidden tax of government-mandated inflation." While such actions are not designed to increase prices, that is their result, according to Weidenbaum. In our attempts to control government spending, we have increasingly turned to the private sector to devote additional resources to achieve certain national objectives. To quote from Weidenbaum's AEI paper entitled, "Government-Mandated Price Increases,"

At first blush, government imposition of socially desirable requirements on business appears to be an inexpensive way of achieving national objectives: it costs the government nothing and therefore is no burden on the taxpayer. But, on reflection, it can be seen that the public does not escape paying the cost. . . . The public does not get a "free lunch" by imposing public requirements on private industry. Although the costs of government regulation are not borne by the taxpayer directly, in large measure they show up in higher prices of the goods and services that consumers buy. These higher prices, we need to recognize, represent the

"hidden tax" which is shifted from the taxpayer to the consumer. Moreover, to the extent that government-mandated requirements impose similar costs on all price categories of a given product (say, automobiles), this hidden tax will tend to be more regressive than the federal income tax. That is, the costs may be a higher relative burden on lower income groups than on higher income groups.

While Weidenbaum concedes that government regulation is an "accepted fact in a modern society," he does argue strongly that the tangible and intangible costs of regulation must be weighed against the benefits. Whereas in earlier periods when productivity and living standards were rising rapidly, we could applaud the benefits and ignore the costs of regulation, the present acceleration of federal controls now coincides with, and accentuates, a slowdown in productivity growth and in the improvement in real standards of living.

While the administrative costs of maintaining an army of some 75,000 regulators is around \$3-billion, the hidden tax or cost to the economy of complying with these regulations is variously estimated at between \$60 billion and \$120 billion annually. These hidden costs of Federal regulation manifest themselves in several forms. One of the most notable is the paperwork burden. There are now some 5,146 different types of approved government forms. It is estimated that individuals and firms spend over 130 million man-hours a year filling them out. Another hidden cost is the reduced rate of technological innovation due to the longer time it takes for a federal regulatory agency to approve a new product or more efficient production process. And probably the most costly aspect of Federal regulation is its impact on manufacturing. It's been estimated, for instance, that Federally mandated safety and pollution systems on automobiles add some \$320 average to the price of a new car. That comes to about \$3 billion annually on the sale of 9-million autos. And yet, too often the attitude of the bureaucrats is typified by the member of the Consumer Product Safety Commission who said: "When it involves a product that is unsafe, I don't care how much it costs the company to correct the problem," even though in many instances a mere relabeling of the product would suffice over an order to destroy it. Or, take the attitude of an assistant EPA administrator who was recently quoted as saying: "The whole thrust of the new legislation is to push technology and not get bogged down in deciding whether costs justify water-quality needs in a particular area."

The findings in S. 600 also address themselves to the tendency of many regulatory agencies to squander their resources on trivial aspects of regulation while failing to set clear priorities or articulate cogent policies. Weidenbaum cites some of these trivial examples from OSHA regulations: What size to establish for toilet partitions? How big is a hole (it depends where it is). When is a roof a floor? What colors to paint various parts of a building? How frequently are spittoons to be cleaned?

In this regard, I was pleased to read the joint announcement last week of Labor Secretary Marshall and OSHA Assistant Secretary Bingham that OSHA is finally coming around to initiating a "common sense approach to implementation of the Occupational Safety and Health Act of 1970" because, in their words, "we believe that such action will allow us to more effectively carry out the mandate of Congress." Let's hope this revolutionary concept of "common sense" ala Tom Paine catches on in other regulatory agencies as well.

But we're still left with the often conflicting mandates of various regulatory agencies which S. 600 is designed to eliminate. Weidenbaum

cites the example of the OSHA mandate for backup alarms on vehicles at construction sites and yet another requirement that workers wear earplugs to protect them against noise, thus making it extremely difficult to hear the alarms.

Then there's the case of New York State banning detergents containing phosphates to halt water pollution and the subsequent order requiring children's sleepwear to be flame-retardant. Without the phosphates, the detergent washes away the flame-retardant, and housewives were, in the words of the New York Times, faced with the decision of whether to "commit an illegal act of laundry." Now, as it ironically turns out, the flame-retardant has proved to be dangerous.

These general findings have been more than borne out by the voluminous studies of this and other committees of the Congress and by the President's Domestic Council Review Group on Regulatory Reform (DCRG). In its final report, "The Challenge of Regulatory Reform," issued in January of this year, the DCRG drew three major conclusions about the current regulatory system: first, that "some regulation simply no longer makes sense" because its original rationale "has been overtaken by economic or technological change;" second, "in areas where federal intervention is needed, much regulation has been ineffective or inefficient because the agencies have not been using appropriate tools;" and third, "that far greater efforts are needed to determine the social and economic effects of regulation."

In view of these findings, which tend to parallel the findings contained in S. 600, the DCRG makes the following recommendations in its final section on "Future Directions":

Efforts should be initiated to begin pulling together information about the size and cost of the regulatory bureaucracy and about the costs that these programs are imposing on the private sector. This will allow the President and Congress to gain a comprehensive understanding of regulatory activities and their costs and consequences. Government should begin to measure the total costs of regulation and make informed trade-offs in a fashion not dissimilar from the current budget process.

Bringing the regulatory system under control and disciplining it will require a comprehensive and systematic reexamination of all federal regulatory activities as they affect different activities of the private sector. We cannot hope to achieve this discipline by continuing to look at the issues in a fragmented, piecemeal way.

The need for a fundamental reassessment has not been widely accepted and encouraged because many allege that it is too complicated to be dealt with in the political process. But complexity is no excuse for continuing to allow the regulatory system to run unchecked. The Executive and Congress can and should design a timetable for reform. We believe that a disciplined agenda is an essential ingredient in assuring a more responsive, effective, and understandable Federal Government.

Mr. Chairman, it seems to me that S. 600 represents the embodiment of that recommendation of the President's Review Group on Regulatory Reform. As section 2(b) of the bill states: "It is the purpose of this Act to require over a period of eight years the President to submit at least once in each Congress, and to require the Congress to act upon, a plan designed to prevent unnecessary or harmful regulation because such regulation has led to inflationary consumer prices, a reduction of competition in providing of important goods and services, and other economic inefficiencies which distort and disrupt the operation of a free enterprise system without correspondingly benefiting the health, safety, or economic welfare of the Nation." I hope this committee will act fa-

vorably on this action timetable for reform of our regulatory process.

# BRIEF SUMMARY OF THE "REGULATORY REFORM ACT OF 1977"

(1) Not later than the last day of April in each of the years specified, the President shall submit to the Congress a comprehensive regulatory reform plan for each of the following designated areas (specific agencies affected are enumerated in the bill):

(a) 1979 (96th Congress)—energy, environment, housing and occupational health and safety;

(b) 1981 (97th Congress)—transportation and communications;

(c) 1983 (98th Congress)—banking and finance, international trade, and government procurement; and

(d) 1985 (99th Congress)—food, consumer health and safety, economic trade practices, and labor-management relations.

(2) Each plan submitted by the President shall contain recommendations for:

(a) the transfer, consolidation, modification or elimination of functions;

(b) organizational, structural and procedural reforms;

(c) the merger, modification, establishment or abolition of Federal regulations or agencies;

(d) eliminating or phasing out of outdated, overlapping or conflicting regulatory jurisdictions or requirements of general applicability;

(e) eliminating agency delays; and

(f) increasing economic competition.

(3) Each plan submitted by the President shall report on the cumulative impact of all government regulatory activity reviewed on the following specific industry groupings:

(a) transportation and agriculture;

(b) mining, heavy manufacturing, and public utilities;

(c) construction and light manufacturing; and

(d) communications, financing, insurance, real estate, trade and service.

(4) If the President fails to submit the required plans, the appropriate committees of Congress having legislative jurisdiction in the areas covered, together with the House and Senate Government Operations Committees, shall prepare the appropriate plans which shall become the pending business of each House not later than the first day of April of the following year.

(5) The Comptroller General and the Director of the Congressional Budget Office shall submit reports at the same time a plan is submitted detailing the purposes of each agency covered by the plan, any changes in the areas covered by the agency and their impact on the effectiveness of the agency, the net impact of the agency and the degree to which it has accomplished its purposes, its cost-effectiveness and the efficiency of its operations, and practical and more efficient alternative approaches to achieving presently demonstrated regulatory needs.

(6) Each plan submitted by the President shall be submitted to the appropriate legislative and oversight committees of the House and Senate and the Committees on Government Operations which shall report bills approving or disapproving in whole or part the plans, together with such amendments as may be deemed appropriate. Such bills shall become the pending business in each House not later than the first day of May of the following year.

(7) If no plan is approved by August 1 of the following year, the affected departments and agencies shall have no authority to promulgate new rules and regulations except those essential for preserving public health and safety, but subject to congressional veto by concurrent resolution.

(8) If a comprehensive regulatory reform plan is not enacted by October 1st of the

following year, then all affected departments and agencies shall lose all authority to enforce any rule or regulation except those essential to preserving public health and safety, again subject to congressional veto.

(9) In the event that no comprehensive regulatory reform plan has been enacted by the last day of December in the following year, all agencies affected by the plan shall be terminated unless appropriate provisions for their continuation are made by enactment of Congress.

(10) The timetable would be repeated beginning in 1995, in the ninth year following completion of the first eight-year timetable. This will ensure continuing review of the regulatory process, with a reasonable interim period to monitor the process before the comprehensive cycle begins anew.

## SIXTY-THREE PERCENT OF PUBLIC VOTE AGAINST UNION SHOP

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. DICKINSON. Mr. Speaker, the very real possibility exists that this Congress will attempt to repeal section 14(b) of the Taft Hartley Act—the authorization for State right to work laws. In Alabama, we are proud of the fact that workers can decide for themselves whether or not they want to belong to a labor union. Alabamians do not want that freedom of choice taken from them. They do not want section 14(b) repealed. The citizens of the 19 other right to work States do not want section 14(b) repealed, and the citizens of this entire country do not want section 14(b) repealed. As further proof of this fact the prestigious Gallup Poll has just conducted a survey of public opinion on the question of a union shop. I invite the Members attention to the results of that poll as they appeared in the Denver Post of May 12, 1977:

## THE GALLUP POLL—63 PER CENT OF PUBLIC VOTE AGAINST UNION SHOP (By George Gallup)

PRINCETON, N.J.—Organized labor's legislative agenda includes at least one item facing strong opposition from the American public—the union shop.

In the latest Gallup Poll, 63 per cent of the public vote against compelling people who work for a unionized employer to join a union once they have been hired, while 31 per cent support the idea.

The survey shows, not only 2-to-1 opposition to the union shop, but that opinion against this policy has grown over the last decade. In 1966, when the same question was last asked, the public was opposed to compulsory unionization, but by a much closer margin—49 to 42 per cent.

Repeal of section 14(b) of the Taft-Hartley act has been a goal of organized labor virtually since the day the legislation was passed over the veto of President Harry S. Truman in 1947. What 14(b) does is allow individual states to enact laws that ban the union shop. Without these laws, a person who works in a unionized factory or business can be forced to join a union. A total of 20 states have passed such legislation—so-called right-to-work laws—and repeal of 14(b) would invalidate these laws.

In urging repeal of 14(b), union leaders argue that those who benefit from union

representation should share in the support of the union.

Opposition to the union shop among the various population groups—except among nonwhites and labor union families—is widespread.

Regionally, attitudes haven't changed in the last decade. Strongest resistance to the union shop is now, as it was in 1966, centered in the South and Far West. People living in the East and Midwest are against the idea too, but not as much as residents of the other two regions.

Interestingly, while members of labor union families predictably favor the union shop, a sizable minority, 40 per cent, stand in opposition. Furthermore, this figure represents a significant increase (11 percentage points) since 1966 in the proportion of labor union family members who vote against the union shop.

Sharp differences are also found by education level. Among the college-trained opposition to the union shop principle is better than 3 to 1, while those with no more than a grade school background are close divided.

Politically, Republicans and independents are found to be overwhelming in their opposition to forced unionization. And although there has traditionally been a close identification by organized labor with the Democratic party, Democrats also vote against the union shop. The tone of Democrats nationwide is colored by the negative vote of Southern party members. Outside the South, Democrats are evenly split on the issue.

Here is the question asked:

"Do you think a person should or should not be required to join a union if he or she works in a unionized factory or business?"

Here's how the latest findings compare with those recorded in the mid-'60s:

## SHOULD JOINING UNION BE REQUIRED?

[In percent]

## STATE DEPARTMENT ISSUES WARNING ON PANAMA CANAL TREATY

HON. GENE SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. SNYDER. Mr. Speaker, on May 19, the Washington Star reported that State Department officials warned Members of Congress opposing a new treaty with Panama that it would be—in the State Department's words—

The greatest tragedy politically to negotiate a treaty and then have it turned down by the Senate.

Mr. Speaker, our sellout artists in the State Department have put the cart be-

fore the horse with that outrageous statement. The greatest tragedy politically has already been committed by the Department itself.

In February 1974, Secretary Henry Kissinger signed a conceptual agreement with Panama promising to give that small, weak country the Canal Zone and Panama Canal without the slightest indication from the American people or their representatives in Congress that it was the national intention or desire to dispose of the taxpayers' \$7 billion investment there. Subsequent negotiations for a new treaty have centered entirely on that total surrender of the zone and canal operations, within a relatively short time.

Mr. Speaker, I believe it would be the greatest political misrepresentation of the people on record, since by the polls they stand some 5 to 1 against any surrender of the Canal Zone and waterway, for the Senate to ratify a treaty embodying such a surrender.

#### ARTICLE POINTS UP NEED FOR HIGHER EDUCATION HELP TO MIDDLE AMERICA

#### HON. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. COUGHLIN. Mr. Speaker, I am inserting in the CONGRESSIONAL RECORD an article by Linda Loyd which appeared in the May 23, 1977, edition of the Philadelphia Inquirer.

This article underscores the impact of rising higher education costs which are steadily forcing middle-income level students out of college. The five Pennsylvania high school seniors interviewed face a new form of economic bias which is gradually squeezing out the middle-income group and making higher education an institution for the elite—the rich and the poor.

The article illustrates the financial crunch which middle-income Americans are experiencing who want to send their children to colleges and universities. The dollar figures speak eloquently of the need for assistance to the middle Americans, traditionally the segment of our Nation which pays the most taxes, provides the stability the Nation enjoys and which just as often is forgotten in the talk of "tax reform" and "social justice."

Tax relief for families bearing the costs of higher education is slowly becoming an economic necessity to insure quality education and skills of our future America.

The article follows:

#### CHOOSING A COLLEGE IS NOW A LESSON IN ECONOMICS

(By Linda Loyd)

Lori Riesenfeld, 17, studied hard all through high school, made good grades and took advanced courses so she could qualify for one of the big, prestigious private universities.

And when her first choice—George Washington University—notified her that she had been accepted, Lori recalls, "I was thrilled."

Then came the bad news: Lori would get no financial aid—and the yearly cost of attending George Washington University is nearly \$6,000.

"At one point," says her father, Ernest Riesenfeld, an engineer with the Boeing Vertol Co. in Ridley Township, "we told her she'd have to go to a college I could afford."

The Riesenfelds are not alone. Across the country thousands of parents of high school seniors are frantically juggling figures and analyzing their bank books to see what kind of college they can afford—if they can afford college at all.

And as tuitions continue to rise, and financial aid is awarded only to the "needy," increasing numbers of middle-class Americans are being forced to choose less costly state colleges and universities or community colleges.

Some other examples:

Eric Erdmanis, a senior at Haverford High School in Havertown, had his sights set on the University of Pennsylvania—until tuition jumped by \$325 for next fall. Counting tuition and fees, room and board, books and supplies, a year at Penn is estimated to cost \$7,500. "So I'm going to Temple," he says.

At Cherry Hill East High School in New Jersey, senior Lisa Monteriro had been accepted at Dayton University in Ohio. Instead, she will commute next fall to nearby Glassboro State College, which will cost about \$1,500 compared to \$3,700 at Dayton.

Debbie Stipick of Newtown Square, Pa., a senior at Marple Newtown High School, says she never even bothered applying to the high-cost schools. She is going to West Chester State College next fall. Her anticipated cost: \$2,000 to \$3,000.

Lori Riesenfeld will be going to Penn State, a school where tuition, room and board cost about \$2,600.

"We have a son at Drexel University, and another son still in public school," says Ernest Riesenfeld. "I can't afford to spend more than \$4,000 or \$5,000 a year on two children in college."

"If I were really convinced she would get an inferior education at Penn State, I'd borrow the money," he says, "but having visited Penn State and seen the facilities, I don't think she'll suffer."

The swing away from private schools to public-supported institutions is nothing new. "It's been a gradual trend since the 1950s," says Dr. Grant Vance of the National Center for Education Statistics in Washington.

Today, more than three-fourths of all college students attend state-supported schools, Vance says. And all indications are that the percentage will keep increasing.

"We've seen this trend even among our brightest students who a few years ago would have gone to Cornell or Princeton or Penn," says Dr. Kevin O'Shea, director of guidance in the Tredegar Easttown Schools in Chester County.

"They are still being accepted at those schools, but many are going to the state-supported colleges, and the reason is economics."

Most counselors are quick to point out that the most prestigious private schools still get plenty of applicants.

#### WILLING TO SACRIFICE

"Parents are still willing to sacrifice, no matter what the cost, to send a child to Harvard or Yale," says Robert Fitzgerald, guidance director for the Radnor Township schools.

"But it's the other private schools that

parents are looking at more closely . . . and if they think their child can get just as good an education at a state college as another private school in the state, they'll choose the state school."

Not only are more students applying to state colleges such as Shippensburg and Slippery Rock (where costs are as low as \$2,000 a year), but they also are applying to fewer colleges—to save the \$20 or \$30 application fees.

"I've noticed that more parents are unwilling to travel great distances to look at colleges," says a counselor at Nether Providence High School in Wallingford.

#### 200 MILES

"Parents want students within a 200-mile radius. They don't want their kids going to Ohio or California—they don't want to pay air (travel) expenses."

The main reason students give for turning down high-cost colleges, says Dawn Butler, 18, is that "if you're middle-class you can't get any financial aid."

A senior at Great Valley High School in Malvern, Pa., she will be going to Juniata College, a private, \$4,600 a year school near State College, Pa., next fall.

"But I would have liked to have gone to Bryn Mawr, Penn., Swarthmore or Villanova," she says.

"I applied and got into all those schools but my father said no way could we afford them, and I could not get any aid."

"I always felt the major hurdle was getting into a good college. But once I got in, I found out there was a whole other struggle: money."

Although more financial aid is available to students today than a decade ago from the state and federal governments, families often must be poor to receive it.

#### THE ELITE

"I'd like to go to an Ivy League school," says Haverford High School's Eric Erdmanis, "but they're for the elite—the rich and the poor."

The cost of a college education is an especially heavy burden for families like that of Doris and Jack Brookshaw of Fairless Hills, Bucks County, where the family breadwinner is out of work.

The Brookshaws' daughter, Terry, 19, had always wanted to attend Ursinus College, a small private school in Collegeville that is known for its women's field hockey team.

Terry who is a good scholar and an accomplished athlete at Pennsbury High School, had hoped for an athletic scholarship there.

But costs at Ursinus have climbed to \$5,050 next year, and Terry's father, a \$17,000-a-year sheet metal worker, has been laid off. So Ursinus College is "out of the question," Terry says.

#### NINE CHILDREN

To make financial matters worse, Terry is one of nine children, seven of whom still live at home.

"She had to go where the finances are available," says Doris Brookshaw, who took an \$81-a-week job as a sales clerk after her husband was laid off.

"She's getting some financial aid to go to Temple. We don't know how much, and she'll have to get a loan to cover the rest."

Jack Brookshaw sat in the living room of his home the other day explaining the family's predicament:

"All we're trying to do is survive—pay the bills and eat," he said. "I know parents who both have jobs and just one or two kids at home . . . and they're pulling their hair out over the high cost of college."

"For people like us, higher education is becoming the impossible dream."

# J. PORTER MATTHEWS RETIRES AFTER 48 YEARS IN BANKING

## HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. BAUMAN. Mr. Speaker, those of us in public life have many occasions to work with community leaders in our congressional districts and home States. Of the many thousands of people we meet, some stand out, not only because of their devotion to their duties but because of their personal qualities as well. Such a person is J. Porter Matthews of my own hometown, Easton, Md.

Porter, as he is affectionately known, retired last month after a distinguished career of 48 years in banking. At the time of his retirement he was a vice president of the Maryland National Bank and manager of its Easton branch. Over the years, Mr. Matthews has seen many changes in the Easton area and on Maryland's Eastern Shore and he was part of many of the decisions which shaped and guided this growth.

Porter Matthews has been an active participant in every level of community leadership and his unflinching courtesy and interest in other people has been his hallmark. He has also found time to take part in political activities, serving for many years as the treasurer of the First District Republican Congressional Committee during the tenure of my predecessors Bill Mills, Rog Morton, and Ted Miller.

Mr. Speaker, we can all salute men like Porter Matthews who do so much for their communities and those around them. I am sure that ending one career marks only the beginning of many years of active and productive retirement for one who has certainly earned the thanks of his many friends and neighbors.

I include an article from the Easton Star Democrat:

### J. PORTER MATTHEWS ENDS 48-YEAR BANKING CAREER

EASTON.—After 48 years in the banking business, J. Porter Matthews of 406 S. Hanson St., vice president and manager of the Maryland National Bank here, has retired.

Matthews, whose retirement was effective last Sunday, started his career as a bank runner in 1929.

It was uninterrupted except for three years of U.S. Navy service during World War II.

Daniel W. Swann, assistant vice president and manager, succeeded Matthews.

Said Swann: "Mr. Matthews has served his bank and community well and we look forward to his continued association as a board member and coming to his office from time to time to continue contact with his wide acquaintance of friends and customers."

What differences are there between banking today and 1929? Matthews said change is inevitable, but there is no difference in people. They are the same now as they were 50 years ago, honest, friendly, sincere and interesting and by associating with them I have learned things that make life so worthwhile.

"Sure there is a difference in banking today compared to when I started. Then it was all pen and ink, an occasional typewriter and adding machine. Today there is no end to possibilities. Our employes are capable and more people-oriented.

"Today is a great time to be alive and I plan to have a part in making things happen. I've had a part during my banking career in helping the community develop into such a fine place and the envy of the Eastern Shore.

"As an example, in 1946 our bank felt the architecture in the business area had deteriorated. We had an architect do a drawing to show buildings as they were in the middle of Colonial 18th Century and published in the local papers. We suggested remodeling along Colonial lines, offering long term loans at low interest rates for those that did. The result is evident and interestingly enough, it was done with their own money as no loans were ever asked for or needed," Matthews recalled.

The retired banking official continued: "I've had the pleasure of being one among many who kept their shoulder to the wheel in having part in Chamber of Commerce undertakings, being a past president, helping raise funds and build a new hospital as a board member, president of YMCA that culminated in a new Y, members of board of education, United Fund director, all things that have helped make Easton and Talbot County a better place in which to live as well as a fulfillment of what I believe to be my public responsibility. The pay for these duties was the real satisfaction of seeing them succeed.

"Once I was told by a man in a moment of disgust that he didn't trust anyone. I told him I was the opposite, my whole life was based on trust, I trusted everyone, with possibly one exception, him. He changed and said he didn't mean exactly what he said and he meant he didn't trust some people.

"He hit the point as there are always a few who are off the straight and narrow, but the good is in the great majority and we must be careful not to condemn all because of a few.

"People today are great, youth are finer and smarter than they were when I was young, and all in all doing a good job under trying conditions."

How were the first days of retirement going? "I'm so busy I haven't had time to think about it. I have a written list of things I have to do and it seems to grow longer each day. I kinda feel like I'm on a vacation," Matthews said.

## "LEST WE FORGET" BY THOMAS BOULET

### HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. REUSS. Mr. Speaker, my constituent, Thomas J. Boulet, has sent to me his poem entitled "Lest We Forget," which I believe contains a fitting message for us to keep in mind during the upcoming Memorial Day observances. I would like to share the poem with my colleagues:

#### LEST WE FORGET

(By Thomas J. Boulet)

[Copyright 1947]

We gave our thanks and our goodwill,  
That all the battlefields now are still.  
That Peace, at last, has come  
The war is over, the Victory's won!

But little did we pause to recall,  
Those fighting men who gave their all;  
Who have come back with missing limbs  
Whose outlook on life has grown quite dim.

For the dead, we say a prayer,  
In peace let them rest over there;  
Let us turn our eyes and look ahead,  
For no longer can we help the dead.

Let us help those who have come back,  
To stride forward in life and ne'er slack;  
'Till at last their goals they reach,  
And can live on in everlasting Peace!

## MEMORIAL DAY, 1977

### HON. WILLIAM S. COHEN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. COHEN. Mr. Speaker, as Memorial Day approaches, each of us should take the time to pause and reflect upon the sacrifices that generations of soldiers, sailors, and airmen have made to keep our country free.

Last week, Daniel E. Lambert, the Department Adjutant of the Maine American Legion and a man I am proud to call a friend, delivered a moving message at a memorial service of the Oxford County Council in Rumford, Maine. In his talk, Dan Lambert reminds us all that the greatest honor we can pay to the servicemen who gave their lives defending the United States is to remember and care for the thousands of veterans confined to hospitals throughout the country who still need our help.

I hope each of my colleagues will take the time to read Dan Lambert's remarks and to take his message to heart. The remarks follow:

MY FELLOW LEGIONNAIRES: "It is a holy and a wholesome thought to pray for the dead."

Those words are taken from the Old Testament, the Book of Maccabees. After some of the soldiers, who probably had the taint of sin upon their souls, were killed in battle, Maccabees brought some money to the temple to ask that the Priest therein would spend some time in praying for the repose of the souls of those who had not paid the last farthing.

With those words in mind, today I am going to tell you that one of the most beautiful things ever written by Sir Walter Scott was of a character called Old Mortality. Old Mortality was a Scotsman who day after day, week after week and year after year, felt it his duty to go to the graves of his fellow countrymen and make sure that the moss didn't gather too deeply on their gravestones, and that the emblems that marked the Divisions to which they belonged were not erased. Sir Walter Scott says of him that he was probably as wonderful a character as one would know because he remembered with his motives of devotion the old men who had gone before him, who had fought for a cause of their country and their God. He wanted all generations behind him to remember these things, and therefore he brushed these things up from time to time, that they might read the inscriptions, and that they might know that "it is a holy and a wholesome thought to pray for those dead" lest they be forgotten.

Whenever veterans get together, I know too in their hearts they always have a feeling of their fellow veterans who have gone before them, fellows with whom they walked and talked and laughed and smiled and had the social amenities of life. When we pay them tribute, our heroic dead, we certainly know that we are giving tribute to men who lived a life and died a life in sacrifice that

these American institutions might endure. Some way in our life we try to emulate them.

What is true of all veterans as we pay this tribute is often too rare. Once a year we have a memorial service, but this should be constantly in our mind because "it is a holy and a wholesome thought to pray for the dead." We should, especially Legionnaires, pray for men who have done so much for this great organization. Forever enshrined in our minds should be the names of those countless men who have given their all to this great organization's cause.

If you ask anyone of the men who have gone before—men who have given of their last drop of blood for God and Country in this great organization—what their greatest request is, what their last will and testament was, it was the same as the fellows who were left on the battlefields, who as they breathed their last breath said: "Don't bother with me. Take care of those who can make it."

We are gathered together at a time like this, and you know that you have a great cause on your hands. You know that you have a principle to fight for. Most of all we should measure this principle in a spiritual value.

You know they say of a man who doesn't catch on very fast and who can't see through things, that he is dumb. But I say to you that two of the principal things that should be indelibly impressed on the memories of each and every one of us here today, is a divine sense of humor. Not a sense of humor just to make somebody laugh, but a divine sense of humor—that is to see through things. See in the snowflake the purity of God; see in the mountain the power of God, and see in the rainbows and in the heavens the beauty of God.

That divine sense of humor is most essential for us, for when we go about our work of rehabilitation, when we go about our work of preserving the good things and carrying out the last testaments of our dying comrades, we shall see to it that when we take care of a fellow in Room 262 at Togus, we are not only taking care of a fellow in Room 262, but we are taking care of somebody in the name of Christ, somebody that He died for, somebody that He loves. And as a reward for that, we have a promise some day in store for us: "Well done, thou good and faithful servant."

You may say, "I didn't do anything. I'm sorry, I didn't." But you gave a cup of cold water, you fought for a cause in the Legion's program to help one of those comrades to see to it that they weren't thrown out in the streets, out of the hospitals, because of some false economy. You saw to it that these, our heroes, were enshrined and never to be forgotten in our hearts. That cup of cold water that you gave took on a spiritual investment in the bank of heaven where the rust and the moss cannot destroy, nor thieves break in and steal. You placed these things in spiritual value, and every effort that you extend to that end will pay great dividends.

I said that you needed two things, not only a divine sense of humor, but you have to have the knowledge of the pain of an incision. Not necessarily a physical incision, but an understanding of pain.

You know, these, our honored dead, who left the classrooms became history's graduates. Left at home they were to be probably the greatest statesmen this country has ever known. They grabbed the rifles and marched off to war. They might have been the scientist who would discover the cure for cancer, they might have been a captain of industry, they might have been a rabbi, a minister, or a priest who would bring spiritual consolation to future generations. They might have been an artist, or a painter, or a sculptor.

But today many grope with the blindness inflicted upon them by battle. They are warped in mind because they still scream in the psychopathic wards, hearing the ghost guns of battle. They clutch with stumps of hands. They bear the constant pain of wounds from battle or POW camps. They are carried around in wheelchairs, and you who are here today must know and have an understanding of pain in order to give them your all.

These are the things that I would like you to make a part of your mental make-up. Leave on the indelible tablets thereon these impressions.

What you do, you do well before the throne of the most high God.

Two thoughts, therefore, in conclusion. Remember your dead who have done so well for you in days gone by. Remember them where remembrance counts—at the altar of God. And don't forget their last wish and will and testament—Take care—at all costs—take care of the sick and the wounded and those who are suffering on beds of pain, the widows and orphans. We Shall Remember Them!!

#### INTERNATIONAL ENERGY EXPERT REFUTES CIA VIEWS ON SOVIET ENERGY

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. KEMP. Mr. Speaker, in the recent past, a great deal of attention has been focused on the urgency of America's near-term energy shortage. In part, the urgency of this concern has been intensified as a consequence of a CIA report, quoted by President Carter to the effect that we may expect the Soviet Union to become an energy importer by 1980, even further diminishing the world's petroleum reserves.

A recent report published by the London Financial Times, by Zbynek Zeman, tends to undermine the CIA's case concerning Soviet oil and gas. The author concludes that the Soviet Union's exportable petroleum surplus is unlikely to slip below 140-150 million tons by 1980.

This evidence appears to be yet another example of the tendency to overstate the magnitude of the energy shortage to induce draconian conservation measures when such measures should not be necessary. The reserves of energy are vast; only the interference of the Federal Government with private entrepreneurship now inhibits the United States from increasing supplies of energy in virtually every form, particularly hydrocarbons. I insert the text of the Financial Times essay at the end of my remarks:

[From the London Financial Times, May 18, 1977]

#### HOLDING ON TO FIRST PLACE

The view appears to be gaining ground in the West—particularly after the recent CIA report—that the Russians are about to run into difficulty with their oil industry, that their reserves are too low to meet the new targets, that production will decline, that consumption is growing too fast, and so on.

While there is little hard information on Soviet oil reserves, what data there is sug-

gests a different conclusion, namely that in the short to medium term Soviet oil prospects are quite good. This means that the Soviet Union will not only hold its place as the world's largest oil producer with over 500m. tons a year, but will also have a surplus to export to world markets and to its East European allies.

This export potential—about which the U.S. Central Intelligence Agency is clearly sceptical—could put the Soviet Union in a favoured energy position in the medium term.

For there is a growing feeling within energy industries that the West could run short of oil supplies within the next 25 years. The International Workshop on Alternative Energy Strategies, which this week reported on global energy prospects between 1985 and the year 2000, saw the possibility of free world oil supplies lagging behind demand as soon as the early 1980s. (WAES largely ignored the influence of the USSR and China because it was felt that their oil trade with the rest of the world would remain relatively small until the end of the century.)

Trends in the Soviet and Comecon energy sector have generally paralleled trends in the West. Oil and natural gas are coming to be seen less as sources of primary energy than as raw materials for the chemical industry; more of the burden of power generation is being shifted to coal and nuclear fuel.

#### PROJECTION OF SOVIET ENERGY CONSUMPTION IN 1980

[m. tonnes coal equivalent]

|                               | Minimum |                  | Likely version |                  |

| Oil.....                      | 658     | 35.8             | 686            | 36.3             |
| Natural gas.....              | 436     | 23.7             | 464            | 24.6             |
| Coal.....                     | 575     | 31.3             | 567            | 30.1             |
| Other solid fuels.....        | 60      | 3.2              | 60             | 3.2              |
| Hydro and nuclear energy..... | 110     | 6.0              | 110            | 5.8              |
| Total.....                    | 1,839   | 100.0            | 1,887          | 100.0            |

#### SOVIET OIL BALANCE, 1975 AND 1980

[m. tonnes]

|                         | 1980    | 1975 |
|-------------------------|---------|------|
| Production.....         | 630-640 | 491  |
| Consumption.....        | 480     | 361  |
| Exportable surplus..... | 150-160 | 130  |

Also, the Russians are trying to relocate industry closer to the big sources of coal and hydro power in Siberia, and effect big energy savings.

The 1976-1980 plan calls for crude oil output, including gas condensate, to reach 620-640m. tonnes in 1980: an absolute increase of 129-149m. tonnes, or 26.3-30.3 per cent. This is a slower rate of growth than before; nevertheless, prospects for production reaching the upper target are good.

The West Siberian oil fields are to produce most of the increase and they are well placed to reach the upper end of their 260-300m. tonnes target. This increase will more than compensate for the declining trend in European Russia, including the Caucasus and Volga-Urals fields. Output here is likely to diminish to some 260-270m. tonnes, despite the growing use of secondary recovery methods.

Serious doubts have been raised as to whether the Soviet Union will be able to go on supplying its East European allies with the required amounts of oil, and whether it will go on exporting to the West. There are two developments in particular which will help the Soviets to fulfil their obligations to

their allies, and to earn precious hard currency.

The high level of exports to the West has meant that the managers of the Soviet oil industry are in charge of a privileged sector of their country's economy, and that they can import Western technology whenever they need it. They used this freedom much more in 1975 than before, a year in which such imports quadrupled.

Though the Soviet oil industry will continue to be aided by large injections of Western technology, no great demands will be made of the industry at home. Indeed, Soviet consumption of oil and oil products until 1980 is likely to be much lower than earlier forecasts had assumed.

The projections here were prepared after the main information on the current Soviet development strategy became known: that is to say, after the announcement of the current five year plan. This has made it possible to develop two scenarios: one assumes that Soviet economic growth will be as low as planned and that the energy savings will be effected. The other projection assumes that Soviet economic growth will be somewhat above plan, and that the intended savings will not be wholly realized.

But both these projections forecast a consumption rate that is considerably lower than any previous estimate. (For instance, a NATO seminar in January 1974 regarded a consumption forecast of 2,333m. tonnes of coal-equivalent), of which 786m. tonnes of coal-equivalent was set aside for the consumption of oil, as acceptable.) Considered together with production trends, it is likely that the Soviet Union will have an energy surplus in 1980 about twice as large as in 1975.

Even if the Soviets decide to develop their petrochemical industry faster than planned, bringing about a rapid increase in domestic consumption of oil, their exportable surplus is unlikely to sink below 140-150m. tonnes by 1980.

Despite rising East European requirements, crude oil available outside the Comecon area in 1980 should be over 50m. tonnes, and therefore well above the average in the 1971-75 period. The Russians will retain their most important source of hard currency: and the East Europeans will not go short of oil.

#### THE 50TH WEDDING ANNIVERSARY OF MR. AND MRS. JOSEPH TOKAR

**HON. HAMILTON FISH, JR.**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. FISH. Mr. Speaker, on May 14, 1977, Anna and Joseph Tokar, aunt and uncle of House Republican photographer, Mickey Senko, celebrated their 50th wedding anniversary. Services were held at the St. Stanislaus Roman Catholic Church, Pleasant Valley, N.Y., with a reception following the 9 a.m. Saturday morning service.

Anna Tokar was born in New York City in 1906, on the lower East Side. She went to Catholic grade school and later worked for the National Biscuit Co. in New York.

Her husband, Joseph Tokar was born in New Jersey and later moved to Brooklyn, where he started a motorcycle repair and sales shop for the Harley-Davidson Co. In 1945, Mr. Tokar sold his business and moved to Pleasant Valley, in my congressional district, where

he bought a 40 acre apple orchard and chicken farm, which he is still running.

I would like to take this opportunity to express my sincere congratulations and best wishes to the Tokars. May I also take the opportunity to wish them continued good health and happiness in the future.

#### ENERGY BREAKTHROUGH: SOLAR-POWERED WELLS IN ARIZONA

**HON. MORRIS K. UDALL**

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. UDALL. Mr. Speaker, solar power is certain to be one of the key elements in any sound, long-term answer to America's energy problems.

Recently, the combined efforts of the Northwestern Mutual Life Insurance Co., and the Battelle Memorial Institute produced an important advance in solar technology.

On a large irrigated farm near Gila Bend, Ariz., they developed a solar system to power the pumps that draw water from deep aquifers to grow alfalfa and cotton. An article in the May 25, New York Times, describes this successful experiment, which may pave the way for significant savings of natural gas and electricity, the energy sources Arizona farmers must now depend on.

As I call this article to my colleagues' attention, however, I must express a degree of misgiving about any advance that might make it even cheaper and easier to tap our diminishing underground water. Arizona is a dry land, and even with construction of the controversial Central Arizona project we will need to institute some sound, tough water management practices to halt the overdraft of our groundwater. I hope, therefore, that the men and women who contributed to this important step will devote similar ingenuity and industriousness to finding water-conserving agricultural techniques that will let us produce vital food and fiber and still have enough water to meet urban and industrial needs.

#### SOLAR ENERGY TESTED AS WAY TO REDUCE COST OF IRRIGATION IN SOUTHWEST

(By Grace Lichtenstein)

GILA BEND, ARIZ., May 23.—Under the searing sun of central Arizona, a strange "crop" occupies one section on the Gila River Ranch, surrounded by fields of cotton and alfalfa.

Row upon row of curved, shiny aluminum planks are rotating face up toward the sun. They are absorbing its heat to run what is believed to be the world's largest solar-powered irrigation system for pumping water into 50 ditches of this 22,000-acre farm.

It is a part of a \$500,000 pilot project by two organizations not usually associated with the agriculture business—the Northwestern Mutual Life Insurance Company of Milwaukee and the Battelle Memorial Institute of Columbus, Ohio, a large private research and development company.

Their aim: to see if solar energy can solve the problem of soaring irrigation costs that now faces farmers in the arid regions from California to Texas.

There are huge portions of the Southwest that cannot rely on rain to water their crops.

Instead, many water ditches that line crop fields, or pump that water rely on underground wells, from which they pump into sprinklers that water the crops.

Recently, however, farmers who use pump water for irrigation have seen their bills soar for both electricity and natural gas, the normal fuels used to power such pumps. This eventually means higher food costs to the consumer.

Ten years ago, Northwestern Mutual bought the Arizona farm from its owner, who was in debt to the company.

In 1973, the electric bill for irrigation pumps on the property reached \$1 million. "When our power costs began to soar, we began to think of all that sun," said Francis E. Fergusin, president of Northwestern, "and we began to think of what we could do with solar energy."

#### HORSEPOWER SYSTEM

Northwestern asked Battelle to design a 50 horsepower solar system. According to Northwestern, there are only two other such solar experiments in the world. One is now being installed by the Federal Energy Research and Development Administration in New Mexico and another has been done by a French company in Mexico, but both are smaller than the Arizona one.

Graham Alexander of Battelle, the project manager, explained that an electrical starter, similar to the ignition starter in an auto, starts up the system by pumping water into tubes set in the center of the curved solar collectors.

The water gets hot, then flows into a boiler where it heats the liquid chemical freon until it becomes a gas. This gas then turns a turbine that pumps water into irrigation ditches.

The amount of electricity needed to start the system is minuscule compared with the amount that it would ordinarily take to run irrigation pumps. So, although installation of the solar system is very expensive, a farmer would pay almost nothing to operate it, Mr. Alexander said.

#### SOME "BUGS" IN SYSTEM

The Arizona system is only a few weeks old and still has some "bugs" in it, Mr. Alexander said. But project officials are optimistic. "We've proved it's feasible, but we also know it is not economical," said Thomas W. Harvey a Battelle vice president.

"However, we've put this in as a showcase to encourage manufacturers of irrigation systems to invest in this new technology," he continued.

Northwestern and Battelle are hopeful that some company will join them in manufacturing solar irrigation systems on an assembly-line basis, which would bring the initial cost down to a level where it could compete with conventional pump systems. For example, a 50-horsepower pump can now be installed in California for \$20,000. Farmers can often pay off that cost within five years because it allows them to produce much higher yields of crops.

"It all depends on OPEC," said Mr. Harvey. According to him, if the Organization of Petroleum Exporting Countries continues to increase the cost of gas and oil as predicted, farmers in the dry, sunny parts of the United States may be forced within 10 years to convert to solar-powered pumps or to have "little nuclear plants" all over their farms.

A representative of a pump manufacturing company, who toured the Arizona pilot project the other day, was interested, but skeptical. "There's nothing complicated about it, but as far as costs go, I haven't the foggiest idea," he said.

Companies such as his, the man said, are nevertheless eager to see new technology because they fear rising fuel costs may soon deter farmers from buying conventional pump systems.

As he spoke, the curved solar plates were turning slowly toward the heavens. There was not a cloud in the sky.

A few minutes after Mr. Alexander threw a switch, water suddenly began spurting out of a large irrigation faucet a few yards away, flowing into a ditch toward the wide, flat expanse of Gila River Ranch's cotton and alfalfa.

#### DISPOSITION OF RESIDUAL INDOCHINA AID FUNDS

**HON. LEE H. HAMILTON**

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HAMILTON. Mr. Speaker, I would like to bring to my colleagues' attention some material provided by the General Accounting Office regarding the final disposition of aid funds left in the Indochina accounts at the time of the fall of the former South Vietnam Government on April 30, 1975, and our withdrawal.

This material indicates that of the roughly \$180 million in unexpended funds, \$116 million was returned to the U.S. Treasury as of September 30, 1976, \$29 million was returned to the Department of Defense, and most of the rest was reprogrammed into other Agency for International Development aid accounts. This means that now there is only \$8.5 million left in unliquidated Indochina obligations.

This update of information provided last year and inserted into the Record of September 14, 1976—page 30358—completes the work of the General Accounting Office for the Committee on In-

ternational Relations on the closeout of the Indochina accounts. There are, however, some claims still pending and it will be some time for action on these claims to be completed and the disposition of the remaining \$8.5 million to be determined.

The information provided by the GAO follows:

STAFF UPDATE ON THE INDOCHINA RESIDUAL AID FUNDS REPORT: GAO REPORT ID-76-54

#### CURRENT STATUS

The Subcommittee and GAO asked AID to tell the Congress: what it intended to do with all residual Indochina aid funds.

AID advised that: AID would close out Indochina fund balances by (1) returning the Indochina Post-war Reconstruction Program appropriated funds (that amounted to about \$93 million at the time of GAO's review) to the U.S. Treasury; (2) returning some \$25.2 million in DOD-advanced funds back to DOD; and (3) put the remaining funds (some \$4.2 million) back into AID's worldwide general aid accounts for reprogramming with appropriate congressional notification.

Our follow-up disclosed that: AID has made disposition on most of the Indochina funds. AID had (1) returned about \$116 million of Indochina appropriation funds to the U.S. Treasury and promised the Congress to return \$1 million more by 9-30-77; (2) returned more than \$29 million to DOD; and (3) reprogrammed the remaining funds through its worldwide aid accounts as authorized by the Foreign Assistance Act. As of 3-31-77 AID had only about \$8.5 million left in unliquidated Indochina obligations which would eventually be dropped from AID's financial records by actions described in (1) through (3) above.

The Subcommittee and GAO asked AID to tell the Congress: what AID's plan was for closing out all Indochina activities.

AID advised that: AID could not give the Congress a plan because an accurate date for

termination of activities such as closing out claims and contracts could not be established. However, Congress would be kept advised through quarterly reports on close out activities.

Our follow-up disclosed that: AID is giving the Congress periodic updates on contract and claims activities through the quarterly Indochina Refugee reports. These reports go to the Judiciary, Appropriations and International Relations Committees. Our review of the latest report indicated that it will take considerably longer for AID to close out its contract and claims processing activities.

The Subcommittee and GAO asked AID to tell the Congress: what actions were being taken to recover U.S. assets in the Cambodian Exchange Stabilization Fund (CESF).

AID advised that: the New York bank holding U.S. assets of some \$1.4 million told AID it cannot release these funds or any of the CESF assets without agreement of all contributing governments on how the residual assets should be distributed. Also, these assets are frozen under the Treasury Department's Foreign Assets Control Regulations.

Our follow-up disclosed that: AID has done about all it can on this matter and it is now being turned over to State and Treasury for further action. AID officials speculated that any settlement will involve diplomatic initiatives to bring the various governments together on a CESF settlement and will also be part of an overall disposition of Indochina countries' assets frozen by the Treasury. This matter is likely to drag on for some time. The U.S. assets were transferred into an interest bearing account during the interim until a settlement can be arranged.

Follow-up conclusions: AID has made considerable progress in winding up Indochina activities. Most of the funds have been closed out with the largest part being returned to the U.S. Treasury. Other aspects will still take some time, such as close out activities and disposition of the Cambodian Exchange Fund assets. It looks like AID is keeping the Congress generally informed on how the activities are progressing.

#### INDOCHINA CLOSEOUT UNLIQUIDATED OBLIGATIONS AS OF MAR. 31, 1977

[In thousands of dollars]

## PUBLIC FINANCING OF CONGRESSIONAL ELECTIONS

**HON. MATTHEW F. McHUGH**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. McHUGH. Mr. Speaker, last week I presented the following testimony to the Committee on House Administration relating to public financing of congressional elections. Because extending public financing to primaries is controversial, I thought that it would be useful to share with you the reasons why I am convinced that we must deal with this issue comprehensively rather than on a piecemeal basis.

### INTRODUCTION

I appreciate having this opportunity to testify, Mr. Chairman, and to share with you and the other members of the committee my views on the financing of Congressional campaigns.

As you know, Mr. Maguire and I have introduced legislation that would provide for partial public financing of congressional primary and general elections. That bill has been cosponsored by twenty-three other members of the House. We believe that it is a good bill, and we are hopeful that the committee will adopt its basic provisions.

We recognize, of course, that no bill is perfect in every detail, and I am sure that the committee can improve upon our bill. In fact, I will make a number of suggestions as to how it might be improved in my testimony this morning. However, there are a few fundamental principles that I hope will not be compromised, particularly one which we

concede will be controversial, the coverage of primary elections.

In my testimony this morning I would like to explain why I believe the time has come to extend public financing to congressional campaigns, outline the basic features of H.R. 5116, suggest some changes that may be desirable, and focus upon why I believe it is essential to include congressional primaries in any legislation the committee may report.

### THE NEED FOR PUBLIC FINANCING OF CONGRESSIONAL ELECTIONS

The 1976 Presidential election proved that public financing works, and that it works for both primary and general elections. As you know, some adjustments in the original legislation were mandated by the decision of the Supreme Court in the case of Buckley v. Valeo. Despite these adjustments, a comparison of the 1976 election with the campaign of 1972 demonstrates, I think, that we were successful in cleansing our Presidential election of the influence of special interest money to a substantial degree.

However, the very success of public financing of Presidential elections makes extension of this reform to congressional campaigns all the more urgent.

Closing the Presidential arena to special interest contributions substantially increased the flow of such special interest money into House and Senate election races. According to Common Cause, for example, \$12.5 million were contributed by special interests to congressional campaigns in 1974. In 1976, that figure increased to \$22.6 million.

What will we have gained by closing off the Presidency and the Executive branch to the influence of big money if the result is to open up Congress to a heavier influx of special interest funds and influence?

The American people clearly distrust the present system for financing congressional campaigns. Intuitively, they understand that

it is neither democratic nor fair. Unless a candidate is personally wealthy, he must in some measure rely upon special interest contributions to finance the expense involved in running for public office.

The evidence clearly suggests that such contributions come from individuals and groups that are typically not representative of the nation as a whole. In the very recent past, for example, 90 percent of all campaign contributions came from less than 1 percent of the population. That 1 percent represented individuals and groups that often had a substantial interest in the decisions to be made by public officials.

The potential for abuse should be obvious. We are not talking primarily about bribes or the buying of votes, although we know that votes have been bought and members have been bribed in the past. What we are talking about is a widespread perception that money can buy a favorable climate, or a willingness to listen. And we know that it can.

The needed reform is both simple and obvious. We must extend public financing to congressional campaigns, and we must do so in the 95th Congress.

### PROVISIONS OF H.R. 5116/6209

To achieve this goal, the legislation that Mr. Maguire and I have introduced would establish a matching system of partial public financing for House and Senate primary and general elections. At this point, Mr. Chairman, I would like to briefly summarize some of the major provisions contained in our bill.

### SPENDING LIMITATIONS

One of the most important features of this legislation is that it would reestablish campaign spending limitations for primary and general elections for those candidates who chose to accept public financing.

For the House of Representatives, a general spending limitation of \$80,000 per campaign

would be established for primary and general elections in 1978. These general limitations would be tied to the Consumer Price Index and would be adjusted upward on an annual basis thereafter.

For the Senate, a general spending limitation of 8 cents multiplied by the voting age population (VAP) of the State, but not less than \$80,000, would be established for 1978 primaries. A general spending limitation of 12 cents multiplied by the VAP of the State, but not less than \$80,000, would be established for 1978 Senate general elections. These general limitations would also be tied to the Consumer Price Index for the purpose of adjustment in succeeding election years.

Candidates who accepted public financing would be able to exceed these general limitations in three ways:

(1) A candidate would be allowed to raise and spend up to an additional 20 percent of his or her general limitation to cover the actual expenses of fundraising in both primary and general elections.

(2) A candidate for election to the House would be allowed to accept and spend up to \$10,000 in additional funds from a state or national party organization in the general election only. A candidate for election to the Senate would be allowed to accept and spend up to 2 cents multiplied by the VAP of the State, or \$20,000, whichever is greater, in additional funds from a state or national party organization in the general election only.

(3) Expenditure limitations would be waived for a candidate who accepted public financing if his or her opponent did not accept public funding and exceeded the expenditure limitations contained in the bill. The candidate who had accepted public funds would still be entitled to them, but only up to the levels stipulated in the bill. As you know, Mr. Chairman, a similar provision in a Senate bill would allow the Treasury to continue matching in this situation even after expenditure limitations had been waived. While I can appreciate the reasons why the authors of that bill included such a stipulation, I believe it would constitute an open-ended commitment of Treasury funds that could be potentially expensive. Such a stipulation would make it difficult to cost out these proposals. Consequently, I would oppose such a stipulation.

#### Eligibility for public funds

To be eligible for Treasury matching under our proposal, a candidate would have to raise at least \$7,500 in amounts of \$100 or less from private contributors. After this threshold is reached, the qualifying amount and each additional contribution of \$100 or less would be matched by the Treasury on a 1 for 1 basis up to 50 percent of the general spending limitation. Cash contributions could be matched provided they were properly accounted for. Only contributions of \$100 or less from residents of the state in which the election is being held would be eligible for Treasury matching. The qualifying amount would only have to be raised once.

For the House of Representatives, this would mean a maximum allowable Treasury match of \$40,000 in a 1978 primary, and \$40,000 in a 1978 general election race. For 1978 Senate primary elections, this would result in a maximum Treasury match ranging from \$40,000 in the smallest states to \$308,720 in Illinois, the largest state with a 1978 Senate primary. For 1978 Senate general elections, the maximum Treasury match would range from \$40,000 in the smallest states to \$463,080 in Illinois. These estimates for the Senate are based upon 1976 VAP figures.

#### Independent and minor party candidates

Candidates of minor parties, and independent candidates, would be eligible for matching payments in both primary and general elections. Our bill makes no distinctions between types of candidates or types of parties. Rather, the ability of a candidate to qualify for matching payments is based solely upon demonstrated support in raising the threshold qualifying amount and additional contributions of \$100 or less.

We realize, Mr. Chairman, that some have expressed concern that public financing could lead to a proliferation of minor party and independent candidates. I share that concern. On the other hand, I do not believe that public financing should artificially prop up the existing two party system, nor put obstacles in the way of a candidate who does have broad support among the general public but is not seeking election as a major party candidate.

In short, public funding should be related to public support, and I believe that our bill adheres to this principle. Of course, I would be prepared to accept a threshold qualifying level somewhat higher than \$7,500. There is no special magic in this figure.

#### How will all of this be financed?

Funds for congressional public financing would come from the existing \$1 voluntary checkoff on Federal income tax returns, and the program would be administered by the Federal Election Commission. If sufficient funds were not available, the Secretary of the Treasury would be authorized to proportionately reduce the entitlements of candidates. Alternatively, the \$1 checkoff could be increased by law or general revenues could be infused.

The estimated cost of our bill is \$93.1 million every two years, or \$46.5 million annually. I do not believe this is an unreasonable sum, Mr. Chairman. For example, the estimated cost of financing all Senate primary and general election campaigns is \$25.4 million, a reasonable figure when compared to the \$21.8 million that President Carter received to finance his general election campaign alone last year. The estimated cost of financing all House primary and general elections is \$67.7 million, or approximately one-third more than it cost to finance the general election campaigns for both President Carter and former President Ford. Moreover, I would stress that I have used very liberal assumptions in costing out our proposal, estimates that probably overstate the real cost to the Treasury of this legislation.

#### A FEW CRITICAL ISSUES

##### Spending limitations

One of the most important questions the Committee must consider is the spending limitations. As you know, Mr. Chairman, there is no precise formula to guide the Committee on this issue. On the one hand, we do not want to set the limits too low and thus preclude any effective challenge to an incumbent. On the other hand, campaign costs have escalated in recent years, and it would be helpful if a campaign financing measure did something to hold those costs down and force candidates to target their funds more carefully.

Our bill may set the spending limits too low, especially for the general election. Perhaps the spending limits in the Udall-Anderson bill should be adopted for general elections while retaining the primary limits suggested in our bill. Of course, since the primary limit would be lower, there would have to be some provision that would prevent candidates from opting out of public financing for the primary and opting in for the general election. However, I am sure that the committee can work something out along these lines.

I would also favor that provision of the

Udall-Anderson bill that would preclude candidates in a general election from receiving public funds if they are unopposed, and I also believe that some limit should be placed upon the amount of personal funds a candidate can contribute to his own campaign. On the other hand, I oppose that provision of the Udall-Anderson bill that would place a \$100,000 ceiling on the amount of public funds that could be expended in any one congressional district. If there were more than two candidates in the race, this provision would only further strengthen the position of incumbents. Moreover, it would constitute a breach of faith with a candidate who accepted expenditure limitations on the assumption that he would receive a specific amount of public funds, namely, \$50,000 under Udall-Anderson, only to find out later that he might be receiving considerably less.

#### Primary coverage

For those who support public financing, the key issue in controversy is whether primary elections should be covered. As you know, President Carter supports primary coverage, and I believe anything short of that will be sharply criticized by the public at large.

If one accepts the wisdom and efficacy of public financing, how can primaries logically be excluded from its application? The public is aware that most seats in the Congress are considered "safe," that is, are occupied by representatives who are of the same political party as the majority of their constituents. The public realizes that these representatives can be meaningfully challenged only in primaries. Therefore, the public will see immediately that if public financing is extended only to general elections, Congress will be attempting to have it both ways. Congress will be trying to claim that it has extended this important reform to its own races, but at the same time will have protected itself from serious challenges in the only elections that matter, Mr. Chairman, I fear that such an effort will only increase public cynicism regarding the political process and the Congress itself.

Moreover, to cover general elections and not primaries will result in a diversion of the special interest money to primaries. We saw what happened when the presidential campaigns were publicly financed—the big money went into the Congressional races. To close off Congressional general elections to that money will inevitably result in its being channeled in ever increasing amounts to the primary elections. Our purpose should be to reduce the influence of special interests, not enhance that influence.

Sophisticated observers do not believe the House will be able to overcome its political interests on this question, Mr. Chairman. They hold that we are not serious enough about this reform to have it apply to our most important elections, the primaries. The point was made on last Sunday in the Washington Post by David Broder, who said:

"There is little risk for most incumbents in voting themselves and their opponents a modest subsidy of taxpayer funds for the general election campaign. But primaries are another question. At best, they tend to be nasty and divisive; at worst, they pose real peril for the veteran Washington politician who faces an ambitious young state legislator or mayor of his own party. Few in Congress want to subsidize an intra-party challenge."

I sincerely hope that this Committee will not exclude primaries from this needed reform. To do so will only open us up to the accusation that we have acted in the name of reform, but have in fact preserved the large advantage which incumbents enjoy in our political system—an advantage which for many is advanced by the ability to raise funds from the special interests.

## CONTINUING CRISIS IN FOSTER CARE

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. MILLER of California. Mr. Speaker, for the past several days, I have placed in the RECORD statements and reprints which illustrate the great need for adequate Federal support for preventive service programs which can reduce the need for foster care, or shorten its duration. That support, full funding of title IV-B—Child Welfare Services—is contained in H.R. 7200.

But more than just money is required. We cannot simply pour an additional \$209 million into a system which lacks adequate procedures and respect for the rights of the children and families affected by it. I have strongly spoken in favor of linking increased Federal financial aid with substantive programs reforms which, like additional service programs, can reduce unnecessary placements and save substantial amounts of funds.

Current Federal law requires a review of placement every 6 months for every child receiving Federal support. However, a review of four States by the General Accounting Office, which Congressman BRADEMAS and I commissioned, revealed that only slightly more than one-third of all children in fact were reviewed semi-annually, and that in some States, only one-sixth of all children were reviewed. Even more incredibly, one recent witness at a hearing on foster care reported that in one California county, reviews—when they did occur—lasted only about 2½ minutes!

A lack of reviews directly contributes to the maintenance of children in costly long-term foster care because there is no mechanism for identifying those children who should be returned home, moved to a more appropriate setting where they could receive services which would accelerate the process of reunification, or be freed for adoption. In many cases, GAO found these children do not even have case plans which would make it possible to evaluate their progress, their needs, and plan for their exit from foster care.

Failure to provide for case plans and reviews is a major reason for children languishing in the system. A review by HEW in one State has found that children who entered the system anticipating removal in 3 months or less in fact remained in foster care for nearly 2 years. Those intended for a placement not to exceed 1 year remained for more than twice that time, while those placed in care for adoption remained for 2 years.

As is the case with the demonstration preventive and reunification services of which I have written, there do exist effective review procedures which identify and move out of foster care, children who do not need to be there. The best of these is the Children in Placement project of the National Council of Juvenile Court Judges. The CIP project, which utilizes largely volunteer personnel to assist the

court in reviewing children in foster placements, has operated in many jurisdictions with uniformly successful results. Recent figures from four States indicate their effectiveness in facilitating the review of children in foster care and the resultant changes in their placement:

|   | Ohio | Oregon | Texas | Rhode Island |
|---|------|--------|-------|--------------|
| Number of cases reviewed                  | 99   | 1,006  | 222   | 1,172        |
| Children moved out of foster care         | 26   | 671    | 136   | 95           |
| Returned to own home                      | NA   | 131    | 13    | 32           |
| Permanently placed with relatives         | NA   | 131    | 13    | 13           |
| Placed for adoption                       | NA   | 462    | 91    | 35           |
| Removed from group homes and institutions | 1    | 66     |       | 11           |

Some would argue that reviews cost money. In fact, failure to review is the real cause of wasteful spending, because failure to review results in hundreds of children remaining in foster care, at costs of thousands of dollars monthly. Identifying and removing only a few children in each jurisdiction who needlessly are in placement pays for the cost of reviews.

I am pleased that H.R. 7200 contains the kinds of review procedures which I have included in H.R. 5893, "The Foster Care and Adoption Reform Act of 1977." These protections will not only safeguard the rights of children in foster care, and their families, but will introduce a previously ignored level of accountability into a wasteful and ineffective system.

A man far more experienced than most, Judge John P. Steketee of Grand Rapids, Mich., has spoken eloquently of the need for such reviews at a hearing on foster care and adoption before the Subcommittee on Select Education. Judge Steketee, president of the Children in Placement Project, not only pointed to the need for reviews and their cost-effectiveness, but testifies to the need for assuring the comprehensiveness and objectivity of such reviews. In designing the review provisions of the foster care reform legislation, I have heavily relied on his experience and judgment, and I urge my colleagues to note his views.

The article follows:

[Hearing held in Washington, D.C., Sept. 8, 1976]

Judge STEKETEE. Most of the people that have been testifying to you today have had a different vantage point, whether it is a social worker, whether it is a lawyer, mental health person, whether it is an author, whatever. There are a number of persons who are very concerned, but each have their own vantage point, and I submit that the thing I am just going to briefly address will be the whole business of, What can the courts do?

Now, again, I wanted to stand up and say: Wait a minute, when some of the folks were talking about it, and, yet, there is a good share of truth in what they are saying, that in the past, I think, the judiciary has not lived up to its responsibility.

I have heard today a number of extreme statements and a number of, you know, negative ones, and I caution us to be a little bit careful on our extreme statements or extreme judgments because there are a few things occurring—and I point them out very briefly on my last page. I don't want to sound like Pollyanna, but there are some things that are occurring that I think are of

a constructive nature, and I think the judiciary, particularly in the juvenile/family courts, are perhaps living up to their responsibility in some ways.

The things that I basically pointed out is that I think—and you have heard this over and over again—I am reassured because I am hearing it from a number of different sectors that I had kind of stereotyped as not really understanding the problem, and I am very reassured that you sound like you really know what you are talking about and are working at trying to find out what some of the details are of the situation.

Children do have the right to permanency. We have each got a little different definition of what that is, and I have been able to observe over the last 10 years that I have been a juvenile court judge that many times they do languish, benignly so, in some kind of a foster care situation.

I have heard a lot of scare stories today about institutions, and I am sure much of those are justified. People have seen them firsthand. I would like to think that at least in our area—and I have got a jurisdiction approaching half a million people—I have been in most of the institutions that I use. I know personally a number of the foster parents, meet with them on a regular basis. I would like to think that there are fewer of those examples.

We send our caseworkers out to see the people that are there. By and large, my main concern is—and I am not minimizing for a minute the institutional problem. I think what our particular focus in this children in placement project has been kids who are out of their own homes.

Now, some are in institutions, but a great share of them are in foster homes, very nice places. People are doing a good job. They are really loving people and so forth, except that it is not their own home. It is not that youngster's home.

I guess the main thrust of this children in placement project has been to concern other courts, other judges, that this is an important thing, the right to permanency, and one way to pull it all together is to have a regular accountability.

Now, who can do it? I listened to one witness testify, who said there are five persons on the team, five elements to that team. The court wasn't mentioned. I have heard it said that the typical court review is perfunctory, and I guess that can, by and large, be stated.

The point that I think I am trying to make—and I am being joined progressively by more and more juvenile and family court judges who are committed to this prospect—is that a meaningful, aggressive, sensitive, regular review, not a rubberstamp kind of thing, but a judicial review, is sometimes the only place where all of these things—all of these persons who are really in fact interested in youngsters can be pulled together. The court holding parents, kids, agencies, institutions, indeed themselves, the community responsible on a regular basis.

Now, some courts have the statutory review process. Michigan has had it for 10 years. It is in some ways routinized, although, it is not a routine thing. It is a meaningful kind of review. The hard questions are asked. The hard, legitimate questions. How long has this youngster been in foster care? Is this in fact the best possible placement? What are the parents doing to reestablish a home for the kids? What are we doing to assist, reaching out to help this whole process? And how long are we going to let the kid drift in and out of some kind of placement?

We are realizing that many more youngsters than we used to think are adoptable, and I am talking about the older youngster. I am talking about the youngsters with physical and emotional handicaps. I am

talking about the mixed race youngsters. They are adoptable, and not just to place them with somebody. There are many parents who are ready, willing, and able to make these youngsters part of their family.

I agree with—and I think most of the judges who are involved with us in this project agree that it is a continuum. You know, the aggressive, prevention kind of thrust ought to be made. When you get to the point where a youngster has to be removed—and I think too many are removed, many more than really have to be removed—are removed—then there ought to be—that is kind of a last resort thing. Then, while that youngster is in governmental care, there ought to be a real outreach on behalf of all those that are in charge of this process, and that we not let the thing drift unnecessarily.

Our children in placement project has only been going for a couple of years, but it has spread across the country. We are doing the whole State of Rhode Island, because it is not that big. We are doing a county court in California. We are stretched North and South, East and West. We are even in Utah, that has probably one of the most sophisticated tracking systems of any State in the country. They get computer printouts on all these kinds and so forth, and Judge Larsen in Salt Lake at first said: "We don't need any of those situations. We have got all this mechanism." Yet, when he reassessed it, he said: "You know, I have got numbers and things, but it doesn't give me much on a qualitative basis," and he is involved with the process.

There are fascinating things happening, and again I am saying that the thrust of the courts that are beginning this process is that kids have the right of permanency. Probably the only place where this can occur with due process—and, as lawyers, we know that due process is no guarantee that things are going to happen—making sure we touch the bases. And, out of that, hopefully the questions are going to get asked. It doesn't guarantee it, but that is what this review process can do and that is what it is doing.

A lot of things have happened. Kids have been returned home that have been sitting in limbo. The hard questions have been asked of agencies and others. What are we doing to help? Rights have been terminated where appropriate, and kids have been placed for adoption. In some instances, substantial use of volunteers in the court, with appropriate confidentiality, was used. We justified to our very conservative county government that in fact it was justified putting another person on the staff whose sole responsibility was a test monitor, to bird-dog these cases and be a liaison person with agencies, both public and private, in our community. At first, we were looked on as a judge doing social work from the bench, and I am sure this has happened in some of our project courts. The best way I can describe it is that the social work agencies, both public and private; the attorneys who are appointed to represent these youngsters; and the court is kind of establishing a new partnership, if you will, each with our respective roles, but respecting each other's various responsibilities.

As a matter of fact, in Rhode Island, which started out as some kind of a hostile confrontation, it has turned into maybe less than a love match, but has turned into a real partnership where not only the court involved kids who are being reviewed, but in a good faith gesture the director of Social Services said: "Look, we have got these voluntary cases and we will throw them in the review system too so we can do this together."

So the judges have in these project areas begun to live up to their responsibilities. Certainly, they are hand-picked, they are selective volunteers. They have got things going in their communities. They have got cooperation by both public and private sec-

tors and they are well respected in their communities, so you have got all the various things going. But I submit it is the kind of thing that can grow, is growing, can happen in any community.

I think, by and large, we are seeing a commitment on the judges—and I am speaking now on their behalf, those that are involved, and a number of others—that, if we are going to get involved with the lives of families—and maybe the least restrictive alternative is an appropriate approach, but, if we are going to get involved, then the agency best suited for that is the court, with its due process, and I think the judges are committed that we not substitute governmental neglect for parental or family neglect.

[Prepared statement of Judge John P. Steketee follows:]

PREPARED STATEMENT OF JUDGE JOHN P. STEKETEE, JUVENILE COURT, GRAND RAPIDS, MICH.

Gentlemen and Committee members: You have already heard and will continue to hear about the plight of children in foster care and the various needs they have. My focus will be on those things that the judicial branch of government can do to assist in rectifying the situation, based on my experience as a juvenile court judge for some ten (10) years, and also my experience as Chairman of the Children in Placement (CIP) Project sponsored by the National Council of Juvenile Court Judges.

We know that there are many children across the country not living in their own homes. Some have been placed there by parents under the auspices of private or public agencies, but a substantial portion of them have been placed in out-of-home living arrangements by some judicial body, usually a juvenile or family court.

Everyone in our society has rights—and obligations. Children too! One of the emerging rights that is gaining more recognition is that children have the right to permanency; a family and home that is theirs.

If a family has problems the most humane, effective and economical way to assist is by protective services intervention. If a family is to be separated, this should be only as an emergency or last resort and we must all work together toward reuniting that family. If out of home placement continues unduly—weeks and months stretching into years—it is imperative that planning be made for permanency for the child.

Bypassing the issue of what children get into foster care—and it is my observation that too many youngsters come into foster care initially because of the lack of protective and supportive services for a family—it is imperative children's rights to the permanency of a family be respected. They should not be allowed to languish, no matter how benignly, in a home with substitute parents without the matter of planning for them and their families having been continually addressed.

Good foster parents are a necessity in our society. It is usually a better situation for the child than the home from which he was removed. This child usually makes the fewest "waves" and life goes on.

However, too many times we rely on the "system" to do well on behalf of families and children. We direct our attention elsewhere to the crises and the emergencies. But children grow older and sometimes—too many times—to adulthood never having the permanency we could have given them. Even though a child makes a good adjustment in a foster home this should be no automatic permanent substitute for his own home or an adoptive home.

From the humane standpoint it is imperative we continue to ask what direction the planning is taking for this youngster. From the financial standpoint at the very least we are not getting the value for our

collective dollars. Costs for out-of-home placement can be from a few dollars a day to over \$100 per day in specialized placements. Many of these same youngsters are adoptable if parental rights can be terminated. Finding one lost child in the system and making appropriate planning for him can save thousands of dollars, aside from salvaging a child and giving him a permanent home. A court is the only agency of government that can do this with adequate protection of rights.

It is, thus, incumbent, upon the courts, of our nation—the juvenile and family courts—to be the monitor, "watchdog" or advocate of these rights. Periodic, regular, sensitive, demanding review of those cases of children in foster care is, in my opinion and shared by a growing number of juvenile and family court judges, a necessity to respect the best interests of the child. This can be achieved because of statutory review in each state or, I submit, by the inherent power of the individual court which originally took jurisdiction of the case.

The judicial review can ask the hard questions that too often don't get asked by anyone, no matter how well meaning. The court can and should hold parents, children, agencies, institutions, communities and, indeed, themselves accountable for what is happening to the children in foster care. That often referred to "road" can indeed continue to be paved with all our "good intentions" unless the questions are constantly asked by someone, e.g., how long have these children been out of their homes, what are the parents doing to reestablish a home for their children, what are we doing to assist, and is it likely that within a reasonable time period this family can be reunited? Parents have rights, certainly, but children have rights too. It is only in the courts with due process, together with appropriate legal representation for children as well as parents, wherein a constant focus can be given these issues. We should not have a result by default.

Courts are more and more taking the initiative and insisting on regular reviews of the status of youngsters, either through a statutory authorization or by inherent power. Lost children are being found. The National Council of Juvenile Court Judges Children in Placement Project has demonstrated that regardless of apparent variations in state laws or size of jurisdiction—rural or urban—that the court monitoring is beneficial. Courts are asking the "tough" but legitimate questions and children are being returned to a now adequate home, are freed for adoption through termination proceedings, or are reinforcing a "planned" decision that, in fact, foster care is the best alternative. The decisions, however, are planned ones with the current facts being explored and the on-going evaluation being rigorously continued.

With the courts as a catalyst we are finding that each of the child caring agencies are beginning to pull together and searching out the lost children in the system. A coordinated effort is beginning in the Children in Placement Project areas and elsewhere. The courts are beginning to move on this philosophy of aggressive review, setting realistic expectations for everyone involved and requiring regular accountability for a child's status. Some courts are implementing training programs for social workers in their community to help sharpen their skills and assisting in coordination of efforts between all agencies and the court. Tracking systems for children—with appropriate confidentiality—are beginning to emerge on a local, State, and regional basis. Parents, once deemed inadequate, are being helped to resume responsibilities in a more appropriate manner by imagination and dedication of those performing innovative casework. More agencies—public and private—are broadening their hor-

izons regarding permanent planning for children and who are adoptable. We are all discovering that most children—including older, handicapped and mixed race—are indeed adoptable and many fine families are eagerly awaiting to receive them in a permanent home. Foster parents and former adoptive parents are being given the credibility they so richly deserve to help in the planning. Some state legislatures are assuming responsibility for establishing realistic criteria for original jurisdiction (for instance emotional neglect), incentives for reuniting families through more realistic funding procedures and mandatory court review requirements, broader and specific realistic criteria regarding termination of parental rights, and for planning through the vehicle of subsidized adoption and other means. The Federal Government can be of great assistance by encouraging this process through funding incentives and constructive guidelines. But more collectively needs to be done.

There is much, much more to do, certainly. The judicial branches of the various governments are showing a growing willingness to lead. More and more juvenile and family court judges are assuming this activist role to the end that we not substitute governmental neglect for parental or family neglect.

#### HOW DID IT EVER SLIP BY CRONKITE?

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. DORNAN. Mr. Speaker, I have just read an article written by TV Guide's Patrick Buchanan, about the recent CBS documentary on defense, "Who's Ahead? The Debate over Defense." In this Congressman's opinion, the article was a fair and unbiased critique of the documentary and of past CBS News "head-in-the-sand" attitude toward the Soviet arms buildup.

I had the pleasure of spending some time in private conversation with Maj. Gen. George Keegan this week. I can say in all candor that I agree in almost every respect with his evaluation of the threat of Soviet arms. However, General Keegan may be a little rough—as reported in the Buchanan article—on the CBS documentary. I found that the documentary was refreshingly evenhanded in its assessment of the Soviet threat and that Mr. Buchanan's article reflected that evenhandedness.

The most interesting aspect of the CBS news story—and one which the TV Guide article points out—is its virtual uniqueness in the annals of CBS News. As Mr. Buchanan states, this documentary can be interpreted as "tacit admission that CBS's priorities were totally warped in the early 1970's, when the Soviet buildup was all but ignored by Cronkite & Co."

I hope that it is a portend of things to come at CBS News.

The text of the TV Guide article follows:

CBS DEFENSE DOCUMENTARY DESERVES PRAISE  
(By Patrick Buchanan)

Having watched the hour-long CBS special "Who's Ahead? The Debate over Defense" on April 20, Maj. Gen. George Keegan, former

Air Force Chief of Intelligence, was an unhappy man.

CBS, the general told this writer, has reneged on a firm commitment not to twin his comments with those of Herbert Scoville Jr., consultant to the Carnegie Endowment for International Peace. In Keegan's judgment, Scoville is a "professional dove of the worst kind," who hasn't accurately predicted a Russian weapons development in 20 years.

Further, said the general, while CBS spent two-and-a-half hours interviewing and filming him, they chopped his remarks to "63 seconds"—excluding some "dynamite" news items he had given the network.

Hanging up the phone, I began to wonder if the general and I had watched the same show. For in this writer's judgment, the Charles Collingwood-narrated documentary on the B-1 bomber and cruise missile was perhaps the best defense debate ever aired in prime time. I had given CBS an A for effort and, at the least, an A-minus for performance.

Not trusting my initial reaction, I managed to wrestle out of a tenacious CBS bureaucracy a copy of the transcript. It confirmed my original judgment.

The editing done by the CBS team was little short of superb. The quality and persuasiveness of the individuals interviewed—making the case for a more impressive American deterrent—was extraordinary. The arguments presented on both sides were sharp, concise, convincing. If anything, the "hawk" side of the question got more than equal time.

With regard to General Keegan, by my count he was quoted eight separate times, quotations that totaled a good deal more than "63 seconds." To this writer, the general emerged as the most forceful witness on either side of the argument.

There are other indications CBS bent over backward to give "our" side, if you will, the benefit of the doubt. Early in the show, CBS used several minutes of straight footage from the powerful half-hour documentary prepared by the American Security Council Education Foundation (ASCEF). "The Price of Peace and Freedom." Toward the end, there was even footage of Scoville and superdove Sen. Frank Church expressing alarm about the buildup in Soviet conventional weapons.

Indeed, John Fisher, the head of the ASCEF, which had filed charges with the FCC against CBS for alleged censorship of news of Soviet weapons, fired off a telegram of congratulations to CBS producer Ernest Leiser. (The ASCEF complaint, incidentally, was not taken up by the FCC—which, however, did not really pass upon the merits of the complaint, which has been directed at Walter Cronkite's evening news show.)

For the first time, millions of Americans were acquainted with the extraordinary capability—and cost—of the B-1 bomber, the sophistication of Soviet air defenses, compared to which the U.S. has nothing. Even more important was the half of the CBS show devoted to introducing the American people to the cruise missile.

Barry Goldwater is quoted as saying that a new aircraft carrier costs the taxpayers \$2 billion. If the figures one expert used during the show are accurate, the U.S., for the identical sum, could purchase between 3300 and 4000 nuclear-tipped cruise missiles—21-foot, air breathing, subsonic weapons, that, following the contours of the Earth, could swamp the sophisticated Soviet air defenses, landing within 10 meters of their targets. (One exuberant military officer has been quoted as saying the cruise missile can take out a Soviet factory in Siberia without waking the night watchman.)

Man, talk about your deterrents!

If President Carter gives this bird away in the SALT II negotiations, he will be making the worst military blunder of the 20th cen-

tury—surrendering a weapon that can guarantee the peace for the next 30 years as effectively as the U.S. bomber and missile arsenals have for the last 30.

One of the minor mistakes in the CBS documentary was identification of the American Security Council as a "conservative group." Up around CBS News, that is not your term of endearment; it is something of a code word for lightweights. Nor is it precise. The ASCEF is an organization concerned with defense that has the personal and financial backing of liberals and conservatives. On its board of directors is one Sol Feinstone, who, Fisher contends, is a socialist who used to carry around the soap box on which Eugene V. Debs stood when he was laying the heavy wood on the robber barons.

When it comes to concern over defense, the liberal-vs.-conservative breakdown does not apply. There are "conservative" businessmen who care less about SALT II than about the profits to be made in the Communist trade, so long as the illusion of "detente" endures. Meanwhile, there are labor-union liberals and ADA types, who are as apprehensive as General Keegan about the deteriorating military balance. The newly formed Committee on the Present Danger is replete with individuals this writer has always considered "establishment liberals." On that committee, the Reagan-Goldwater conservatives are in a near-taken minority.

But if the CBS documentary merits commendation, the ASCEF film "The Price of Peace and Freedom," which has been shown on 276 TV stations, deserves a standing ovation. Using statistics provided by the Department of Defense and filmed quotes from men of eloquence such as Alexander Solzhenitsyn and the late John F. Kennedy, it is the most powerful case this writer has seen presented about the alarming Soviet reach for nuclear superiority. The Nation would be well served if every TV station and college campus in the country used the film as the basis for a round-table discussion.

Toward the end of the CBS show, Collingwood conceded that the debate over defense "could be the most important debate of our lives." I take that to be tacit admission that CBS's priorities were totally warped in the early '70s, when the Soviet buildup was all but ignored by Cronkite & Co., while we were getting almost nightly reports on the peril to mankind from a polluted environment.

For the record, if General Keegan & Co. are wrong about the Soviet buildup and Kremlin intentions, we are going to waste billions on unnecessary deterrence. But, if Scoville and Church are wrong, we stand to lose something slightly more important than our money—i.e., our freedom, our lives, our civilization.

#### RECOMBINANT DNA RESEARCH

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. ROGERS. Mr. Speaker, the Subcommittee on Health and the Environment is currently considering legislation designed to regulate recombinant DNA research activities. On May 2, the subcommittee made several tentative policy judgments and directed the staff to place that policy in legislative form.

The staff has completed its work and yesterday I introduced the staff draft as a bill, H.R. 7418. By introducing this measure, I do not intend to imply that it necessarily represents either my position or that of any member of the subcommittee. I have placed this proposal in the

public domain prior to subcommittee consideration to encourage public participation in the decision-making process by the broadest spectrum of interests. H.R. 7418 should be available in the House Document Room within the next day or two.

## CONTINUING CRISIS IN FOSTER CARE

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. MILLER of California. Mr. Speaker, the New York Board of Social Welfare's study, "Foster Care Needs and Alternatives to Placement," is a highly informative review of the largest foster care program in any State. Many of the results of this study pattern national trends which illustrate the severity of the crisis in the foster care system, and the pressing need for immediate reform of the sort contained in H.R. 7200, the Public Assistance Amendments of 1977, and my own legislation, H.R. 5893, the Foster Care and Adoption Act of 1977.

The New York study revealed that there has been a distinct upward trend in foster care in the past 25 years, with a 40-percent increase occurring between 1960 and 1970 alone. In fact, the figures for AFDC foster care are even more staggering: Children in AFDC-FC increased from 600 in 1961 to 115,000 in March 1976. Responses by many States to a questionnaire which I have recently distributed on foster care and adoption has revealed that many States anticipate increases in their foster care populations during the coming year of 10 to 25 percent because of similar increases in past years.

The study reveals that foster care is becoming increasingly used for black and Hispanic children, while the numbers of white children are falling. Between 1960 and 1974, the number of black children in care more than doubled, and the number of Hispanics nearly doubled. Other statistics indicate that there has also been a large increase in the number of older children, aged 12 and over, in foster care. Tragically, many of these children are those who entered care years ago, often supposedly for a short period of time, and who have grown old in the same system.

The New York study also reveals a substantially higher rate of institutionalization for black and Hispanic children, and a far greater use of residential group homes among white children, and less restrictive and very often more appropriate alternative to institutionalization which should be encouraged for all children requiring such placements.

I have repeatedly noted that many children enter foster care through no fault of their own, but that once in the system, because of inadequate services and reviews, they become its victims. This view is borne out by the findings of the New York State study:

### REASONS FOR PLACEMENT

It is the problems of parents rather than the problems of the children which cause the vast majority of foster placements—almost 80 percent of the total (Table 5). Two types of parental problems stand out as the primary reason for foster placements—parental unwillingness to care for the child and emotional or behavioral problems afflicting the parent. It should be noted, however, that the parents frequently have multiple problems. Thus, although drug addiction or alcoholism accounts for 2.5 percent of the primary reasons for placement, about 20 to 25 percent of the parents are addicted or alcoholic. While we have classified these problems as those of parents, they may reflect low income status, recent migration to the city, and/or effects of discrimination.

Problems inherent in the child, mainly emotional or behavioral, are primarily responsible for the placement of 14 percent of the children in care and, as with the parents, multiple problems are common.

As has been true for several decades, the data indicate that relatively few—only 3 percent—of children in placement are there because of the death of both parents and the absence of other relatives able to care for them.

Children from intact families who are in foster care are more likely to be in care because of their own problems than children from broken families or conjugal unions. Almost two-fifths of the children from intact homes are in care because of child-related problems, as opposed to 16 percent of the children from female-headed households, 24 percent of the children from male-headed homes, and less than 10 percent of those children in the care of another relative or non-relative.

TABLE 5.—Percent distribution of New York City children in foster care or awaiting placement by primary reason for current placement

|   | Percent |
|---|---------|
| No natural home (parents dead and there are not other relatives)..... | 3.1     |
| Parent-related problems.....  | 78.2    |
| Abuse of child.....   | 0.2     |
| Neglect of child.....   | 0.7     |
| Parental unwillingness to care for child, including desertion.....    | 30.6    |
| Marital conflict of parents.....                                      | 0.4     |
| Emotional or behavioral problem of child-caring person.....           | 31.0    |
| Physical illness or death of child-caring person.....                 | 3.6     |
| Employment of child-caring person.....                                | 0.3     |
| Financial need and/or inadequate housing.....                         | 2.5     |
| Drug addiction of one or both parents/alcohol addiction.....          | 2.5     |
| Other parent problem.....   | 6.4     |
| Parent-child conflict.....  | 1.5     |
| Child-related problems.....   | 14.5    |
| Emotional or behavioral problem of child.....                         | 10.1    |
| Child physically ill or handicapped.....                              | 0.6     |
| Child retarded.....   | 1.2     |
| Child adjudicated PINS.....   | 1.4     |
| Child adjudicated juvenile delinquent.....                            | 0.5     |
| Other child problem.....  | 0.8     |
| Unknown.....  | 2.6     |
| Total.....  | 100.0   |

Analysis of the current reason for the placement of the child by the age of the child confirms what has been reported elsewhere in the literature.\* Specifically, the

\*Such as Shirley Jenkins and Mignon Sauber, *Paths to Child Placement* (New York: Community Council of Greater New York, 1966), p. 135.

older a child is, the more likely he is to be in placement because of a child-related problem. While over one-quarter of the children 12 years old and over are in placement because of their own emotional or behavioral problem, a parent-child conflict or another child-related reason, only eight percent of children between six and 12 and fewer than three percent of the children under six are in placement for such reasons. What is most interesting to note is that even in the oldest age groups more than 70 percent of the children were placed because of parent-related reasons.

Examination of the reason for placement by the total amount of time the child has been in foster care indicates that children who have come into care because of their own behavioral or emotional problems have been in care for less time than children who are in care primarily for parent-related reasons. Children who come into care for child-related reasons, however, tend to do so at a later age; therefore, the possibility for being in care for longer periods of time is diminished. It should also be noted, however, that children who enter care for their own behavioral problems are more likely to come from intact families and/or higher income families. Therefore, it is possible that because these children are from better organized families, discharge can take place faster than for children who are in placement because of family disorganization. If this is in fact the case, it argues for an increase in services to the families of the children in care, not only so that so many children would not have to come into care in the first place, but so that children can be returned home sooner. [emphasis added]

Cross-tabulation of the data on the type of current placement and the primary reason for placement reveals a pattern which one could largely have anticipated. The vast majority of children in foster homes, group homes and residences, and general institutions are in placement because of their parents' problems. In contrast, most children in residential treatment centers or institutions for the retarded need placement because of their own behavior or emotional state although, of course, it must be recognized that their behavior may reflect their parents' problems. What might not have been anticipated, however, is that the primary reason for placement of as many as 19 percent of the children in residential treatment, type A, is parental unwillingness to care for their child.

The study also addressed the critical question: "Are the children appropriately placed?" This is really the key question, because it goes to the heart of whether children should be removed from their natural homes and placed in foster care, and at what point they should be returned home or freed for adoptive placement, and the type of services which should be offered to the child and the family.

Other studies have demonstrated that a substantial number of foster children are not appropriately placed. A recent examination of foster care in eight Southeastern States concluded that 60 percent of the children were not in the proper placement. "Supply and Demand for Child Foster Family Care in the Southeast," Regional Institute of Social Welfare Research, Inc., Athens, Ga., 1977. The conclusions of the New York review on this point are extremely important:

### ARE THE CHILDREN APPROPRIATELY PLACED?

On the basis of the criteria for placement and alternatives to foster care developed for the study, the case readers made a judgment

as to whether the initial placement of the child, whenever that occurred, was appropriate, and whether the current placement, as of October 1974, was appropriate. Before presenting the conclusions obtained, it is necessary to make some comment about the general institutions which currently care for almost 4,000 children.

According to our criteria, the general institutions are never appropriate for the foster placement of children because they care for a most heterogeneous group of children, many of them normal or near normal children who would be more appropriately served in foster homes or group homes or residences, and many so seriously disturbed that they should be in residential treatment or other closed settings.

*The answers reflect a grim picture. More than half were inappropriately placed initially and while some improvement has occurred, more than two-fifths of the children are currently inappropriately placed. The slight improvement over the course of time between the initial and current placements derives from two sources: one is that during the last five years, some new group homes and residences have been created and some new residential treatment facilities have been developed, permitting more children to be put in the preferred placement; and second, some children are moved from an initial inappropriate placement to a preferred one. It must also be said, however, that the initial placement sometimes becomes a self-fulfilling prophecy: a child inappropriately placed initially sometimes changes to the point where the placement becomes appropriate. For example, the case reader may have judged that a child was no longer adoptable or that it would not be sensible to move an older child from a foster home even though a group home or residence might better prepare him or her for independent living. (Emphasis added.)*

The picture is even grimmer for the older child. Just over half of the children 12 to 18 years of age are currently inappropriately placed. In contrast, 28 percent of the children under three and 38 percent of the 3-9-year-olds are not in the preferred placement. (Emphasis added.)

The high proportion—69 percent—of young people 18 years of age or over who are appropriately placed appears an anomaly. It results from the fact that most children are discharged from foster care at age 18 unless they are going to college, or need special vocational training, or are highly disturbed. If they are not discharged, they are likely to be in the appropriate setting.

Among the Catholic and Protestant groups, which comprise over 92 percent of all children in or awaiting placement, about 41 and 47 percent respectively are inappropriately placed. In the Jewish group, which includes just under five percent of all children in care, about 20 percent were inappropriately placed.

In terms of ethnic groups, just over 46 percent of the black and Hispanic children are inappropriately placed compared to about 30 percent of the white children. These differences are related to a problem of acute shortages of certain types of facilities, as will become evident in the further analysis.

Child welfare workers charged with finding placements for foster children know how hard it is to find the appropriate placement for a child who exhibits difficult behavior. Two-thirds of the children viewed as normal or near normal were placed appropriately compared to about 57 percent of the children regarded as either near normal with some problem or not normal with one or two problems. In contrast, only 39.5 percent of the children judged as not normal and with three or more specific problems were in the preferred placement.

The data indicate that in all types of pro-

grams and facilities, some of the children are inappropriately placed but the proportion varies widely by type of program. The highest ratios of appropriate placements are found in the institutions for the retarded and in foster homes with prospects for adoption—91 and 86 percent respectively. The second highest ratios of appropriate placement are found in the residential treatment centers—about 75 percent, followed by the group living arrangements and foster homes—about 65 percent. About 22 percent of the children in foster homes, however, should have been placed for adoption. In terms of the criteria for placement, none of the children in general institutions are appropriately placed—if they are normal or near normal in behavior they should be at home (21%) or in smaller group homes or residences (30%) or foster homes (18%); if they are emotionally disturbed, as 22 percent of them are, they should be in residential treatment. It is also important to note that almost two-fifths of the children at home on suspended payment should not be at home. Actually many are AWOL and others have been sent home only because they were difficult or unmanageable. (Emphasis added.)

Among the 28,800 children currently in placement (including children in secure detention), 2,094 (7.3%) should be in their own homes and 3,669 (12.6%) should have been placed for adoption; this figure is in addition to the 3,951 children (13.8%) who should be and are in foster homes with the prospect of adoption. The major deficits in facilities for children who need to be in placement are residential treatment (2,750 additional places) and group homes and residences (1,000 additional places). On the other hand, if all the children were appropriately placed, about 3,700 fewer children would be in long-term foster homes. (Emphasis added.)

It should also be noted that among the children currently in foster care are an estimated 145 who suffer from such serious physical handicaps or severe or profound retardation, or brain damage, that they will require lifetime care. They do not belong in the foster care system, as least as it is presently defined, since these children cannot be brought to even a minimum level of functioning, with known methods of treatment, by the time they reach adulthood.

Although these conclusions would appear to demonstrate a widespread unaccountability in the foster care system, New York has one of the better tracking and review programs because it employs the child welfare information system, developed by Prof. David Fanshel of the Columbia University School of Social Work. Figures in other States, and nationally, are as tragic or worse. They point to the great need for a major reform of the foster care and adoption laws, which would be achieved with the enactment of H.R. 7200.

#### TRIBUTE TO CHARLES OSMERS, JR., FORMER MEMBER OF THE HOUSE OF REPRESENTATIVES

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. RINALDO. Mr. Speaker, the death of Frank Charles Osmers, Jr., who served as a Member of the House in the 76th, 77th, 82d and 83d Congresses, has ended an outstanding record of distinguished public service.

His death is a particular loss to Bergen County in New Jersey where he was born and where so many benefits were derived from his dedication to high standards of public office.

As Mayor of Haworth, as a member of the New Jersey Legislature, as a Congressman, as an officer in the U.S. Army, and as executive director of Bergen County, Frank Osmers exemplified the highest traditions of conscientious service to the Nation.

He set high standards and lived up to them in a way that will be remembered with genuine warmth and lasting respect.

I am proud, Mr. Speaker, to be associated with the tributes paid to such an outstanding former Member of Congress.

#### A TRIBUTE TO THE VETERAN

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. DRINAN. Mr. Speaker, as Memorial Day, 1977 approaches, it is appropriate that we turn our attention to the great heroism of veterans who have served our Nation. In that connection, I commend to my colleagues an essay written by Ms. Basilla E. Neilan of Marlborough, Mass., who is the winner of the 1976 Freedom Foundation Award.

Ms. Neilan's beautiful depiction of the great sacrifices made by the American veteran was brought to my attention by Mr. Charles N. Collatos, the very able Commissioner of Veterans' Services for the Commonwealth of Massachusetts.

The article follows:

#### TELLING IT LIKE IT IS

(By Ms. Basilla E. Neilan)

Who is this person called veteran? Usually a man, sometimes a woman, who has given months or years to their country's call for service. Some lost legs, many lost arms, and over the decades millions have lost their lives. They were issued G.I. haircuts, clothes, were told what, when, and how to do it. Do what? Carry a litter, man a howitzer, pilot a plane, land on a beach with seventy pound packs, or send a torpedo spitting out of the side of a submarine tube. They starved and bled to death at Valley Forge and endured the battle of brother against brother in the War of the Rebellion. They stormed up San Juan Hill and were gassed to death in the trenches of Meuse Argonne and Chateau Thierry. They were humiliated and tortured in the Bataan Death March and their nurses were raped, maimed, and dragged through the mud of Corregidor. Their youthful lust for life was surrendered at distant places called Pork Chop Hill and Da Nang. Guys and gals from places like Kearney, Nebraska, Tonkawa, Oklahoma, and Damariscotta, Maine—white men, red men, black men, and yellow men fighting side by side to see a flag fly over Mount Suribachi or to protect the stars and stripes from desecration in the last hours of a falling Saigon.

Today many of them lie in veterans' hospitals, blind, legless, armless, and mindless. How many of you have ever taken time to visit a hospitalized veteran whose day follows day of empty hours dreaming of what life might have been?

How many of you stop to give thanks to these men and women who gave their youth so yours would be secure?

Do you owe them anything? Yes. You owe them your life and especially your freedom you take so much for granted. They more than all the statesmen, more than all the laws that guide us and the buildings that house our government have committed the word liberty to the highest level of our existence with a purity of purpose that rests under simple white markers forever both here and under foreign soil.

This, therefore, extracts from each and every one of us a promise never to forget their glorious deeds of heroism that can never diminish or disappear. We gratefully recognize them and promise to guide this generation and those generations to follow in a factual, consistent reminder of great deeds accomplished by those who have been our greatest Americans.

Dedicated to George Snyder, U.S.A.F. (Ret.)

### TRUE AND FALSE ON LAETRILE

**HON. LARRY McDONALD**

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. McDONALD. Mr. Speaker, many of my colleagues have had many questions on the subject of the amygdalin/laetrile controversy. Unfortunately, so much that has been presented by the media, the Food and Drug Administration, and even orthodox medical circles has been conflicting, confusing, and on occasion totally dishonest. Fortunately, a recent article helps to remove some confusion.

Writing in the April 25, 1977, issue of New West magazine, David Rorvik presented a true-false presentation on the subject of laetrile as part of a larger article.

David Rorvik, the former Time magazine science and medical reporter and author of several books on scientific and medical problems, approached the laetrile question as a skeptic. After a painstaking, year-long investigation carried out under an Alicia Patterson Foundation fellowship, he emerged, to his own surprise, convinced that the substance has not only been unfairly maligned by the medical establishment but, that it offers, in his words, "considerable promise as a cancer control." This is the most favorable laetrile article ever to appear in a large circulation magazine.

The true-false clarification article follows:

#### LAETRILE: TRUE OR FALSE?

Laetrile is a cancer cure.

False. The best evidence suggests that it is a control, capable of arresting the spread of cancer in some cases. It may be far more effective as a preventive.

Laetrile is a drug.

The FDA says yes; the Laetrilists say no, insisting that it is a vitamin or natural food factor. Dozens of foods, including raspberries, contain Laetrile.

Laetrile is illegal.

Largely false. It is now legally used in 26 countries, including Japan, England, Germany and the Soviet Union. Alaska has specifically legalized the use of Laetrile against cancer. Laetrile is specifically illegal—and then only for use against human cancers—in California and, according to an FDA official, "perhaps one other state." However,

California juries have acquitted several individuals accused of administering Laetrile to cancer victims on grounds that it is a vitamin or nutritional therapy and not a drug. Though the FDA often speaks of Laetrile as a "banned" or "illegal" substance, it admits, under close questioning, that it is illegal only when offered for sale in interstate commerce.

There is no evidence from the animal studies that Laetrile works.

False. Numerous animal studies have demonstrated Laetrile's efficacy. In one Sloan-Kettering test, Laetrile-treated mice lived 30 percent longer than untreated mice afflicted with identical cancers. In another S-K test, the treated mice (this time given a dose of Laetrile considered "optimum") lived about 55 percent longer than the untreated mice.

Even if Laetrile does work it is no better than other therapies.

False. Laetrile's palliative effects (pain reduction, restoration of appetite and so forth) appear to far outstrip most other therapies—perhaps all other therapies—and it doesn't cause apparent adverse side effects.

Laetrile is merely a good placebo.

Almost certainly false. Placebo effects do not manifest themselves in animals, yet Laetrile has been effective against various animal tumor systems when used in controlled experiments.

Apricot kernels contain cyanide and can kill you.

False—except in the sense that anything taken in great quantities can kill you, including water. No deaths caused by the ingestion of apricot kernels have ever been substantiated in the U.S.

### NEW YORK TIMES ARTICLE EXPLORES THE MYTHS OF THE WELFARE SYSTEM

**HON. ROBERT W. EDGAR**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. EDGAR. Mr. Speaker, I would like to share with my colleagues an informative and stimulating article on welfare reform which appeared in last Sunday's New York Times. David E. Rosenbaum, the author of "Officials Are Up Against the Myths of Welfare," explores the stereotypes and explodes the myths about participants of the welfare program. Welfare reform is one of the highest priorities of the Carter administration, and will be high on the agenda of the 95th Congress. The article effectively addresses many of the false perceptions some of us have about this program, and I feel that it merits the attention of our colleagues:

#### OFFICIALS ARE UP AGAINST THE MYTHS OF WELFARE

(By David E. Rosenbaum)

WASHINGTON.—The politicians and technical experts who are trying to formulate a welfare policy for the Carter Administration say that they feel at times the way Copernicus and Galileo must have felt. Like the iconoclastic astronomers, the Government officials have amassed huge amounts of evidence to prove their points, but they are running headlong into false impressions that are ingrained in the society. What the officials fear is that the myths about welfare may be so deeply entrenched that sheer

statistical evidence will be unable to dislodge them.

"Past debates about welfare have too often focused on myths about the poor in America," Joseph A. Califano Jr., the Secretary of Health, Education, and Welfare, complained recently. "We cannot and must not develop and legislate a welfare reform program based upon myth. We must center the welfare debate around blunt talk about real facts."

Perhaps the most abiding myth is the stereotype of the lazy, shiftless, able-bodied adult who could lift himself off the dole if he did not prefer to spend his days loitering on street corners and his nights procreating. If it were not for Government handouts, the argument goes, these people could and would earn a living. The fact is, however, that welfare is limited almost entirely to children and their mothers. Of the 11.2 million people who receive basic welfare payments under the program of Aid to Families With Dependent Children, fewer than 150,000 are men. Eight million are children of school age or younger, and the others are their mothers.

Moreover, according to a recent study by the Rand Corporation, 65 percent of the welfare mothers in California have children under the age of 6, and the percentage is believed to be similar nationwide. Those without small children, the study found, are "substantially underschooled, undertrained and underskilled."

Furthermore, there is evidence that poor people who are able to work do so. More than half of the heads of poor families are now working, a third full-time, even though the national unemployment rate is still extraordinarily high and jobs are relatively scarce. Even when only welfare mothers are counted, the Rand study showed, 15 percent had worked in the month before they were interviewed and nearly a third had worked in the previous year.

It must be remembered, the experts say, that a full-time job at the \$2.30 federal minimum wage—40 hours a week, 52 weeks a year—provides an annual income of only \$4,784, nearly \$1,000 below the official poverty line for a family of four and only half of what the Labor Department believes is the minimum income at which an urban family of four can live without serious deprivation. "The poor are poor, not because they won't and don't work," Mr. Califano told Congress the other day, "but because when they do work they do not earn enough money to lift them out of poverty."

A second myth is that cheating on welfare is rampant and that the government would be better advised to round up absent fathers and make them support their families rather than simply pay relief to their dependents.

The extent of the cheating is difficult to measure. Mitchell I. Ginsberg, dean of the Columbia University School of Social Work and the former Human Resources Administrator of New York City, believes that only 5 to 10 percent of those on welfare are receiving payments for which they are ineligible and that almost half of those errors are caused by administrative mistakes. Other experts believe that there may be a bit more dishonesty than that, but there is a consensus among them that cheating among welfare recipients is probably less prevalent than cheating by income taxpayers or lying on expense accounts.

As for finding absent fathers, such efforts have generally proved to be fruitless and expensive. Last year, for instance, New York City spent \$13 million to collect less than \$6 million in child support payments from parents who had absconded.

Another myth is that once people become poor they remain poor. In fact, the poor population is extremely fluid. According to Mr. Califano, as many as 10 million people move

above the poverty line each year and a comparable number become poor. That means that as many as two persons in every five who are poor in any given year have incomes above the poverty level the next year. The Rand study found that half of all the families on welfare in California had been receiving public assistance for less than two years.

A final myth: It is widely believed that poor blacks leave Mississippi, Alabama and Texas and other states with low welfare benefits for places like New York and Detroit because the benefits there are much greater. It is true that benefits in the large Northern cities are several times those in some of the Southern states, but there is no evidence whatsoever that the discrepancy is a factor in migration. Actually, the evidence is all to the contrary.

Larry H. Long, a demographer at the United States Census Bureau, analyzed six Northern cities with large black populations and found that Southern blacks who had migrated there were less likely to be on welfare than were blacks who had been born in the cities. Employment and earning opportunities, those who have investigated migration believe, seem to provide the primary impetus for moving to the cities.

In their talks around the country, Mr. Califano and Ray Marshall, the Secretary of Labor, are trying hard to debunk some of the welfare myths. Last week in Chicago, for instance, Mr. Marshall recalled that 30 years ago the New York City newspapers had gone on a crusade against welfare fraud that centered around a mysterious "Lady in Mink." Mr. Marshall quoted a headline that read, "Woman in Mink with \$60,000 Lived on Relief in a Hotel."

In fact, those stories, like others over the years, were grossly exaggerated. "Welfare," Mr. Marshall remarked, "is the sort of issue that almost automatically produced cheap shots."

#### SISTERS OF MERCY IN CONNECTICUT CELEBRATE 125TH ANNIVERSARY

HON. WILLIAM R. COTTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. COTTER. Mr. Speaker, the Sisters of Mercy, a Roman Catholic religious community for women, recently celebrated the 125th anniversary of their work in Connecticut. Their work among the poor and the sick and their educational activities have contributed to the life of my State.

I hope my colleagues will join me in congratulating this community as they begin their 126th year of service.

THE 125TH YEAR CELEBRATED BY SISTERS OF MERCY

(By Karen Mamone)

Friends, families and benefactors gathered Sunday at the Cathedral of St. Joseph in Hartford to celebrate the 125th anniversary of the work of the Sisters of Mercy in Connecticut.

"This is a seminal event in the history of the Catholic Church in Connecticut," said Msgr. John S. Kennedy, editor of the Connecticut Catholic Transcript, who spoke during the Mass of Thanksgiving.

He traced the origins of the order in the state from the time when Mother Francis Xavier Ward arrived in Hartford by stagecoach from Providence with eight sisters in 1843, to a diversified religious community

today with more than 500 members in the state.

"That pioneering has never stopped—the church moves as it must, always into the future," Msgr. Kennedy said.

Major superiors of other religious congregations in the state attended the Mass of celebration, as did Sisters of Mercy from throughout New England.

Among the civic and religious leaders attending were Lt. Gov. Robert K. Killian; U.S. District Judge of the 2nd Court of Appeals Thomas J. Meskill Jr. the former governor, and the Rev. Edward M. Dempsey, son of former Gov. John N. Dempsey.

In their 125 years, Msgr. Kennedy said, the Sisters of Mercy "have been the teachers of our parents in their childhood and the counselors and friends of their old age."

He said their work among the poor and the sick, and in education has earned them "our gratitude, our confidence, and our prayers—they have added to the life and liveliness of the church in Connecticut."

Archbishop John F. Whealon of the Archdiocese of Hartford was the principal celebrant in the Mass Sunday afternoon.

Concelebrating with him were Bishop Daniel P. Reilly of Norwich, Auxiliary Bishop Joseph F. Donnelly of Hartford and retired Maryknoll Bishop Edward McGurkin of Maryknoll, N.Y.

#### THE ISMAEL MENAS OF THE WORLD

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HARKIN. Mr. Speaker, there now lives in my congressional district a former Chilean refugee, Ismael Mena of Ogden, Iowa. He recently made available to me the letter he had written to Rev. Robert Buhr of the Immanuel Lutheran Church of Ogden. His letter gives a graphic account of his personal experience with torture in Chile and a passionate appeal for information about his missing sister. I want to share his letter with the Members of the House of Representatives:

(Translation of a letter by Ismael Mena)

DEAR PASTOR BUHR: I received your letter with joy because it permits me to relate what has happened to me in my country and what is happening to my beloved sister. This I owe to you and to the Lutheran Church who have helped me so much.

I hope and confide that Congressman Harkin might help to reclaim the liberty of my poor sister after her case is known by him.

I am Ismael Segundo Mena Alvarado, 34 years old, auto body worker, father of three children, address in Chile was Pablo Suarez 48, Cerrillos. My sister is Nalvia Rosa Mena Alvarado, her husband is Luis Emilio Recabarren Gonzalez, his father is Manuel Segundo Recabarren Rojas, and the second son of Manuel is Manuel Segundo Recabarren Gonzalez.

I was arrested on the 17th of November, 1975 at 3 p.m. in my home in the presence of some neighbors. A dark, strong looking man had no legal arrest order when he met me in my house when I arrived at 3. My wife later told me that this man with others searched my house and gave no explanation.

I was sick with the flu and I asked him to identify himself. He showed me a card from DINA and told me that they had to ask me some questions relating to my work. I replied that I would have no problems in answering them. He asked that I accompany

him. We took a taxi and went to my shop where two more men were waiting for us. Then I was told that we would go to another place to talk.

We got into a mini Austin at which point everything ended for me. In ten minutes they took away my glasses and gave me dark lenses through which I could not see because they had taped my eyes shut. After one-half hour (approximately) of going toward the uptown of Santiago, we arrived at a place where they gagged me and took me out of the car. They beat me to soften me up they said and at the same time they grossly insulted me and treated me as a communist because I had been a leader at the University of Chile when I had worked there.

Then they took off my clothes and tied me to a metal cot frame which they called "The Grill". They began to throw cold water on me that they said was acid and that I would talk before they killed me about what I knew of the University and the people there. I told them that I did not know anything since I had left there in 1970 and did not know anything. They attached wires to my feet and began to give me electrical shocks—on the genitals, the anus, the head, the ears. They kicked me repeatedly. They choked off my cries with a piece of towel. They played a phonograph very loudly. They shouted like mad men saying that I would talk to them even though I had no idea about what they were asking me since I had not participated in anything at the University since I had left.

They gave me such an electrical shock that I suffered a cardiac arrest. I believe this to be so because I lost consciousness and when I came to I felt one of them massaging my chest rhythmically and I heard him say, "This 'desgraciado' (disgrace for a human being) almost went out on us." They said other stronger and grosser things as well.

That night I was tortured for four hours continuously. Then they tried to make me dress myself after untying me. As I could not do it, they laughed at me and beat me as I lay on the floor. I lost all feeling in my arms and legs. I bled from the mouth and nose.

Late in the night they put me in a cell together with other prisoners who were in my condition or worse (our eyes were still covered). A medical student was in the cell with us and he attended to me.

The following day they took me up in the condition I was in and they began to beat on me again, kicking me to the ground. This took place in a large patio. As I had nothing of interest to say, they returned me to my cell with other prisoners.

After a week, when I had recovered a little from the beatings, they took me again and told me to forget my name. Now I was only Number 1018 and I must forget my family. As I had not said anything, they said that they were going to kill me and I now had one last opportunity to talk.

Two other prisoners and I were made to dig a hole 4x4 meters. One of the other prisoners was Manuel Dinamarca, ex-secretary of the CUT whom I knew. When we slowed down a little they made us lie down in the hole and beat us on the head. We thought we were digging our grave.

After working five days in the hole they told me that they were going to put me on the "grill" again. I asked them to either kill me or let me live for my children but not to put me on the "grill". Again they tried to make me sign some papers which they said were declarations.

After 30 days of all types of torture done against me and others young and old, after all the horror that this represents in listening to the suffering of others being tortured, they moved me to another place—my eyes were again covered for this trip.

This place was called "Tres Alamos." The blindfold was taken from my eyes and they

tried to hypnotize me to make me forget. A man kept saying, "No one has done anything to you. No one has tortured you, etc."

On the third day they released me on the street after making me sign some documents where I said I had not been tortured.

Where they tortured me was Villa Grimaldi and where they released me was an annex of "Cuatro Alamos."

Three months later agents of the DINA began to pressure me anew. Five times they came to my business. Various times they stopped me on the street to put pressure on me. They told me that one day I would be lost.

I should note that it was due to the gestures of the First Secretary of the French Embassy that made it possible for my arrest to be known. The authorities had not recorded my arrest and had told my wife and family that they did not have me.

So I ask—after 33 days of blindfolded horror, where I listened to torturing and to killing others, young people, women, priests, tortured people, men equal to other men taking the lives of their brothers in the name of liberty—can one shut up? Can one forget? Can one permit the lack of respect for the life of human beings? Can one? Life is a right from God and only He can take it from us.

Mr. Congressman, for the respect for human life, for the right to liberty, for the respect to democracy which this great country and the people have, I ask that you call out for my sister.

She was only 20 years old and like me, they arrested her—April 29, 1976, at 11 p.m. along with her husband and his brother on the street near their home in the community of "La Granja." She was walking with her three year old son and they left him alone, thrown down in the street. She was three months pregnant.

All the motions made before the government by my parents have failed. The President of the Supreme Court of Justice has said that he cannot do anything because the DINA answers only to General Pinochet.

A little while before I received a visa to the U.S., it was normal to find bodies of men and women with their hands cut off. I accompanied my mother to the Morgue four times to identify bodies in the sad hope that we might find one of our loved ones there.

That God protect your person and accompany you in your decisions, I desire it—  
ISMAEL MENA.

Mr. Mena provides us in the most personal terms a first-hand meaning of violations of basic human rights. We are not dealing with abstract principles. Violations of human rights must be thought of in concrete terms—torture, murder, starvation, missing relatives, and unspeakable degradation of the worth of individual human beings—and not in abstract terms.

We are talking about the thousands of Ismael Menas and Nalvia Alvarados in the world who are the victims of repression.

#### A REPORT ON THE AGING COMMITTEE'S MANDATORY RETIREMENT HEARINGS IN MASSACHUSETTS

**HON. ROBERT F. DRINAN**

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. DRINAN. Mr. Speaker, I recently had the privilege of participating, as a member of the House Select Committee on Aging, in hearings held in my district

on the question of mandatory retirement. The sessions were chaired by the distinguished chairman of the Aging Committee, the Honorable CLAUDE PEPPER, and produced some very moving testimony concerning the effects of compulsory retirement on older Americans.

I would like to share with my colleagues an excellent chronicle of those hearings written by Mr. Wendell Coltin, a highly regarded columnist for the Boston Herald American. Mr. Coltin's column appeared on Sunday, May 22, 1977.

The article follows:

CLAUDE PEPPER SALTY AS EVER IN VISIT TO HUB  
(By Wendell Coltin)

At 76, Rep. Claude Pepper (D-Fla.) chairman of the House Select Committee on Aging, can share some delightful memories of years past at appropriate moments.

This was evident a couple of weeks ago when he came to Brookline and Waltham to conduct hearings with a member of his committee, Rep. Robert A. Drinan (D-Newton), on mandatory retirement.

He heard himself welcomed to Boston by Frank J. Manning as "a happy warrior" who has "consistently furthered the interest of the elderly and handicapped" in a "long and honorable career."

Then, Manning told Pepper, who has served in both the Senate and House, "sometimes we get disgusted with public officials—especially those who confess for money."

More than one listener reflected on the televised interview two days earlier David Frost conducted with former President Nixon.

Pepper recalled another occasion more than 50 years ago, when he came to Boston with misgivings about the kind of welcome he would receive.

He had come to attend Harvard—he is a graduate of the Law School—and he was certain he would not be welcomed warmly because of being a southerner; that he would be constantly reminded of the Civil War. To his great surprise, his fears were unwarranted.

Another time during the Brookline hearing, he related this story:

"I was a student at Harvard when they celebrated the 90th birthday of Dr. Eliot.

"The following Sunday, I sat behind Dr. Eliot in church.

"He rose, straight and erect. I was in my 20s and was largely holding to the back of the bench to help myself up. From that day to this, I have never pulled myself up by grabbing the back of the bench."

Dr. Charles William Eliot retired as president of Harvard in 1909 and died Aug. 22, 1926, at age 92.

Fr. Drinan informed Pepper and the audience at the Coolidge Corner Library in Brookline:

"The first witness is a young man by the name of Frank Manning."

Manning, who in his 70s is "still going strong" as president of the Legislative Council for Older Americans, recalled that during the course of a congressional hearing in Washington, Rep. Fred B. Rooney (D-Pa.) remarked, "America cannot continue to waste the valuable human experience of those individuals in later life. We must tap the skills, knowledge and wisdom of our elders. We must offer them the opportunity to instruct, advise and consult, listen and reflect, and work for a growing American."

Manning described, "We waste money, food and other resources on a large scale, but the greatest waste of all is the disregard of that great bank of human experience to be found in the ever-growing ranks of elders."

He said, "I want to make it clear how deeply we resent the inferences and assump-

tions based solely on one factor, which is really the most unimportant thing about us; that is, chronology—our ages. We want to be judged by our biological age. We are young people in old bodies.

"Those of us who have sound minds, good bodies, mobility and alertness want to be accepted and judged for the kind of persons we are—not on the basis of folklore and prejudiced notions. We're ready to deliver the goods. . . . Give us the opportunity to do so.

"We are stamping out the image of Whittier's Mother and raising the standard of Grandma Moses at age 65 when some of us are looking forward to a lively and meaningful third act. We want a choice, not a mandate. I do not recognize the right of any corporation, government or other sources to say to me at 65 years of age, 'You're all washed up; go out to pasture.' . . . Like hell I will. My associates can testify that I have a daily work schedule that would stagger some of the bureaucratic and anemic personnel managers who decided that we are no longer fit for gainful employment."

Sen. Jack Backman (D-Brookline) told Pepper and Drinan:

"The question we must ask is whether a man or woman, after working 40 or 50 years, must be doomed to poverty, idleness and indignity at age 65 because of forced retirement provisions. . . . There are more than 23 million Americans over age 65. In Massachusetts, over 900,000.

"One of the great tragedies of the fantastic technological century in which we live is that there people—our fathers and mothers—are being dumped onto the ash heap, being forced out of work and asked to go into cold storage without adequate income to live or opportunity to utilize their talents, their energies, their aspirations, their humanity. We are treating them as factory rejects; cancellations from the community at large."

Rep. David J. Mofenson (D-Newton) testified that as chairman of the House Committee on Human Services and Elderly Affairs, he is confronted daily with the problem of older citizens living on fixed incomes and struggling to meet the rising cost of food, housing and a host of necessary services."

He said, "At the same time, workers under 65 are taxed more and more to meet the obligations of our Social Security and other pension systems. Who can deny the resulting economic absurdity that those who reach 65 and wish to continue to work and pay taxes, are forbidden to do so solely on the basis of their numerical age?"

"Clearly, however, the problems transcend bloodless economics. While some welcome retirement at 65, others forced to do so against their wishes suffer a loss of self-esteem. The medical profession tells us a person's perception of such a loss of dignity has a measurable impact on his physical well-being.

"Surely reaching the age of 65 is no more a guarantee of incapacity or lack of productivity than being 30 or 40 years old is a guarantee of intelligence, efficiency or imagination."

#### FOREIGN OIL TANKERS THREATEN OUR MARINE ENVIRONMENT

**HON. JOSHUA EILBERG**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. EILBERG. Mr. Speaker, I continue to share the concern of American-flag shipping companies and American maritime unions about the threat to America posed by foreign oil tankers.

I am in receipt of a fact sheet from the U.S. Maritime Committee to Turn the

Tide, which puts into perspective the adverse impact on our marine environment caused by foreign oil tankers.

I am placing this fact sheet in the RECORD, Mr. Speaker, so that my colleagues in the Congress will be aware of the nature of the problem, and the need for a prompt resolution:

#### FOREIGN OIL TANKERS THREATEN OUR MARINE ENVIRONMENT

Operating without adequate safety and environmental standards, equipment and crew training, "flags of convenience" pose a major threat to our beaches, shorelines, fish and wildlife.

Last year, 19 oil tankers were lost. The lost ships' tonnage, 1,120,000 deadweight tons, was nearly 50 percent greater than the losses in 1975, when the previous record was set. Of these 19 tankers, 11 flew the Liberian flag.

The two major factors involved in tanker accidents are the age of the ship and human error. Foreign flag of convenience shippers often hire cheaper, untrained crews, and do not have to meet the stricter safety requirements or undergo the same U.S. Coast Guard inspections and crew-licensing procedures required by those shipping on U.S. flag tankers.

Without the rigid inspections imposed on U.S. flag tankers, the Liberian flag vessel Argo Merchant, tagged as a dangerous and defective ship and banned from the port of Philadelphia, ploughed into a well-marked shoal off Nantucket Island last December. The 7.5 million gallons of oil spilled off Nantucket Island created an oil slick 120 miles long. Manned by a polyglot crew and captained by an officer who read his radio direction finder backwards—the Argo Merchant fiasco is indicative of the numerous flag of convenience tanker disasters that have threatened our marine environment.

When the Argo Merchant broke up last December, it spilled almost all of its cargo of 7.5 million gallons of heavy fuel oil into the Atlantic off New England. Shortly thereafter an explosion tore apart the Sansinena in Los Angeles Harbor—the Oswego Peace lost 5,000 gallons of bunker fuel oil into the Thames spilled into the Delaware River, and Daphne River in Connecticut—the Olympic Games caused 133,000 gallons of crude oil to be spilled into the Delaware River, and the Daphne went aground in Puerto Rico. Each of these vessels had one thing in common: they all were Liberian flag of convenience vessels.

It's time to turn the tide and transport more of our imported oil on U.S. flag tankers, manned by competent, trained crews, and inspected regularly by the U.S. Coast Guard to meet stringent standards.

#### DISRUPTER WELCOMED AT COLLIER AWARD BANQUET

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. McDONALD. Mr. Speaker, demonstrators from the Campaign to Stop the B-1 Bomber of the American Friends Service Committee—AFSC—and the misnamed Washington Peace Center protested the annual trophy presentation banquet of the prestigious Robert J. Collier Award for outstanding achievement in technology held at the Mayflower last night. The award was being presented to the joint Air Force/Rockwell International B-1 team which made the major

design breakthroughs for this versatile aircraft which should be one of the cornerstones of America's defense in the 1980's.

While a small group of local activists milled about outside the Mayflower passing out leaflets terming the B-1 the "lemon of the year," two or three of their comrades sought admission to the banquet. One of these, Terry Provance, well-known to the aerospace and defense industry for his protests at stockholders meetings, was refused admittance to the private banquet and his money was returned.

Early in the proceedings, however, Provance entered the Collier banquet by a side door and made a shouted protest against the B-1 and the award, including a demand that he be heard. Provance was, quite properly, ejected from the banquet. However, the organizers of the Collier award, apparently unaware of young Mr. Provance's allegiances, then had him invited to the podium from which he harangued the audience for 5 minutes. At this point, a number of Americans familiar with the operations of Provance's group left the dinner in protest at being subjected to Soviet propaganda. Having finished his polemic, Provance shook hands and spoke briefly with several people at the head table and left.

I am not opposed to people honestly expressing opinions with which I and the majority of Americans disagree. However, there is a legitimate question of propriety raised when organizations promote themes developed by our country's enemies and which are designed to aid those enemies under a subterfuge. I have charged Terry Provance with uttering Soviet propaganda. I believe that our traditional principles of free speech were gravely abused by him at the Collier Award dinner, in that as director of the Campaign to Stop the B-1 Bomber he is playing a leadership role in a propaganda vehicle aligned with the forces of totalitarianism that are seeking to destroy our country.

Terry Provance has been a radical "peace movement" organizer in support of the Communist aggressors in Vietnam for over 6 years. Provance first came to note as an organizer for the Harrisburg Defense Committee in support of the Berrigans and their codefendants charged with kidnap conspiracy. Following this, Provance worked in support of Daniel Ellsberg who stole the Pentagon papers, and with a group which sent medical aid to the Vietcong and North Vietnamese Army called Medical Aid for Indochina—MAIC.

Having proved his organizational skill and ideological dedication as a "peace activist," Provance was made director of the Americans Friends Service Committee's National Peace Conversion—Stop the B-1 Bomber Campaign in 1973. As a leading "peace activist" and "fighter for peace," Provance's statements figure prominently in articles in the Communist Party, U.S.A.'s newspaper urging U.S. disarmament, dismantling of NATO, and increasing "détente" with the Soviet Union.

But Provance's connections with the

pro-Soviet Marxist-Leninists is more extensive than providing interviews to the daily world. Provance was a member of the U.S. delegation to the "World Conference to End the Arms Race, for Disarmament and Détente" of the World Peace Council, held September 23-26, 1976, in Helsinki, Finland. The World Peace Council—WPC—is the Soviet Union's principal international front; its purpose is to coordinate propaganda in support of Western disarmament while at the same time providing logistical support to the various Soviet-sponsored terrorist "national liberation movements."

The Communist Party, U.S.A.—CPUSA—is responsible for selection of U.S. delegates to World Peace Council meetings. Among the small group of Americans present at that WPC meeting were John Pittman, CPUSA's official representative on the editorial board of the official Soviet-bloc Communist theoretical journal, "World Marxist Review—Problems of Peace and Socialism"; Abraham Feinglass, a top CPUSA trade unionist who is vice president of the Amalgamated Meat Cutters and Butcher Workmen's Union; Joseph North, a leading CPUSA Central Committee member who died in December; and Karen Talbot, the CPUSA member who serves as secretary of the U.S. section of the World Peace Council and who was formerly an active organizer for the CPUSA-dominated anti-Vietnam coalitions.

Bloated in size compared to the delegations from non-Communist countries, the Soviet bloc delegations to the WPC meeting contained important functionaries. For example the Bulgarian delegation was headed by Communist Party Central Committee member Georgy Dimitrov-Goshkin who is also president of the Bulgarian national "peace" committee; and U.S.S.R. delegation of 29 official delegates and half a dozen additional representatives of other fronts included the deputy head of the International Department of the Soviet Communist Central Committee, Vitaly Shaposhnikov.

Even as the U.S.S.R. has been struggling, in the wake of the first SALT agreements, to attain not mere parity, but for overwhelming superiority in weaponry over the United States, it has organized sophisticated propaganda campaigns aimed at altering "world public opinion" in line with the U.S.S.R.'s aggressive foreign policy objectives. The "détente and disarmament" line is coordinated via the WPC, which in the United States works through the Communist Party, allied groups such as Women Strike for Peace and the Women's International League for Peace and Freedom, and with militant socialist pacifist and religious groups such as the American Friends Service Committee—AFSC, the War Resisters League, Methodist Federation for Social Action, National Council of Churches, and so forth.

The Soviets assert that the free world must disarm in order to "make détente concrete." The U.S.S.R. state "news agency" Tass earlier this year described the "peace and disarmament" drive to be organized by the Communists in West Germany as calling for the "supple-

menting of political détente with military détente, disarmament, stoppage of the arms race, and for the reduction of military spending so as to solve the main social problems and problems in education and the health service."

Compare that Tass report with the official declaration of that WPC "World Conference to End the Arms Race, for Disarmament and Détente" to which Terry Provance was a delegate:

We \* \* \* call upon the peoples of all countries \* \* \* to join together in a powerful mass movement not only to end the arms race, but to move rapidly towards general and complete disarmament.

\* \* \* the struggle \* \* \* for social progress is inextricably linked with the struggle to end the arms race and for disarmament.

Such struggle cannot succeed so long as military industrial complexes, striving for profit, instigate the build-up of deadly weapons, produce and provoke the manufacture of ever new weapons of mass destruction and encourage the sale of arms.

We are already thoroughly familiar with the current Marxist circumlocution for revolution—the "struggle for social progress"; however we also call attention to the subtle qualifier in the second paragraph quoted above which condemns only those "military industrial complexes" which are "striving for profit." The U.S.S.R.'s state-owned weapons plants are exempted from criticism.

The WPC's declaration, to which Terry Provance contributed his small part, listed among its demands "the prohibition of the research, development, and manufacture of new types and systems of mass destruction weapons and of new means of delivery of such weapons." Another demand called for the "gradual reconversion—closing down—of the arms industry." As director of the National Peace Conversion Campaign—Stop the B-1 Bomber project, and as a direct participant in the operations of the World Peace Council, Provance is certainly aware of the identity of their demands.

I have previously made extensive information on the World Peace Council, the anti-B-1 campaigns and disarmament lobby available in the CONGRESSIONAL RECORD—March 23, 1976, 7725; January 12, 1977, 1063; January 26, 1977, 2418—and extensive information on the role of this Soviet-run organization in coordinating the activities of the U.S. anti-Vietnam coalitions was provided 6 years ago in hearings of the House Committee on Internal Security.

American businesses and particularly the defense industries have been extremely lax in separating their friends from their enemies. Terry Provance, a dedicated enemy of American defense and collaborator with the Soviet totalitarians who are suppressing human rights in all lands under their control, should not have been allowed to get a ticket to the Collier Award dinner, and following his predictable disruption, the organizers of the banquet should not have invited him back to inflict his harangue on those present to honor outstanding American engineers.

## FORGOTTEN WARRIORS: VETERANS OF VIETNAM

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. EDGAR. Mr. Speaker, 4 years after the end of the Vietnam war, many Vietnam-era veterans are still finding it difficult to cope with the pressures and strains of daily life and impossible to forget the tragedies of Vietnam.

I would like to insert into the Record an article which recently appeared in the Philadelphia Bulletin which vividly describes the traumas experienced by many Vietnam veterans. I have had the pleasure to become acquainted with one of the Vietnam veterans mentioned in the article, Mr. Steve Roten, who works in one of my district offices as a veterans caseworker. His patience, understanding, and dedication have made him an invaluable addition to my staff.

I hope that the Bulletin article will be helpful to my colleagues in understanding the special problems of the Vietnam-era veteran.

The article follows:

[From the Philadelphia Bulletin,  
May 22, 1977]

BITTER MEN CAN'T FORGET FUTILE WAR  
(By Stephen Franklin)

The combat helicopters, loaded with guns and men, are ready for takeoff when he panics. All the crewmen are strange. Something will go wrong; something terrible.

"Stop," he shouts and jumps up in a cold sweat in his suburban Philadelphia home, thrown out of sleep on another night like so many since his service in Vietnam.

It's always the same dream and same anger and it pains him to talk about them. He is angry that so much went wrong and so few back home understand what happened.

For this usually easy-going 28-year-old ex-helicopter pilot, the war's corrosive shadow still lingers. For a still-tormented 26-year-old North Philadelphia veteran junkie and a husky 30-year-old South Jersey marine, who lost a leg in an ambush, there also are vivid reminders of the fighting in Southeast Asia.

Four years after the ceasefire, many of the 10 million veterans of the Vietnam war era—845,000 of them from this tri-state region—still feel effects of the nation's longest war.

The effects are felt in the unemployment woes of young, black and disabled veterans—especially the 138,000 vets 20 to 24 years old whose jobless problems are second only to black teen-agers.

They're felt by the veteran junkies, hooked by the pure white, cheap Vietnamese heroin, the 9,000 addicts treated daily at VA hospitals across the country, 350 alone at the Philadelphia VA hospital.

Many of the addicts are young and from the nation's big cities. They are fewer than some feared, but their tragedy is still as great.

The war's lingering effects are felt by two million Vietnam servicemen, who, according to conservative estimates by the Veterans Administration still face emotional problems readjusting.

The war is not forgotten by veterans groups who complain—with justification. The Bulletin has found—that help for Vietnam-era veterans has suffered from indifference, lack of planning and bureaucratic snarls.

## WAR WITHOUT END

For the 566 Vietnam POWs, 30 of them from the Delaware Valley area, men who served longer in foreign prisons than U.S. soldiers ever before, and for the families of nearly 700 men still listed missing in action, it's almost a war without end.

For the many servicemen who returned physically and emotionally unbroken, however, the signs are less apparent lingering in mostly silent, personal memorials to patriotism, friendship, trust, grief, anger and disenchantment.

Vietnam. Two million, eight hundred thousand U.S. soldiers fought there. Forty-six thousand of them were killed—4,438 from Pennsylvania, New Jersey and Delaware. In the 11-year period, 400,000 servicemen were disabled, 303,704 were wounded, 430,000 received other than honorable discharges, 2,600 deserted and 86,749 received psychiatric discharges.

A warm breeze outside his Ridley Park home stirs Mike Sidoti's memories . . . Glimpses of grubby, dirty John Wayne-like marines, macho warriors, stomping around in the mud, strapped down with heavy weapons.

He was 17 years old in 1967.

The air and grass and green trees recall memories of friendships closer than any he would ever have again. Of friends killed or injured or taken away.

He would come home to study at Kent State, recoil to the shock of student peace marches there and counter marches for the war. In time, he marched with both. He would become a social worker.

In the Delaware Community College vets office, where he works now, a troubled Vietnam vet is saying Mike is the one who helps.

He shakes his head. He only understands, he says.

They were the youngest and best educated soldiers to fight in an American war this century.

They were also a "new breed," say the Veterans Administration officials who came to learn their differences quickly.

They were less accepting of authority, more personal, more uncertain of their future, more frustrated. They used more drugs and, officials learned, attempted more suicides.

And when they came home, many had troubles. "The guys who were drafted have tended to have more problems than others," said Dr. Charles Stenger, chief psychologist for the VA in Washington.

"They were guys caught up in the military system. They were rebellious. Rather than get any recognition when they got home, they got resistance. People asked: 'Are they drug addicts? Did they kill babies?'"

"Bamm. They were set up for future disillusion. The problems everyone else suffered, they got in spades."

Authorities disagree on the seriousness of the so-called "post-Vietnam syndrome," the problem of severely troubled soldiers bringing their war traumas home.

According to Stenger and many VA officials, the problem has been less severe than expected.

But a recent Philadelphia VA Hospital study of 200 Delaware Valley Vietnam veterans found one-third of them depressed by their marriages, their jobs and, in many cases, their brushes with the law.

That depression rate is nearly three times that for the general public, said Dr. Charles O'Brien, a physician who led the study.

"We didn't expect to find so many problems out there," Dr. O'Brien said, noting that few of the troubled vets found in the study had ever sought help.

"There certainly are a lot of people we aren't reaching. But how do we reach them?"

Was Vietnam the cause of their problems? Dr. O'Brien isn't sure. He thinks it added to most of their problems. "Many of them were losers before they went to Vietnam," he said.

But others like Dr. Robert Jay Lifton, author and Yale University psychiatrist, think the war caused far more problems than most government officials will admit.

"They feel a deep mistrust, an inability to believe, a determination not to be duped, which really means numbing oneself to a lot of things to protect oneself," Lifton said.

He might have been describing Steve Roten, 26, a West Chester State College student. "I've become skeptical," said the tall, bearded student who led a march on Washington two years ago for better veterans benefits.

Seven years ago when the draft notice came in the mail at Roten's rural Chester County home, he drove all the way to Canada, but turned back. It wouldn't have been the right way, he told himself.

"I can't take things at face value anymore," he says now. Roten also works in the local office of U.S. Rep. Robert W. Edgar (D-Delaware County). He helps veterans who have problems with the Veterans Administration.

"I am always thinking. They are telling me this, but what is really happening?" he says. "You call up the VA, and the worker says, 'Nothing is wrong with that man's file'. But go over his head and you'll usually find out something is wrong."

That distrust had many roots in Vietnam for Roten. One concerned drug-use statistics. He saw strung-out junkies who were ignored by their commanders. "I saw in our company how they covered up drug figures," he says.

To be sure, at the peak of the war, drug use spread like an epidemic. In 1972 the VA estimated that 50,000 to 75,000 Vietnam veterans were hooked on hard drugs.

That's when the image of the junkie veteran took shape.

#### HALF USED DRUGS

Four years ago a VA sponsored study found that more than 50 percent of the Vietnam veterans had used drugs overseas.

Of those addicted in Vietnam, only 5 percent were still on hard drugs in 1973. Two years later, however, the researchers found 12 percent of the original sample addicted.

The hooked veterans were seen as younger persons from big cities with personal problems predating the war.

Urban blacks showed a slightly higher addiction rate, according to Dr. Lee Robins, the St. Louis sociologist who did the study.

And overall, he said, "Vietnam veterans have a slightly higher use of illicit drugs than others."

Some veterans of Vietnam who learned to use guns overseas turned to crime when they got back home. According to the Veterans Administration, about 12 percent of the convicts in federal prisons are Vietnam veterans. But that is not surprising. Those who served in the armed forces between 1964 and May 1975, when the "Vietnam War era" officially ended, represent about 12 percent of the nation's adult male population.

Vietnam veterans also comprise about 12 percent of Pennsylvania's prison population. A study of these convicts found that they were older and better educated than the average state prisoner. About 60 percent of them are first offenders.

"They are the cream of the crop at the bottom of the barrel," said Darryl Kerr, of Pennsylvania's Program to Advance Veterans Education (PAVE), sponsor of the study.

Some of the jailed veterans turned to crime to finance a drug habit picked up while serving in Southeast Asia.

An example is the young North Philadelphia who survived a mortar shelling but

saw a sentry shot to death a few feet from him by a Viet Cong sniper.

"When I got back here, things looked out of place," he told a reporter the other day.

He became a small-time thief and, a junkie with a heavy habit. He tried to rob a big-time pusher and got four bullets in his chest. The pusher was later murdered and the ex-soldier served a short prison term.

It's been two years since then and now he is married and drug free, he says. He's not bitter but he does believe the veterans have gotten a bad shake.

The whole Moore clan was there in June 1968 to welcome Army Spec/4 Michael Moore home. Andrea Outten, Michael's sister, cooked an enormous meal in her small Wilmington apartment.

It was a very special meal for the young soldier who had gone to war at 18, fresh from Claymont High School.

He showed the family some of his color slides of Vietnam. One was a close friend after he had been blown up. Michael Moore didn't say anything about the slide.

Two years later he was married and working as a mechanic, but the job didn't work out. Something was wrong.

He held up several liquor stores. He never used a gun, only his hand. The judge gave him 18 months in prison and probation.

Andrea Outten remembers talking with her brother at the Delaware State Prison in Smyrna.

He told her he started on drugs in Vietnam when he thought he didn't have a chance and expected to be blown up.

After prison he got married and looked for work, but couldn't find anything. That troubled him. He couldn't sleep and often looked at his slides.

One day Susan Moore came home to find the front door chained. Her husband was on the floor. He died of a drug overdose, said the state medical examiner, ruling it an apparent suicide.

"On March 26 his nightmare ended," Andrea Outten wrote to the local newspaper, crushed by her brother's death and hoping that somebody would understand the cause of his tragedy.

"But for many thousands of our men from Vietnam," she wrote, "The nightmare goes on."

#### COMMON CAUSE CHIEF COMMENTS ON FEDERAL PAY RAISE

#### HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. UDALL. Mr. Speaker, the recent pay raise for Representatives, Senators, judges, and top officials of the executive branch has been the subject of a great deal of hysteria and political haying-making.

Recently, the new president of Common Cause, Mr. David Cohen, brought a rare note of reason to this debate in a commentary carried by 596 radio stations across the United States.

Mr. Cohen points out that, far from being some hasty money grab by greedy politicians, the pay increase resulted from a law designed to prevent elected officials from being able to choose whatever salary level they wish. The panel of distinguished businesspeople and other private citizens who made the recommendations based its findings on the levels of compensation of private-sector

officials bearing comparable responsibilities.

Further, as Mr. Cohen notes, the Commission recommended that the pay increase be tied to a tough code of ethics for all the affected personnel—a recommendation this House was quick to accept and act on.

I urge my colleagues to give careful attention to David Cohen's observations:

#### FEDERAL PAY RAISE

The recent pay raise for top Executive Branch officials, Members of Congress and Judges is deserved. Congress should vote the appropriations to make the pay raise stick.

Under Federal law, a special national commission is created every four years to make recommendations on salaries for elected officials and major government appointees. Earlier this year, Common Cause endorsed the recommendations of this Commission—a non-partisan body made up primarily of citizens outside of government. The Commission supported increasing salaries for high level Federal officials, and recommended conditioning any pay raise on Congress adopting a strong code of public conduct for all three branches of government.

President Carter has committed himself to an improved code of conduct for the Executive Branch and Chief Justice Burger also endorsed the Commission's recommendations. And now the House and Senate have clearly met this condition for themselves. Congress recently adopted an historic new code of conduct. The code, designed to deal with conflicts of interest and with Members escaping their full time responsibilities, included key financial disclosure provisions and a limit on outside earned income by Members of Congress. Congress is on its way to enacting similar tough disclosure and conflict of interest provisions for the Executive Branch and the Judiciary.

With the Federal Government's popularity at a low point, the idea of a pay raise obviously meets with public resistance. As citizens, we've been angry—with good reason—at many of the actions of our government. But government officials need to be treated fairly, too. In the last eight years the cost of living has risen 60 percent; and during the same period, compensation for employees outside of government has increased 70 percent. Yet, until this year, top officials of all three branches of government had only one pay increase of 5 percent during these eight years.

The effect of this situation has been reaching crisis proportions: executives in all branches of government are taking early retirement in unprecedented numbers, and high level positions in the Executive Branch and the Judiciary go unfilled as qualified candidates refuse the positions because of the pay scales. We can't run the government without capable people, and they must receive reasonable pay.

Now there are some reforms needed in how pay raises are put through Congress.

Pay increases for Members of Congress should not take effect until the beginning of the session of Congress following their approval.

Each house should be assured an opportunity to vote on a resolution of disapproval of a pay raise.

Consideration of salary increases for executive and judicial officials should be separated from consideration of Congressional salaries.

The annual cost of living adjustments should not operate in a year in which Commission recommendations become effective.

In its report to the President, the Peterson Commission concluded that, "If we continue down the path of the past eight years, in which the politics of survival have required no pay raises at all, we must accept the im-

plications of a government of only the rich, or only the young and untried, or more likely, a government of those who are willing to compromise themselves with political money. The costs of such a government reach beyond the costs of a salary increase: they are . . . to a free people unacceptable." As a people, we deserve better. All three branches of government deserve the pay raise.

This is David Cohen in Washington for Common Cause.

**PENNSYLVANIA GENERAL ASSEMBLY URGES ADEQUATE R. & D. FUNDING TO MEET NATION'S ENERGY NEEDS**

**HON. JOSHUA EILBERG**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. EILBERG. Mr. Speaker, on April 26, 1977, the General Assembly of Pennsylvania adopted a resolution memorializing the Congress and the President to support adequate research and development funding for nuclear, coal, and alternate energy resource development.

This resolution, which was unanimously voted on by the Federal-State Relations Committee of the House of Representatives of the Commonwealth of Pennsylvania, was adopted by a roll-call vote of 171 yeas and 23 nays.

Mr. Speaker, the full text of House Resolution No. 54 follows:

**HOUSE RESOLUTION No. 54**

In the House of Representatives, March 16, 1977.

The House of Representatives of the Commonwealth of Pennsylvania calls upon the President and the Congress of the United States to insure that adequate research and development funding be provided for nuclear and coal energy development and alternate energy resources.

Whereas, The House of Representatives of the Commonwealth of Pennsylvania believes that the Nation's security and future well-being depends upon the availability of jobs and energy; and

Whereas, The availability of industrial employment depends upon the development of new sources of energy capable of providing increased productivity; and

Whereas, The living conditions for all the residents of the United States are directly related to an abundance of energy for their comfort, convenience and mobility; and

Whereas, Electricity is a flexible mode for distributing energy; and

Whereas, The electric utility industry has indicated an increasing dependency upon nuclear fuel to provide an adequate future supply of energy; and

Whereas, The United States Energy Research and Development Administration is revising its fiscal year 1978 budget request; and

Whereas, The said administration is considering cutting back its funding for development of the fast breeder nuclear reactor by \$199,000,000 and nuclear fusion power by \$80,000,000; and

Whereas, Such cuts may delay the development which could adversely affect our future critical supply of electricity; and

Whereas, There is a great need to also increase total research and development funds to fully support other energy resource alternatives; therefore be it

Resolved, That the House of Representatives of the Commonwealth of Pennsylvania

calls upon the President and the Congress of the United States to insure that adequate funding exists for the timely development and commercialization of these energy sources; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, his assistant for energy matters, the presiding officers of the Senate and House of Representatives of the Congress of the United States, each of the Senators and Congressmen from Pennsylvania and to the Administrator of the United States Energy Research and Development Administration for their review and comment.

**BLACK LUNG REDTAPE**

**HON. DOUGLAS APPELGATE**

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. APPELGATE. Mr. Speaker, most everybody in today's society is faced with some degree of so-called redtape, most of which the average citizen can eventually overcome.

However, there are certain individuals who face insurmountable odds in dealing with certain Federal bureaucracies. A prime example of the seriousness of this situation lies in difficulties a person with black lung disease encounters in trying to receive black lung benefits.

Figures from Washington reflect the frustration in Appalachia. The Labor Department's Division of Coal Workers Compensation reports that of approximately 105,000 claims for black lung benefits filed since it began administering the program in 1973, more than 50,000 have been denied. Another 50,000 claims are backlogged. Only 4,000 miners or their survivors are receiving checks from the Federal Government, according to the Department of Labor.

Mr. Speaker, I would like to insert into today's Record, an article from the Associated Press Wire Service which appeared in the Steubenville, Ohio, Herald Star, on May 3, 1977. This article demonstrates the seriousness of the inequities of this bureaucratic blunder that Congress has created and points to the need for liberalization of the regulations regarding this tragedy. I offer this to my colleagues for their consideration:

**BLACK LUNG "REDTAPE" BREEDS MINER BITTERNESS**

PINEVILLE, KY.—Not many visitors make it down to Kettle Island "holler" in the Kentucky Cumberlands, so a few days passed before Otis Lowe could find someone to read him the letter he got from Washington, D.C.

The 75-year-old retired coal miner makes a kind of wheezing noise when he breathes, but that was the only other sound in his three-room shack in an abandoned mining camp as the message from the U.S. government was read aloud.

"Your entitlement to black lung benefits is denied," the letter said.

"I think there's a racket here," Lowe exclaimed. "The doctor, he showed me the X-ray picture of my lung on the wall. I saw big, black spots of rock dust. I ain't got no breath left from them 44 years I worked

in the coal mines. Don't that mean somethin' in Washington?"

"They got a law up there in Washington that's supposed to take care of us, but we still got thousands who can't draw the benefits," said Ernest Green. Green is vice president of the Harlan County Black Lung Association, a grassroots organization funded by contributions of small change from the coal fields.

"Take me, for example, I'm old, I'm about spent. I should have quit working" the face of the coal years ago, but I can't retire 'til I get those benefits. If the government would let me quit, my job could go to one of them young, able-bodied men they're keepin' up on welfare. It just doesn't make sense."

"The federal government's black lung program has turned into the most absurd, goldarn mess you've ever seen," said attorney Steve Cawood, whose law practice in this tiny Appalachian mountain town is composed mainly of cases related to the coal industry.

Cawood's criticism was echoed by Arnold Miller, president of the United Mine Workers, and acknowledged by Carter administration representatives at recent House Labor subcommittee hearings. Congress is considering a bill to revamp the program it created to compensate coal miners and their survivors for the effects of the chronic respiratory disease due to long exposure to coal dust.

"When a man walks into my office and says that he has just been removed from the mines because his black lung has gotten too bad," explained Cawood, "the first thing I do is tell him that he can forget all the material he's read in the UMW Journal or the newspapers about the Department of Labor black lung program. I tell him that he most probably won't even get a hearing for several years and that he can expect his claim to be denied."

Figures from Washington reflect the frustration in Appalachia. The Labor Department's Division of Coal Workers Compensation reports that, of about 105,000 claims for black lung benefits filed since it began administering the program in 1973, more than 50,000 have been denied. Another 50,000 claims are backlogged. Only 4,000 miners or their survivors are receiving checks from the federal government, according to the Labor Department.

Anybody would concede that the program has problems," said a Labor Department official charged with administering black lung claims. "Our own review shows that it routinely takes over two years for a claim to even make it through the initial determination process, an amount of time that is obviously unacceptable."

The taxpayers might have another gripe about the federal black lung program. Although fewer than one of the 20 claims are approved, the program costs more than \$1 billion a year.

Congress intended, in its Coal Mine Health and Safety Act of 1969, that responsibility for compensating black lung victims shift from the government to the coal industry. But the Labor Department says the operators have agreed to pay for only "a handful" of claims, forcing the government to foot most of the bill.

The National Coal Association concedes that the industry has settled only 138 black lung cases but explains: "We do not feel, in a number of instances, that the claimant was totally disabled." An industry spokesman added: "Often the only way we can get information from the government is by challenging the claim."

Some \$200 to \$300 a month are the benefits that Otis Lowe and Ernest Green are trying to get. The problem for them, and

for the thousands of miners who \* \* \* claims."

"We have been criticized for rereading X-ray film," acknowledged a Labor Department official in Washington. "We do this to maintain the uniformity and integrity of the program."

The measure to revise the black lung program that's shaping up in Congress after two years of hearings \* \* \*

# THE PRESIDENT'S ENERGY PLAN: SACRIFICE OR ELSE

**HON. LARRY McDONALD**

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. McDONALD. Mr. Speaker, a surprising and revealing article by James R. Schlesinger, the President's Energy Adviser, appeared in the May 21, 1977, edition of the Atlanta Journal and Atlanta Constitution. Mr. Schlesinger is apparently trying to defend President Carter's plan to deal with energy shortages, but in so doing he makes clear that it is not designed to solve our energy problems but rather to increase Government power.

After falsely implying that energy shortages are due to finite fossil fuels, Mr. Schlesinger nevertheless admits that the free market would solve our energy problems in the most efficient way. But, he continues, we must also consider "social" and "political" interests and it is these that the President's plan is addressed to.

What are these social and political interests? Mr. Schlesinger mentions only one which, he claims, cannot be solved by the free market—"protecting the consumer" from higher prices. To accomplish this the administration plans to raise the price through taxes instead of allowing the price to rise through market forces. Schlesinger allows as to how the effect on the consumer is the same in either case, but under his plan the Government will rebate the taxes to the consumer instead of allowing this money to go to the oil companies.

Now if the actual intent of this proposal is to force the American people to use less energy, how will this be accomplished by raising the price and then returning the money? If in fact people are going to get their money back through rebates, they will pay the higher price. But since none of this money is going to oil companies, they will produce less energy and thus the price will rise even higher or the Government will have to resort to rationing.

Hence the President proposes to "protect the consumer" by prohibiting oil companies from providing him with abundant supplies of energy. In other words, the consumer is going to use less energy whether he likes it or not.

By making it clear that the administration's energy plan is not designed to solve energy shortages, but to grant the Government vast new authority to force the American people to sacrifice by using less energy, Mr. Schlesinger has performed a valuable service to the public;

although perhaps not the service he intended.

The article follows:

NATIONAL ENERGY PLAN IS EFFICIENT, BUT PRACTICAL IN REAL HUMAN TERMS, IT'S NOT  
(By James R. Schlesinger)

For the most part, the fundamental element in the energy crisis is geological reality. Reserves of fossil fuels are finite, and for the last several decades, the United States has based its economy primarily on the most finite of all—oil and natural gas.

We have relied on these resources for roughly 80 per cent of our energy when they constitute a mere 7 per cent of the energy resources available within the United States.

In the period between 1950 and 1970, falling real prices for energy caused an increase of 98 per cent in energy consumption—a virtual doubling of energy use in two decades. Once our ability to satisfy our own growing petroleum needs with domestic production peaked in 1970, oil imports, previously manageable in volume, began to climb inexorably.

Until 1973 imports—abundant and cheap—seemed the logical way to satisfy incessant increases in energy demand. No longer, however, are they cheap; last year they cost \$35 billion. And, though momentarily abundant, they are nonetheless finite and, in the final analysis, insecure.

So from a domestic viewpoint, the energy crisis is comprised of a disproportionate reliance upon our scarcest energy resources. The result has been a deepening dependence on imports to resolve the disparity between domestic production and demand.

The energy crisis also has an international dimension. World petroleum resources ultimately are as finite as those of the United States. In short, there is a limit to the productive capacity of global petroleum reserves. At some time or other, we will begin to approach those limits. The oil consuming countries of the world will then begin competing with each other for limited supplies of oil at ever increasing prices.

The consequences could be disastrous. From that competition for oil would emerge global turmoil; and from that chaos, world conflict.

The classical laissez-faire response to the energy situation I have briefly outlined would be to allow the market to set the prices of oil and natural gas. Thus, the true value of energy would become apparent to all. As a result, attitudes toward energy would change, and people would begin to use it efficiently, and with greater respect for its value.

As the price continued to rise, other forms of energy would become more competitive with oil and natural gas. In this way the marketplace would gradually phase out these fuels, replacing them with coal, nuclear power and ultimately with sources, such as solar energy, which are virtually inexhaustible.

True, Adam Smith's "invisible hand" would probably accomplish these economic goals rather efficiently. However, this classical economic process, ideal though it may be for allocating resources, is not the most effective arbiter of social and political interests.

These have to be recognized and dealt with by society acting through its representatives. And the administration, acting on behalf of the people, has sought to fashion a policy that will attain a number of economic, social and environmental—as well as energy—goals.

Those goals include:

Reducing our dependence on oil imports to a manageable level; increasing the amount of domestic oil and natural gas produced;

raising the production and use of coal; stimulating greater use of advanced technologies, such as solar energy; and—most important at this juncture—fostering more efficient use of available energy supplies.

All this could be accomplished by resorting to the strategem of the classical economist, and allowing the uncontrolled prices of oil and natural gas to reflect their replacement costs.

But the same thing can be accomplished in a fashion that protects consumers, and moderate and lower income Americans particularly. The price can be increased gradually through taxes as has been proposed by the administration.

The effect on consumers of energy would be the same as if prices had been decontrolled; the necessary stimulus to conserve energy would begin to enter into market choices between energy and other goods, such as insulation.

However, the revenues from those taxes, rather than flowing to the oil companies, can then be rebated to offset the adverse impact on consumers—particularly moderate to low income individuals. Withdrawal of the government from regulating the energy industry might produce salutary results, increasing energy production and stimulating conservation. But from the broader perspective of national policy, our goals for energy—though critically important—are only one element among many that have to be considered.

The administration seeks to make the nation's energy use more efficient by having the price of energy reflect its true value. But at the same time, we want to avoid the windfall that would sweep huge amounts of revenue out of the hands of the mass of Americans into those of the oil industry.

The proposed National Energy Plan accomplishes this and a number of other objectives without subjecting the economy to the shock of decontrol, and turning control of the U.S. oil market totally over to the Organization of Petroleum Exporting Countries.

In formulating the plan we have tried to limit the intrusions of the federal government into the economy. Rather than resorting to direct behavioral regulation, such as rationing, we have attempted to maintain the widest possible latitude for the exercise of free, individual choices in the way energy is used.

The administration's National Energy Plan accomplishes that goal of maximum freedom. But it also reconciles economic freedom with the nation's other responsibilities to its citizens.

## TELECOMMUNICATIONS REGULATORY POLICY

**HON. JOHN B. ANDERSON**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, at the request of the Honorable David C. Shapiro, minority leader of the Senate of the State of Illinois, I am at this point inserting in the RECORD the text of Senate Resolution No. 95 which was unanimously adopted by the Senate on April 22, 1977:

SENATE RESOLUTION No. 95

Whereas, The Communications Act of 1934 called for the development of an efficient, high-quality, nationwide communications service available to all the people of the United States at reasonable costs; and

Whereas, The telephone industry over the years has carried out the mandate of Con-

gress expressed in the Communications Act to the extent that today 94 per centum of all American households have telephones; and Whereas, The 1968 President's Task Force of Telecommunications Policy concluded that the United States has the finest telephone service in the world; and

Whereas, The Federal Communications Commission, which was created by the Communications Act of 1934, has made several recent decisions authorizing new communications common carriers to construct facilities which duplicate facilities of the existing telephone companies and to engage in services which duplicate the services being furnished by existing telephone companies and permitting the connection of nontelephone company equipment to telephone company facilities; and

Whereas, These decisions may have a substantial economic impact on consumers of residential telephone services; and

Whereas, The question of whether these Federal Communications Commission decisions will lead to higher telephone rates for sixty-seven million households or alternately result in increased competition in the telecommunications industry to the betterment of the consuming public is a matter of national policy that should be decided by Congress; and

Whereas, The determination of such telecommunications regulatory policy may have to await a complete revision of the entire Communications Act of 1934, during which period the investments and activities of the newly authorized telecommunications common carriers and the manufacturers and distributors of nontelephone company equipment could become so extensive as to make an equitable decision difficult or impossible; therefore, be it

*Resolved*, by the Senate of the Eightieth General Assembly of the State of Illinois, (a) that the 95th Congress is asked to expeditiously determine the telecommunications regulatory policy of the Nation with the purpose of insuring that high-quality telecommunications services continue to be widely available to the American people at the lowest rates reasonably possible; and

(b) Until the 95th Congress shall have completed its study and made its determination of the appropriate national telecommunications regulatory policy or adjourned sine die, the Federal Communications Commission should declare a moratorium on any further implementation of its new policies in these areas; and be it further

*Resolved*, That the Secretary of State send a suitable copy of this Preamble and Resolution to the Members of the Illinois Congressional Delegation and the members of the Federal Communications Commission.

#### STUDDS EXPLAINS ABSENCE

#### HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. STUDDS. Mr. Speaker, on May 19, I was absent on a vote—rollcall No. 268—for the first time during the 95th Congress. When this vote occurred, I was at the White House along with several of my colleagues discussing a variety of important subjects with President Carter. Given the choice between the opportunity to talk to the President and the need to vote on a bill which was ultimately approved by a vote of 389 to 5—the Juvenile Justice and Delinquency

Prevention Amendments of 1977—I chose the former. Had I been present, I would have voted in favor of the bill.

#### RECOGNITION OF HARRY FIRESTONE—SUPERINTENDENT OF IDA SCHOOLS FOR 34½ YEARS; EDUCATOR FOR 45 YEARS

#### HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. PURSELL. Mr. Speaker, Harry Firestone has been associated with education for more than a half century as a student, teacher, and administrator. In June 1977, Harry Firestone will have completed 45 years as an educator. The story of Harry Firestone is representative of many persons in the educational field, with the exception of 34½ years as a superintendent in a single district, Ida. With the mobility of Americans and the frequent leadership changes at the top, it is rather unique to find a person in a public service job, with changing board of education membership, who has satisfied so many for so long.

Superintendent Firestone entered the teaching field 1 year after completing high school at Leland School in 1929, with a teaching certificate issued by the Leelanau County Normal School. His career started at Maple City in 1930, where he taught in a rural grade school until 1933. Then, to improve his skills and thereby contribute more to his chosen field, he entered Central Michigan College of Education in 1933. After 2 years of full-time study, Mr. Firestone combined work and study by teaching at the nearby town of Farwell. Upon completion of his baccalaureate work in 1937, Harry Firestone accepted a position at Middleville, teaching mathematics and coaching basketball until he moved to Monroe Lincoln Junior High School in March of 1942. The following March, Harry Firestone became superintendent of the Ida schools—with a student enrollment of 177, housed in a bell-towered 1906 building and a newly built, two-room elementary facility on the street across from the main facility. Former students fondly recall their encounters with the redheaded principal, disciplinarian, adviser, one whale-of-a-fine math teacher, friend, and superintendent all in one.

Today the system's total enrollment is 2,070: 762 in the elementary, 651 in the intermediate, and 657 in the high school. One of the biggest factors in the school's growth was the reorganization of school districts that took place during late 1945 and was completed in 1946. Harry considers this consolidation of schools an outstanding memory, as he made most of the contracts necessary in consolidating the 13 small districts—Ira, Federman, Knapp, King, Strasburg, Harwick, Morocco, Maplegrove, Heck, Richardson, Moyer, Dentel, and Lulu—

into the Ida Public School District. The consolidation brought back the name of Ida Public Schools, a name previously synonymous with the school, but dropped when agriculture was introduced into the curriculum and it became Ida Rural Agriculture School.

Certainly much of the growth of Ida is reflected in Harry's ability to project his honesty and to "tell it as it really was and what it meant in dollars and cents," which provided a long history of successful bond issue and millage votes. In fact, only once was a millage vote defeated in the Ida district, but it was approved on the next ballot cast.

From this long string of successes at the polls has come such progressive features as a new lighted football field in 1946, a new elementary school, agriculture building and shop in 1950, an addition to the elementary building in 1952, a new high school and gymnasium in 1954, and an addition to the elementary building in 1959. Special education for handicapped children with hearing difficulties was introduced and the addition of four rooms for this purpose added to the elementary building in 1961; another new high school building and gymnasium to seat 1,700 persons was constructed in 1964, with the previous high school building becoming the intermediate school. In 1975, additions to both the intermediate and high school buildings were completed, the need for which has come from the newest trend in the Ida district—urbanization from both Monroe, Mich., and Toledo, Ohio.

In 1944 there were eight teachers on Ida's staff, including Harry. Today there are 109 teachers and six administrators, plus 33 teacher's aides, seven school cooks, 14 custodians, and 23 bus drivers. In 1945, Ida purchased its first school bus. Today a fleet of 25 buses operate daily to supply the ever-increasing demands for student transportation.

Harry Firestone has had a very full personal life also. He married Josephine Burns of Middleville in 1939, and they have reared four children: Susan Josephine, now Mrs. William Burns of Torrence, Calif.; Sister Jane Firestone, RSM, now at Saginaw, Mich.; Mary Lynn, now Mrs. Sam Gianino of Ida, Mich.; and Frater Tom Firestone of the Redemptorist Fathers Order, now at Mount St. Alphonsus, Esopus, N.Y.

As Superintendent Firestone retires from educational leadership, he reflects that students have not changed a great deal, but we—the educators—require much more today, because of the many curriculum changes. In 1967, Central Michigan University named Harry Firestone, outstanding alumnus. The educational community has honored their superintendent as he completed 25 and 30 years. On June 12, 1977, the total Ida community and the county of Monroe will gather to thank Harry Firestone for his years of service and wish him well as he retires from his educational leadership role to one of citizen and community leader.

## CONTINUING CRISIS IN FOSTER CARE

## HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. MILLER of California. Mr. Speaker, yesterday I spoke of the great need for additional Federal financial support for preventive service programs, which could substantially reduce the need for costly, long-term foster care maintenance.

There exist today model programs which achieve stunning results at less expense than conventional foster care programs. The earliest of these is the comprehensive emergency services program in Nashville. The following article indicates how successful and cost-effective such a program can be with adequate fiscal support of the sort which would become available with the full funding of title IV-B, Child Welfare Services, as contained in H.R. 7200:

[From Child Welfare, November 1976]

## FINAL RESULTS OF THE NASHVILLE COMPREHENSIVE EMERGENCY SERVICES PROJECT

(By Marvin R. Burt)

A detailed description of the Nashville Comprehensive Emergency Services demonstration project and preliminary results of an evaluation of its first year of operation appeared previously in Child Welfare [1:167-179]. This paper summarizes the final results [2].

The new Comprehensive Emergency Services (CES) system was designed to meet the need for coordination and expansion of existing services for neglected, dependent and abused children. Four types of emergency services were established. One was a 24-hour emergency intake service operated 7 days a week. The second was an emergency caretaker service intended primarily for cases of temporary abandonment or unforeseen emergency where children were without parental supervision. Caretakers served as temporary guardians until the parents returned or until an alternative plan was developed. The third service made emergency homemakers available on a 24-hour basis during crisis situations where parents could not exercise their routine responsibilities. Finally, emergency foster homes were established to provide temporary care for children who could not be maintained in their homes or in regular foster care placement. In addition to these emergency services the Department of Public Welfare (DPW) also realigned and expanded outreach and followup services.

These services were complemented by the establishment of three programs independent of the DPW. One was an emergency family shelter, established by the Salvation Army, that could accommodate three four-member families on an emergency basis (normally less than 14 days). Richland Village, the local child shelter care facility, set aside space for 12 to 15 older abused and neglected children, thereby offering an emergency residential service for brief periods (up to 2 weeks) when other program options were unavailable. And the Metropolitan Nashville Juvenile Court's Protective Services Unit began to coordinate with the DPW on decisions involving removal of a child from his home. The court's intake division complemented that of the DPW by receiving and screening complaints on a 24-hour basis and by working closely with the Metropolitan Police Department.

## RESULTS OF THE PROJECT

A brief summary of the outcome statistics indicates the success of CES in meeting program objectives during a period when the number of child neglect and abuse complaints and referrals had increased 92%:

The number of Neglect and Dependency petitions filed was reduced from 602 in program year 1969-70 to 266 in program year 1973-74, a reduction of 56%.

The number of families that contain one or more children named on N&D petitions was reduced from 339 to 156 in these years, a decrease of 54%.

The number of cases screened where an N&D petition was not filed increased from 770 in program year 1969-70 to 2156 in program year 1973-74, an increase of 180%.

The number of children removed from their homes and placed in some type of substitute care decreased from 353 in program year 1969-70 to 174 in program year 1973-74, a decrease of 51%.

The number of children institutionalized was reduced from 324 to 50 in those years, a decrease of 85%.

The number of children under the age of 6 who were institutionalized was reduced from 180 to 0.

The number of recidivistic cases (i.e., the number of children on whom petitions are filed in given years who previously had petitions filed) was 196 in program year 1969-70 but only 23 in program year 1973-74, a decline of 88%.

The recidivism rate (i.e., the percentage of children on whom petitions are initially filed who are abused or neglected again by the end of the subsequent year) declined from 16% in program year 1969-70 to 9% in program year 1973-74.

The number of children who had delinquency records declined from 44 in program year 1969-70 to 0 in program year 1973-74.

The incremental difference in cost between the old system and the new system was a net savings of \$68,000, an efficient use of resources in view of the substantial increase in effectiveness; and a solution was achieved in which effectiveness was increased while costs decreased.

## FOLLOWUP WORK

Comprehensive Emergency Services staff, in their followup efforts, worked intensively with parents of children placed in longer-term foster care to reestablish families, or sought placement with relatives. This was done in conjunction with the regular DPW foster care staff. Further, the DPW increased its efforts to place children who were in foster care for adoption. As a result of these efforts, only 34% of these children remained in longer-term foster care 2 years after initial placement, compared with at least 94% under the old system. Several children were adopted, compared with none under the old system.

## GUILTY UNTIL PROVEN INNOCENT

## HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HANSEN. Mr. Speaker, small businessmen throughout America are deeply disturbed by the specter of OSHA which looms so ominously over their businesses with its threatening exercise of arbitrary and unconstitutional powers. They feel cornered by the economic coercion practiced by this Federal agency through excessive costs of compliance, expensive paperwork, and costly fines which can impose a great financial burden and even bankruptcy.

They are further chagrined by the galling fact that OSHA itself, by its obsessive preoccupation with trivia and scandalous lack of commonsense diverts their attention from constructive measures to achieve real occupational safety and health.

Yet even more, the aspect which perhaps engenders the greatest resentment among small businessmen is the implicit insult and derogation by OSHA that they are second-class citizens, undeserving of basic constitutional protections such as "due process" and "unreasonable searches and seizures." Even the criminal—the robber, the rapist, the murderer—is guaranteed more rights than they. Indeed, the exalted eyes of the law hold the criminal innocent until proven guilty and require a warrant before a search. Yet OSHA strips businessmen of these rights and turns the law on its head with warrantless searches and the premise that you are guilty until innocence is proven.

Mr. Speaker, in a reasoned and insightful article appearing in the May 7, 1977, issue of the Atlanta Journal & Constitution, these issues and more were addressed by its author, my good friend and colleague of the Presidential State of Georgia, the Honorable LARRY P. McDONALD. Impressed as I am by the wisdom and truth of his remarks, I wholeheartedly commend its reading to my colleagues and all interested Americans, and to this end I submit it herewith for the RECORD:

YES \* \* \* IT IS IMPOSSIBLE TO MEET THE STANDARDS

(By Representative Larry P. McDonald)

Let's consider two individuals and their relationship to government authority.

Man A enjoys a great deal of protection from the arbitrary use of government power. A government agent may not, for example, search and seize his property without showing "probable cause" that he has committed a crime and obtaining a search warrant from a judicial court.

If he is charged with a crime, he is assumed innocent and it is the government's responsibility to prove him guilty by means of a trial by jury. If he cannot afford a competent lawyer, the government will provide one at taxpayer expense.

If the law he is accused of violating is vague, so that he could not know in advance whether his actions were legal or illegal, his case will be thrown out of court. Only if his guilt is clearly established by this process of

jury trial may be fined or deprived of his liberty.

Man A is a common criminal operating in the United States—murderer, rapist, drug pusher, or whatever.

Man B enjoys almost no protection from the arbitrary use of government power. A government agent may enter his property without notice to search for violations of the law. The agent need not show "probable cause," nor must he have a search warrant. In fact, anyone giving advance notice of the agent's visit is guilty of a crime and may be imprisoned. The agent may cite Man B for a limitless number of violations of vague and undefined laws, fining him \$1,000 per violation or \$10,000 for any violation the agent says is "willful." In such a case, Man B is automatically guilty. No trial need be held to establish that fact—the government agent serves as policeman, judge and jury. Man B may contest the charges, but he must first do so in an executive tribunal under control of the same authority which sent the agent. Only after this may the question be appealed to a judicial court. But there is still no right to a jury trial and if he cannot afford a competent attorney, well that's just too bad.

Man B is an American businessman.

In 1970 those constitutional rights which still applied to businessmen were repealed by Congress when it passed the Occupational Safety and Health Act (OSHA). It placed virtually every businessman in the position of Man B, so long as the business was private. The law does not apply to government officials—federal, state or local.

OSHA's alleged purpose was to protect the health and safety of American workers, but this was merely a rationalization and a poor one at that. In fact, a worker's safety and health is far better protected under a free enterprise system, with its built-in economic incentives to provide safe working conditions. A skilled worker laid off due to injuries reduces productivity and places his employer at a competitive disadvantage, whereas a government-imposed system of inflexible safety standards stifles innovation and retards adoption of improved safety measures. Under OSHA an employer's incentive is to meet government standards, not to improve working conditions.

Statistics confirm this. Worker death rates fell from a high of 43 per 100,000 workers in 1943 to 18 per 100,000 in 1968, during a time of rapid industrialization. Yet in 1968 the safety record of American private industry was far better than that of England, which had a national government safety program. For example, the accident rate of American chemical companies was seven times better than that of similar British firms; in the steel industry, the rate was 10 times better. The consequences of this law are far-reaching and disastrous. For example, costs of complying with the rigid standards and mountains of paperwork required by OSHA were estimated at \$3.2 billion in 1973, and full compliance with the present OSHA noise standard alone would cost \$13.5 billion. These costs must be passed on to the customers—which means higher prices for everyone.

But by far the worst and most indefensible aspect of OSHA is the arbitrary and unconstitutional power that it places in the hands of unelected bureaucrats. The safety standards, written not by Congress but by the OSHA bureaucrats, are so detailed, voluminous and contradictory, that it is impossible for a businessman to be in full compliance no matter how hard he tries.

One firm, for example, was fined for having an EXTRA fire extinguisher not hung at precisely the right height. Other companies have had to replace guard rails that were 41 or 43 inches high—the required height being 42 inches.

Consequently, OSHA inspectors can always find violations if they want to. And, as Lord Acton observed, "Power corrupts and absolute power corrupts absolutely." The result has been malicious and unjust harassment of honest businessmen.

A Nebraska contractor, for example, had his fines raised from a few hundred dollars to \$35,422, after he complained to his senator about OSHA harassment. A court eventually reduced the fines to \$1,572, when OSHA was unable to justify its actions.

OSHA has worked its greatest hardship on small businessmen, who can least afford the extra costs, fines or attorney's fees. Many have been forced out of business, but many are standing up for their constitutional rights and fighting OSHA in court. And they are winning.

A three-judge federal court in Idaho recently ruled unanimously that the entire inspection procedure of OSHA is a violation of the 4th Amendment protection against unreasonable searches and seizures. The case has been appealed to the Supreme Court.

It is gratifying that Georgians have been active in this fight to restore constitutional rights. Lofton H. Smith of Duluth, Georgia, recently found himself in federal district court after he refused to permit an OSHA agent to inspect his business without a search warrant. OSHA asked the court for an order compelling Smith to admit its agent, but federal judge Richard Freeman agreed with Smith—no warrant, no admission.

How the Supreme Court decides these cases is extremely important. If the right to protection against arbitrary searches and seizures is not upheld, our Constitution will cease to serve as a check on government power. While this may apply only to businessmen at present, once the principle is broken it will be merely a matter of time before everyone's rights will be abused. While businessmen are not safe in their places of business today, no one will be safe in his home or anywhere tomorrow.

#### PASSING OF A CIVIC LEADER

### HON. RICHARD C. WHITE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. WHITE. Mr. Speaker, many residents in El Paso, including me, have been personally saddened upon the passing of Marian "Mrs. William C." Collins, one of our community's most selfless and effective civic servants. She was best known and loved for her complete dedication to the betterment of El Paso's schools which she served as a twice-elected board member. She did not just show up for periodic board meetings; rather, she spent nearly full time at her tasks, and most productively. Even though education was her first passion, she still found time to serve as an officer or board member, and work actively with such organizations as the junior league, the Members Guild of the El Paso Museum of Art, the El Paso Planned Parenthood Center, the guidance and rehabilitation center, and the Texas Social Welfare Association. El Paso joins in offering deep sympathy to Marian Collins' family, her husband, the outstanding practicing attorney William C. Collins, and their three daughters, Nancy Sue Collins, Cynthia Collins Hunt, and Marian Collins O'Hara, and we hope they

may find a certain solace in knowing that we will all miss her almost as much as they do.

#### CLEAN UP CLEAN AIR AMENDMENTS

### HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HANSEN. Mr. Speaker, the Clean Air Act of 1970 mandated a 90 percent reduction in the following three automobile pollutants: Hydrocarbons, carbon monoxide, and oxides of nitrogen. This act required that this reduction be completed by 1976; but it also gave the EPA discretionary power to delay these standards for 1 year, which they did until the 1978 model year.

This has placed the Congress in its present situation of either having the statutory standards to go into effect or extending them in some way. The Interstate Commerce Committee adopted the emission schedule proposed by President Carter. This emission schedule is contained in H.R. 6161.

Congressmen JOHN DINGELL and JAMES BROXHILL have proposed an alternative emissions schedule which gives the House a choice in legislation that will be best for the Nation both environmentally and economically. There are no substantial differences between the two bills on the health protection they provide except for the carbon monoxide standard.

H.R. 6161 proposed to go to 3.4 grams per mile by 1981 and H.R. 4444 would go to 9 grams by 1980 and remain at that level. An EPA study released in April 1977, stated that the 9 grams standard is sufficient to meet the ambient air quality goals for carbon monoxide and that the reduction to the proposed 3.4 grams level would not result in any substantial improvement.

Offsetting this insignificant improvement the 3.4 grams level would increase sulfuric acid emissions, add one more catalyst behind the three way catalyst system—about \$120 more, and cause driveability so poor as to encourage owner tampering.

Other major problems which would accompany H.R. 6161 are the disruption of 1979 production and increased energy use. These could cause severe economic repercussions. The EPA technical analysis of April 1977, says that the administration schedule cannot be met in 1979 without a delay in production. DINGELL and BROXHILL say:

The stringency of the Administration proposal works against its own planned energy conservation objectives by wasting as much as 5 to 10% or more in lost fuel efficiency with no discernable public health benefits and at a high cost to the consumer in terms of increased prices for cars.

Energy conservation is definitely an environmental concern because wasting fuel, such as would result from the administration's position, would require an unnecessary drain on America's limited

resources since the search and drilling for more total energy output would necessarily increase. In a statement made by Ford Motor Co. they contended that if H.R. 6161 passed they would be forced to revert to an obsolete fuel system. This would decrease fuel efficiency by 12 percent until 1980 when replaced with a newer system, which would cause a substantial increase in consumer prices.

Another major economic consideration arising from the debate is the after-market parts, the length of warranties on emission control devices. Under current law, auto manufacturers have to guarantee the performance control devices for 5 years or 50,000 miles in recognition of the anticompetitive impacts this long warranty period could have on so called "aftermarket" parts. Manufacturers and independent service industries would be cut out of the repair market for the length of the warranty. In a Justice Department statement on the possible anticompetitive effects of Clean Act warranty provisions it was said that—

In addition to the direct costs to the consumer of such a performance guarantee, the social costs associated with the competitive disadvantage that potentially could be imposed on a sizable class of vehicle service businesses is a particular concern of the Department of Justice. This would come about if the warranty is honored only by manufacturer-affiliated dealers. Then, vehicle owners can be expected to take their vehicles exclusively to dealers for all emission related repairs and services. Independent garages and service stations that may be equally skilled in making such repairs would be placed at a disadvantage relative to dealers. Without a comprehensive warranty non-dealers would succeed or fail depending upon their ability to compete in the marketplace next to dealers; however, the presence of the warranty would make it next to impossible for nondealers to attract customers for emission related repairs, regardless of their price and their quality of work. If an environmentally effective production warranty must cover essentially all engine repairs and service, then the warranty would have severe implications for the long run viability of independent garages and service stations. Indeed, it could effect a significant increase in concentration in the service industry to the point where a substantial adverse impact on the price of service and repair could be expected. In any event, the impact on concentration would be directly related to the comprehensiveness of the warranty.

We must seriously weigh the side effects of the legislation that is before us. It appears that in view of the State of the Nation, economically and environmentally, the Dingell-Broyhill amendment is the most functional and acceptable alternative. As pointed out in a statement by Harold Pastuer of the United Auto Workers:

We believe that the Dingell-Broyhill legislation fully protects the public health and is totally consistent with the goals of the 1970 Clean Air Act. Moreover, H.R. 4444 is fully consistent with the important goals of energy conservation and automobile efficiency which were not as salient in 1970 as they are today. This legislation constitutes a responsible balance between inter-related and important national objectives and we urge that you give it your careful consideration, support, and cosponsorship.

The Carter Administration has proposed one set of auto emission standards for the coming years. Congressmen John Dingell and

Jim Broyhill have proposed a different set of standards. Congress will have to make a choice.

#### EFFECT ON PUBLIC HEALTH

Health impact studies of various possible emission schedules have been conducted by Federal agencies including the Environmental Protection Agency, Department of Transportation, and Federal Energy Administration. These studies indicate that improvement in air quality under the Carter Administration's schedule will be no greater than under the Dingell/Broyhill schedule.

#### EFFECT ON FUEL CONSUMPTION

The Carter Administration has already asked you to save gas. It is now going a step further on asking Congress for legislation to make sure you save gas.

The fact is, however, the Administration's emission schedule would actually waste gasoline. Compared to the Dingell/Broyhill schedule, the Administration's unnecessarily stringent proposal will result in a 15-Billion gallon fuel penalty between now and 1985. That's 140,000 barrels of wasted oil every day.

The extra price tag for American consumers—\$10 Billion.

The extra price tag for you—\$125.

#### EFFECT ON AUTOMOBILE COSTS

According to EPA testimony, the Carter Administration's emission schedule will force new car owners to spend dramatically more to buy and maintain their automobiles.

The extra price tag for American consumers—\$30 Billion.

The extra price tag for you—\$450.

#### SUMMARIZING

The proposed Dingell/Broyhill emission schedule will protect your health... save you gas... and save you money.

### SMALL BUSINESS AND OSHA

## HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. EDGAR. Mr. Speaker, yesterday I had the opportunity to testify before the Subcommittee on Energy, Environment, Safety, and Research of the Committee on Small Business regarding small business concerns with OSHA regulations. My colleague, ALVIN BALBUS, who chairs the subcommittee is to be congratulated for his willingness to explore ways in which the burden of complicated and expensive OSHA regulations can be lightened for our Nation's small businessmen.

I asked small businessmen in my district, the seventh in Pennsylvania, to share with me their experiences with and perceptions of OSHA. Many told me that their experiences with OSHA inspectors had been good—their inspectors had been polite and cooperative. However, there were just as many who told me of their negative experiences and complained of nitpicking and incompetency on the part of inspectors. This inconsistency indicated to me a confusion, even within OSHA, about their purposes and goals. I am hopeful that this confusion can be redirected into a more creative and cost-effective use of Federal Occupational Safety and Health dollars with the help of the new commonsense priorities announced by Secretary of Labor Marshall. I would like to share my testimony with my colleagues at this time.

#### TESTIMONY OF REPRESENTATIVE EDGAR

Mr. Chairman, I appreciate this opportunity to testify today on a subject which has been of great concern to many small businessmen in my district. The enactment of the Occupational Safety and Health Act in 1970 marked a milestone of Congressional concern for the protection of American workers in the workplace. However, the implementation of the Act embodied in the Occupational Safety and Health Administration has imposed a burden under which small business has chafed.

The need to lighten the load on small businessmen has become abundantly clear. I therefore welcome Secretary of Labor Marshall's announcement that OSHA will begin a drive to crack down on major occupational health and safety hazards, rather than trying to enforce the petty regulations which have received so much publicity. Despite the implementation of this Act, accidental deaths and injuries on-the-job have not significantly decreased. While this fact does not suggest a need to throw in the towel on OSHA, it indicates to me that an alternative thrust, such as the one heralded by Secretary Marshall, might be profitable. I believe that OSHA deserves more of a chance to prove its viability and to improve America's on-the-job safety record.

I seized this opportunity to testify with the idea of acting as a spokesman for small businessmen in my district, the Seventh in Pennsylvania, comprising most of Delaware County. My district ranges from very urban areas to almost rural ones and our small business community is an important source of jobs and prosperity. I got some interesting reactions from the small business community and I would like to share them with you today.

There was general agreement that many OSHA inspectors were more intent on enforcing the "nit-picking" regulations than in carrying out the spirit of the legislation. I found, for the most part, that small businessmen believe in OSHA's mission and are anxious to make their workplaces as hazard-free as OSHA is. After all, they point out, worker safety and health are in the best interests of employers.

From the reactions I received, it would seem to me that Congress and OSHA have been too intent on instant compliance with every regulation. In an effort to immediately improve occupational safety and health, the emphasis of the legislation and of the Occupational Safety and Health Administration has been on citing violations and imposing fines. This emphasis has demonstrated to businesses that OSHA is serious about the regulations, and Congress and the courts have generally backed OSHA up. This unyielding stance has fostered resentment on the part of business, especially small business.

I do not believe that it is too late to turn this resentment around. There are many good resources in OSHA which can be turned into a cooperative effort between government and business. One small businessman in my district said it very well: "OSHA has the opportunity to serve safety and industry. Not all small businessmen realize the total cost of accidents, particularly lost-time accidents. Small business cannot be expert in safety, therefore, if the inspectors were to pass on their experience on how other companies had developed simple procedures to eliminate or guard against hazards, everyone would benefit."

Not surprisingly, I also heard quite a few complaints. One story concerns a mechanical contractor who was performing the plumbing contract on a fourteen-story construction project. An electric cord, which was not properly grounded, was in use on one of the floors. There were at least ten contractors on the job and four of those were prime con-

tractors. According to OSHA, all contractors on this project were liable for this violation and all were given citations. Since the contractor in question had no control over the violation, their only recourse was to take their men off the job until the violation was corrected.

In another company, OSHA came in and conducted tests for airborne lead. None was found. Then an employee was ordered to sweep the floors and of course, any residue from production became air borne. In this case, the inspectors made specific recommendations which were instantly incorporated, yet the company was fined. This small businessman asks, "I can understand this (the fine) if the specific complaint is not rectified within a reasonable period of time, however, when compliance is immediate, why the fine?"

Another small businessman in my district has a more serious problem. They have been sued by OSHA for refusing to divulge the secret formulations of 7 of their 50-odd products. The company in question objected, because as a small firm, they cannot protect themselves with patents like larger companies. The president of the firm is understandably reluctant to reveal his secret formulations to a government agency knowing the track record of the government with secrets. The company therefore offered, as an alternative, to give OSHA a list of every chemical used in the manufacture of all their products. The case is presently being appealed. Apparently, there are some 2,000 other companies who have also refused to supply this information. Moreover, there is some question about the value of these formulations to OSHA, since there was no inquiry about the amount and duration of exposure of the employees to these chemicals.

Another complaint is the cost of compliance. One small business-owner wrote, "to be perfectly frank, to comply with OSHA regulations 100 percent would put me and every other small businessman I know, out of business." There are some questions which obviously should be asked before adopting regulations. Is it economically feasible for the small businessman to comply with the regulations? If the costs involved can be met, will the results be of value, or will they force people out of business?

I believe that the easiest way to bring OSHA in compliance with what it was envisioned to be, would be to improve the program of on-site consultation. OSHA has the experts and they should be sharing their expertise with small business. The Pennsylvania State Grange put it very succinctly to me when they wrote, "After all, the goal should be to help, not hamper."

#### PERSONAL ANNOUNCEMENT

**HON. JIM LLOYD**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. LLOYD of California. Mr. Speaker, I will be absent from the House on official business for the next 3 legislative days. I will be representing the Science and Technology and Armed Services Committee at the Paris Air Show. The trip also includes an examination of NATO facilities and fact finding meetings for upcoming close air support hearings.

#### KITES RETURN TO NEST BY OIL WELL EACH YEAR

**Hon. Theodore M. (Ted) Risenhoover**  
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. RISENHOVER. Mr. Speaker, the search for oil is an unexact science with many risks involved, financially and ecologically.

Fortunately, our geologists, drillers, and investors have continued to locate enough petroleum reserves to serve our needs. On the other hand, we all are concerned about the impact that such activity may have on the environment and wildlife.

In her column in the Tulsa World, Fleeca C. Dunaway, describes some activities around a drilling rig which I include in the Record:

#### KITES RETURN TO NEST BY OIL WELL EACH YEAR

(By Fleeca C. Dunaway)

For six years Mississippi kites nested on the Cruzan farm north of Cushing. The first few years after they were sighted, the Cruzans believing the birds to be "chicken hawks," discouraged them from perching on an old dead tree near the barn.

Members of the local Audubon Society were invited to see the "hawks," and discovered these large gray birds, which had a pale head, dark back and wings, black tail and dusty legs, were the gentle inoffensive Mississippi kites.

"Never do they eat chickens and apparently never molest birds. They feed on the wing, snatching large insects off plants and cicadas in flight. Toads, mice and small lizards are also caught," the Cruzans were told. From that time on the kites were a welcome addition to the farm.

"Progress" caught up with the Cruzans. A drilling site for an oil well was chosen only 300 feet from the kites' nest which was built high in a large tree. The area was bulldozed; the trees and brush were uprooted and pushed to one side.

As soon as the oil producer, Jerry Rodgers, a nature lover himself, was told about the nesting kites, he directed the men and their equipment to avoid the kites' tree.

Roads were made, pits were dug and the derrick was set up.

The kites stayed on their small flattened, compact nest built of sticks and lined with green leaves. The two whitish eggs were incubated by both parents.

The drilling began; lights cut through the night like sharp rays from the sun. Noise increased and so did traffic of the work crews. The kites stayed close to their nest, either on the nest or perched in a nearby tree.

Rain poured from the sky and everything was soaked, including the kites. Cars and small trucks became stuck in the deep mud and were pulled out by roaming tractors almost under the nest.

In 31 to 32 days after the eggs were laid, they hatched. Two young were faithfully fed by both parents. The well was completed, and a pump installed. Pits were covered and the access road was graveled.

The young kites left the nest and about the middle of September with the adult birds started their migration toward South America.

"Would the kites return to the farm the following April after such a traumatic experience that spring and summer?" This was the question that was on everyone's mind.

The following spring all four of the kites did return and to everyone's surprise the adult birds repaired their old nest down by the pumping well and raised another brood.

That fall an electric pump replaced the noisy gas engine, and once again it was quiet in the woods. The well site was cleaned and equipment painted.

The kites showed up as usual in late April and found their tree cut down, accidentally by the electric company when new lines were strung. They were often sighted soaring around the old barn, but no nest could be found. When the leaves dropped from the trees in the fall, the nest was found only a fourth of a mile away in the top of a large elm.

This spring five kites were sighted perched on an old dead tree at the edge of the woods. In a few days their new nest was discovered less than a hundred feet from their old nesting site near the oil well.

Each spring the kites move a little closer to their original nesting site. Thanks to Rogers, the surroundings are compatible with the wildlife on the farm, and the anxiety of the Cruzans that the kites may be frightened away has ceased to exist.

#### A PRIMER ON ENERGY

**HON. LEE H. HAMILTON**

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for May 25, 1977, into the CONGRESSIONAL RECORD:

#### A PRIMER ON ENERGY

Is the energy crisis real?

Yes. Although many people still refuse to believe it, all the experts agree that there is a serious and continuing energy problem. Demand for energy is increasing while the supplies of oil and natural gas are diminishing. Unless we plan now before oil and gas become very scarce, the American economy and our way of life will be gravely endangered.

How did the crisis come about?

Because energy was cheap, we have used it extravagantly and inefficiently. Last year we wasted as much energy as the poorest two-thirds of the world's people consumed. We use most the least plentiful domestic energy resource (oil) we use least the most abundant resource (coal). Oil and natural gas provide 75% of U.S. energy consumption, but constitute less than 8% of domestic reserves.

Are we running out of oil?

Yes. U.S. domestic oil production has been declining since 1970. The oil exporting countries will not be able to satisfy the expected increases in world demand for oil in the 1980's. Within four generations, most of the oil in the world will have been substantially consumed. Natural gas supplies are also limited.

What should be the objectives of our energy policy?

We want an adequate and secure supply of energy at reasonable prices. In the short run we want to reduce our dependence on foreign oil and our vulnerability to interruption of foreign oil supply. In the long term we want to have inexhaustible sources of energy. To achieve these objectives, we need to reduce the annual rate of growth of demand and pursue a vigorous research and development program.

How long with the crisis be with us?

It depends on how we respond to it. The world is in an early stage of a transition from

a period of abundant oil and gas to a period when these resources will be in short supply. There is hope that technological developments will provide long-term solutions to the energy problem, but, in the energy field, technologies develop slowly. Until such solutions are developed, the basic task is to adjust energy consumption to reduce pressures on domestic oil and gas resources and to reduce oil imports. Thereby the United States will be prepared for the transition to a different energy economy at the beginning of the next century.

Why don't we have a crash program to increase production?

Although increased production is desirable, a crash program could have serious adverse consequences. Oil would be drained rapidly from domestic supplies and the United States could become vulnerable. A crash program could also harm the environment and demand a disproportionate share of capital investment for all plant and equipment throughout the economy.

Why don't we just import more oil?

If the United States continues to increase its dependence on oil imports, its position as a world leader would be weakened and its flexibility and independence in foreign policy would be lost. Besides the oil import bill this year is \$40 billion and the United States trade deficit is slipping deeply into the red. Continued growth in imports would erode the nation's economy, promote dissension with our allies as we compete for scarce oil, and jeopardize America's world leadership.

Why is conservation the cornerstone of a national energy policy?

It is cheaper than the production of new supplies. It is the most effective way to protect the environment, and it can lead to quick results. Conservation may require sacrifice, but if instituted now, the sacrifices can be moderate in scope and impact.

What is being done to encourage the development of unconventional sources of energy?

Relatively clean and inexhaustible sources of energy—like solar, geothermal and fusion—are hopeful prospects. The U.S. cannot depend on technological miracles, but steady progress is likely, and breakthroughs are possible.

(This information was gleaned from many materials but principally from "The National Energy Plan," published by the Executive Office of the President.)

## HOSPITAL COST CONTAINMENT

**HON. ROBERT H. MOLLOHAN**

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. MOLLOHAN. Mr. Speaker, I would like to go on record as supporting wholeheartedly action to dampen the ever spiraling costs of health care for the people of the United States. No one abhors Federal regulation, bureaucratic paperwork or nonproductive overhead more than I, but if regulation is necessary to accomplish our objectives in this instance, then regulation is what we must have. I suggest, however, that we need assurances that whatever actions we may mandate through Federal law are truly cost effective.

Hearings have just been held on the Hospital Cost Containment Act of 1977, aimed at trimming "fat" from the budgets of hospitals which have, during the past quarter century, become "obese"—

to use the terminology coined by Secretary Califano. Much of the supportive testimony given before the joint meetings of the two subcommittees conducting these hearings has focused on governmental action—both direct regulation and oversight.

I wish to remind my colleagues that the only successful permanent treatment for the obesity problem must parallel the treatment of obesity in men. For example, an overweight man can be submitted to sauna treatment, forced to abstain from pasta, ice cream, and chocolates, and prodded to exercise—and a noticeable trimming effect will result. However, until the man decides for himself that certain restraints are necessary and commits himself to a new direction—no lasting change will occur.

I confidently believe that the medical services field is fertile for productive trimming—and I am speaking about the total costs of that service—the cost of the ingredients that go into the operation of a hospital as well as the charges the hospital levies on its patients.

Let us concern ourselves with salaries, for example. Not the salaries of the minimum wage earners in the custodial, personal services, and administrative categories, but the fees of professionals.

I urge the inclusion of a full disclosure provision in the bill to bring into public view not only current hospital charges for various services but also salary and fringe benefit information on the management hierarchy. I am advised that although administrative personnel, supervisory personnel, and physician-specialists comprise only 40 percent of the total work force at most hospitals in this country, their salaries comprise 60 percent of the payroll.

Clearly, little cost saving can be attained among clerical and maintenance personnel who, for the greatest part, are but a stride ahead of the minimum wage standard, but certainly, disclosure of top-level earnings, as well as conflicts of interest on boards of trustees, will serve as a disincentive for disproportionately high salaries in the administrative sector.

We need to provide incentives for institutions to consolidate specialist services and unique equipment resources, and we may need to provide disincentives for those institutions that fail to do so.

We need to encourage the wider use of physicians extenders and nursing services in lieu of treatment by a doctor. This will cut the costs of medical education by making better use of our doctors and employing those with competent but less expensive training to administer simple treatment.

We need to make research grants productive and meaningful.

We need to coordinate emergency medical services systems to provide adequate support to the injured or chronically ill but avoiding surplus facilities and unnecessary redundancy.

We need to assure that the various classes of services pay for themselves rather than piling the high cost of such special services as emergency room operation or intensive care on the routine bed patient's room charges.

We need adequate "limited care" fa-

cilities so those patients who need care but not the full scale of hospital services can be accommodated in less expensive facilities.

We need to implement a practical and stringent control on overbuilding, overequipping, and in a few rare cases, overstaffing of facilities.

And, we need to restrain the greed that has resulted in profiteering by a very few members of the medical profession itself. This small group has reflected discredit upon their profession.

We challenge hospital costs—but we must remember as we do that it is the doctor that orders the services. Basic economies—to assure that only necessary services are ordered—must start with the physician.

We need to impose some restraint on malpractice suits to make frivolous suits unprofitable, restrict contingency fee suits and place reasonable limits on settlements. This action will help eliminate the costly practice of "defensive medicine."

I regret that professional review has become necessary. We cannot depend solely upon the American Medical Association to guarantee the delivery of the best medical service possible at a cost that will make it available to all.

I regret that a few doctors have so ripped off both the private and the publicly supported patient that we now must challenge the motives of all doctors.

I regret that some professionals have so coveted the \$200,000- and \$300,000-a-year incomes that they have priced high quality service out of reach of many people.

My conclusion is, I believe, obvious. We cannot contain hospital costs unless we contain the costs of professional services.

Congress can legislate, regulate, and supervise as much as it wants to, but, unless hospitals, with help from physicians and other health professionals, make a firm commitment to halt or at least slow the inflationary 15 percent annual increase in the cost of care, we will never bring medical costs under control.

Incentive is the key to any program ultimately passed. I wholeheartedly endorse stringent containment of hospital costs, both to private patients and to publicly supported patients.

Throughout 3 days of hearings on the President's bill, alarming figures were cited by witnesses testifying on both sides of the issue. The crisis is monumental—therefore, quite obvious and very real. We all recognize it, and the malady has long gone untreated. Our major problem now is one of identifying the proper method of treatment.

We must recognize, most importantly, that not all hospitals in this country are obese and wasteful. Not all hospitals maintain incredibly exorbitant charges for their services. I am concerned that placing a uniform nine percent ceiling on all revenues of all hospitals will work gross injustices on "lean hospitals"—that is, those institutions which have postponed capital improvements, have absorbed increased work loads with little or no additional personnel, and have steered away from ballooning administrators'

salaries and hospital-based physicians' percentage agreements. Our plan must incorporate both: first, incentives for wasteful hospitals to follow the example of lean hospitals, and, second, penalties for failure to "shape up."

Since 90 percent of all hospital bills are paid for by medicare, medicaid, private insurance companies, and other third parties, citizens have learned to seek the full panoply of health care services. At the same time, institutions have been "spending more to get more" from the Federal Government.

Structural reform in reimbursements made by medicare and medicaid is not only necessary but is essential to any plan to curtail rising hospital costs. Stricter review of applications for Federal monies will go along way toward insuring that only justifiable services and expenditures are reimbursed.

I adamantly endorse the utilization of the "certificate of need" programs presently followed by most State planning agencies concerning capital expenditures for hospital expansion. We must be certain, however, that the plan implemented, in whatever form, does not have the effect of freezing progress in health care.

In the face of H.R. 6575, hospital associations have been crying that physicians generate the rising costs which plague Americans in need of health services. To be sure, much of the blame is rightly laid in that quarter. But, at the same time, hospital administrators, in many cases, have failed to exercise control over the hospital-based specialist who reaps bountiful remuneration from percentage agreements. This represents, I believe, an area which is particularly deserving of serious scrutiny and, possibly, harsh tightening of the reins.

I reiterate that although we must eliminate fat from hospital administration almost instantly, we must not lose sight of the fact that the long-range plan must be to alter the method of operation. In effect, through the implementation of Federal guidelines and the monitoring of those guidelines, Government must assure effective procedures for delivering care to our people. Permanent practices will give birth to permanent benefits.

I caution my colleagues against the promulgation of an overly burdensome regulatory scheme—lest we save on one hand and spend on the other—through the additional demand for administrative and clerical personnel.

Health care must be affordable. The time is well nigh for legislation to contain the cost of receiving that care.

#### THE RECURRENCE OF HARRY SHLAUDEMAN

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. HARRINGTON. Mr. Speaker, exactly 1 year ago today, I testified before the Senate Foreign Relations Com-

mittee in opposition to the nomination of Harry Shlaudeman to be Assistant Secretary of State for Inter-American Affairs. My position then was that the Ford administration was rewarding Mr. Shlaudeman for his deception of the Congress about the actions and purposes of the United States in Chile during the Allende years, when Mr. Shlaudeman was our deputy chief of mission in Santiago.

I warned that the confirmation of Mr. Shlaudeman would mean "a clear message will be sent to the executive branch that the Congress does not demand truth and candor from Executive officials, and that when evidence of deception is clear, the responsible officials will not be held to account."

My statement then quoted heavily from the Senate Select Committee on Intelligence report, "Covert Action in Chile, 1963-1973," to demonstrate that Mr. Shlaudeman's characterization of U.S. policy as "nonintervention in Chile's internal affairs" was patently false. The Senate report also indicated that Mr. Shlaudeman, as the No. 2 American official in Chile from June 1969 to June 1973, knew that his characterization was false.

Today, I find myself once again opposing the assignment of Harry Shlaudeman to an important diplomatic post, on precisely the same grounds. The Senate Foreign Relations Committee held a very brief hearing last week on his nomination to be Ambassador to Peru, and I once again submitted a statement in opposition.

Two fundamental changes have occurred since my testimony last year. First, a new administration has been elected which makes the "advancement of human rights a central part of our foreign policy." Implicit in this new approach is a rejection of the kind of covert action undertaken in Chile to subvert the democratic process and install a military regime. Second, President Carter has explicitly rejected the interpretation of events in Chile used by Mr. Shlaudeman and other apologists for U.S. involvement there during the Allende period. The administration no longer holds an official policy which conceives of the U.S. role in Chile as one of circumspect non-intervention.

It was particularly troubling to me, therefore, to learn that this new administration had nominated Mr. Shlaudeman to be Ambassador to Peru. I fail to understand how an administration so committed to rejecting the principles that Mr. Shlaudeman's career represents could make such an appointment. Surely the new Secretary of State could have found another position for this career diplomat more appropriate to his questionable background, though I hesitate—in the interests of civility—from making a specific suggestion.

Because I feel that the new administration has made so much progress to date in defining a new kind of foreign policy, devoid of the cold calculations of the Nixon-Ford-Kissinger era, this appointment troubles me all the more. As a result, I have felt a special compulsion to make my views known, and urge the

administration to demonstrate in more concrete fashion its commitment to a more moral foreign policy.

I insert my statement to the Senate Foreign Relations Committee, along with my testimony from last year, in the Record at this point.

STATEMENT BY THE HONORABLE MICHAEL J. HARRINGTON

Mr. Chairman, while I appreciate the opportunity to present this statement for the record on this nomination, I wish to first state my concern over the haste with which this matter has been handled. In light of the controversy that surrounded Mr. Shlaudeman's previous confirmation hearings, first to be Ambassador to Venezuela and later to be Assistant Secretary of State for Inter-American Affairs, one would have thought that the Committee might have provided a greater opportunity for public debate.

Far more serious, however, is this Committee's failure to weigh the record of Mr. Shlaudeman's performance against the standards of human rights and integrity in foreign policy endorsed by the Carter Administration. In his enunciation of U.S. human rights policy, Secretary of State Vance spoke of "the resolve of this Administration to make the advancement of human rights a central part of our foreign policy." This new focus and emphasis, constituting a basic reordering of our foreign policy priorities, suggests a marked and welcome divergence from an earlier conception of our "national security" which required the subordination of human rights to the maintenance of a "continuing relationship" with repressive governments.

Mr. Shlaudeman was both a proponent of that earlier policy and its executor during the past eight years of his professional career. Casting himself in the role of apologist for the Chilean junta before various committees of the Congress, Mr. Shlaudeman continued to defend the post-coup status quo, a state of affairs characterized by numerous neutral observers as one of widespread violation of basic human rights and of general repression. His unwillingness to speak out more forcefully against these practices—quite conversely, his comments on the progress the Chilean government was making in the area of human rights—suggests that Mr. Shlaudeman's perceptions of what constitutes a violation of human rights lack the degree of sensitivity necessary to effectively carry out both the letter and, more importantly, the spirit of President Carter's initiatives.

On the particular issue of Mr. Shlaudeman's role as Deputy Chief of Mission in Chile, my testimony to this Committee on May 25, 1976 documents his knowledge of covert operations there and his deception of committees in both the House and Senate. I include that statement as an appendix to today's testimony, and stand by the argument I made then. I wish to add, however, that President Carter has since rejected the interpretation of the events in Chile put forth by Mr. Shlaudeman. During his foreign policy debate with former President Ford in the recent campaign, Mr. Carter said, "this is a typical example (Chile) . . . where this Administration overthrew an elected government and helped to establish a military dictatorship."

Even in his explanation of this analysis in March, while citing the Church committee as failing to prove U.S. involvement in the actual overthrow of the Allende government, President Carter acknowledged that "we did have financial aid . . . to political elements in Chile that may have contributed to the change in government."

Diplomatic niceties aside, the sum of President Carter's comments and the Church committee report amount to a common recognition that the United States emphatically did not, as Mr. Shlaudeman testified in 1974,

adhere "to a policy of non-intervention in Chile's internal affairs during the Allende period." Nor can it be argued any longer, as Mr. Shlaudeman also did that "we had nothing to do with the political destabilization in Chile, the U.S. Government had nothing to do with it."

In sum, I contend that the rejection of Mr. Shlaudeman's nomination would make concrete the commitment to principles of human rights and political nonintervention which the new Administration has so strongly asserted. The integrity of the Congress would be vindicated by the rejection of a nominee who has engaged in the deception of its committees. I would prefer to see the Administration withdraw this nomination as a positive assertion of its dedication to the principles of honesty and morality in the conduct of foreign affairs. In the absence of such assertion, I call on the Senate to make clear to the Administration that a policy of human rights and nonintervention depends as much on its choice of ambassadors as its public statements to the world.

[From the CONGRESSIONAL RECORD, May 25, 1976]

#### TESTIMONY OF HON. MICHAEL J. HARRINGTON

The President's nomination of Ambassador Harry W. Shlaudeman as Assistant Secretary of State for Inter-American Affairs should be rejected by the Senate. There are two principle grounds for rejection: First, as Deputy Chief of Mission in the U.S. Embassy in Santiago, Chile from June, 1969 to June, 1973, Mr. Shlaudeman participated in the formulation of recommendations and the execution of instructions which resulted in the destruction of Chilean democracy. As a result of the reports of the Senate Select Committee on Intelligence, we know a great deal more about those activities and policies than we did in February, 1975 when Mr. Shlaudeman was confirmed as Ambassador to Venezuela.

Second, given what we know now about the actions, and the purposes of the actions, of the U.S. Government in Chile during Mr. Shlaudeman's tenure there, much of Mr. Shlaudeman's testimony before committees of the Congress was, at best, misleading about the actions and purposes of the U.S. Government in Chile in those years, and, at worst, simply untrue. For example, on June 12, 1974, Mr. Shlaudeman testified before a joint meeting of the House Foreign Affairs Committee's Subcommittees on International Political and Military Affairs and International Organizations that:

"... We had nothing to do with the political destabilization in Chile, the U.S. Government had nothing to do with it."<sup>1</sup>

The Senate Select Committee on Intelligence, in providing a full and authoritative account of U.S. covert intervention in Chile between 1963 and 1973, called that involvement "extensive and continuous." Between 1970 and 1973, the CIA spent \$8 million, and in 1972 alone spent over \$3 million.<sup>2</sup> In addition a policy of vigorous economic pressure against the Allende government was adopted by the highest levels of the U.S. Government and overtly carried out by the relevant agencies.<sup>3</sup>

There are three major questions relevant to Mr. Shlaudeman's nomination which are raised by the facts as they have been disclosed: First, what were the purposes and intentions of the actions and policies of the U.S. Government, both overt and covert, in Chile during Mr. Shlaudeman's tenure? second, to what extent did Mr. Shlaudeman know of the overt and covert actions and their purposes? and third, is it fair and proper to hold Mr. Shlaudeman accountable

for the policies he was instructed to execute, and the account of them to which he has testified before congressional committees?

#### I. U.S. INTENTIONS AND PURPOSES

In his June 12, 1974 appearance in the House, Mr. Shlaudeman testified that:

"Certainly there was never any intention on the part of the United States to produce political destabilization."

The following exchange then took place:

"Congressman HARRINGTON. Did we spend funds to your knowledge?"

"Mr. SHLAUDEMAN. For political destabilization, no, not to my knowledge. . . . My remarks on Chile and U.S. policy toward Chile should be understood in those terms, in light of the commitment strongly affirmed by the Secretary to the hemispheric principle of non-intervention."<sup>4</sup>

Mr. Shlaudeman took the same position in February, 1975 during his testimony before the Senate Foreign Relations Committee regarding his nomination to be Ambassador to Venezuela:

"I know nothing and I do not believe that there was any attempt to subvert or to overthrow the Chilean government, nor was there any involvement by the United States in a coup."<sup>5</sup>

The argument that Mr. Shlaudeman seems to be making is that the expenditure of funds did not constitute an effort at "destabilization" or to "subvert" or "undermine" the Chilean government. Indeed, he conceded before the Senate committee that he had knowledge of covert expenditures:

"What I have been saying is not that covert activities did not take place, but that they were not intended to, nor did they, in my view, result in the overthrow or the destabilization of the Allende regime."<sup>6</sup>

This testimony can only be squared with his answer to questioning quoted previously if the U.S. purpose was something other than the destabilization of the Allende government. Shlaudeman argues that the purpose was to strengthen democratic forces in Chile:

"... support was given to parties and to media which were under very great strain. I know nothing, and as I said just now, I do not believe that there was any attempt to undermine or subvert or overthrow the government of Allende."<sup>7</sup>

This final statement is simply not true. To know that covert support was being given to media and political parties entailed knowledge of the intentions and purposes of that support, which were to undermine the Allende government both by aiding its opponents and by promoting disorder to hasten the downfall of the government by one means or another. Shlaudeman's testimony about the purposes of U.S. activities in Chile is misleading and fallacious.

A brief review of the record demonstrates conclusively the objectives of the programs of which Shlaudeman concedes he has knowledge. Generally the Senate Select Committee found them to be:

"... to maximize pressures on the Allende government to prevent its consolidation and limit its ability to implement policies contrary to U.S. and hemispheric interests."<sup>8</sup>

(1) Media propaganda—Shlaudeman concedes he knew of support to friendly media, and according to the Senate report, this was the "most extensive covert action activity in Chile."<sup>9</sup> The report itemizes the propaganda campaign.

"The CIA spent \$1.5 million in support of *El Mercurio*, the country's largest newspaper and the most important channel for anti-Allende propaganda. According to CIA documents, these efforts played a significant role in setting the stage for the military coup of September 11, 1973." (Italics added.)

The major propaganda project funded several magazines with national circulations

and a large number of books and special studies.

Material was developed for the *El Mercurio* chain; for "opposition party newspapers, two weekly newspapers, all radio stations controlled by opposition parties," and several regular television shows on three channels.

During the period of September 15, 1970 to October 24, 1970 while Allende's election was in doubt, a massive propaganda campaign was launched including "support for an underground press, placement of individual news items through agents, financing a small newspaper, indirect support of *Patria y Libertad*, a group fervently opposed to Allende, and its radio programs, political advertisements, and political rallies."<sup>10</sup>

The propaganda campaign was the most important constituent of the CIA's efforts to convince the Chilean people, and even world opinion, that Allende was dangerous, a failure and should be replaced. Shlaudeman's claims that the media/propaganda program was not intended to undermine the government contradicts the CIA documents cited by the Senate Select Committee as attributing it a significant role in the ultimate coup.

(2) Support for political parties and groups—Again the Senate Select Committee's report on covert action in Chile itemizes support of parties and groups in Chile. These programs fall into three categories:

September and October of 1970: Money was given the "right-wing paramilitary group" *Patria y Libertad* "in an effort to create tension and a possible pretext for intervention by the Chilean military." This aid was continued indirectly throughout the Allende government. By July, 1973, this group announced it "would unleash a total armed offensive to overthrow the government."<sup>11</sup>

The Chile report found that "The issue of whether to support private groups was debated within the Embassy and the 40 Committee throughout 1972 and 1973."<sup>12</sup> In October of 1972 \$1.5 million was approved to support opposition groups. It is highly improbable that Mr. Shlaudeman, as DCM, was not privy to these discussions and the subsequent decision.

Following the 1973 municipal elections "there did appear to be a possibility that increasing unrest in the entire country might induce the military to re-enter the Allende government to restore order." Consequently "the 40 Committee approved a proposal granting \$1 million to opposition parties and private sector groups with the passage of the funds contingent on the clearance of the Ambassador, Nathaniel Davis, and the Department of State."<sup>13</sup> Although the coup occurred three weeks later and the funds were never passed, it is improbable that the DCM was unaware of the program.

It is important to understand that much of our support to violent and disruptive forces was given indirectly and under cover, precisely in order that diplomats such as Mr. Shlaudeman could make the sort of statements quoted above. The level of knowledge conceded by Mr. Shlaudeman requires him to have penetrated to the real purpose of the programs. In this connection, the Senate report concluded:

Given turbulent conditions in Chile, the interconnections among CIA-supported political parties, the various militant trade associations and paramilitary groups prone to terrorism and violent disruption were many. The CIA was aware that links between these groups and the political parties made clear distinctions difficult.<sup>14</sup>

#### II. EXTENT OF MR. SHLAUDEMAN'S KNOWLEDGE

As indicated above it is clear that Mr. Shlaudeman was aware of the major CIA covert action programs and must have therefore divined their purpose. This contradicts his testimony. For example:

"Despite pressures to the contrary, the U.S.

Footnotes at end of article.

Government adhered to a policy of non-intervention in Chile's internal affairs during the Allende period.<sup>16</sup>

"Senator SPARKMAN. In other words, you are telling us that you had no hand in the overthrow of Allende?"

"Mr. SHLAUDEMAN. That is exactly right, Mr. Chairman. To my knowledge, there was no U.S. involvement . . . I know nothing of any attempt to subvert anybody or overthrow Allende."<sup>17</sup>

At the same time Mr. Shlaudeman denies knowledge of anti-Allende activities and their purposes, there is evidence of his participation in policy-formulation to undermine the Chilean government;

"Senator BIDEN. Were you any part of making recommendations to the Administration that they (Chilean parties and media) were in danger?"

"Mr. SHLAUDEMAN. Obviously, I participated in formulating the reports in which these decisions were taken. I had nothing to do with the decision-making process."<sup>18</sup>

The record shows that the Embassy was often more eager to take action against Allende than was the State Department, and again it is implausible that the DCM was not involved, as he himself concedes he was.

In December, 1969, six months after Mr. Shlaudeman's arrival, the Embassy and the CIA Station in Santiago made a joint proposal for an anti-Allende campaign in the upcoming 1970 elections. The proposal was killed in Washington "because of the State Department's qualms about whether the United States should become involved at all."<sup>19</sup>

"On March 25, the 40 Committee approved a joint Embassy/CIA proposal recommending that 'spoiling' operations—propaganda and other activities—be undertaken by the CIA in an effort to prevent an election victory by Allende."<sup>20</sup>

On June 18, 1970, Ambassador Korry "submitted a two-phase proposal to the Department of State and the CIA for review. The first phase involved an increase in support for the anti-Allende campaign. The second was a \$500,000 contingency plan to influence the congressional vote in the event of a vote between the candidates finishing first and second."<sup>21</sup> Again it is unlikely that the DCM was unaware of his superior's plan to bribe the Chilean Congress.

In July, 1970 the CIA ended up helping ITT pass money to the National Party and to conservative candidate Jorge Alessandri. "The Station Chief informed the Ambassador that the CIA was advising ITT in financing the Alessandri campaign," but did not tell him about payments to the National Party.<sup>22</sup>

When attention turned toward bribing the Chilean Congress, "The funds were to be handled by Ambassador Korry and used if it appeared that they would be needed . . ."<sup>23</sup>

Between September 15 and October 24, 1970 the CIA promoted a coup by the Chilean military. Although the Ambassador and the State Department were explicitly cut out of this, Korry suspected that the CIA was "up to something behind my back" and directed Mr. Shlaudeman to investigate. "I questioned him and others closely and repeatedly as to whether they had discovered anything corroborative. No one could find any basis for suspicion."<sup>24</sup>

Korry was, however, "authorized to encourage a military coup, provided Frei concurred in that solution. At the 40 Committee meeting on September 14, 1970 he (Korry) and other 'appropriate members of the Embassy mission' were authorized to intensify their contacts with Chilean military officers to assess their willingness to support the 'Frei gambit'. The Ambassador was also authorized to make his contacts with the Chilean military aware that if Allende were seated, the military could expect no further military assistance from the United States.

Later Korry was authorized to inform the Chilean military that all MAP and military sales were being held in abeyance pending the outcome of the congressional election on October 24."<sup>25</sup> (Italics added)

### III. THE FAIRNESS OF HOLDING MR. SHLAUDEMAN TO ACCOUNT

As Deputy Chief of Mission, Mr. Shlaudeman was a senior member of the U.S. Embassy in Santiago. He tries to make a distinction between "formulating reports" on which decisions were based, and the "decision-making process" in Washington. With respect to those decisions, Mr. Shlaudeman has testified:

"Let me say that I certainly supported the decisions when they were taken, and I certainly thought at the time that there were good reasons for those decisions."<sup>26</sup>

"Senator BIDEN. In light of what you have learned since your post there, have you changed your view?"

"Mr. SHLAUDEMAN. No, I have not, Senator."<sup>27</sup>

Thus there is no desire on the part of Mr. Shlaudeman to disassociate himself from the course pursued by the decisionmakers in Washington in regard to Allende. His appointment is a reaffirmation at the highest level of our government that those policies are approved, unaltered, and that those who are identified with them, such as Mr. Shlaudeman, will be rewarded.

In other words, the authoritative and official disclosure of the destabilization program against Allende have not prevented the Administration from elevating one of the symbols of that program to responsibility for all of Latin America. It is clear that Mr. Shlaudeman was not a reluctant executor of the anti-Allende program. The evidence indicates the opposite, that he was part of an Embassy team that was pressing Washington for more activity than Washington was always prepared to endorse.

Finally, there is ample evidence here that Mr. Shlaudeman has not told the truth to congressional committees before which he has testified. He has conveyed the impression that the U.S. followed a policy of non-intervention in Chile when we were in fact, and to his knowledge, intervening deeply. He has then argued that we simply tried to help democratic forces withstand the pressure of Allende, when the facts demonstrate the opposite, that we actively promoted unrest and disorder to create tensions that would force Allende out.

If Mr. Shlaudeman did not understand these things that were going on all around him, then he should not be confirmed on grounds of incompetence. If he did understand them, then he has deceived the Congress. In either instance, his nomination should be rejected by the Senate.

## CARTER PROGRAM DISTORTS FULL ENERGY PICTURE, SUBSTITUTING POLITICS FOR FREE MARKET

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. McDONALD. Mr. Speaker, it is a rare day that the Atlanta Journal and Atlanta Constitution newspapers carry accurate and worthy news articles. Like many metropolitan newspapers, editorial views too often color the news articles; the editorial bias usually reflects attitudes counter to free enterprise economics, counter to limited governmental principles as in our initial Constitutional Republic, and counter to our Christian heritage. The editorial bias usually shows continued support for the forces of socialism, insolvency, and surrender. In most metropolitan newspapers, and most especially the Atlanta Newspapers Inc., support the forces which have led the charge in the four decades of America's retreat from greatness.

The excuse for these editorial views is that it helps sell newspapers. This is strange when the majority of Americans do not support the editorial trends in most metropolitan dailies. Perhaps the reasons for the editorial bias are not for such a simple reason as selling newspapers but rather a more sinister one.

With the above review in mind, Mr. Speaker, you can well imagine my pleasant surprise upon reading the presentation by R. H. Timberlake, Ph. D., on the subject of solving the energy crisis. This article appeared in the Atlanta Journal/Atlanta Constitution on May 21, 1977. This review of energy and economics is a masterpiece and should be read by every Member of Congress.

Not only is it a masterpiece on the technical details of the energy reserves status, it is an excellent review of basic economics. Midway through the presentation we read: "However, in the presence of inflation, an event wholly caused by government monetary-fiscal practices."

It is refreshing to read the truth on the subject of inflation when all of us have been forced to wallow in a sea of lies and nonsense for years.

Dr. Timberlake is a professor of economics at the University of Georgia, Athens, who teaches courses in money and banking principles, economic thought, monetary theory and policy,

and has written two books on money and banking.

The article follows:

CARTER PROGRAM DISTORTS FULL ENERGY  
PICTURE, SUBSTITUTING POLITICS FOR FREE  
MARKET

(By R. H. Timberlake)

The Carter administration's "energy program" opens yet another hole in the dike that restrains government intervention, and protects the constitutional rights of individuals.

Probably the most important element of this program is the administration's delusion of the public into believing total amounts of traditional energy sources—petroleum, natural gas, coal, and nuclear fuel—are nearing exhaustion, and an energy "crisis" is impending.

The facts of the matter are very different. Before discussing the facts, however, two concepts of energy "reserves" must be distinguished. One is proven reserves of a given energy source; the other is absolute reserves. Proven reserves are an economic phenomenon. They are the reserves that have been verified as commercially available within the time frame in which energy companies feel certain they can operate as cost-recovering enterprises. The proving of reserves is costly. It requires both real resources and an outlook of confidence and certainty toward the future operations of the enterprise. The energy industries, therefore, can only be interested in proving a limited amount of the earth's total energy capacities at any one time; and the more they are harassed by government regulations, restrictions and constraints, especially in the form of taxes and money price controls, the less interested they can be in proving future sources of commercially available reserves.

Absolute reserves are a geologic subject. They may be defined as the total amount of reserves in existence. Since no one has any good reason for proving absolute reserves, estimates for these values must be very problematic.

Another factor contributing to the uncertainty of their measure is current ignorance of what might be a recoverable energy process:

For example, geopressurized water. This water is at temperatures between 150 degrees and 180 degrees. It is trapped in deep sedimentary basins at high pressure. The pressure is created by methane, which is the main ingredient of natural gas. At least 375 years worth of natural gas at current consumption rates would seem to be certain of recovery from this source. (*Access to Energy*, May 1977.)

Other estimates for absolute reserves of conventional energy reserves are, for coal, about 3,000 years; for natural gas from ordinary sources, at least 1,000 years (*Wall Street Journal*, April 27, 1977); for petroleum, just from high-grade shale in the Green River area of Colorado, Utah and Wyoming, 2.6 trillion barrels, or enough for 300 years! (*D. T. Armentano, U.S. Energy Crisis: The Real Story*). This estimate does not include Alaskan oil, coastal oil from sedimentary rock basins along the Eastern and Western shores of the United States, or secondary and tertiary recoveries from "depleted" wells in the conventional oil-producing states. These sources would add at least another 100 years supply.

A final note on nuclear fuel reserves: At Oak Ridge, Tennessee, there are 200,000 tons of Uranium 238 stored and packaged in steel containers above ground. (*Access to Energy*, May 1977.) This material is what remains after Uranium 235 has been extracted. It can be bred into plutonium fuel by means of the liquid-metal fast breeder reactor that the Carter administration has arbitrarily declared "verboten" on the flimsiest of pretexts. If used as fuel, this packaged material

would supply the U.S. with energy at current rates of consumption for 100 years. And the remaining 3.5 million tons of as yet unmined uranium ore would supply U.S. needs for an additional 1,750 years, or until the year 3727!

These infinite quantities of energy sources only become "shortages" when government intervenes.

The "shortages" are shortages of proven reserves, not of absolute reserves. They appear most noticeably when government imposes money price controls on the purchase and sale of products. These policies have been especially destructive with respect to natural gas, where proven reserves between 1963 and 1972 declined from a 20-year supply to a 10-year supply. (See Robert B. Helms, *Natural Gas Regulation*, American Enterprise Institute.) Effects on U.S. production of petroleum have been similar if less dramatic.

When a ceiling is imposed on the money price of a product, it will, if effective, increase the flow of the commodity demanded and decrease the flow supplied. These results have largely been avoided by industries producing energy products, because energy companies have been able to produce higher quality products at lower prices over the decades when left unmolested by government butchers.

However, in the presence of inflation, an event wholly caused by government monetary-fiscal practices, the legally fixed money prices become lower real prices. Since 1967, for example, money prices generally have increased from 100 to 177. So if you paid \$.32 for a gallon of gas in 1967, you are paying the same real price today when the price is \$.57 a gallon. Thus, government price controls in the presence of government-induced inflation do not "stabilize" prices. They force real prices to go lower and lower. Since money costs in the affected industries are not controlled, and in fact have been significantly increased by government regulatory policies, real production both for the present and the future is actively discouraged. Each administration that comes to power in Washington takes its turn at making matters worse.

In truth, the problems of the economy are not economic but political. And the Carter energy program reflects this development. It is another example of government politicizing the economy. Consider the details. First, it calls for an additional excise tax on gasoline of 5 cents per gallon per year. This tax would increase the price of gasoline constantly over the foreseeable future. Yet, the restrictive price ceilings on gasoline and other petroleum products have been imposed allegedly to keep prices down. What kind of economic "philosophy" has the price being forced down and forced up at the same time? The tax would also return revenues to the government rather than to the beleaguered petroleum industry. The government would use these revenues to increase the bureaucracy and effect further counter-productive policies. The oil companies, on the other hand, who have been enjoined from absorbing any such "excessive" revenues, would use this money for exploration and development of more petroleum.

The second detail is the tax on "guzzling" cars. This imposition is the most insufferable kind of moralistic hypocrisy. It is outrageous chauvinism. Anyone who drives a larger-engined car has weighed the advantages and disadvantages to him and his family of using such a machine. He has considered the full consumption along with the greater safety, the greater durability, the greater comfort, the smoother ride, etc. All of these factors affect "efficiency." Efficiency is a subjective matter. It is not objectively determined by the President of the United States, nor by a board of ecologists, nor by a city council. It is a process of weighing up of competing benefits at the margin by in-

dividuals who have free market prices as guides for their decisions.

A much greater source of the "inefficiency" that Carter and his gauleiters could be concerned about is the use of elevators. Here is a machine weighing several thousand pounds frequently used to carry healthy people weighing only a few hundred pounds up (and even down!) a few floors. Virtually all passenger elevators that move less than five floors involve a complete waste of time and of electrical energy. In addition, they contribute to the debilitation of human physique. Yet the "concerned" politicians, ecologists, humanists and other Pharisees who drive their small-engined cars—which frequently have cost much more in total resources than the big-engined cars driven by "poor" people, never hesitate to step into an elevator and push the button that takes them from the third floor to the coffee lounge on the first floor. As if economy begins and ends with the cubic inch displacement of internal combustion engines!

Bushwah!

Another tax in the Carter program would be on domestic oil at the wellhead. Already, governmental policy has significantly discouraged domestic production by fixing the price of domestic "old" oil at only 50 percent of the price paid to foreigners on any oil. Now, the Carter plan would burden the oil industry with yet another tax, which would incidentally provoke a yet greater proportion of petroleum imports, and the proceeds of which would again go to government. The same argument applied to the tax on gasoline at the gas pump and to the tax on large-engined cars also applies here: The revenue would be used to enhance government bureaucracy, prices of petroleum products would be further discouraged.

Gasoline rationing authority, also asked for by the administration on a stand-by basis, would surely be forthcoming. Here is another example of counter-productive inefficiency that would further extend the role and scope of government bureaucracy.

In a free market, prices ration goods. Each person then can choose the mixture of goods and services that best fits his needs; and he is surely a better judge of these needs than an official Pooh-Bah in Washington.

Some people have argued that "poor" people—this ubiquitous category that has taken the place of widows and orphans in politician prose—could not "afford" higher prices on gasoline or other energy products. If they could not, why are three or four new taxes being proposed that would significantly raise prices, the alleged rebates notwithstanding. In any case, neither the petroleum industry, nor the medical industry, nor the automobile industry, nor any other industry can afford to act like a private charity without jeopardizing its existence. If people are "poor," then they can become "rich" by getting jobs and producing something other people want.

(Here, too, government policies in the form of minimum wages and welfare payments have made matters worse by discouraging employment and production, and by encouraging profligacy and idleness. Government policies in the form of income tax laws then discourage production further by legally stealing the fruits of people's efforts.)

In no case, however, can private industry be shouldered with welfare responsibilities that result from public policies. If people are truly poor and their poverty is made a public issue, it must be tackled as a general problem of low income, not as the inability to afford this or that particular good or service.

The Carter program is totalitarian. It obfuscates and distorts the real facts of energy logistics, energy prices, and energy profits. It is yet another attempt to substitute politics for the free market. It is grossly counterproductive. It is omnipotent busy-body government at its worst.

At the very least, the Congress should reject it and allow government to make its maximum contribution to production by getting out of the way. Laissez faire policy toward the U.S. energy industry has resulted in unequalled production and benefits at every level of society more than 100 years. Why abandon the principles upon which this splendid record was achieved?

## NEW YORK TIMES VISITS GUAM

### HON. ANTONIO BORJA WON PAT OF GUAM

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. WON PAT. Mr. Speaker, the May 22, 1977, New York Times newspaper carried an excellent article by Andrew H. Malcolm in their travel section which explores the many wonderful charms of Guam.

The article noted that Guam is a paradise for the travel-weary tourist with our wide beaches and warm sun. Guam also has the advantage of being a duty-free port. Our prices on all sorts of cameras, cut glass, jewels, and other items are lower than almost any other place in the Pacific. Americans returning home can bring from Guam twice the duty-free items into this country—\$200 per person as compared to \$100 from other areas.

Guam has been better known as a military bastion rather than a thriving civilian community. I hope this article will dispel some of the lingering myths about Guam and its image.

The people of Guam are known for their hospitality. We give tourists a warm American welcome that they will long remember and cherish. I include the text of the New York Times article to be inserted in the CONGRESSIONAL RECORD at this time for the enjoyment of my colleagues:

#### A NEW INVASION OF THE ISLAND OF GUAM— BY TOURISTS

(By Andrew H. Malcolm)

The full name of the travel agent has been lost in the misty pages of history, but the man who booked Ferdinand Magellan into Guam for four days and three nights—"Arrive March 6 by Ship, Depart Same, March 9, 1521"—knew exactly what he was doing.

He undoubtedly sold the island not as a destination in itself: It is, after all, many leagues from virtually everywhere that is inhabited. But Guam did make a convenient mid-Pacific stopover, a place to rest on the way to somewhere else, to stock up on inexpensive goods. Moreover, the water was clean, the natives festive and fresh fruit abounded.

A lot of visitors have come and gone since that Portuguese explorer checked out of Umatac Bay (item: a few hundred thousand exchanged unpleasantly here during World War II) and a lot of things have changed. On the beach where Magellan first set foot, for example, Loling's hamburger stand stays open later on Fridays now. But there is a kind of continuity to the history of this 216-square-mile United States territory 9,000 miles southwest of New York City.

The roads, generally paved are narrow, winding and largely unmarked, but there aren't that many of them. The beaches are quiet except for chubby children who build tiny sandforts where real machine guns once

chattered. The jungle is virtually unexplored now that the last—presumably—Japanese G.I. straggler has surrendered. The surrounding waters are alive with colors and creatures curious to see the two-legged denizens who wear masks. The hillsides are rolling and almost shockingly green, and the weather is monotonously magnificent. In fact, Guam may be the only place in the world where a mellow-voiced television newscaster could describe the day's 79-degree water, the 81-degree air and the 15 mile-an-hour trade winds and then say with a straight face, "Tomorrow's weather will improve."

Usually, however, the world hears of Guam, Micronesia's largest island—it is nine times the size of Manhattan—after storms of various kinds strike the place. Last year Super Typhoon Pamela blasted through, giving mid-May visitors two or three spectacular sentences for their postcards. In recent years the bombing of Vietnam made the phrase "Guam-based B-52's" an international cliché, and then there was the airlift of Indochinese refugees, who temporarily doubled the island's 100,000 population.

The Guam Visitors' Bureau (P.O. Box 3520, Agaña, Guam 96910) has labored to make news of the territory's non-disaster, non-military events and attractions. So far, it has been more successful in drawing the Japanese (Tokyo is only 1,500 miles north), whose group tour throngs of awkward newlywed couples can be seen dining, strolling or taking snapshots amid the palms.

Some 13,000 Japanese, Guam residents and American soldiers died in the war's end bombardment and invasion of Guam. Yet today the three groups mingle amiably. About 45,000 of Guam's 250,000 visitors this year will be Americans; some 175,000 Japanese. One visitor, Gary Green, of Lexington Park, Md., says of the island, "It's the same as Hawaii, only cheaper and not crowded."

The tourists ride by the overgrown caves, follow signs that say, "This way to Japanese bunker" and pose for photographs by once-deadly coastal-defense guns now aimlessly aimed at resort hotels across Tumon Bay. One rock-enshrouded machine-gun nest sits just outside the Hilton's Genji Japanese Restaurant. The bunker's walls carry such graffiti as "Yoshio + Kazuko 1976."

Local businessmen want more Americans to visit this American territory where the dollar is worth a dollar and postcard postage is domestic rate. "We're not trying to sell Guam as a destination in itself," says Martin Pray, head of the Visitors' Bureau. "After all, we're a long way away from other places, but Guam is a good English-speaking stopover in mid-Pacific. We've got good hotels, duty-free shopping, native foods and it's a good place for hamburger-hungry Americans fleeing Asia's crowded, dirty cities to rest up on the way home."

Pray emphasizes that a layover in Guam is free. Passengers, on Pan American's daily trans-Pacific flight, for example, can stop off there en route to or from Manila with no additional charges on the \$598 one-way economy fare from San Francisco. The one-way San Francisco-Guam economy fare is \$400, only \$125 more than the mainland to Hawaii trip, although Guam is a seven-hour flight beyond Walkiki. Because of the distance and the International Dateline, the westbound Pan American flight arrives in Guam at 3:05 A.M., a sleepy, street lit-time that to the annoyance of local businessmen, discourages disembarking. Eastbound, the Pan American flight from Manila or Hong Kong arrives at 10 P.M. The island is also served by Continental Air Micronesia, whose twin 727's atoll-hop from Honolulu to Saipan via Guam every other day. From Japan Pan American and Japan Air Lines provide daily service.

For hungry travelers, the island has its share—perhaps even more—of McDonalds,

Kentucky Fried Chicken and Pizza Hut establishments, enough to satisfy even a Portuguese sailor 110 days out of his last South American port. But a variety of local restaurants, especially those specializing in spicy Spanish-style fare, are just a taxi ride away from the hotels. In Micronesia where life is largely informal and jackets and ties look funny, visitors to Papagayo's may find diners erupting in song or, at King's intently watching a local magician make someone's plate disappear for a moment.

Seven major hotels provide a total of more than 2,000 rooms, reservations are essential. For crowds on Asian holidays, Americans seem to prefer the tall Hilton or the Continental's separate bungalows (run by the airline), if only for the ease of reserving through their local Hilton or Continental office. Rooms range from \$30 to \$45, depending on the view (but add 10 percent local tax for the real cost). Almost all the hotels line Tumon Bay, a reef-enclosed indentation that at some low tides seems to contain more snorkels than fish. One hotel sign warns: "Do not go over the reef. There are sharks and also a strong current. It is very dangerous."

However, farther out, and elsewhere along the 30-mile-long coast, experienced swimmers working from boats with seasoned guides can safely find colorful coral and legions of sea life to watch and catch year round. Billfish and tuna are best in late summer, local experts say, and mahi-mahi are most plentiful between November and June. A record blue marlin, weighing 1,153 pounds, was caught off Guam in 1969. It remains greet travelers in the airport's new customs area.

Snorkeling and fishing equipment rental, as well as information on charter boats and net fishing, are available at the island's three marine specialty shops: Marianas Divers, Cora Reef and Marine Center and International Divers ("Our business is going under"). Guam has two public golf courses and numerous tennis courts, including some at the Hilton. There is sailing at the Marianas-Yacht Club and two-hour horseback tours in the jungle through the MJ Academy, the island's best—and only—riding stable. For those inclined to wagering, there are dog races and cockfights, both of which are legal, although on Guam such contests would probably take place even if they weren't.

In the evening the hotels have disco lounges or Polynesian dinner shows. In downtown Agaña, the capital, and Tamuning, two towns separated only by a sign, an array of bars and massage parlors offer a different kind of menu. For Japanese visitors, one very popular tour-bus stop is the X-rated movie house where gaggles of foreigners giggle and gawk at the uncensored activity, forbidden on film in Japan, on the screen.

Although these two towns, both five-minute cab rides from most hotels, form the island's commercial center even containing branch offices of two New York City banks, Chase and City bank, their single strip of gas stations, clothing shops, drug stores and drive-ins offers little of interest that can be found in, say, Paramus, N.J.

However, Guam is a duty-free port which means substantial savings on items like jewelry, watches, perfumes, liquor and cigarettes. And for Americans there is a little-known bonus. Due to legal quirks, Americans returning to the mainland may take through customs there \$200 worth of goods purchased in Guam without paying duty—a doubling of the standard limit.

Given a bit more time, effort and money, there is another Guam to visit the non-neon island of sleepy villages, quiet roads and empty beaches dwarfed by towering green hills. A photographer's haven, this Guam offers glimpses of previous eras that have swept across Micronesia's 2,142 islands. Rental cars are available from Avis, Hertz and Na-

tional, but be sure to specify in advance a car with air-conditioning, which is not standard equipment on the island. Drivers should beware of the rains, which can come at a moment's notice and end just as quickly. As one airport sign puts it, "Attention Valued Customers: The roads on Guam are very slick when wet—just like grease."

Take the west coast road south past the invasion beaches at Asan. There, in the shadows of the cliffs where Japanese gunners poured down murderous fire, visitors can also see battered metal barracks that once housed Americans wounded in Vietnam and then plane-loads of frightened Indochinese refugees, who hung their laundry out to dry in the bright tropical moonlight. Many of the buildings are mere hulks now, torn open like sardine cans by the 200-mile-an-hour winds of last year's typhoon.

From a hill overlooking the Naval Air Station one can see the cracking cement of Orote Point, an abandoned Japanese Zero field where Comdr. Asachi Tamai led 3,100 screaming soldiers in a suicidal charge against advancing American marines on July 26, 1944. Thirty-one years later the same site was seen on the world's television sets as a sprawling tent city of 40,000 Indochinese.

Nearby in Apra Harbor is a major dock facility for the United States Pacific Fleet; watch especially for the long, back cigar-shaped vessels, missile-equipped nuclear submarines, emerging for crew changes after 60 days' patrolling under the ocean. On clear days binoculars may also pick up the ubiquitous Soviet ship that stands off the island carrying more antennas than seem necessary to catch fish.

From Agat Beach, another landing site, the road twists on into the hills for a tropical sunset panorama that rivals in colorful spectacle anything seen from Waikiki's crowded islands. Sprinkled along the road are Guam's 21 villages where fiestas are honored, chickens patrol the streets and church bells chime from white stucco steeples.

Each community has its own saint whose annual day provides yet another excuse for a food-laden fiesta. Other events requiring similar celebrations are American holidays, weddings, Guamanian holidays, births, religious holidays, trip departures, trip returns, historic holidays such as Magellan Day, high school graduations, college graduations and nice Saturday evenings.

One need not speak Chamorro, a kind of island Spanish, to enjoy such Guamanian dishes as red rice, finadene (a sauce hotter than August in Agat) barbecued chicken and pig or shrimp or chicken and shrimp kelaguen, which also contains lemons, onions, peppers and coconut meat.

Of course, Guam is not for everybody; some believe it has less than meets the eye. For instance, hardworking businessmen in a hurry may experience terminal frustration: It is speculated that "haf' adai," the local equivalent of "aloha," is not a friendly greeting at all but describes the amount of time devoted to work. The candles in the drawers of every Hilton room are not there for birthday celebrations: brief power failures are frequent. The telephone system rarely works. Some subscribers have been known to cheer when a call goes through; the glee subsides when it's the wrong number.

Little of this affects the relaxing vacationer, however, and it seems unlikely that Guam's critics have ever gone beyond the faint phony glitter to talk with, or rather be talked at, by Maka Kinata, who works at Loling's beachside stand in Umatac, where she expertly dispenses hamburgers and tourist information, both with relish.

"You see, Magellan was going around the world," says Miss Kinata, "sailing from South America to the Philippines, but he needed, like, supplies for his men, you know, so he

decided to discover Guam, although people had been living here for a long time before then. He landed right over there by the boat ramp. Well, anyway, so he took over, you see, for I think it was four days or so and he burned down some houses and killed some people 'cause he thought they stole his row-boat. But he left. They all do. And he went on somewhere outside and some guy killed him. You want another Coke?"

### STOPPING NUCLEAR PROLIFERATION

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. BINGHAM. Mr. Speaker, yesterday the House International Relations Committee took an important step in our continuing effort to control nuclear proliferation. By a unanimous voice vote, 24 committee members voted to support President Carter's proposed cuts in the budget for the Clinch River breeder reactor—CRBR. The committee action came on an amendment I offered to the ERDA fiscal year 1978 authorization bill, H.R. 6796, which we were considering under a sequential referral from the Science and Technology Committee.

The International Relations Committee reported out H.R. 6796 with the committee amendment which would terminate the Clinch River project by authorizing \$33 million for completion of the design studies, but no moneys for construction. There will still be \$337 million in the ERDA bill for continued research and development of alternative liquid metal fast breeder reactor program. The funding cuts supported yesterday by the International Relations Committee were strongly favored by the White House.

The primary reason for stopping the CRBR project is to send a strong signal overseas that the United States is serious about its desire to avoid moving to a "plutonium economy" in which plutonium-fueled reactors such as the CRBR would be used for power production. Already the U.S. deferral policy has brought encouraging results overseas: the West German Parliament has frozen funding of their breeder program, the Dutch government is evidently seriously reassessing its commitment to the breeder and the French are taking a long look at their entire nuclear energy production and export program.

It is also important to note that the cuts in the CRBR program will save the taxpayers nearly \$150 million without making any significant sacrifice in our energy program. For, as Dr. James Schlesinger noted in a recent letter to me, "The Clinch River program is of questionable value for research and development." The complete text of Dr. Schlesinger's letter follows my remarks.

Mr. Speaker, I am confident that the Congress is prepared to endorse strong legislative measures to combat the proliferation of nuclear weapons capability. I believe the Congress will reject any energy program which would make com-

merce in nuclear weapons grade materials—such as the plutonium fuel which would be used in a facility like the CRBR—an everyday occurrence. The unanimous vote in the International Relations Committee yesterday indicates the committee's strong desire to support the President's antiproliferation efforts. A contrary vote by the Congress—to go full speed ahead with the Clinch River breeder reactor—would cast doubt on the sincerity of the United States in this matter and would effectively derail the President's efforts to prevent the spread of nuclear weapons.

I am submitting herewith for the Record the text of Dr. Schlesinger's letter as well as two news articles from the New York Times and the Washington Star on the International Relations Committee action:

THE WHITE HOUSE,  
Washington, May 23, 1977.

HON. JONATHAN BINGHAM,  
House of Representatives,  
Washington, D.C.

DEAR MR. BINGHAM: When you called the other evening, you asked whether the President had wavered on his decision to defer indefinitely the commercialization of the Liquid Metal Fast Breeder Reactor (LMFBR) technology and to cancel the construction of the Clinch Breeder Reactor.

I have talked with the President and I can assure you that the President continues to hold to these positions. He believes the Clinch River Breeder Reactor is unnecessary for the maintenance of the U.S. nuclear research and development program. The Clinch River Breeder Reactor is a highly expensive program designed to give momentum to the commercialization of the LMFBR. This effort is superfluous at this time and the Clinch River program is of questionable value for research and development.

The President believes that continuing with the Clinch River Breeder Reactor program is unwise. He believes it is in the best interest of the United States and of the world to minimize the risk of nuclear weapons proliferation. He believes that now is the time to examine alternative approaches to the use of nuclear energy other than that represented by the Clinch River program.

The President has proposed to retain the base LMFBR program. This will fully fund the Fast Flux Test Facility (FFTF) and provide the necessary research and development support for the LMFBR, for alternative approaches to breeder reactors, and for other advanced nuclear technologies. The President believes that no commercialization should take place until we have the breeder technology or other advanced nuclear technology developed in such a way as to provide assurance of minimizing the risk of nuclear proliferation.

Sincerely,

JAMES R. SCHLESINGER.

[From the New York Times, May 24, 1977]  
CARTER'S OPPOSITION TO TENNESSEE BREEDER  
REACTOR

(By Edward Cowan)

WASHINGTON, May 23.—In a counterthrust at pro-nuclear forces in Congress, the White House reaffirmed today that President Carter opposed construction of the Clinch River breeder reactor at Oak Ridge, Tenn.

In a letter meant to rally support for the Administration on an expected vote tomorrow in the House International Relations Committee, James R. Schlesinger, the President's chief energy adviser, told Representative Jonathan B. Bingham, Democrat of the Bronx, that the Clinch River demonstration

project was "highly expensive" and "superfluous at this time."

As Mr. Carter did last month, Mr. Schlesinger linked cessation of the plutonium-breeding project with the Administration's efforts to prevent more countries from developing nuclear weapons systems based on plutonium. Mr. Carter has renounced such power for the United States, to the disapproval of some utilities and manufacturers of nuclear power reactors.

The breeder reactor is so called because it would take an initial charge of uranium and plutonium and, while producing electronic power, convert or "breed" more plutonium from the charge. Plutonium itself is a reactor fuel. The basic case for the breeder is that it would assertedly expand by 50 times the energy yield of uranium. Plutonium can be fashioned into nuclear weapons, although there has been debate about whether it can be rendered nonexplosive by mixing it with other materials.

Opponents of breeder reactors feel threatened because the House Science and Technology Committee has tentatively authorized \$150 million in breeder funding for next year. Mr. Carter requested \$33 million for winding up the Clinch River project. The House Appropriations Subcommittee has tentatively written \$33 million into the draft bill that would actually make the money available, but that figure could be raised if the higher authorization finally prevails.

The Natural Resources Defense Council has accused the White House of falling to lobby vigorously for the reduced funding and has maintained that some officials of the Energy Research and Development Administration have tried "to undercut" Mr. Carter. Breeder opponents contend that a vote for the \$33 million in the International Affairs Committee, combined with strong White House lobbying, would induce the Science Committee to go along with the lower figure.

The Natural Resources Defense Council, an environmental lobbying group, said in a memorandum that H. Hollister Cantus, the energy research agency's chief of Congressional relations, "has made several attempts in the House to undercut the White House position" on the breeder. In replying, Mr. Cantus expressed puzzlement and said that in the Science committee's debate on the authorization bill "we were dealing with every single member of the committee we could get our hands on."

[From the Washington Star, May 25, 1977]  
**PANEL OKS KEY SEGMENT OF CARTER  
 NUCLEAR POLICY**  
 (By John J. Fialka)

The House International Relations Committee has approved a key piece of President Carter's nuclear nonproliferation policy, voting to cut \$117 million out of the nation's breeder reactor program.

The cut, approved by a unanimous voice vote yesterday, sets the stage for a fight on the House floor on what appears to be the most controversial project in the nation's domestic nuclear power program, the prototype breeder reactor planned for a site on the Clinch River near Oak Ridge, Tenn.

The move, based on an amendment sponsored by Rep. Jonathan Bingham, D-N.Y., provides only \$33 million for the Clinch River project, enough to complete planning designs and terminate the project, according to Bingham.

The vote came after the two chief architects of Carter's nonproliferation policy, Robert W. Fri, acting administrator of the Energy Research and Development Administration, and Deputy Undersecretary of State Joseph Nye, testified that the United States must postpone the breeder's development. That, they said, would show other nations that the United States is serious about find-

ing ways to avoid widespread use of plutonium as nuclear reactor fuel.

Breeder reactors are designed to create more plutonium fuel than they consume. Widespread use of the technology, the Carter administration argues, would lead to serious world security risks because plutonium, while useful as a nuclear fuel, is also the principal material used for nuclear weapons.

Fri said the United States must defer work on the breeder in order to "buy time" and to explore other types of reactors to make sure the United States is adopting the safest technology, technology which may serve the nation's energy needs for hundreds of years.

Because Britain, France, Germany, Japan and the Soviet Union already are working on breeder programs, Nye was asked whether "the horse was already out of the barn," by one committee member who wondered what purpose halting the Clinch River project would serve.

"It matters how many horses are out of the barn," Nye explained, asserting that until the United States curbs its own plutonium usage it will not be able to convince other countries to do so.

Support for the President's policy on the breeder is by no means unanimous in the House, however. Last week another committee with jurisdiction over the ERDA budget, the House Committee on Science and Technology, voted to approve full funding for the Clinch River project, pending further hearings on the subject.

Once the House finishes the ERDA budget, the removal of funds for Clinch River will face further opposition in the Senate. Sen. Frank Church, D-Idaho, a senior member of the Foreign Relations Committee, has come out against Carter's policy.

#### HMO'S—BETTER HEALTH CARE AT LESS EXPENSE

**HON. DONALD M. FRASER**

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. FRASER. Mr. Speaker, rising costs for employees' health insurance are prompting businesses to form or join health maintenance organizations as an alternative to conventional health insurance. Businesses are finding that their employees are getting better health care at less expense under prepaid group plans, both in terms of benefit costs and in sick time lost.

As one example, the National Association of Employers on Health Maintenance Organizations in Minneapolis, founded less than a year ago, has 117 member companies interested in creating or working with HMO's.

The Business Week article which follows takes note of a growing trend toward company health plans:

[From Business Week Magazine,  
 May 30, 1977]  
**CONTAINING THE COST OF EMPLOYEE  
 HEALTH PLANS**

Byrum E. Tudor, director of employee benefits for R. J. Reynolds Industries Inc. in Winston-Salem, N.C., used to worry a lot about the rising cost of the company's health insurance program—20% higher each year, with no end in sight. "We had no control over our health insurance system whatsoever," Tudor says.

Today Tudor feels a great deal better.

Reynolds has gone into the health care business on its own, competing successfully with its long-time health insurance contractor, Blue Cross. Some 10,000 employees and their family members have chosen the company's health care program over their former insurer and 13,000 are on a waiting list. Moreover, after less than a year, RJR reports that the program costs less per employee than Blue Cross premiums for comparable coverage.

The program that erased the furrows from Tudor's brow is the Winston-Salem Health Care Plan Inc., one of some 180 health maintenance organizations (HMO's) that provide 7 million subscribers with a comprehensive range of health services for flat monthly fees. Family members get treatment for everything from junior's sniffles to dad's coronary arrest in or out of a hospital. Their monthly fee covers all charges. Long theoretical alternative to conventional health insurance (and, in a few areas, a sturdily functioning one), HMOs have suddenly become the country's hottest concept in health care, thanks largely to business interest. And while RJR may be the only corporation to run an HMO exclusively for its employees, HMO's are being talked up in board rooms from coast to coast—most recently, and fervently, in Detroit, where Ford Motor Co. has backed a feasibility study by experts from the big brother of all HMOs, the 3.1-million-member nonprofit Kaiser Foundation Health Plan.

#### A LENGTHENING LIST

Companies that already offer the HMO option to their employees include the Big Three auto makers, American Telephone & Telegraph, General Mills, Dow Chemical, Bechtel, Alcoa, Sherwin-Williams, Sears Roebuck, Xerox, IBM, Sun Co., Bell & Howell, and a lengthening list of others. U. S. Steel, J. C. Penney, and American Can have joined the list just this year. PepsiCo plans to offer the option within the next few months.

Says Lawrence P. Carrington, manager of planning and development at AT&T: "HMO's are doing the job for us that we wanted done." AT&T began offering the HMO option back in 1972. The 8% of its 75,000 employees who chose it, says Carrington, "are probably getting better health care than the ones who didn't, at less expense to AT&T both in terms of benefit costs and in sick time lost."

Carrington's remarks are typical. Companies that offer HMO membership report almost universally that the system controls costs by drastically cutting the number and length of hospital stays; first, because its emphasis on preventive care produces fewer seriously sick patients and, second, because the flat-fee formula discourages doctors from hospitalizing patients unnecessarily or keeping them hospitalized longer than necessary. Some HMO groups log half the hospital days of comparable insured groups. Employers also like the fact that prepaid plans enable them to budget health care costs to the penny. And—the clincher for many companies—as the traditional health insurance providers raise their rates by as much as 50% a year, the cost advantages they formerly enjoyed over most HMOs are narrowing or disappearing.

#### FAVORABLE TREND

The situation varies plan by plan. Health Care Louisville Inc. in Kentucky charges \$72.90 a month for family coverage, higher than the Blues' rate of \$62.95, while the Rutgers Community Health Plan in New Brunswick, N.J., charges \$60.69, \$12 below the Blues' rate. But the long haul seems to favor the HMOs, whose costs are rising more slowly than those of the insurers. Kaiser's John J. Boardman Jr. believes that, on average, "the cost lines have crossed during the past two years." In northern California, Kaiser undercuts the Blues by 20% or more.

As the country's biggest and best-known HMO, Kaiser has received so many industry requests for advice that it recently created a management consultant firm, Kaiser-Permanente Advisory Services, with Boardman as director. Ford contracted with the group, says Jack K. Shelton, manager of Ford's employee insurance department, because company health care costs were doubling every five years, to the current annual total of \$460 million, and a national study had shown that HMO costs averaged significantly below those of conventional Blue Cross and Blue Shield plans. The 5% of Ford's own employees who belong to HMOs (including one in Detroit) cost the company less than those covered by the Blues, says Shelton. If Ford gets the go-ahead, he says, the auto maker will back the creation of a second Detroit-area HMO.

#### MANDATORY ALTERNATIVE

Within the next few years, the company that does not offer its employees the opportunity to join an HMO will probably be the exception rather than the rule. Under the "dual option" provision of the 1973 HMO law, every company with 25 or more employees must offer HMO membership as an alternative to its current employee health insurance plan if a federally qualified HMO exists in the vicinity. Congress set this requirement to help foster the growth of HMOs, protecting employers from being penalized for their foster-parent role by asking them to pay only the sum they normally paid for health insurance if the HMO membership fee ran higher. The employee himself would pay the difference.

But HMOs, potentially a \$5 billion industry, failed to grow beyond their established 5% of the market because the 1973 law contained a Catch-22 provision. It demanded that federally certified HMOs provide so many services—ophthalmology, mental health care, dentistry for children—that few HMOs could qualify. Any that tried would wind up being far too expensive to compete with conventional insurance.

Last June Congress amended the law, reducing HMO service qualifications to manageable proportions and easing enrollment requirements that might have stuck HMOs with an outsize load of elderly and infirm members. Companies did not even wait for President Ford to sign the bill last fall. The National Association of Employers on Health Maintenance Organizations (NAEHMO) held its founding meeting in Minneapolis in July, and the business campaign to promote HMOs was under way.

Today the Health, Education & Welfare Dept. has certified only 30 of the nation's 180 HMOs, but additional ones are seeking certification and employers, consumer groups, and even traditional health insurers are announcing plans for new groups. Less than a year after its formation, the NAEHMO has 117 member companies interested in creating or working with HMOs.

#### COST CONTAINMENT

The companies join, says Ruth H. Stack, executive director, both because of the dual option requirement and out of "a very real concern about health costs, period." Under conventional health insurance, NAEHMO member companies experienced an average annual 23% increase in their health care packages during the past two years.

Traditional insurers, who can spot a trend as well as anyone else, have also boarded the bandwagon. The Health Insurance Association of America reports that 22 insurance companies are involved in 50 HMOs in 25 states, and the Blues sponsor, administer, market, or have some other link with 107 HMOs. Insurers say they see no conflict between their promotion of traditional plans and their promotion of HMOs. In Rochester, N.Y., the Blues simultaneously underwrite

and manage two HMOs and sell standard health insurance. "We provide the community's mechanisms for paying for health care, leaving the choice to the public," says Donald Robertson, president of the Rochester Blue Shield.

Both HMOs are prospering with a combined membership of 110,000 in a field where 30,000 members are usually considered the breakeven point. A third Rochester HMO fell by the wayside.

This high breakeven point represents the HMOs' major obstacle and also explains their need for well-heeled sponsors. Without solid financial backing, the plans face the circular dilemma of attracting members fast enough to pay the high startup costs of acquiring the staff and equipment that will attract members. As a result, only a few HMOs have done more than squeak by. Some 90% of all HMO members belong to only 20 plans, and those 20 tend to have substantial patrons. Typically, the United Auto Workers founded Detroit's 78,000-member Metro Health Plan and ran it for five years before turning it over to the Blues. The Kaiser plan alone accounts for almost half of HMO membership, 2,617,000 in California and 483,000 in four other states.

The Kaiser Foundation, the HMO everyone knows, was founded in 1933 by industrialist Henry J. Kaiser, originally to provide his employees with medical facilities at construction sites that lacked them. The plans took their characteristic form, says Dr. Sidney Garfield, one of the planners, because the men working on their design rapidly discovered that "much of the high cost of medical care was due to waste resulting from poorly planned facilities, insufficient coordination between physicians and the institution in which they worked, and insufficient coordination between physician and physician. The simple solution was to bring physicians into coordinated group practice, operating a medical center geared to serve them efficiently."

#### SALARIED DOCTORS

Kaiser expanded during World War II, opened its rolls to outsiders in 1945, and the rest is history. The foundation adds several new centers each year, paid \$80.5 million for capital expenditures last year, and employs 3,137 salaried doctors—who, like most HMO doctors, earn somewhat less than many of their peers in private practice, but follow their calling undistracted by paper work and call their lives their own after office hours.

What is civilized living for doctors, however, is a marketing problem for most HMOs. Many potential members fear that they will encounter an unfamiliar doctor in an emergency. HMOs have tried to accommodate this reaction by introducing some flexibility into scheduling. They also stress that private-practice doctors, too, sometimes refer their patients to substitutes.

Realistically, however, the private-practice doctor loses money with every substitution and the HMO doctor usually does not. Against this must be balanced the fact that the private-practice doctor usually makes money with every visit and procedure, necessary or unnecessary, and the HMO doctor does not.

Since HMOs come in a variety of forms, some doctors have it both ways. As participants in foundation HMOs, doctors may serve some patients on a prepaid basis—usually drawing a lesser "fee" for each visit from the foundation and sharing whatever gains or losses remain at yearend with their colleagues—and treat other patients on a conventional fee-for-service basis.

The typical HMO, however, resembles any other suite of offices occupied by a large group of physicians practicing different specialties. Often it includes laboratories. Unlike the Kaiser plan, which runs its own hospitals, it refers members to hospitals and other

special facilities under contract to the HMO. Doctors have hospital staff privileges, just as they would in private practice.

#### A PLAN EVOLVES

RJR Industries, which certainly never expected to find itself running an HMO, embarked on the path to the Winston-Salem Health Care Plan five years ago when it decided to investigate the causes of rising health insurance costs. Its task force made one discovery after another. Because of the shortage of doctors in the area, some shortage of doctors in the area, some 45% of the company's 14,000 employees simply reported to hospital emergency rooms for medical care, says RJR's Tudor. "It cost something like \$45 for those people just to walk through the door," he adds. Moreover, some employees remained hospitalized for suspiciously long periods. Tudor recalls one seven-week stay for a condition that normally requires 10 days' hospitalization.

Turning to the search for solutions, officials visited some HMOs and, says Tudor, "after that, it wasn't a question of whether or not this was our alternative, but how to start one." The Winston-Salem Health Care Plan opened last summer with much hoopla and 6,000 members, all it could accommodate immediately of the 23,000 employees and dependents who asked to join. It is still interviewing doctors—1,000 have applied at "highly competitive salaries," says Tudor—and expects to have facilities for 19,000 members by yearend. The company counts on recouping its \$2 million in startup costs within two years. Meanwhile, Tudor says, "The facility is giving our people high-quality medical care for about half the price of Blue Cross." Equally important, he says, "The plan permits us some control over the quality of what we pay for."

In Minneapolis, officials of General Mills Inc. express similar enthusiasm. The company gave its employees the HMO option four years ago, has 57% of its work force signed up today, and reports happily that the employees who belong to HMOs average half the hospital days of the other employees.

#### OTHER APPROACHES

But not all company reports are upbeat. The three auto makers in Detroit note that the percentage of their workers enrolled in the Detroit Metro Health Plan has declined as workers moved to the suburbs. And in Akron, Goodyear Tire & Rubber Co. feels that active involvement in local health delivery systems may do more to keep down costs than sponsorship of HMOs in areas where health care capacity exceeds demand.

Not even Tudor believes that HMOs are likely to replace all the employer health insurance, which covers 140 million workers and their dependents. But most observers would agree with him that they will inevitably play a large role in companies' efforts to control employee health care costs because of their built-in bias toward economy.

"The biggest asset a hospital or doctor has is sick people," says Tudor. "The biggest asset an HMO has is healthy people. HMOs reap economic rewards for keeping people well. That's why they work for business."

#### IN RECOGNITION OF DICRAN B. BARIAN OF THE CONGRESSIONAL RESEARCH SERVICE

HON. CHARLES ROSE III

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. ROSE. Mr. Speaker, I would like to call the attention of my colleagues to

the outstanding and dedicated service rendered to them by Dicran B. Barian, head of the legislative documentation section of the American Law Division of the Congressional Research Service, Library of Congress, upon his retirement from Government service on May 27, 1977.

Dic Barian, who had served as a Marine Corps and Navy Judge Advocate for many years, came to CRS in 1972 to head the bill digest, terminating programs, legislative history, and voting records units of the American Law Division. He has devoted countless hours to improving all these services rendered to Congress and has been instrumental in advancing the automation of legislative data available to the Congress through the Library.

It is with great pleasure I describe to the Members of the House the dedication shown by Dic Barian and extend our warmest wishes to him on his retirement.

#### SOMETHING WORTH READING

### HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. PICKLE. My colleague, MICHAEL HARRINGTON of Massachusetts, and I do not agree on many issues. However, we have agreed that the following piece by the distinguished economist Walt Rostow presents with great commonsense and sympathy a helpful framework for discussing solutions for our regional and national economic problems.

Representative HARRINGTON and I hope many of you will take the time to read Dr. Rostow's article, which, I should note, has been shortened from a longer address:

#### A NATIONAL POLICY TOWARDS REGIONAL CHANGE

(By Walt Rostow)

I

I shall try, first, to explain the origins of the present problems and prospects of the major regions.

The two phenomena to be explained are why the South and Southwest have been narrowing the historic gap in real income per head between the North and the South; and why the future prospects of the South and Southwest appear to be more promising than the prospects of the older industrial regions of the North.

The first phenomenon flows from the tendency of late-comers to modern economic growth to catch up with those who began earlier.

The two basic reasons for this pattern are, first, the late-comers to industrialization have a large backlog of modern technologies to absorb, whereas the more advanced nations must depend on the flow of new technologies, while carrying a heavier weight of old or obsolescent industrial plant; second, as countries (or regions) get richer, they allocate more of their income to services which, in general, do not incorporate technologies of high productivity to the same extent as manufactures.

Between 1840 and 1860, the real income of the South, relative to the rest of the country, declined, as the north as a whole experienced its first rapid phase of industrialization; in 1930 relative income per capita was only about half the national average. From the

mid-1930's, however, four decades of sustained relative progress occurred. The states of the Southwest followed a similar path; although their relative income position in 1930 was a bit higher than in other parts of the South.

This striking movement had these specific features:

A remarkable decline in agricultural employment accompanied by the technical modernization of agriculture, including a shift to the west and mechanization of cotton production, and accompanied by a large flow of black migrants to the North;

A more than doubling of manufacturing employment, with a marked relative shift towards the production of durable as opposed to non-durable goods (e.g., textiles);

A large shift of labor to construction as the region's population moved into the cities and suburbs (37% of the population in the South was urban in 1940, 65% in 1970);

A rapid expansion of public and private services, including education.

In broad terms, then, the structural differences between the South and the rest of the nation were rapidly reduced over the period 1940-1970. It could not longer be said in the old way and to the same extent: "It's different in the South."

Meanwhile, the North also moved ahead, but growth was slower.

There was some concern about specific problems. Nevertheless, the affluent northern regions, taken as a whole, moved ahead in reasonable comfort, expanding social services at a rate which could only be sustained if regular growth yielded regularly expanding tax revenue.

Then came the period since the end of 1972—the fifth time in the past two hundred years a rise in the prices of basic commodities relative to the prices of manufactures has occurred. On each of the other four occasions it has been accompanied by manifestations similar to those we have experienced over the past four years: an accelerated general inflation, an extremely high range of interest rates, pressure on the real wages of industrial labor, pressure on those with relatively fixed incomes, and shifts of income favorable to producers of food as well as energy. The other four occasions occurred in the 1790's, the early 1850's, the second half of the 1880's, and the late 1930's.

I am not wedded to the notion that these cycles will continue in the future. But I would guess that the inexorable pressure of excessive population increase in the developing world, the tendency of the poor to spend increases in income disproportionately on food, the rising demand for grain-expensive proteins among the rich, the raw material requirements of a world economy where industrialization is spreading in the southern continents, and the high marginal cost of expanding the non-OPEC energy supply will persist for some time.

Down to 1914 the classic response to an upswing in basic commodity prices was to open new agricultural and raw material producing areas: the American West, Canada, Australia, Argentina, and the Ukraine. The great movements of international capital during this era were, in substantial part, induced by the price system, combined with new technologies of transport and production, to bring new supplies into the market and to restore balance in the world economy. In, say 1936-51, the diffusion of new agricultural technologies, rather than the opening of new physical frontiers, reestablished a tolerable balance in food production without much conscious government intervention; although the exploitation of Middle East oil after 1945 ranks, in the field of energy, with the opening up of the American West in agriculture a century earlier.

But in the 1970's and beyond we confront a setting quite different from that of the past. We cannot realistically rely to the same

extent on the automatic workings of the price system and private capital markets to restore and maintain balance. All over the world, in one way or another, policy toward resources is in the hands of governments or is strongly influenced by governments. At every stage in the effort to restore balance, therefore, public policy will be involved. This time we shall have to think and consciously act our way through.

1972-3 also converted a relatively benign pattern of regional development into something of a national problem. This was the case because the relative rise in food and energy prices accelerated the development of a good many Sunbelt states which exported energy and agricultural resources to the rest of the country; while the relative price shift decelerated the already slower rate of expansion in the northeast and north central industrial states.

Thus, the shift in relative prices since the end of 1972 did not create the problems of the Northeast and North Central states; but it converted a slow-moving but livable erosion of their relative position into something of a northern crisis.

These changes are underlined by looking beyond the Sunbelt. Between 1970 and 1975 both the agricultural states of the West North Central area and the coal-rich Mountain states also enjoyed a rise in relative prices, a favorable relative shift in income, and lower than average unemployment. The Mountain states, in fact, experienced the highest rate of population increase (16.3%) of any of the nation's regions over those five years.

II

Now, what about remedies?

As this situation became apparent, the initial reaction in the North was, in crude terms: the rise of the Sunbelt was a product of disproportionate outlays of the federal government financed by northern taxes; now is the time for the South to contribute disproportionately to the rehabilitation of the North. The evidence suggests a less straightforward picture of the past and less simple remedies for the future.

For example, when federal tax contributions are calculated as a proportion of income per capita in the states (rather than on a per capita basis) the relative contribution of the still higher income northern states to federal revenues is much reduced. And when the flow of federal grants is systematically correlated with various indicators of economic development in the states, no significant association emerges. The Northeast appears to have been drawing more from Washington than the South in defense contracts, welfare programs, and, marginally, retirement programs. The more rapidly urbanizing South acquired somewhat more for highways and sewers, a great deal more in defense salaries due to the location of military bases. The midwestern states, both industrial and agricultural, fared worse than the South in all categories except highways and sewers; but the West (a high income area) far outstripped all other regions in defense contracts and salaries, highways and sewers.

The analysis and debate about federal tax flows and expenditures can be expected to remain a lively part of the national political scene. My own view is that the major regional changes in the country have been determined by deep and understandable historical forces. They have been only marginally shaped by the balance of federal tax and expenditure flows. I believe the future of federal policy and outlays in the regions should be determined by the requirements of the several regions, seen in terms of their structural problems and the larger interests of the nation as a whole.

When, for example, the Northeast Governors Conference met in November 1976 they did, indeed, point to the apparent regional

imbalance between tax revenues and federal expenditures. But they went beyond to propose measures which would enlarge investment in energy production and conservation; to rehabilitate the region's transport system; and to expand and modernize industrial capacity in areas of particularly severe unemployment. They proposed manpower training and public works programs, exhibiting considerable sensitivity to assure the latter were undertaken in sectors where investment would prove productive over the long run; e.g., transport rehabilitation, solid waste disposal plants. The Conference also considered the complex problem of welfare reform on a national basis, but with an understandable emphasis on the extent to which slow growth, the long prior period of south to north migration, and higher than average unemployment since 1973 have converged to make the welfare problems of the Northeast particularly acute.

The institutions and policies, regional and national, do not yet exist to translate these directions of thought into lines of action; but the fundamental issues and remedies being explored are significant and hopeful.

Over the past year similar analyses have been emerging in the North Central states; for example, the studies of the Academy for Contemporary Problems in Columbus, Ohio. Its policy agenda includes special measures to expand local coal production and to reduce energy consumption; a modernization of the transport system; special incentives to stimulate high growth manufacturing and export industries as well as to rehabilitate aging or obsolete plants. As in the Northeast, there is a call for redirected federal tax revenues, a national welfare plan, and intensified regional cooperation between the public and private sectors to stimulate investment in the directions necessary for further development.

The South and Southwest confront what may appear in the North an easier future; but analysis and policy are also increasingly addressed to their serious structural problems. The excellent report of the Task Force on Southern Rural Development, for example, measures the scale and character of poverty in the South relative to the rest of the country. Evidently, a massive problem of poverty still exists in the rural South roughly matching in scale the more visible urban poverty of the North, but constituting a higher proportion of the total southern population. The recommendations of the Task Force, notably with respect to retraining and bringing the poor effectively into the working force, are similar to the manpower proposals of the Northeast Governors Conference.

Analysts are beginning to perceive a set of investment and policy tasks quite as challenging, in their way, as those in the North and Northeast. For example, the whole irrigated area of the High Plains, from Northwest Texas to Nebraska, is endangered by the decline of the underground water basin which supplies it. The region produces a significant part of the American agricultural surplus. Large investments in surface water conservation and transfer will be required to preserve it.

The challenge to the Sunbelt is, of course, to complete its transition to industrial modernization; to develop its resources in energy and agriculture in both its own interest and that of the nation; to deal with its social problems, under conditions of rapid population increase; and to do all these things while avoiding to the degree possible the environmental degradation which marked the urbanization of the North.

The problem of the North is to regather momentum by bringing to bear its enormous potentials in technology, finance, and entrepreneurship; to exploit its energy resources

in the new price environment; to rehabilitate its transport system in cost-effective ways; and to modernize the industrial sectors which hold greatest promise for the future. This will require a new regional sense of purpose as well as intimate public-private collaboration.

But the central point I would make is this: once the debate shifts from the allocation of federal revenues to the deeper structural problems of the several regions, the possibilities for national policies which would mitigate the tensions between the regions enlarge. I believe an appropriate reallocation of federal revenues would flow naturally from an approach to regional problems in these basic terms.

This brief survey of regional change and the directions of regional thought about future development is, of course, too simple. But six large general conclusions stand out.

First, a return to sustained full employment and high growth rates on a national basis would greatly ease the special problems of the northern states. Further, sustained full employment is to be achieved not by unbalancing the federal budget a little more, not by easing monetary policy a bit, but by expanded investment in energy and other resource development and conservation fields combined with outlays to re-accelerate the growth of productivity.

Second, economic as well as social and human considerations require serious and sustained efforts to bring into the working force the large number of Americans now trapped in urban and rural poverty in both regions. The nation's special investment requirements over, say, the next ten years in agriculture, energy, raw materials, the environment, the rehabilitation of obsolescent industrial and transport facilities, research and development, manpower retraining will require us to use our manpower resources to the hilt.

Third, the case for a national energy policy which would both enlarge our resources in all the regions and economize their use is greatly heightened as one observes the differential regional impact of the energy crisis. Here, we face the most potentially divisive issue in the nation. I cannot convey to you with sufficient force the depth of the feeling in the southern energy exporting states about some of the attitudes of the North. At one and the same time, the North appears to be demanding both low energy prices and refusing to develop its own energy resources on environmental grounds. This is seen in the South as a straightforward colonial policy of exploitation underlined by the fact that natural gas is much more expensive in producing states than for interstate commerce. Some of the Western states already have a severance tax on coal production. The only answer is to have the nation as a whole face up to the fact that energy is and will be expensive; that conservation and economy are required of us all; and that the energy potentials of the country as a whole—not merely the South and the West—must be promptly and fully exploited under environmental rules of the game that are firmly settled.

Fourth, we require a national welfare policy which would render more uniform the criteria for public assistance; and, once again, such a system will be viable and sustainable only in an environment of full employment and rapid growth.

Fifth, within the states and regions new forms of public-private collaboration will be necessary as well as the national level. We have no other course than to learn how to make the public and private sectors work together.

Finally, it seems clear to me, at least, that these problems cannot be dealt with if the states and regions look merely to Washington for salvation. The basic analyses, in-

vestment plans, public-private consortia must be developed within the states and regions. State and local governments may have to alter their taxation systems. The revitalization of the North is a development task; and the firmest lesson of development economics is that it must be rooted in self-help. There is scope for federal assistance in the form of tax incentives, investment capital, manpower retraining programs, and the direction of public service job programs towards areas judged of high priority within states and regions. It is likely that a national development bank will be required like the old Reconstruction Finance Corporation. Its authority should extend not only to the fields of energy and energy conservation but also to the financing of water development, transport rehabilitation, and other projects judged of high priority national interest.

In addition, it would be wise, in the phase ahead, for both state and federal governments to organize their budgets in ways which would separate out authentic investment outlays from conventional expenditures and transfer payments.

There is a warning to be made about any proposal for an increased government role in the investment process: high standards of priority and productivity must be preserved. The experience of Great Britain and other countries with nationalized industries and with government loans to private industry suggests that there is an inherent danger of confusing criteria of productivity and simple job maintenance or creation. The latter can lead to increasing public subsidy and the drawing off of scarce investment resources to low productivity tasks. But if I am right, the United States and the other industrialized nations have ample opportunities to generate full employment through high-priority and essential investment tasks.

#### IV

Now a final question. Do the Northeast and industrial Middle West have a future? There are those who have concluded that the North, after a century and a half of leadership, should gracefully decline and surrender economic leadership to the South and Southwest.

But, as the case of Britain illustrates, economic decline is not a graceful process. It is painful, socially contentious, and potentially quite ugly in the political moods and problems it generates. Moreover, I believe it is unnecessary. The lesson of economic development in many parts of the world is that it hinges mainly on the human resources available, mobilized around the right tasks.

The problems of the North will not be resolved, then, by incantation or by somewhat enlarged flows of federal funds. But structural transformations are clearly possible if there is a common will to accomplish them, a sense of direction, and a general environment of rapid economic growth. Only those who live in the North can generate the common will and sense of direction. What the North—and all of us—have the right to demand of Washington are policies which would get the nation as a whole back to full employment and rapid growth.

**NEW SUPPORT FOR LAETRILE:  
WHY THE OUTLAW CANCER DRUG  
IS FINALLY CATCHING ON**

**HON. LARRY McDONALD**

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1977

Mr. McDONALD. Mr. Speaker, many of my colleagues in the Congress have

asked me questions on the subject of laetrile. Needless to say, there is much confusion in the general public on the truth of this issue. This has been due to the mass of misleading articles promoted in the media by the Food and Drug Administration—FDA, and by orthodox medical circles, including the American Medical Association—AMA, American Cancer Society, and others. Unfortunately, so much of the mass media "information" has been confusing, conflicting, and in many cases outright dishonest.

Fortunately, there has been a recent article that is, in my opinion, the most objective review of the subject of laetrile ever to appear in a large circulation magazine—almost 300,000. This article, written by David Rorvik, appeared in the April 25, 1977, issue of *New West* magazine.

David Rorvik, the former *Time* magazine science and medical reporter and author of several books on scientific and medical problems, approached the laetrile question as a skeptic. After a painstaking, year long investigation, carried out under an Alicia Patterson Foundation fellowship, he emerged, to his own surprise, convinced that the substance has not only been unfairly maligned by the medical establishment, but that it offers, in his words, "considerable promise as a cancer control."

Some aspects of the article are at odds with my own experience, but these areas are on the issue of personalities, et cetera, rather than the history and value of laetrile. For example, I personally have found Dr. Krebs to be more personable than the article suggests. Dr. Krebs is well versed on a wide range of subjects and speaks from knowledge rather than unsupportable bias.

Near the end of his article, Mr. Rorvik implies that the John Birch Society takes a position in favor of laetrile. This is misleading, for the society takes no position on the value of aspirin, vitamin C, penicillin, or laetrile; this organization rightly and constitutionally feels that those are decisions best made by the individual and his physician. Government should not be involved. The John Birch Society does support the concept of individual freedom of choice in the matter of laetrile, a nontoxic food. For the same reason the John Birch Society opposes OSHA in its construction manufacturing and EPA in its action upon farmers, et cetera.

Mr. Speaker, I make these observations as a Member of Congress, a physician, a member of the National Council of the John Birch Society, and as one who has prescribed amygdalin/laetrile.

The article by Mr. Rorvik follows:

NEW SUPPORT FOR LAETRILE: WHY THE OUTLAW CANCER DRUG IS FINALLY CATCHING ON

(By David Rorvik)

(*lā-e-tril*) n. [*laevo-mendelonitrile-beta-glucuronoside*] 1. — quackery—Helene Brown, former chairman of the board of the American Cancer Society in California. 2. the stuff against which "we're going to protect them (Californians) even if some of them don't want to be protected"—Grant Leake, Food and Drug Coordinator, California Department of Health.

A few weeks ago when the California

Senate Health and Welfare Committee conducted hearings on the merits of a bill that would legalize Laetrile—perhaps the most controversial anti-cancer substance of all time—the big guns from the State Health Department, the American Cancer Society, the FDA and established medicine showed up to oppose it. They protested, they proclaimed, they even shouted. Helene Brown, former chairman of the board of the American Cancer Society, California Division, became so emotional at one point that she had to be gavelled to silence. When it was all over, the senators voted 7-0 to approve the legislation. Afterward, one senator said he was swayed "more by the asininity of the opposition than by the eloquence of the Laetrile supporters."

After twenty years of guerilla warfare, the heretofore unbreakable barriers against Laetrile thrown up by the cancer establishment have begun to topple. The government suffered a major setback when the 10th U.S. Circuit Court of Appeals in Denver ruled recently that the Food and Drug Administration (FDA) has never produced data sufficient to characterize Laetrile as a "dangerous substance" or a "new drug." The Appeals Court thus upheld a federal judge who had authorized terminal cancer patients to import and use Laetrile without harassment. Elsewhere a number of state legislatures are moving to legalize Laetrile for use against cancer—something Alaska did last year. In Indiana, the Lower House recently voted 80-10 to legalize the substance. A short time later Arizona's House of Representatives voted unanimously for legal Laetrile. And Nevada will probably be the first state to fully legalize it. At last count 23 other states appear favorably disposed toward the substance.

Meanwhile, at least some of the medical powers that be are softening their stands on Laetrile. C. Chester Stock, vice-president and associate director of Sloan-Kettering Institute for Cancer Research, flagship of orthodoxy's cancer armada, has just told the FDA that he did not object to clinical trials of Laetrile—or to administering the substance to terminal patients. The American Medical Association recently dispatched the feature editor of its *AMA News* to Tijuana and San Francisco to confer with the Laetrile generals, which is something like Nixon sending Kissinger to confer with Ho Chi Minh.

How could a rag-tag band of apricot peddlers get the best of the country's rock-ribbed medical establishment? The answer is that the established medical system itself contributed heavily to its own defeat. To get an idea of how this happened, let's go back to a day in 1976, a particularly bad day for the California forces that oppose Laetrile, the controversial anti-cancer substance commonly extracted from apricot kernels. Here they'd gone to all this trouble to get Stewart Jones, MD, of Palo Alto arrested on charges of prescribing Laetrile for the "alleviation, treatment and cure of cancer," a felony, and now undercover agent Natasha Benton was in the process of blowing their case all to hell. In short, Benton was saying some very damaging things in front of a judge, who was holding a preliminary hearing in the case.

Benton testified that she had been sent to Dr. Jones's office to get information that would help the district attorney win a conviction against him. The hope was that Dr. Jones would specifically prescribe Laetrile for use against cancer. But then Benton, who testified against the overruled objections of Santa Clara County deputy district attorney Michael F. Popolizio, went on to say that she lied in the report that resulted in Dr. Jones' arrest.

"Before any report was written," she told the judge, "Mr. [James] Eddington [a supervising inspector with the Department of

Health's fraud unit, which is spending 70 percent of its time and money fighting Laetrile] left instructions for me on what to write. . . . I wrote as close to what he said as I could, according to my conscience. But I still didn't feel that I told the truth in that report. Later, on June 1, I was shown a quite lengthy report . . . and I read a small portion of it. That isn't the report I wrote. Outside of this courtroom he [Eddington] admitted that isn't the report I wrote. He said my report was—quote—so —, that that's why he changed it—close quote."

Later Benton testified: "I was specifically asked to put that Dr. Jones said it [Laetrile] was a cancer cure." In fact, she continued, he said "he could not say Laetrile is a cancer cure."

In cross-examination, Popolizio apparently sought to get Benton to admit that some of her testimony was the result of pressure exerted by unnamed individuals. She shot back: "The pressure was that you told me that if I didn't help you get a conviction you would press perjury charges."

Asked about Benton's statements, Eddington says he asked her to list "certain relevant facts" in her report. If undercover agents "are intelligent enough without a Mary, Jane and Dick book, fine," he adds. "If not, we have to help them along." He says he "helped" only in improving Benton's grammar. "For some reason," he says, "she decided we were the bad guys, and they were the good guys."

This year the court threw out two of the three charges against Dr. Jones; the third may also be junked.

At one point during the trial, Eddington said of the undercover agent who decided to defend the doctor as a matter of conscience: "She was considered to be a reliable undercover agent. So what happened is beyond me."

But it isn't beyond me. After a year on the Laetrile trail find myself identifying with Benton. I started out thinking that Laetrile was about as useful against cancer as shoe polish; I ended up convinced that the stuff, while not the "magic bullet," is more effective than most of the American Cancer Society's "proven" cures, with which, incidentally, nearly 400,000 American cancer patients continue to die each year.

I've checked out Laetrile all across the country and, in fact, around the world, but I keep coming to California, front line in the medical establishment's war on the "quacks." "Those guys in the California Department of Health. . . . I was saying one day, and the former governor, Edmund G. Brown Sr., with whom was conversing, finished for me: 'Yeah, they're the worst.'"

But the resistance is to be expected, I guess, in part because Laetrile started here. As the story goes, Laetrile was born in a barrel of whisky in San Francisco in the 1920s. An enterprising MD came up with a concoction to improve the flavor of the stuff and, serendipitously, noticed there was something in his brew that could dissolve protein. He decided that it might work against cancer, too. But it wasn't until the 1950s that the doctor's son, a scientist named Ernst Krebs (German for "cancer") Jr. claimed to have isolated the active ingredient in apricot kernels and named it Laetrile, a shortened version of the chemical names of the compound.

Krebs is no quack, but neither is he a lovable human being. He has an assortment of social views which are, to most people, about as palatable as a platter of live eels. And his doctorates are honorary. But he did study medicine and anatomy for three years at the respected Hahnemann Medical College at Philadelphia and later biochemistry, bacteriology and graduate pharmacology at the University of Illinois, the University of California and elsewhere.

But, more importantly, Laetrile has left Krebs behind; his views are seldom sought by the increasing number of physicians and researchers who are taking a serious interest in the substance. Krebs's contribution to Laetrile was to show, however tentatively, that it could have some efficiency in the treatment of cancer. But he apparently felt he had to explain how it worked, as well. The fact that those "explanations" often appear to have been arbitrary and *ad hoc* has, no doubt, obscured the fact that Laetrile seems to work even if it doesn't work exactly the way Krebs says it does.

But if Krebs played fast and loose with the facts on occasion, his opponents in the 1950s did worse. The California Medical Association conducted an irrefutably slapdash survey of some 44 cancer patients who received varying, but always small, amounts of Laetrile under poorly monitored conditions and then had the audacity to claim, in a widely circulated 1953 report, that Laetrile had now been thoroughly tested and had been found completely worthless. The report's authors stated that some six pathologists had examined the tissues of Laetrile-treated cancer patients and were of the "unanimous opinion" that the substance had exerted zero effect on their malignancies. This was, very simple, a lie. I have seen the raw data upon which these conclusions were purportedly based, and the pathologists in question were quite explicit in pointing out a number of instances in which malignancies receded and to quote one of the pathologists, a "chemotherapeutic effect might be entertained." And all of the physicians directly involved in the administration of Laetrile noted that patients receiving the substance, even in dosages which are a mere fraction of what is administered today, experienced notable reduction in pain, increased sense of well-being, weight gain and other palliative effects.

It is important to note that, right up until the 1970s, when cancer authorities assured an inquiring public that "we've tested Laetrile and found it worthless," they could cite but one study to back them up—the 1953 report of the California Medical Association.

It is important, too, I believe, to say a few words about the character of the two men who authored this report which was to condemn Laetrile to the American Cancer Society's "unproven" category (from which, once so classified, one researcher said, "not even Jesus himself could be reprieved"). Dr. Ian MacDonald, an internationally famous cancer surgeon, served as chairman of the commission to study Laetrile. Dr. Henry Garland, a famous radiologist and fellow Californian, was its secretary. Both men were remarkable, not only for putting down "quack" cancer cures that issued from outside the realm of surgery and radiation, but also for their tireless efforts on behalf of the tobacco industry—which was beginning to feel the heat as more and more evidence piled up linking smoking to lung cancer. For instance, Dr. MacDonald went about the country calling the smoking habit "a harmless pastime up to 24 cigarettes per day." He even quipped that "a pack a day keeps lung cancer away."

Dr. MacDonald burned to death in bed as a result of a fire said to have been started by his own cigarette. And Dr. Garland, who often boasted that he'd been chain-smoking since childhood and was fit as a fiddle, died of lung cancer.

So, Laetrile got off on the wrong foot. Apocryphal kernels, alas, are in the public domain, and there isn't a drug company in the world willing to spend the millions it takes to get a substance approved as a "new drug"—unless it stands to profit by its at least somewhat exclusive product. The only organization altruistic or soft-headed enough to seek "new drug" status for Laetrile in the United States was the nonprofit McNaughton Founda-

tion established in 1956 by Andrew R. L. McNaughton in Montreal. McNaughton, a man who is 59 but looks 45, is the son of the late Canadian national hero General A. G. L. McNaughton. Andrew McNaughton's own career has been as colorful, if not as kosher, as his father's. Once chief test pilot for the Royal Canadian Air Force, McNaughton moved on, after World War II, to make several million dollars by—among other things—running guns for the emerging nation of Israel.

Still later, code-named Esquimal ("man from the North"), he did the same for Cuba. McNaughton was so successful in this latter pursuit that Manuel Urrutia, then provisional president of Cuba, named him an honorary citizen of Cuba, along with Ché Guevara. With his cover as a cloak-and-dagger agent thus blown, McNaughton turned to new challenges.

Nine years after McNaughton met Krebs by chance over breakfast in a Rexall Drugstore in Florida, he moved to Sausalito to be closer to the growing Laetrile "underground" that radiated from the nearby Krebs mansion. In Sausalito in the late 1960's, McNaughton and his foundation were involved in a massive research and data-gathering effort to assess the effectiveness of Laetrile. He hoped to win for the substance an "IND" or "Investigational new drug" status from the FDA, thus opening the way for the first clinical trials in the U.S. Hundreds of thousands of dollars were expended in this effort, and the ultimate IND application included in it the results of tests demonstrating that rats treated with Laetrile survived more than 50 percent longer than untreated rats afflicted with the same type of cancer. Finally, on April 27, 1970, the foundation received a letter from the FDA issuing an official IND number and granting approval to begin clinical trials. On May 6, however, the foundation received a letter from the FDA dated April 28 citing patently nit-picking and sometimes incomprehensible "deficiencies" in the IND application, which, the FDA asserted, would have to be corrected within ten days of receipt of the letter. Then only six days later, the FDA sent a telegram stating that, due to failure to comply with the request for more data the IND was being revoked immediately.

Why did the FDA reverse itself? There are two notions. One is that the FDA never intended to permit Laetrile to be tested. By making it appear that the application was faulty and that the foundation failed to correct the defects, the FDA and all those who opposed Laetrile (principally the American Cancer Society, which has never conducted any Laetrile tests) could say that the other camp had been given its chance and had blown it.

The other idea is that the FDA proceeded in good faith, until Surgeon General Jesse Steinfeld, a anti-Laetrilist, got wind of the IND and demanded that it be recalled at all costs.

Deeply disappointed by the IND revocation, McNaughton moved his foundation to Mexico, where he had already helped Dr. Ernesto Contreras launch his Clinica Del Mar, which today embraces a large modern clinic and hospital complex. Recently McNaughton helped establish a second major Laetrile clinic, this one under the direction of Dr. Mario Soto, one of Mexico's leading cancer specialists. But perhaps McNaughton's most important contribution to the Laetrile movement, since going into "exile," has been to persuade recognized cancer specialists from other lands to visit the Tijuana clinics for first-hand experience with the substance. Recently two topnotch Israeli cancer doctors made the journey. The elder of the two, a man who is a national hero in Israel, said he arrived deeply skeptical. But after a month of examining patients, their records and their progress, his colleague, also a surgeon and cancer specialist, says, "There are

three things we know absolutely from our visit: 1) Laetrile is not quackery, 2) it is nontoxic, even in very large injected doses and 3) the substance has definite palliative effects." Among other things, they saw cases of "terminal" patients who began to eat again and others who reported that their pain disappeared.

Meanwhile, back in California, cancer politics rage on. Only the "quacks" no longer doubt they are winning. In a majority of actions brought by the government against doctors using Laetrile, juries have exonerated the accused, apparently buying the argument that Laetrile is not a drug but a vitamin or food factor that should not be under the purview of regulatory agencies. With each new court case all four of the national organizations which support Laetrile and other "alternative" cancer therapies swell in size. The most powerful of these is the Committee for Freedom of Choice in Cancer Therapy (headquartered in Los Altos, near San Francisco); it is reliably estimated to have at least 25,000 members, including about 800 MDs. Laetrile opponents have tried to dismiss the committee as an instrument of the John Birch Society, but though a minority of Birchers are there, increasingly the "movement" is attracting those who fervently attached themselves to left-wing causes in the sixties and early seventies.

Establishment "overkill," more than anything else, say the Laetrilists, is abetting their cause. They point, for example, to the arrests last spring of two of their number at the Capitol in Sacramento, where they had gone to testify on behalf of three bills that would effectively legalize Laetrile for use against cancer. The two, John Richardson, MD, of Albany, California, and Frank Salaman, vice-president of the committee, were charged with smuggling Laetrile and handcuffed. Someone in authority obviously thought the arrests—under the Assemblymen's noses—would weaken the new legislative drive to legalize Laetrile. But the arrests backfired. Senator William Campbell, chief sponsor of the bills, said at the time, "Even some of those most strongly opposed came up to me to say how appalled they were. Many said they would take another look." Now, a year later, the Senate health committee has unanimously approved pro-Laetrile legislation. Debate on the bills will resume shortly in the Senate.

Why has the cancer "establishment" (generally defined as an alliance of the ACS, FDA, NCI, AMA and various drug companies) opposed even the clinical testing of Laetrile with such ferocity? The easy answer is to surmise that it fears that the substance might be the "magic bullet" that will do in not only cancer, but (as night follows day) the cancer establishment itself. But it is far more likely that the lockstep resistance accrues more than intellectual arrogance and entrenchment than from any open-eyed concern about money.

And yet money, powerful instrument that it is, cannot be entirely discounted as a motive. As Mike Culbert, feisty and articulate editor of the committee's monthly publication, *The Choice*, puts it: "The feds and the state of California aren't deploying all of those agents, all of that time, money and energy to crack down on things that are dangerous [like heroin]. No, it's all or most of it reserved for Laetrile. . . . It really doesn't make sense, unless you're dealing with insanity or conspiracy. I'm guessing it's conspiracy, which means money. The big drug companies aren't competing with heroin."

"This is the first time unorthodoxy has seized the initiative, and I think they, whoever they turn out to be, are panic-stricken because, of course, this doesn't stop with cancer. Laetrile opens the door to countless other nutritional, metabolic therapies which are equally nontoxic and useful in a wide

range of other diseases." And like Laetrile, he adds, most nutritional therapies are in the public domain—which means competition, low prices and even lower profits.

"It's going to be interesting," he concludes, "to see the final time, place and manner of the decriminalization of Laetrile. It's coming. I think the government will finally just steal it, and put another name on it and make sure Krebs and McNaughton get none of the credit."

To which Andrew McNaughton adds: "God-speed."

#### SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, May 26, 1977, may be found in the Daily Digest of today's RECORD.

#### MEETINGS SCHEDULED

##### MAY 27

10:00 a.m.

Commerce, Science, and Transportation  
To hold hearings on the nomination of Alfred Edward Kahn, to be a member of the Civil Aeronautics Board.

5110 Dirksen Building

Governmental Affairs

To hold hearings on the nominations of Jule M. Sugarman, of Georgia, and Ersi H. Poston, of New York, each to be a Civil Service Commissioner.

3302 Dirksen Building

##### JUNE 3

11:00 a.m.

Joint Economic

To hold hearings to receive testimony on the employment/unemployment situation in May.

1202 Dirksen Building

##### JUNE 6

9:30 a.m.

Commerce, Science, and Transportation  
To hold hearings on the nomination of Robert A. Frosch, of Massachusetts, to be Administrator of NASA.

5110 Dirksen Building

10:00 a.m.

Banking, Housing, and Urban Affairs

To hold hearings on H.R. 5675, to authorize the Treasury Department to make short-term investments of any portion of its excess operating cash balance.

5302 Dirksen Building

Commerce, Science, and Transportation  
Communications Subcommittee

To hold oversight hearings on the cable TV system.

235 Russell Building

#### Select Indian Affairs

To hold oversight hearings on the Indian Education Reform Act (Public Law 93-638).

Room to be announced

##### JUNE 7

8:30 a.m.

Finance

Health Subcommittee

To hold hearings on S. 1470, Medicare and Medicaid Administrative and Reimbursement Reform Act.

2221 Dirksen Building

9:30 a.m.

Energy and Natural Resources

To receive testimony on part D (natural gas pricing) of S. 1460, National Energy Act.

3110 Dirksen Building

Select Small Business

To resume hearings on alleged restrictive and anticompetitive practices in the eyeglass industry.

424 Russell Building

10:00 a.m.

Banking, Housing, and Urban Affairs

To hold hearings on S. 1397, to increase from 16 to 19 the size of the Board of Directors of FNMA.

5302 Dirksen Building

Commerce, Science, and Transportation

Communications Subcommittee

To continue oversight hearings on the cable TV system.

253 Russell Building

Foreign Relations

To hold hearings on an agreement with Canada concerning the transit oil pipeline (Exec. F, 95th Cong., 1st sess.), and the Inter-American Treaty of Reciprocal Assistance (Exec. J., 94th Cong., 1st sess.).

4221 Dirksen Building

Governmental Affairs

Intergovernmental Relations Subcommittee

To resume hearings on S. 600, the Regulatory Reform Act of 1977.

6226 Dirksen Building

Human Resources

Health and Scientific Research Subcommittee

To hold hearings to evaluate information upon which the FDA based its decision to propose regulations banning the use of saccharin.

4232 Dirksen Building

Judiciary

Criminal Laws and Procedures Subcommittee

To hold hearings on S. 1437, Criminal Code Reform Act of 1977, and the following criminal sentencing bills: S. 31, 45, 181, 204, 260, 888, 979, and 1221.

2228 Dirksen Building

Joint Economic

Economic Growth and Stabilization Subcommittee

To hold hearings on economic development in rural areas.

1202 Dirksen Building

Select Indian Affairs

To continue oversight hearings on the Indian Education Reform Act (P.L. 93-638).

Room to be announced

10:30 a.m.

Appropriations

Transportation Subcommittee

To mark up proposed appropriations for fiscal year 1978 for the Department of Transportation.

S-128, Capitol

##### JUNE 8

8:30 a.m.

Finance

Health Subcommittee

To continue hearings on S. 1470, Medicare and Medicaid Administrative and Reimbursement Reform Act.

2221 Dirksen Building

9:00 a.m.

Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee

To hold hearings on S. 421, to establish a program to educate the public in understanding climatic dynamics.

5100 Dirksen Building

10:00 a.m.

Banking, Housing, and Urban Affairs

To continue hearings on S. 1397, to increase from 16 to 19 the size of the Board of Directors of FNMA.

5302 Dirksen Building

Commerce, Science, and Transportation

To continue oversight hearings on the cable TV system.

235 Russell Building

Energy and Natural Resources

Parks and Recreation Subcommittee

To hold hearings on S. 975, to improve the administration of the National Park System.

3110 Dirksen Building

Energy and Natural Resources

Energy Research and Development Subcommittee

To receive testimony on proposed legislation authorizing funds for fiscal year 1978 for nuclear programs of ERDA.

Room to be announced

Foreign Relations

International Operations Subcommittee

To hold oversight hearings on the role of the media, business, banking, labor, national security, etc. in the current and future international flow of information.

4221 Dirksen Building

Governmental Affairs

Intergovernmental Relations Subcommittee

To continue hearings on S. 600, the Regulatory Reform Act of 1977.

6226 Dirksen Building

Human Resources

Health and Scientific Research Subcommittee

To hold oversight hearings on environmental toxins in mother's milk.

Until 12:30 p.m. 4232 Dirksen Building

Judiciary

Criminal Laws and Procedures Subcommittee

To continue hearings on S. 1437, Criminal Code Reform Act of 1977, and the following criminal sentencing bills: S. 31, 45, 181, 204, 260, 888, 979, and 1221.

2228 Dirksen Building

Joint Economic

To hold hearings to review economic conditions, and to discuss the future outlook.

6202 Dirksen Building

2:30 p.m.

Foreign Relations

Arms Control, Oceans, and International Environment Subcommittee

To resume hearings on S. 897 and 1432, proposed Nuclear Nonproliferation Act.

4221 Dirksen Building

##### JUNE 9

8:30 a.m.

Finance

Health Subcommittee

To continue hearings on S. 1470, Medicare and Medicaid Administrative and Reimbursement Reform Act.

2221 Dirksen Building

9:00 a.m.

Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee

To continue hearings on S. 421, to establish a program to educate the public in understanding climatic dynamics.

5110 Dirksen Building

9:30 a.m.  
Energy and Natural Resources  
Energy Research and Development Subcommittee  
To hold hearings on S. 1432, Nuclear Non-Proliferation Policy Act of 1977.  
6226 Dirksen Building

10:00 a.m.  
Energy and Natural Resources  
Energy Production and Supply Subcommittee  
To hold oversight hearings on strategic petroleum reserves.  
3110 Dirksen Building

Foreign Relations  
International Operations Subcommittee  
To continue oversight hearings on the role of the media, business, banking, labor, national security, etc., in the current and future international flow of information.  
4221 Dirksen Building

Governmental Affairs  
Reports, Accounting, and Management Subcommittee  
To resume hearings to review the processes by which accounting and auditing practices and procedures, promulgated or approved by the Federal Government, are established.  
6202 Dirksen Building

Judiciary  
Criminal Laws and Procedures Subcommittee  
To continue hearings on S. 1437, Criminal Code Reform Act of 1977, and the following criminal sentencing bills: S. 31, 45, 181, 204, 260, 888, 979, and 1221.  
2228 Dirksen Building

Joint Economic  
To continue hearings to review economic conditions, and to discuss the future outlook.  
1202 Dirksen Building

JUNE 10

8:30 a.m.  
Finance  
Health Subcommittee  
To continue hearings on S. 1470, Medicare and Medicaid Administrative and Reimbursement Reform Act.  
2221 Dirksen Building

9:00 a.m.  
Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee  
To continue hearings on S. 421, to establish a program to educate the public in understanding climatic dynamics.  
5110 Dirksen Building

9:30 a.m.  
Human Resources  
Health and Scientific Research Subcommittee  
To continue oversight hearings on environmental toxins in mother's milk.  
Until noon 4232 Dirksen Building

10:00 a.m.  
Energy and Natural Resources  
Energy Production and Supply Subcommittee  
To continue oversight hearings on strategic petroleum reserves.  
3110 Dirksen Building

Foreign Relations  
International Operations Subcommittee  
To continue oversight hearings on the role of the media, business, banking, labor, national security, etc., in the current and future international flow of information.  
4221 Dirksen Building

JUNE 13

9:30 a.m.  
Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee  
To resume hearings on S. 657, to establish an Earth Resources and Environmental Information System.  
235 Russell Building

Finance  
Taxation and Debt Management Subcommittee  
To receive testimony on proposals which seek to encourage economic growth and employment.  
2221 Dirksen Building

10:00 a.m.  
Energy and Natural Resources  
To resume hearings on part D (natural gas pricing) of S. 1469, National Energy Act.  
3110 Dirksen Building

Governmental Affairs  
Reports, Accounting, and Management Subcommittee  
To resume hearings to review the processes by which accounting and auditing practices and procedures, promulgated or approved by the Federal Government, are established.  
6226 Dirksen Building

JUNE 14

9:30 a.m.  
Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee  
To continue hearings on S. 657, to establish an Earth Resources and Environmental Information System.  
5110 Dirksen Building

Finance  
Taxation and Debt Management Subcommittee  
To receive testimony on proposals which seek to encourage economic growth and employment.  
2221 Dirksen Building

10:00 a.m.  
Energy and Natural Resources  
To continue hearings on part D (natural gas pricing) of S. 1469, National Energy Act.  
3110 Dirksen Building

Joint Economic  
Economic Growth and Stabilization Subcommittee  
To resume hearings on economic development in rural areas.  
1202 Dirksen Building

JUNE 15

9:30 a.m.  
Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee  
To continue hearings on S. 657, to establish an Earth Resources and Environmental Information System.  
235 Russell Building

10:00 a.m.  
Foreign Relations  
To hold hearings on treaties with Mexico and Canada on prisoner exchanges (Exec. D and H, 95th Cong., 1st sess.).  
4221 Dirksen Building

Joint Economic  
Economic Growth and Stabilization Subcommittee  
To continue hearings on economic development in rural areas.  
6226 Dirksen Building

JUNE 16

9:00 a.m.  
Veterans' Affairs  
Compensation and Pension Subcommittee  
To hold hearings on proposed increases in veterans' pensions.  
6226 Dirksen Building

10:00 a.m.  
Commerce, Science, and Transportation  
To hold oversight hearings on the effects of radiation on humans, i.e., health, safety, and environment.  
5100 Dirksen Building

Commerce, Science, and Transportation  
Surface Transportation Subcommittee  
To hold hearings on general conditions of the intercity motorbus industry and suggestions for increased ridership.  
235 Russell Building

Energy and Natural Resources  
Energy Production and Supply Subcommittee  
To continue markup of S. 977, to conserve gas and oil by fostering increased utilization of coal in electric generating facilities and in major industrial installations.  
3110 Dirksen Building

Foreign Relations  
To continue hearings on treaties with Mexico and Canada on prisoner exchanges (Exec. D and H, 95th Cong., 1st sess.).  
4221 Dirksen Building

Select Small Business  
To hold hearings on S. 1526, to establish the position of Associate Administrator for Women's Business Enterprise within the SBA.  
424 Russell Building

11:00 a.m.  
Human Resources  
Health and Scientific Research Subcommittee  
To resume hearings on S. 1391, Hospital Cost Containment Act of 1977.  
Until 1 p.m. 4232 Dirksen Building

2:30 p.m.  
Foreign Relations  
Arms Control, Oceans, and International Environment Subcommittee  
To resume hearings on S. 897 and 1432, proposed Nuclear Nonproliferation Act.  
4221 Dirksen Building

JUNE 17

9:30 a.m.  
Human Resources  
Health and Scientific Research Subcommittee  
To continue hearings on S. 1391, Hospital Cost Containment Act of 1977.  
Until 12:30 p.m. 4232 Dirksen Building

Veterans' Affairs  
Health and Readjustment Subcommittee  
To hold oversight hearings on veterans' employment-unemployment situation  
Until 12:30 p.m. 6226 Dirksen Building

10 a.m.  
Commerce, Science, and Transportation  
To continue oversight hearings on the effects of radiation on humans, i.e., health, safety, and environment.  
JUNE 20

9:30 a.m.  
Human Resources  
Handicapped Subcommittee  
To hold hearings on proposed extension of the Rehabilitation Act of 1973 and Education of the Handicapped Acts.  
Until 1 p.m. 4232 Dirksen Building

10:00 a.m.  
Energy and Natural Resources  
To resume hearings on part D (natural gas pricing) of S. 1469, National Energy Act.  
3110 Dirksen Building

JUNE 21

9:00 a.m.  
Energy and Natural Resources  
Energy Conservation and Regulation Subcommittee  
To receive testimony on proposals embodied in parts A, B, C, and G of S. 1469, the National Energy Act.  
3110 Dirksen Building

9:30 a.m.  
Human Resources  
Handicapped Subcommittee  
To continue hearings on proposed extension of the Rehabilitation Act of 1973 and Education of the Handicapped Acts.  
Until 1 p.m. 4232 Dirksen Building

Human Resources  
Health and Scientific Research Subcommittee  
To hold hearings to evaluate information upon which the FDA based its decision to propose regulations banning the use of saccharin.  
Until noon 1202 Dirksen Building  
JUNE 22

9:00 a.m.  
Energy and Natural Resources  
Energy Conservation and Regulation Subcommittee  
To receive testimony on proposals embodied in parts A, B, C, and G of S. 1469, the National Energy Act.  
3110 Dirksen Building

Veterans' Affairs  
Health and Readjustment Subcommittee  
To hold hearings on the effectiveness of VA programs on mental health, alcohol and drug abuse, readjustment counseling, and health.  
Until 2 p.m. 6226 Dirksen Building

9:30 a.m.  
Human Resources  
Handicapped Subcommittee  
To continue hearings on proposed extension of the Rehabilitation Act of 1973 and Education of the Handicapped Acts.  
Until 1 p.m. 4232 Dirksen Building

10:00 a.m.  
Joint Economic  
Subcommittee on Economic Growth and Stabilization  
To hold hearings to receive testimony from public pollsters on the current status of and future conditions affecting the economy.  
1202 Dirksen Building  
JUNE 23

10:00 a.m.  
Commerce, Science, and Transportation  
Communications Subcommittee  
To hold hearings on S. 1547, to assure that all those providing communications services are able to use existing communications space on poles which are owned by regulated utilities, and to simplify FCC forfeiture provisions.  
235 Russell Building

Energy and Natural Resources  
To consider pending calendar business.  
3110 Dirksen Building  
JUNE 24

9:00 a.m.  
Veterans' Affairs  
Health and Readjustment Subcommittee  
To hold hearings on proposed increases in rates of veterans' education benefits.  
Until 2 p.m. 6226 Dirksen Building

10:00 a.m.  
Commerce, Science, and Transportation  
Communications Subcommittee  
To continue hearings on S. 1547, to assure that all those providing communications services are able to use existing communications space on poles which are owned by regulated utilities, and to simplify FCC forfeiture provisions.  
235 Russell Building

JUNE 27  
9:30 a.m.  
Veterans' Affairs  
Health and Readjustment Subcommittee  
To hold hearings on proposed legislation

to amend the Veterans' Physician and Dentists' Pay Comparability Act.  
Until noon 6226 Dirksen Building

Banking, Housing, and Urban Affairs  
Consumer Affairs Subcommittee  
To hold hearings on legislation to amend the Truth in Lending Act, including S. 1312.  
5302 Dirksen Building

Commerce, Science, and Transportation  
To resume oversight hearings on the effects of radiation on humans, i.e., health, safety, and environment.  
5110 Dirksen Building

JUNE 28  
9:00 a.m.  
Veterans' Affairs  
Housing, Insurance, and Cemeteries Subcommittee  
To hold hearings on S. 718, to provide veterans with certain cost information relating to the conversion of Government-supervised insurance to individual life insurance policies.  
6202 Dirksen Building

10:00 a.m.  
Banking, Housing, and Urban Affairs  
Consumer Affairs Subcommittee  
To continue hearings on legislation to amend the Truth in Lending Act, including S. 1312.  
5302 Dirksen Building  
Commerce, Science, and Transportation  
To continue oversight hearings on the effects of radiation on humans, i.e., health, safety, and environment.  
5110 Dirksen Building  
JUNE 29

9:00 a.m.  
Veterans' Affairs  
Health and Readjustment Subcommittee  
To resume hearings on proposed increases in rates of veterans' education benefits.  
Until 2 p.m. 6226 Dirksen Building

10:00 a.m.  
Banking, Housing, and Urban Affairs  
Consumer Affairs Subcommittee  
To continue hearings on legislation to amend the Truth in Lending Act, including S. 1312.  
5302 Dirksen Building  
Commerce, Science, and Transportation  
To continue oversight hearings on the effects of radiation on humans, i.e., health, safety, and environment.  
5110 Dirksen Building  
JUNE 30

9:00 a.m.  
Veterans' Affairs  
Housing, Insurance, and Cemeteries, Subcommittee  
To continue hearings on S. 718, to provide veterans with certain cost information relating to the conversion of Government-supervised insurance to individual life insurance policies.  
6226 Dirksen Building

9:30 a.m.  
Select Small Business  
To resume hearings on S. 972, authorizing the Small Business Administration to make grants to support the development and operation of small business development centers.  
424 Russell Building

JULY 12  
9:30 a.m.  
Human Resources  
Health and Scientific Research Subcommittee  
To hold hearings to evaluate information upon which the FDA based its decision to ban Laetril from interstate commerce.  
Until noon 4232 Dirksen Building

10:00 a.m.  
Foreign Relations  
To hold hearings on the Vienna Convention on the Law of Treaties (Exec. L. 92d Cong., 1st sess.).  
4221 Dirksen Building  
JULY 13

10:00 a.m.  
Foreign Relations  
To review the operation and effectiveness of the War Powers Resolution of 1973.  
4221 Dirksen Building  
JULY 14

9:30 a.m.  
Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee  
To receive a report from the National Commission on Supplies and Shortages on materials policy research and development.  
5110 Dirksen Building

Human Resources  
Health and Scientific Research Subcommittee  
To hold oversight hearings on the cost of drugs.  
Until noon 4232 Dirksen Building

10:00 a.m.  
Foreign Relations  
To review the operation and effectiveness of the War Powers Resolution of 1973.  
4221 Dirksen Building  
JULY 15

10:00 a.m.  
Foreign Relations  
To review the operation and effectiveness of the War Powers Resolution of 1973.  
4221 Dirksen Building  
JULY 19

9:30 a.m.  
Commerce, Science, and Transportation  
Science, Technology, and Space Subcommittee  
To review a report from the National Commission on Supplies and Shortages on materials policy research and development.  
5110 Dirksen Building

10:00 a.m.  
Foreign Relations  
To hold hearings on the following five tax treaties: Convention with Israel (Exec. C, 94th Cong., 2nd sess.); Convention with Egypt (Exec. D, 94th Cong., 2nd sess.); Convention with the United Kingdom (Exec. K, 94th Cong., 2nd sess.); Convention with the Republic of Korea (Exec. P, 94th Cong., 2nd sess.); and Convention with the Republic of the Philippines (Exec. C, 95th Cong., 1st sess.).  
4221 Dirksen Building  
JULY 20

10:00 a.m.  
Foreign Relations  
To hold hearings on the following five tax treaties: Convention with Israel (Exec. C, 94th Cong., 2nd sess.); Convention with Egypt (Exec. D, 94th Cong., 2nd sess.); Convention with the United Kingdom (Exec. K, 94th Cong., 2nd sess.); Convention with the Republic of Korea (Exec. P, 94th Cong., 2nd sess.); and Convention with the Republic of the Philippines (Exec. C, 95th Cong., 1st sess.).  
4221 Dirksen Building  
JULY 26

10:00 a.m.  
Foreign Relations  
To hold hearings on protocol to the Convention on International Civil Aviation (Exec. A, 95th Cong., 1st sess.), and two related protocols (Exec. B, 95th Congress, 1st sess.).  
4221 Dirksen Building

## SENATE—Thursday, May 26, 1977

(Legislative day of Wednesday, May 18, 1977)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. EASTLAND).

## PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Let us pray.

Almighty God, who has made and preserved us a nation, we beseech Thee to prepare the heart of this Nation to keep Memorial Day, not as a holiday but as a holy day. Show us the vital truth that wisdom is learning what the past has to say to the present and that nations live by reverent ceremonies.

As patriotic citizens and loved ones journey to the silent, green-tented cities of the war dead, studded with crosses and stars, may there come to all of us hushed thoughts and hallowed memories. Give us grateful hearts for those who one day marched away never to march back again, having spent their lives for us. And may our hearts be joined to those, who having returned, live out their time with bodies and minds broken, deprived of fullness and health. May we remember especially the veterans of Vietnam, loyal to the last but sometimes forgotten and neglected, that they may find in the older generations a new appreciation and comradeship. May the lonely and discouraged find in their fellow citizens a new friendship and unity of purpose. Hasten the day when war shall be no more, when

"Nation with nation, land with land,  
Arm in arm shall live as comrades free;  
In every heart and brain shall throb  
The pulse of one fraternity."

—JOHN ABINGTON SYMONDS (1840-93).  
Amen.

## THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Wednesday, May 25, 1977, be approved.

The PRESIDENT pro tempore. Without objection, it is so ordered.

## REFERRAL OF BLACK LUNG BILL

Mr. ROBERT C. BYRD. Mr. President, this request has been cleared with the minority and all around.

I ask unanimous consent that Calendar No. 183, S. 1538, the black lung bill, be referred to the Committee on Finance, with instructions to order the bill reported not later than July 1, and with further instructions that the report thereon be filed no later than July 12.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I yield back the remainder of my time.

## GEN. LEWIS B. HERSHEY

Mr. BAKER. Mr. President, it is fitting and appropriate that this body take

pause to note with reverence the death of retired Army Gen. Lewis B. Hershey. General Hershey's remarkable career as Director of the Selective Service, spanning nearly 30 years, six presidents and three wars, made him an enduring symbol of American military mobilization. As such, General Hershey reaped a quantity of praise and criticism during his lifetime. Combining a homespun likeability with a tough combative constitution, General Hershey thrived in his challenging and vital mission in both war and peacetime. General Hershey's death at the age of 83 ends a full and productive life, characterized in large measure by an indefatigable devotion to patriotic duty. I know that I join millions of Americans in marking his passing with a profound sense of gratitude and appreciation for his lifetime of extraordinary service to his country.

## ORDER OF BUSINESS

Mr. BAKER. Mr. President, I have no further requirement for my time and no requests for time under the standing order, so I yield back the remainder of my time.

## YOUTH EMPLOYMENT AND TRAINING ACT OF 1977

The PRESIDENT pro tempore. Under the previous order, the Senate will now resume consideration of S. 1242, which the clerk will state by title.

The legislative clerk read as follows:

A bill (S. 1242) to provide employment and training opportunities for youth.

The Senate proceeded to consider the bill.

Mr. JAVITS. Mr. President, I understand that last night Senator NELSON opened the consideration of this measure which is of such great importance to the youth of the country.

I will now make my own opening statement as the ranking member of the committee.

Mr. President, this bill, in my judgment, is a triumph of the negotiation which is possible between the administration and the Congress working together in a cooperative spirit to develop a remedy for a severe national problem.

As one of the Senators who participated in the consultations with the administration that reached fruition in this measure, I can assure my colleagues in the Chamber that it represents an important first step toward the amelioration of what has become one of our country's most serious domestic ills: debilitating structural and endemic youth unemployment.

Even as the aggregate unemployment statistic begins to move downward—the rate reached 7 percent of the labor force in April—the measure of unemployment among young people aged 16 through 24 shows little signs of any improvement. When we observe the long-term trends, we begin to realize that youth unemployment is not primarily cyclical in nature; that in the absence of specific remedial

programs youth unemployment will not be reduced appreciably, even if the economic recovery continues on its upward track. It is a situation which is so pregnant with danger for our country and for its future that it simply cannot be permitted to persist.

Growing national production will, to be sure, create job opportunities, but mainly for those who have job experience, specialized and sophisticated technical skills, high school diplomas, or at least some occupational training. For those youths who reside in the aging cities of the Northeast and Midwest, however, which continue to sustain a hemorrhage of the loss the job opportunities, and where it is not uncommon to find shocking unemployment rates of 60 percent among black youths, for those who have left high school before completing their studies or who have never acquired marketable skills or who have been unable to accumulate the requisite occupational experience, the blight of economic depression continues to erode the number and quality of job opportunities.

In the best of times, structural unemployment among our young people breeds a debilitating sense of idleness and alienation from our economic system which places such heavy emphasis upon reward for individual productivity. In the worst of times, however, endemic youth unemployment is social dynamite, because persistent joblessness strikes in the critical formative years and can have severe and permanent psychological ramifications. Indeed, many of today's structurally unemployed youth will be tomorrow's structurally unemployed adults, unless Congress acts to begin to relieve this disproportionate burden of joblessness.

This becomes a deep social, political, as well as an economic problem.

This perception of youth joblessness led Senator HUMPHREY and I to coauthor S. 170, the Comprehensive Youth Employment Act of 1977, and to join others in urging the President and the Secretary of Labor to initiate the formation of a task force to study this serious problem. Such a task force was commissioned, and included staff of the White House, the Labor Department, and the majority and minority of the Senate Human Resources Committee and the Senate Environment and Public Works Committee. The Youth Employment and Training Act of 1977, the bill now before us, was developed as a result of the consultations of this task force, and introduced on April 6 by Senator NELSON, myself, and other colleagues. Although, as I pointed out the day we introduced it, I was not entirely satisfied with some aspects of S. 1242, it was an excellent bill as introduced, and a shining example of the value of administration-Congress consultation in the development of legislation.

Led by our chairman, the distinguished Senator from Wisconsin (Mr. NELSON), the Senate Subcommittee on Employment, Poverty, and Migratory Labor, on which I have the honor to

serve as ranking Republican, held 3 days of hearings on S. 1242, and accepted a number of amendments including those I offered on behalf of myself and Senator HUMPHREY.

We have felt because of our experience that only a targeted program directed at youth, as such, is likely to do us any good because of the seriousness of the unemployment and the discouragement which I have described.

This bill does target such a program. First, it represented a negotiation between the Human Resources Committee and, especially, its Employment Subcommittee, chaired by the Senator from Wisconsin (Mr. NELSON) and on which I have the honor to be the ranking member, in order to agree upon the fundamentals of amount. We agreed upon a global figure of somewhere in the area of \$2 to \$2.5 billion for the first year of this program.

Second, in an extraordinary display of statesmanship, Senator NELSON and I—and I give him enormous credit for this, Mr. President—worked out an allocation of these funds which would place the greatest weight in areas which need the greatest amount of help.

So, of the main amount which is involved here, perhaps more than \$900 million in part C, we were able to agree on allocating 37½ percent of the allocated amount to areas with unemployment in excess of 6½ percent.

The bill before us deserves the support of every Member of the Senate and, indeed, already has broad and bipartisan cosponsorship. The reason why S. 1242 enjoys such support is clear: the bill is an amalgam of many of the ideas that were incorporated in bills introduced this session in both Houses, and thus it embodies some fundamental principles which all Senators can agree ought to be contained in a truly comprehensive youth employment bill.

The first principle is that our Nation requires a targeted approach to the problem of youth unemployment. We need a way to target the program to those individuals and areas most in need of employment and training opportunities. The bill targets funds in part C, for example, to who, if left to their own devices, would be least likely to find permanent, unsubsidized employment in the private sector. Similarly, the program must be targeted somewhat at those geographical areas which suffer the most severe problems of unemployment. With over 3 million unemployed youths in our country—fully half the total number of unemployed—including approximately 750,000 who are high school dropouts—a \$2 billion, 18-month program to create 200,000 job and training positions is, as Senator HUMPHREY testified, "a drop in the bucket." Given these limited resources, we had to design a program targeted as much as possible at the disadvantaged. Accordingly, S. 1242 requires all participants to be from low-income families.

With respect to high unemployment areas, I want to reiterate that I am gratified that our chairman, Senator NELSON, who has been always so sensitive to the needs of those regions suffering from

persistent high unemployment, was able to agree to my amendment to allocate 37½ percent of the part C funds to areas with unemployment in excess of 6½ percent. These areas are least likely to be brought along as recovery progresses, and require the "distress factor" of extra funds because of the more endemic nature of the unemployment they suffer.

A second fundamental principle of this bill is that the youth unemployment problem will yield only to longer run solutions, that is, those that combine training and counseling with employment opportunities. Short term, "make-work" projects are demeaning to the participants, wasteful of taxpayers' money and contribute little to the solution of the problem. Of course, youths require work experience. But the experience itself must be productive—the youths must feel they are making a genuine and lasting contribution to their communities. The Employment Subcommittee, in consultation with the administration, designed a bill, therefore, which would maximize the opportunity for training as well as employment opportunities.

This "longer run view," as I prefer to characterize it, emphasizes the importance of affording youths job experience as well as training, counseling, occupational and career education and information, and overall self-development. Again and again we have learned that it is just not enough to throw 1-year jobs at unemployed youths; we must attempt to remove the competitive disadvantages that characterize their labor market experiences. We must encourage a longer job attachment and permanently elevate young people from the secondary job market.

The third principle which is embodied in S. 1242 is: that we begin now to strengthen the linkages between education and work. As is detailed in the committee report, nearly every witness who came before our committee testified to the need to establish and strengthen relationships between manpower authorities and educational institutions at the local level. Often, these authorities have operated two separate and independent systems supposedly to prepare school-age youth for useful and productive lives. The perfect example of this bifurcated approach has been and still is our in-school youth manpower development programs. They provide employment and training opportunities for youths after school hours and during the summer months. But there has been little, if any, attempt to provide such opportunities during the school day, in cooperation with educational administrators, teachers and guidance counselors. Why cannot the cooperative education or work-study model, which has had such great success at the post-secondary level, be applied to secondary school youths?

S. 1242 breaks new ground by requiring, for the first time in the history of our Federal manpower policy, that employment and training programs to serve in-school youth be undertaken pursuant to agreements between CETA

prime sponsors and local education agencies.

The idea for this approach was incorporated originally in S. 170, authored by Senator HUMPHREY and myself, and was contained in an amendment to S. 1242 which I offered in committee on behalf of Senator HUMPHREY and myself.

The provision states that no less than 15 percent of the funds allocated by formula under this bill to prime sponsors must be set aside for programs for in-school youth, to be operated pursuant to agreements between prime sponsors and local educational agencies within the prime sponsor's jurisdiction. And this might include not only public schools, but so-called private, nonprofit schools.

This is for the purpose of keeping kids in school by giving them a work-study experience, even at a lower than college level. We have it at the college level; we never had it in secondary education. That really breaks new ground of a critically important kind in this bill.

This is a powerful incentive for the relevant authorities to put aside whatever jurisdictional rivalries or jealousies they may have and work in good faith to find a common ground upon which they can agree. I urge the prime sponsors of this Nation, and the many local educational agencies with which they will deal in this regard, to strive to work hand in hand in developing the kinds of work experience and training and counseling programs that will best serve our Nation's youth. I urge them to put the Nation's best interests ahead of parochial concerns and to begin to build, from both sides, bridges of commonality between education and work, which present and future generations of young people might traverse as they begin their careers as productive citizens of the United States.

These items, Mr. President, have been agreed upon between the administration and ourselves. I am very hopeful that, based as they are upon the CETA framework; that is, the framework of some 400 existing primary sponsors of work and training programs under the CETA bill we extended for 1 year yesterday, the jobs and the whole operation can be put into effect very promptly.

To give the Senate a concept of that, it is estimated that we can put people on jobs under CETA within 30 to 60 days after a bill becomes law. I am very hopeful that that will be done as to thousands of youth.

This is in addition to everything we are doing now; that is, in addition to the summer youth jobs, the Jobs Corps, and other youth programs we are carrying on. These are additional programs which we estimate can provide us with at least an additional 500,000 jobs.

Mr. President, this month and next, thousands upon thousands of young people all across the country will graduate high school. For many, especially the disadvantaged, it will mark the end of full time study and the beginning of their adult working lives. They commence their careers with all of the youthful hopes and dreams of success we encourage them to have by our promises of reward for hard work. It is a most

auspicious time, therefore, for the Senate to act upon legislation which, if passed, will help us to insure that their hopes are not dashed and their dreams not shattered.

Mr. President, let me say again that these three principles—of targeting, training, and jobs, of longer range solutions and of education-work linkages—can be endorsed by every Member of this body. The Youth Employment and Training Act of 1977 is an important and comprehensive first step that I believe will lead one day to a permanent program to assure education, training, and employment for all our Nation's youth.

Mr. President, I thank my colleagues, such as the Senator from California (Mr. CRANSTON) and the Senator from Nebraska (Mr. ZORINSKY), who stayed their hands yesterday to allow us to put through the CETA extension so that we may deal with all the amendments they had to CETA in this bill, as this bill must go to conference. We are hopeful that the CETA extension will be passed by the House, without a conference.

Senator NELSON and I are quite prepared to deal with those amendments today.

I conclude by saying that I believe that, on the part of President Carter and Secretary Marshall, as well as on the part of Senator NELSON and those on our committee who were concerned in these negotiations, this represents a legislative triumph as to how business can and should be done on a highly complex bill, which could be extremely controversial—to come into the Senate, so far as the bill is concerned, as it is before us, with a complete agreement with the administration and the whole package ready to go. It is really extraordinary and highly creditable, and I am delighted to have seen it happen in such a highly deserving situation.

Mr. STAFFORD. Mr. President, I strongly support the youth employment legislation reported by the Committee on Human Resources and urge its adoption by the Senate.

I commend the chairman of the committee, Senator WILLIAMS, and the chairman of the subcommittee, Senator NELSON, for their leadership in bringing this comprehensive youth legislation to the floor. Senator JAVITS, the ranking Republican member of the committee, has devoted his energies and excellent talent to every part of this bill. The committee has acted expeditiously to address this very pressing issue and I believe we have produced a sound, workable product.

The committee bill includes three programs. The first part authorizes a Young Adult Conservation Corps patterned on the Civilian Conservation Corps of the early 1930's. The second part provides jobs for eligible youth on community conservation and improvement projects. The third part of the bill authorizes a variety of training and employment activities through the regular CETA mechanism.

I believe the strategy in the bill—to provide several alternative approaches—is good. Employment problems facing

young people are varied and complex. The several programs working together and separately respond to different aspects of the problem. Our experience with these programs over the next few years will broaden our understanding of the situation and help us devise the most appropriate responses.

The Young Adult Conservation Corps included in this measure builds on the value and good work of the earlier Civilian Conservation Corps. The work carried out under the original corps and the recent summer program in our Nation's parks, forests, and recreation areas is being enjoyed today. The most important achievement of the CCC and today's program is the immeasurable experience provided thousands of young people.

Senator JACKSON has been a consistent supporter of the conservation corps idea and his diligent efforts on behalf of the legislation should be recognized.

The second part of the bill, the community improvement and conservation program, is similar to a bill introduced earlier this year by Senator RANDOLPH and myself. The purpose is to create jobs for young Americans, ages 16 to 19, on community improvement projects.

Senator RANDOLPH and I are concerned about the adverse impact of imposed joblessness on young people. Our concern prompted us to introduce a jobs creating bill targeted to this age group. Most young people begin the transition from school to adult society during their teenage years. Early job experience provides one of the essential links between school and the adult world.

Without early job opportunities, many young persons become frustrated, alienated from the work force and many reach their early adult years with no real connection with work and no sense of responsibility. Not only do they lack skills but they lack an adult, pragmatic view of what is required of them to obtain and hold a permanent job. As a young adult they "graduate" into the ranks of the chronically unemployed.

The community improvement program is an attempt to bring together two of today's pressing problems—idle young people and the decay and blight occurring in neighborhoods and communities across the country.

The community improvement program could begin the task of turning those twin problems into an opportunity—an opportunity to provide unemployed high school youngsters with not only a job, but with hope in the future and with a sense of community. Projects undertaken would help reverse the tide of community deterioration and neighborhood decay.

These are tasks that cry out for the doing but which have less priority than fundamental community tasks such as police and fire protection, roads, schools, and welfare. They are, nevertheless, valuable projects which enhance the community and extend the useful life of many facilities. Both the young person and the community share the satisfaction of a job well done.

Jobs created under the program would

be designed at the local level on locally selected community improvement activities. Broad community participation which is vital in the development of good projects is encouraged. Any private or public nonprofit group, including private citizens' voluntary groups, may participate and submit applications.

The supporters of this concept believe it will encourage young people to remain in school or, in the case of those who had dropped out or recently graduated, to return to finish high school and to go on to postsecondary education. In many ways, the program will tend to prevent our young citizens from being abandoned to the ranks of the chronically unemployed.

The community improvement section will create jobs for young people, and more, it will encourage the granting of school credit that might help students achieve graduation and access to higher education.

This is a new approach to the youth unemployment problem. The committee has maintained maximum flexibility in the legislation to provide an opportunity to test its workability and effectiveness. The committee did not place a limit on the use of funds for materials or supervisory personnel. It is clear that dollar limitations in past programs have severely hampered their usefulness. To assure that projects would not become leaf raking for lack of supplies the committee has not imposed arbitrary limitations.

Witnesses representing the construction and trades appeared before the Senate Subcommittee on Manpower and Poverty and were asked their views of the program and how the labor provisions in the bill would work. We were reassured by their answer.

The witnesses agreed there was much good, sound work which would be carried out under the program without triggering the full Davis-Bacon rates. The witnesses supported inclusion of the provision to protect unemployed adult workers. They supported opening this area to more young people and did not see the provision as an obstacle.

The labor unions with the greatest interest in the protections offered by Davis-Bacon are made up of members who also have a great interest in the future of our communities and of our young people.

In our meetings with these interested labor union officials, we have become convinced that—in a spirit of cooperation—we have worked out a legislative program that will provide us with flexibility and continued protection for the rights of older workers.

The third component in the bill, the comprehensive youth employment and training program, builds on the regular CETA mechanism to provide a broad range of training and employment services to young people. Activities would include counseling, occupational information, institutional and on-the-job training, and outreach services.

During its deliberations, the committee adopted several amendments to this section of the administration's bill.

One amendment, which I consider im-

portant, was offered by Senator JAVITS to include a program for in-school youth. Funds would be earmarked to strengthen traditional in-school programs and develop better linkages between school and career opportunities for young people.

I believe it is important to include in-school youth in these programs. The proposal I introduced covered in-school youth and expressly provides that school credits could be gained through employment on projects.

I note that part "C" includes, as eligible activities, some of the same activities authorized in the community improvement section. I am pleased that the project concept has favor and is an eligible activity in part "C." I expect, however, that projects undertaken under this section of the bill will be more limited and secondary to the other training and employment activities which are available.

I assume that all major youth community projects will be carried out under the community improvement section as that is its basic and continuing purpose. I am glad the option to consider projects has been given the prime sponsors as they can supplement activities carried out under the community improvement program.

Mr. President, as I said at the opening of my remarks, I commend the chairman and all members of the committee and staff who have worked on this bill. I believe it is good legislation, addressing a serious problem in this country, and I strongly urge its adoption.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that Chip Terrill, a member of my staff, be granted the privilege of the floor during the consideration of S. 1242.

The PRESIDENT pro tempore. Without objection, it is so ordered.

#### UP AMENDMENT NO. 331

Mr. NELSON. Mr. President, I send an amendment to the desk.

The PRESIDENT pro tempore. The amendment will be stated.

The legislative clerk read as follows: The Senator from Wisconsin (Mr. NELSON) proposes an unprinted amendment numbered 331.

Mr. NELSON. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The amendment is as follows:

#### SPECIAL VETERANS PROVISIONS

SEC. 8. (a) With respect to programs carried out with funds appropriated after January 1, 1977, for each of the fiscal years 1977 and 1978 under the Comprehensive Employment and Training Act of 1973, as amended, the Secretary of Labor (hereinafter in this section referred to as the "Secretary") shall take appropriate steps to provide for the increased participation in public service employment programs and job training opportunities supported under such Act of qualified disabled veterans (as defined in section 2011(1) of title 38, United States Code) and those qualified Vietnam-era veterans (as defined in section 2011(2)(A) of such title) who are under twenty-seven years of age (hereinafter in this section re-

ferred to collectively as "eligible veterans"), including, but not limited to—

(1) providing for individual prime sponsors to develop local goals, taking into account the number of eligible veterans in the area served by such sponsors, for the placement of such eligible veterans in job vacancies occurring in such public service employment programs;

(2) Full implementation of the provisions of section 104(b) of the Emergency Jobs and Unemployment Assistance Act of 1974, as amended (relating to the conduct of an outreach and public information program to promote employment and training opportunities for veterans);

(3) the carrying out of the Secretary's responsibilities under (A) chapter 41 of title 38, United States Code (relating to job counseling, training, and placement services for veterans) to provide the maximum of employment and training opportunities through existing programs, coordination and merger of programs, and implementation of new programs; (B) chapter 42 of such title (relating to opportunities for employment and training for disabled and Vietnam-era veterans, including mandatory listing and the promotion of maximum employment and job advancement opportunities with the Federal Government); and (C) chapter 43 of such title (relating to veterans' reemployment rights);

(4) full utilization of the provisions of clauses (2) and (5) of section 205(c) of the Comprehensive Employment and Training Act of 1973, as amended (relating to service to significant segments of the population and special consideration for special Vietnam-era veterans) and the provisions of subclause (E) of section 105(a)(3) of such Act (relating to maximum use of apprenticeship or other on-job training opportunities available under section 1787 of title 38, United States Code); and

(5) requiring that representatives of appropriate veterans organizations or groups be invited to serve as temporary members of prime sponsors' planning councils (established under section 104 of such Act), the States' Manpower Services Councils (established under section 107(a)(1) of such Act), and the National Commission for Manpower Policy (established under section 502(a) of such Act).

(b) The Secretary shall make available such sums and shall assign such personnel as may be necessary to carry out fully and effectively his responsibilities under subsection (a). The Secretary shall report to the Congress within 60 days of enactment of this section on the amount so made available and the personnel so assigned.

(c) The Secretary shall carry out his responsibilities under this section in consultation with the Deputy Assistant Secretary for Veterans' Employment (established by section 601 of the Veterans' Education and Employment Assistance Act of 1976, Public Law 94-502). The Secretary, in carrying out his responsibilities under this section, shall also consult with and solicit the cooperation of the Administrator of Veterans' Affairs.

#### SPECIAL CONSIDERATION

SEC. 9. (a) Section 205 of the Comprehensive Employment and Training Act of 1973 is amended by adding at the end thereof the following new subsection:

"(d) In filling teaching positions in elementary and secondary schools with financial assistance under this title, each eligible applicant shall give special consideration to unemployed persons with previous teaching experience who are certified by the State in which that applicant is located and who are otherwise eligible under the provisions of this title."

(b) Section 602 of such Act is amended by adding at the end thereof the following new subsection:

"(f) In filling teaching positions in elementary and secondary schools with financial assistance under this title, each eligible applicant shall give special consideration to unemployed persons with previous teaching experience who are certified by the State in which that applicant is located and who are otherwise eligible under the provisions of this title."

Mr. NELSON. Mr. President, this amendment would simply insert in the bill provisions which the Human Resources Committee originally reported as amendments to H.R. 2992, the 1-year extension of CETA, which the Senate passed yesterday.

After consulting with members of the House Education and Labor Committee, it was determined that we could avoid a conference on the simple CETA extension if it contained no other provisions. They strongly prefer that all other issues relating to CETA be dealt with in the conference on the bill we are now considering.

The two provisions stricken from the simple CETA extension yesterday, which this amendment would add to the bill we are considering today, are the following:

First, the section providing that the Secretary of Labor shall take appropriate steps to increase participation in training and job opportunities under CETA for Vietnam-era veterans under 27 years of age and for disabled veterans.

Second, the section providing that, in filling teaching positions in elementary and secondary schools with financial assistance under title II or title VI of CETA, each prime sponsor shall give special consideration to unemployed persons with previous teaching experience who are certified by the State and who are otherwise eligible under CETA.

The PRESIDENT pro tempore. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. NELSON. Mr. President, I understand that the distinguished Senator from Nebraska has an amendment he wishes to offer.

#### UP AMENDMENT NO. 332

Mr. ZORINSKY. Mr. President, I wish to thank the Senator from Wisconsin for the opportunity to present this clarifying amendment which I send to the desk and ask for its immediate consideration.

The PRESIDENT pro tempore. The clerk will report.

The legislative clerk read as follows:

The Senator from Nebraska (Mr. ZORINSKY) proposes unprinted amendment No. 332.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The amendment is as follows:

On page 68 of the bill between lines 18 and 19, insert the following new section:

## "CLARIFYING AMENDMENT"

SEC. Clause (A) of section 608 (a) (1) of the Comprehensive Employment and Training Act of 1973 is amended to read as follows:

"(A) who has been eligible for unemployment compensation benefits for fifteen or more weeks;"

Mr. ZORINSKY. Mr. President, this amendment is in the nature of a clarifying amendment, and I believe it has been discussed on both sides and has the support of the Chairman. My understanding is that there is no other disagreement to the amendment; however, I would like to make it a part of the record.

The necessity for this clarifying amendment was first brought to my attention when I served as mayor of Omaha. I talked with the local official who had responsibility for carrying out CETA. Subsequently, my successor has continued to keep me informed of his efforts in dealing with the Department of Labor. From that exchange, it has become clear that only a change in the law can rectify the situation.

The present law, the Comprehensive Employment and Training Act of 1973 (Public Law 93-567), created title VI. Recently the Congress, in September of 1976, enacted eligibility provisions for title VI under Public Law 94-444. The intent of the eligibility requirements is to insure the hiring of the long-term unemployed.

The present provisions require that if one is eligible for unemployment compensation, then that individual must accept such benefits for 15 weeks before being eligible to obtain employment under the present title VI of CETA. My understanding is that the 15-week point is a very reasonable cutoff. Statistics and demographics have proven that if one is unemployed for 15 weeks, the individual is likely to be unemployed for an extended period of time and, therefore, rationally the 15-week point is the beginning of what can be described as long-term unemployment.

Even though the 15-week point is a reasonable cutoff, the requirement of remaining on unemployment compensation for 15 weeks has created an unintended anomalous situation of encouraging people not to work.

Because of that provision, people who are too proud to take unemployment compensation—and I must say to my colleagues, we still do have such people in Nebraska—and who are yet fit, willing, and able to work are forced to take the benefits to become eligible to be hired under title VI of CETA.

Likewise, people who are unemployed for 13 weeks and then decide to file for unemployment compensation benefits, still must wait to receive unemployment compensation benefits for 15 weeks before becoming eligible for title VI employment.

My clarifying amendment will remove the unintended anomaly. My amendment encourages people to work. It is consistent with the present intent of title VI, that being the hiring of the long-term unemployed. My amendment will simply allow those who have been unemployed

for 15 weeks to be eligible for employment regardless of whether the individual never filed or filed late for unemployment compensation.

Without my amendment, many States will have the money available but will be without the people to qualify. Yet these same States will have significant numbers of people who are long-term unemployed, the very target group title VI is meant to reach. I am underscoring this anomaly in light of the emphasis being given title VI through the recently enacted economic stimulus package.

I thank my colleagues from the State of Wisconsin, Senator NELSON, and the State of New York, Senator JAVITS, for recognizing this problem and for their support of my clarifying amendment.

I ask unanimous consent, Mr. President, that an exchange of correspondence on this matter between myself, the Department of Labor, and the mayor of the City of Omaha be printed in the RECORD at this point.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

MARCH 1, 1977.

HON. RAY MARSHALL,  
Secretary of Labor,  
Washington, D.C.

DEAR MR. SECRETARY: I am very disturbed to learn that the Employment and Training Agency of the Department of Labor is working on new regulations to Title VI of the Comprehensive Employment and Training Act that frankly, undermines the basic intent of Congress in providing local prime sponsors the ability to plan and program on the local level.

Specifically, the proposed regulations will restrict Title VI job placement to those individuals who have been unemployed 15 weeks or more and are verified by the Job Service. Additionally, and this is the rub: If such an individual is eligible for Unemployment Compensation and for one reason or another has failed to either apply for or exhaust his benefits, he will be ineligible for a Title IV public service position. The purpose, so I am told, is to attempt to expand as much Title VI money before September 30th as possible not withstanding the Comprehensive Manpower Plan of the several prime sponsors. While those of us familiar with the CETA effort can see this as an attempt to marry the ETA bureaucracy to the prime sponsors it should also be pointed out that it is an attempt by that bureaucracy to sandbag you and the Carter Administration before you gain functional control of the Labor Department.

How can a prime sponsor be expected to submit its annual plan, replete with job development and meaningful public service slots with public and non-profit agencies, then part way through the year on the whim of the Federal bureaucracy discard those commitments both to the unemployed and the public agencies that developed meaningful slots?

There are other elements of this decision that disturbs me. The U.I. trust funds in the many of the states have approached exhaustion. While the administration and the Congress debate tax relief for the private sector in order to provide job's stimulus, ETA proposes to maximize the drain on those funds by forcing their use when several prime sponsors have work (under Title VI) to provide to such applicants.

As you know, Mr. Secretary, the image of the Job Service with the private sector during the past two decades has been one of

steady decline. Indeed, the Madison Avenue campaign put forth two years ago to change the old "ES" (Employment Service) image into the present "Job Service" was designed to combat this problem. The Prime Sponsors, on the other hand, through their congressionally mandated effort for comprehensive planning and delivery of services have fared far better because they have been in a position to deliver what they have promised to deliver. What the proposed Title VI regulations actually portend is to drag the Prime Sponsors image with the private sector down to the level of the Job Service. CETA and the prime sponsors offered a new way of doing things from the old MDTA, EOA, Wagner-Pepper hodgepodge. CETA prime sponsors must be results oriented to survive and they are. This arrangement should not be torpedoed in order to provide the Jobs Service a reason to exist as the Jobs Service should also be results oriented or be abolished. In short, Mr. Secretary, I believe that CETA prime sponsors should be allowed to carry out their program as planned without unnecessary interference from the bureaucracy so long as it conforms to the law.

Sincerely,

EDWARD ZORINSKY,  
U.S. Senator.

OMAHA, NEBR.,  
March 2, 1977.

HON. RAY MARSHALL,  
Secretary of Labor,  
Washington, D.C.

DEAR SECRETARY OF LABOR MARSHALL: The City of Omaha Combination of Governments as a Prime Sponsor has found a serious flaw in the Emergency Jobs Act (Title VI). It is again a case of Federal bureaucrats "interpreting" Congressional intent. Our problem in Omaha can be corrected by a simple clarification that you as Secretary of Labor can address.

The problem with the interpretation is that the U.S. Department of Labor wants the applicant, if he/she is eligible for Unemployment Insurance (U.I.), to collect a minimum of fifteen weeks of U.I. checks before he/she can be declared eligible for a Title VI job. This interpretation is absolutely ridiculous and makes it extremely difficult for Prime Sponsors to fulfill the intent of Congress in reducing unemployment.

We feel in Omaha that if a person wants to work, and has been unemployed for fifteen weeks that he should be qualified to enter Title VI. Instead, the U.I. interpretation forces claimants who want to work now to receive the full supplement of fifteen weeks of U.I. checks. The verification procedure alone requires the applicant to travel to three different places in Omaha just to determine eligibility for a job.

These kinds of interpretations defeat CETA's purpose of getting jobs for the unemployed, and encourage participants to passively receive U.I. checks even though they want to work and can qualify for a Public Service job.

In short, people who have been unemployed for fifteen weeks or more and meet all other eligibility criteria should be allowed to go to work. Second, I think the Federal Regulations should encourage simplification in such programs, not paperwork obstacles that prevent the unemployed from getting jobs.

I trust that this matter will receive your immediate attention. The problem may be alleviated by simply stating that any person who has been unemployed for at least fifteen weeks is eligible to enter a Title VI job for which he/she is qualified. Please inform me of your opinion and actions on this matter.

Very Truly Yours,

ROBT. G. CUNNINGHAM,  
Mayor, City of Omaha.

WASHINGTON, D.C.,  
April 27, 1977.

HON. EDWARD ZORINSKY,  
U.S. Senate,  
Washington, D.C.

DEAR SENATOR ZORINSKY: Secretary Marshall has asked me to respond to your letter of March 1, 1977, to him concerning the revised program under title VI of the Comprehensive Employment and Training Act (CETA) of 1973, as amended.

As you are aware, Public Law 94-444 entitled "Emergency Jobs Programs Extension Act of 1976" was enacted on October 1, 1976. This legislation amends title VI of CETA and provides for the funding of projects and activities to employ long-term unemployed, low-income persons. Specifically, the law mandates the new eligibility criteria to which you referred in your letter. Federal regulations pursuant to this legislation were published in final form in the Federal Register on January 11, 1977, and recently were revised and published as proposed on March 15, 1977.

Section 99.43 of these regulations provides the guidelines for the prime sponsor's verification of participant eligibility. It should be noted that this section states that prime sponsors are responsible for assuring the eligibility of all participants and are liable for any payments made to participants determined to be ineligible during program reviews and audits. Regarding the method for verification, the regulations only suggest, not mandate, the use of State employment security agencies (SESAs). Prime sponsors may employ any method they choose for verification.

Regarding your concerns that this revised program under title VI of CETA will cause disruptions at the local prime sponsor level, it should be noted that sponsors will have enough funds to sustain throughout Fiscal Year 1977 the number of title II and title VI public service jobs which it had as of June 30, 1976, or October 31, 1976, whichever is higher. With additional monies which the Department anticipates Congress will soon appropriate, sponsors will fund new projects lasting for one year for low-income and long-term unemployed under the amended title VI program. Consequently, those new jobs in projects will be operated as a second, and additional, portion of title VI.

I hope that the information provided will be helpful.

Sincerely,

PIERCE A. QUINLAN,  
Administrator, Office of Comprehensive  
Employment Development.

APRIL 14, 1977.

MR. PIERCE A. QUINLAN,  
Director, Office of Comprehensive Employment  
Development, U.S. Department of  
Labor, Washington, D.C.

DEAR MR. QUINLAN: In accordance with instructions for the submission of comments on the proposed, March 15, 1977, CETA Title VI Regulations, I shall address my remarks to your attention.

As of this date, the Omaha CETA has hired three hundred nine (309) individuals under the new Title VI Projects public service employment program. Therefore, I believe the criticisms and suggestions listed in my letter should receive serious consideration. Omaha CETA is one of the very few Prime Sponsors in the nation who have hired under the Title VI Projects criteria and thus we can speak with the authority of experience.

Members of my staff were present at the Conference on New Dimensions in Public Employment in Washington, D.C., last week and listened to Mr. Ernest Green's explanation for DOL's adamant stance on the rigid Title VI participant eligibility criteria. Ap-

peasing the critics of CETA, with beefed-up program statistics, is laudable, but those efforts should not be at the expense of local officials. By robbing Prime Sponsors the flexibility we require to adapt to local needs, you will defeat the very purpose of Title VI.

The unemployment rate in Omaha is 7.1%; we have fifteen thousand unemployed persons. We've only developed a pool of approximately 600-700 eligible participants since our efforts began in February, 1977. We've already hired 309 of those individuals and are on our way to exhausting the pool completely. By the time DOL gets around to changing the eligibility criteria, to include the next lowest level of unemployed, Omaha's program will have come to a grinding halt.

The Title VI legislation, when outlining eligibility criteria for participants, contains the language, "In filling public service jobs with financial assistance, eligibility applicants shall give preferred consideration to the maximum extent feasible. . . ." That same flexibility should be contained in the regulations. Otherwise, the Administration should be prepared to give Regional Directors the authority to grant waivers, on eligibility requirements, to individual prime sponsors. Omaha is far ahead of the nation. Omaha should be rewarded for its efforts rather than penalized for its efficiency.

In a March 2, 1977, letter to the Secretary of Labor, Mr. Ray Marshall, I suggested a change in the proposed regulations concerning Unemployment Insurance (U.I.) eligibility. I have yet to receive a response from Mr. Marshall, so I shall reiterate my concern to you. The United States Department of Labor's interpretation that the Title VI applicant, if he/she is eligible for U.I., must collect a minimum of fifteen weeks of U.I. checks before he/she can be determined eligible for a Title VI job is ridiculous.

We, in Omaha, believe that if a person wants to work, and has been unemployed for fifteen weeks, that he/she should be qualified to enter Title VI. To insist that an individual sit at home until he/she collects fifteen U.I. checks when he/she is able to earn a living is absolutely absurd.

Finally, I believe the Federal regulations should encourage simplification in such programs, not paperwork obstacles that prevent the unemployed from getting jobs. The verification procedure alone requires the applicant to travel three different places in Omaha just to be determined eligible for a job. The problem may be alleviated by simply stating that any person who has been unemployed for at least fifteen weeks is eligible to enter a Title VI job for which he/she is qualified.

Your earnest and favorable consideration of these matters before publishing final regulations will be appreciated.

Sincerely,

ROBT. G. CUNNINGHAM,  
Mayor, City of Omaha.

OMAHA, NEBR.,  
May 9, 1977.

Senator EDWARD ZORINSKY,  
Russell Senate Office Building,  
Washington, D.C.

DEAR ED: Thank you for sharing the content of Pierce Quinlan's letter on the unemployment insurance question in CETA Title VI. I was most disappointed in his response and thus, I am again requesting your assistance.

The legislation is quite specific and, at first glance, one believes interpretation simple and straight forward. However, by the time you get to D.O.L.'s Technical Assistance Manual, Prime Sponsors are squeezed into

debilitating molds with appallingly restrictive interpretations.

The USDOL's Technical Assistance Manual, Title VI, and the Emergency Jobs and Unemployment Assistance Act of 1976 appears to have discrepancies in terms of the eligibility.

The interpretation raises the question of the intent of Congress dealing with unemployment. If the intent of CETA is to help economically disadvantaged and unemployed, then the Federal Regulations should be flexible to allow Prime Sponsors to perform this task in the manner necessary to meet the needs of their community.

In summary, the Omaha community believes that people who are unemployed should be allowed to go to work.

Enclosed are three items: 1) the Title VI legislative language of eligibility criteria; 2) the D.O.L. Regulations' wording on Title VI eligibility criteria, and 3) the D.O.L. Technical Assistance Manual interpretation on Title VI eligibility criteria. Each succeeding document contains more and more restrictive language.

I would appreciate your keeping me apprised of your communication with D.O.L. on Title VI Regulations. With all of us working together, perhaps someone with the Labor Department will realize that paying an individual not to work is foolish, and not the intent of Congress.

Sincerely,

ROBT. G. CUNNINGHAM,  
Mayor, City of Omaha.

MR. ZORINSKY. I thank the Chair.

MR. NELSON. I want to commend the Senator from Nebraska for his perceptiveness in discovering lacuna in the 1976 amendments which created a situation that was unintended. The intent of Congress was, that in order to qualify for a public service job, one need only be unemployed for at least 15 weeks, whether one was eligible or ineligible for unemployment compensation. It was not intended that if one were eligible for unemployment compensation, but did not apply for it or waited for several weeks to apply, and was unemployed for 15 weeks, that such individual be denied eligibility.

So the amendment is sound and it corrects an unintended error in last year's amendments. The manager of the bill is prepared to accept the amendment.

The PRESIDENT pro tempore. The question is on agreeing to the amendment of the Senator from Nebraska.

The amendment was agreed to.

MR. NELSON. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

MR. STAFFORD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. STEVENSON). Without objection, it is so ordered.

MR. STAFFORD. Mr. President, I ask unanimous consent that Judy Parente be afforded the privileges of the floor during the debate and votes on the pending legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

MR. STAFFORD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. NELSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, this is an important and innovative piece of legislation. It addresses itself to the most difficult of our unemployment problems—youth unemployment. The bill is a good beginning in undertaking to tackle that question.

Usually when we look at a bill the principal sponsor is presumed to be an important, if not the most important, contributor to the origin of the concept and the substance of the legislation. In this particular case, that is not so. I am listed as the first sponsor. I am listed first on the legislation by mutual consent because this bill was referred to the Subcommittee on Employment, Poverty, and Migratory Labor. Several Members had bills and proposals addressing various aspects of the youth employment and training problem. And in a remarkable demonstration of generosity and good sense, these various authors joined in a cooperative effort with the administration to produce one comprehensive integrated bill that incorporated the best ideas and features of several proposals by several Members of the Senate. My contribution was only temporarily to lend my name to their efforts and conduct the hearings on the legislation in the subcommittee of which I am chairman. To the others belong the credit for developing this excellent and creative piece of legislation, not to me.

Part A, the Youth Adult Conservation Corps, is based on a bill introduced in this Congress and the last Congress by Senator JACKSON, who is the leading sponsor of the National Youth Conservation Corps for summer jobs for youth 16 to 18. Part B, youth conservation and improvement projects, is based on the proposal which Senators STAFFORD and RANDOLPH introduced early this session of Congress to put unemployed youths to work on the improvement and rehabilitation of facilities in communities throughout the Nation.

The Youth Initiatives Act of 1977 was introduced on January 10, 1977, by Senator CRANSTON and cosponsored by Senator KENNEDY.

The Comprehensive Youth Employment Act of 1977 was introduced on January 11, 1977, by Senator HUMPHREY and cosponsored by Senators JAVITS, ABOWREZK, CASE, INOUE, and MATSUNAGA.

The Youth Employment Act, S. 503, was introduced on January 28, 1977, by Senator McCLURE and cosponsored by Senators BELLMON, DOMENICI, BAKER, DANFORTH, GARN, HANSEN, HATCH, HAYAKAWA, JAVITS, LAXALT, LUGAR, SCHMITT, STEVENS, and WALLOP.

So this bill that has finally been worked out is the fruit of the conscientious and creative efforts of those Members I have mentioned who have con-

cerned themselves with this very important question and problem of youth employment.

Mr. HUMPHREY. Mr. President, the first thing I want to say in reference to the Youth Employment and Training Act of 1977 is that it represents a very significant improvement and development in our employment programs targeted toward a particular group of our citizens, the youth, that sustain and regretably have one of the highest levels of unemployment.

Second, I compliment the manager of the bill and the chief sponsor, Senator NELSON. He is very modest in his comment today about not having been any more than just by good fortune, because he is chairman of the subcommittee, the sponsor of the legislation.

That is being far too modest. The Senator from Wisconsin is known in this body for his extraordinary good work in the field of manpower legislation and in this instance has played a very significant role in the development of this particular bill and what we hope will be legislation signed by the President.

Of course, there are others. My esteemed friend from New York, Senator JAVITS, the ranking minority member of the committee, likewise has made tremendous contribution, and I rise to compliment and commend him.

Hopefully today we will be taking action on the Youth Employment and Training Act, and it will be a historic first step toward the development of a comprehensive and effective employment and training policy for the young people of this country. This landmark bill holds out the promise of help to millions of young people who will be entering the job market during the next few years who so desperately need to become productive, wage-earning members of our economy. Our good colleagues, Senators NELSON and WILLIAMS, deserve the warmest thanks from their colleagues in the Senate and from the young people of this Nation for their swift and effective action on the Youth Employment and Training Act, and so do, likewise, the other members of the Human Resources Committee on both sides of the aisle who have proven to be so dedicated to the needs of our youth.

I am very pleased to have been a cosponsor of this bill and to have participated in its development. Many of the programs in the Youth Employment and Training Act were adopted from the Comprehensive Youth Employment Act of 1977—S. 170—which I introduced on January 11 with Senator JAVITS and a number of cosponsors. The President and the Secretary of Labor, Ray Marshall, were very cooperative in developing this legislation, and I hope this cooperation is a portent of many good things to come.

Now, more than ever, the youth of our Nation need the employment and training help that will be provided by this bill. All across the country, unemployment has dealt a devastating blow to the hopes and aspirations of our young people. In April of this year, the unemployment rate among teenagers 16 to 19 years old

was 17.8 percent, compared to 4.9 percent among adults 25 years old and over. Among young adults 20 to 24 years old, many with family responsibilities, the unemployment rate was 10.8 percent. Among black teenagers, the unemployment rate was 36.2 percent and, in many of our central cities, disadvantaged youths experience an unemployment rate that exceeds 60 percent.

This is a national tragedy and an unconscionable waste of one of our Nation's most valuable resources. Almost every teenager and young adult I have met wants desperately to work and to become a productive and useful member of our society. They want jobs, they want to be productive, they want to earn their way, they want to be given a fighting chance. Unemployment cheats them out of all this.

The economic, social, and personal costs of this are enormous. In addition, youth unemployment is a major source of crime. Seventy-five percent of arrests for serious crime involve youths under the age of 25 years old. Most often these crimes are committed by young people who have nothing valuable to do and who have been totally alienated from the mainstream of our society and our economy.

The Youth Employment and Training Act provides the first ray of hope for many of these young people. Through the National Young Adult Conservation Corps and the Youth Community Conservation and Improvement projects, the bill creates useful employment opportunities for young people who otherwise may never have had a chance to perform fulfilling and valuable work—jobs reforesting Federal and State lands, creating recreation areas, refurbishing homes and public buildings, weatherizing older homes, providing community services, and doing many other useful tasks.

Under the youth employment and training programs, contained in part C of the bill, young people will receive a wide variety of jobs and job training that will help them obtain good work when they enter the job market—including the creation of employment opportunities that will give participating youths much-needed work experience, job counseling, provision of occupation information, institutional and on-the-job training, and many other supportive services.

I am particularly pleased that the Human Resources Committee adopted my amendment which will allocate 15 percent of each prime sponsor's youth employment and training funds for a program to serve youths who are still in school. The original bill did not have such a provision, and indeed, specified that only out-of-school and out-of-work youths were to be served by programs established by the bill. This would have been a terrible mistake, since it ignored the fact that many young people desperately need a job just to remain in school and, in fact, it would have given these youths an incentive to drop out of school to qualify for assistance. My

amendment is an important provision of the bill, since it now gives youths who are still in school the same access to jobs and training as youths who are out of school.

During the next 18 months, \$2 billion will be distributed to the States and to prime sponsors to develop youth employment and training programs. Although this is not really enough to help all of the 3.3 million young people who are unemployed today, it is a significant start and a signal to our young people that Congress and the administration can and will work together to meet their needs.

The State of Minnesota, as many of my colleagues know, already has a very effective youth jobs program that encompasses funds from the Neighborhood Youth Corps under title III of CETA, a State youth employment program that will receive \$8 million over the next 2 years from the State budget, and privately funded programs, all melded together to provide useful jobs for Minnesota youths. In addition, we have a very effective vocational education program in our State, in fact one of the best in the Nation.

Under the Youth Employment and Training Act, Minnesota prime sponsors will receive about \$30 million to expand our youth employment and training programs. This will allow our prime sponsors to create about 10,000 to 15,000 new job and training opportunities for our State's youths, and to serve 30,000 to 40,000 youths during the upcoming 18-month period. This will be a big help to the unemployed youths in Minnesota.

Many of Minnesota's youth employment and training programs, as I have said many times before, could serve as excellent examples for youth programs across the Nation. The center for community action's summer jobs program, which has employed over 7,000 disadvantaged youths from Minneapolis, St. Paul, and Hennepin County since 1971, has done an excellent job of providing recreational facilities along the riverfront that are highly valued by many Minnesota citizens. Here is a very good model for the youth community conservation and improvement program. The city of St. Paul's youth career exploration and employment program gives over 500 disadvantaged youths each year the opportunity to work and develop job skills while they are still in school, and could well serve as a model for an in-school program. Our statewide work experience program, which integrates up to a half day of work with a relevant educational program, could also be a model.

Enactment of the Youth Employment and Training Act will benefit youths in Minnesota and all across the Nation. I support it and I am very happy to have had the chance to participate in developing this very important program for our Nation's youths.

Mr. President, I see my esteemed friend and colleague from New York (Mr. JAVITS) is present, and I want to ask him a question if I may have his attention.

Congress has appropriated \$1 billion for youth employment and training programs for fiscal year 1977. A quick start-up of the programs that we will enact with the Youth Employment and Training Act would be the most appropriate and effective use for these funds. I understand that the administration has committed itself to using the fiscal 1977 money to fund these programs right away, and that their commitment was part of the negotiations that led to the development of the bill.

I ask the Senator from New York, who participated so eminently in the development of this bill, am I correct in the statement I have just made?

Mr. JAVITS. The answer is yes. And now I would like to implement that answer with the following facts:

We passed here not very long ago the Economic Stimulus Act of 1977. That included \$1 billion for the youth program—the very \$1 billion which the Senator mentioned.

That left the situation neutral, because the committee, in its report, on page 14, said:

For the youth program, the committee recommends \$1 billion, the same amount as the House allowance and the budget figure, to fund the efforts for fiscal 1977 and all of fiscal 1978.

Bear in mind that that is two-thirds of the trench. The other \$500 million will come in a subsequent appropriation. So the matter is left neutral.

Therefore, we revert to the hearing of April 20 before the Subcommittee on Employment, Poverty, and Migratory Labor of the Committee on Human Resources. At page 32 of that transcript, I asked Secretary Marshall specifically about this matter, and I would like the Senator to hear the colloquy. I will read it slowly:

Senator JAVITS. . . . My last question is this: We have a fiscal stimulus appropriations bill before us. It has a billion dollars for youth employment programs. The thought originally was that this would go into title III, so-called national programs for Indians and various other special classifications. Naturally, that is a large sum of money. We feel it is very, very urgently needed in the youth employment field.

Has the department thought at all about how that money can best be used and what assurance we should have as to whether it will be used consonant with this bill, or what are your thoughts on it?

I beg the Senator to note the words "consonant with this bill," which was the bill we were debating in connection with this testimony.

Secretary MARSHALL. We have given a lot of thought to how it can be used. Of course, the \$1.5 billion in the youth bill reaching 200,000 young people is not insignificant.

He was referring to an additional \$1.5 billion, in addition to the \$1 billion.

Mr. HUMPHREY. Yes.

Mr. JAVITS. I do not want us to forget that point.

Again I quote:

but you have to consider it relative to the total problem that young people face, and we think the things we are contemplating doing in other parts of CETA are also neces-

sary and that these are complementary and what our conception of the youth population and programs to deal with it is that we are trying to be comprehensive about it, trying to think out a balanced program that will meet the needs of most groups and give us some flexibility in delivery mechanisms because I think both of those are important, while keeping in mind the need to manage the program as effectively as we can and to be sure we accomplish the objectives; that we get meaningful work done and that the training itself is meaningful.

We have thought about that.

I was not satisfied with that answer and neither would the Senator have been, so I pursued it. Now, I continue at page 33, line 9:

Senator JAVITS. I don't want to put words in your mouth, but what we are concerned about is as executive legislators have pretty well agreed on this bill with the changes being suggested which are not, after all, essential. But the billion dollars which will be used consonant with—I think that is a fair word—the policy and principle of this bill before us.

Secretary MARSHALL. Let Mr. Edes expand on that.

Mr. Edes is the Deputy Under Secretary of Labor for Legislative Affairs of the Department of Labor.

Mr. Edes. Senator JAVITS, we had already contemplated spending that billion and a half dollars in the fiscal stimulus package in the same way that, in fact, is outlined in this legislation. One of the reasons that we—one of the many reasons that we decided to go with the separate use title was to get a clearer congressional input through the legislative mechanism as to how we should, in fact, go about spending that money, and that is what this legislation represents and that is why we are asking that you act as expeditiously as possible in putting this together so that we can move together in the expenditure of that money as this legislation would ultimately command us to do.

Senator JAVITS. Is there anything that inhibits you in what is on the floor? You see, that is very much closer to getting votes and could you—that is why I used the words "consonant with"—use what we provide consonant with the thrust of this bill?

Mr. Edes. That is our intention and that is how we are planning to spend the money.

Then another official interjected, Mr. Green, the Assistant Secretary for Employment and Training.

Mr. GREEN. I would just like to respond. We are ready to move expeditiously and have been in the planning stages on a number of them. Parts C and A, as Secretary Marshall outlined, we have a near finalization of the interagency agreement on the Young Adult Conservation Camps and Part C is through the CETA system and we are ready to move with that as a program content.

Senator JAVITS. Thank you very much. Thank you all, gentlemen.

So Secretary Marshall gave us a willingness, but Edes and Green, who were there also as administration witnesses, gave us a very precise answer which, for legislative history, I interpret to mean that the \$1 billion provided in the stimulus appropriations bill of 1977 will be used in accordance with the purposes of this bill. They have that discretion because the appropriation was neutral.

Mr. HUMPHREY. I am very grateful to the Senator from New York. That

\$1 billion means a very quick startup of these programs.

Obviously, it would fit into the pattern which is established in this bill, which is a very balanced program, of a variety of youth employment opportunities.

Mr. JAVITS. May I add one other thing which has been called to my attention by staff?

Mr. HUMPHREY. Yes.

Mr. JAVITS. On page 66 of the bill, section 4 expressly picks up these funds, the \$1 billion, and provides that:

Sec. 4. In order to provide for an orderly transition to youth employment and training activities funded under title VIII of the Comprehensive Employment and Training Act of 1973 (as added by this Act), the Secretary of Labor shall use the funds available from appropriations under the Economic Stimulus Appropriations Act of 1977 for youth employment and training activities to the maximum extent consistent with law, in such a manner as to be in accordance with the provisions of such title VIII.

So I think it is locked in very well.

Mr. HUMPHREY. I believe it is locked in very well. I thank the Senator from New York for referring to the testimony because the legislative history is of vital importance.

While I have the Senator's attention, he will note that we included in the bill a provision that sets up a new work-study program that incorporates job training and work experience in the educational program of in-school youth, and allocates 15 percent of the funds authorized under the act to in-school programs. The programs are to be run by the local educational agencies under contract from the prime sponsors.

I believe this provision is so important because without it the program would be essentially for out-of-school youth and those who were completely unemployed. I want to make sure that, when we go to conference with the House, our conferees on both sides of the aisle, Democratic and Republican, will fight hard to keep that 15-percent provision.

Nothing would be worse than to have a bill that had an incentive to take young people out of school in order to qualify for the provisions of the bill. This 15-percent allocation permits the bill to be applied for in-school, on-the-job training, programs relative to education and work experience, thereby keeping young people in the school systems of the country.

I would appreciate the Senator's comments.

Mr. JAVITS. Mr. President, to me this is the most innovative part of this bill. I was very honored to sponsor it with Senator HUMPHREY. I deeply believe he has exactly described the situation.

We have never applied work study on the Federal level to secondary education and yet that is where all the dropouts occur.

Not only is it critically important to keep them in school, and this program would be designed for that purpose, but it is also critically important to get the educational agencies into the whole complex of effort for training them. Many of the trainees, whether in or out

of school, simply lack basic skills of reading, writing, and arithmetic. They cannot get a job because they are practically illiterate. That is aside from a lifetime education and other very gifted concepts of the present Vice President of the United States in which many of us have joined. It opens up a totally new world in terms of the training of people, of how to deal with the unemployed, of the kinds of jobs which Government may have to give as public service jobs, and so on.

I deeply believe this is the most innovative aspect of this bill.

It will be a great challenge to the educational agencies and it will be a great challenge to the prime sponsorship. It is extremely desirable from every point of view.

One thing I would like to point out is when we speak about work study we are also talking about community colleges which mainly teach professional subjects and in many cases quasi-professional subjects, like dental technicians, or something like that. This is critically important because by doing that, they begin more nearly to match the training with the person.

I congratulate the Senator on our work.

Mr. HUMPHREY. It is a joint effort. Might I say it has been a special joy to work with the Senator from New York. I feel this legislation, to which we have all had a chance to make a real contribution, is landmark legislation.

It is one of the fundamental social economic problems of our country. This particular provision is innovative. I do think it will stand the test of a very critical examination. I do think it will produce results.

I thank the Senator for his observations.

Mr. JAVITS. I thank my colleague.

(At this point Mr. SASSER assumed the Chair.)

Mr. HUMPHREY. I yield the floor, Mr. President.

Mr. McCLURE. Mr. President, at the outset I thank the Senator from Wisconsin for having noted that this bill has broad support and had initial broad sponsorship for a number of its features. I am particularly happy that the report, as well as the remarks of the Senator from Wisconsin, indicate that the Senator from Idaho, along with cosponsors, introduced the Youth Employment Act back in January.

One of the concerns that I have in the entire field of youth employment lies in the institutional barriers to employment. We have not attacked those institutional barriers directly, but we leave that to future action of the Congress of the United States.

That was done for two reasons: One is that those institutional barriers fall very seldom, and they are very difficult to surmount. They have all kinds of constituencies that defend them.

The other is that the problem of youth employment is so severe that it cannot await the resolution of some of those larger and more difficult solutions.

One of the areas that I am pleased to see included in the bill that was a part of the legislation which I introduced was the inclusion of an option for the prime sponsors, the option of involving the private sector. This is a new attempt on the part of CETA. This can be one of the most significant changes in the basic legislation, but it will be significant only if local prime sponsors avail themselves of that opportunity and if the applications of local prime sponsors who seek to do that are recognized through the approval of their grant applications.

I take the time this morning only to concentrate for a moment on making legislative history that would indicate that we expect that the private sector will be involved; that we will expect, a year from now, in looking back at the evolution of the administration of this program, to find that local prime sponsors have reached out to job opportunities in the private sector; have worked to find ways to create job opportunities, work experience, and training on the job—not in public service jobs, not in public sector jobs, but in private sector employment.

We know that a very, very high percentage of all the jobs in our society are in the private sector, not in the public sector. We know that if we are to be successful in moving young people off the unemployment rolls and into meaningful employment, they must find those jobs in the private sector. If, as a matter of fact, our major or our only thrust is to create new public sector jobs or public service jobs, we shall have created a wider hiatus rather than solving the problem that we seek to solve; for far too many public jobs, and, indeed, public sector jobs, funded by a program of this kind, are deadend jobs. They do not lead to permanent employment, but are temporary in their nature. The job lasts as long as the grant lasts. The job terminates when the grant terminates. We have to be building bridges to permanent employment, not simply finding work for young people on a temporary basis, as important as that may be.

I was particularly happy that the section of the bill which was in my bill is included in this measure. It appears on page 48 of the bill, in subsections 4 and 5, line 11 through line 22. But the reality of the promise will be met only in practice. It means nothing to include it if, as a matter of fact, the applications that include these innovations are not improved and funded and actually put into practice. I hope that the sponsors of the bill and the floor managers of the bill will agree with me that we will expect to see some measurable progress.

I wonder if the Senator from Wisconsin might not agree with me that, a year from now, looking at the progress on this bill, we are going to be looking to see whether or not prime sponsors have involved the private sector; whether or not those have been funded; and whether or not jobs have actually been created in the private sector.

Mr. NELSON. I agree with the distinguished Senator from Idaho. As the Sen-

ator well knows, that is one of the reasons that we made this a 1-year bill. We did give considerable flexibility in the bill to the Secretary of Labor so that we can gain 1 year's experience in the management of this legislation. The private sector, in my judgment, is very important in this; it is, at least ultimately, our objective to get people trained—one, for youth to have a job-working experience; two, to get some job training so that they can go into the private sector, and, of course, on-the-job training programs are authorized by the legislation.

The problem of youth employment is, as the Senator knows, the most serious structural unemployment problem this country has. When the President met in London at the summit of leaders of the Western industrialized nations, youth employment was one of the most important areas of concern, because it is a worldwide problem. The problems of youth unemployment are not going to be resolved unless there is close connection between activities of the kind supported under this legislation and the ultimate employer, who is the private sector employer.

A year from now—that is why we made it 1 year. We usually provide authorizations for 2, 3, and 5 years. We made this a 1-year bill so that we can get back to the legislation and have very good, careful, and extensive oversight as to how the program is working. We can then make whatever changes will be necessary to implement the objectives we all have in mind.

Mr. McCLURE. I thank the Senator from Wisconsin. I appreciate both his leadership and his assistance in making this legislative history. The merit in this proposal will be reality only if it is practiced. We can make suggestions; we can provide flexibility; we can create the opportunity; we can point in the direction. But if the direction is not followed in the administration of the program, all we have done means nothing.

I do not intend, and I think it would be impossible, for us to mandate at this point the degree of private-sector involvement. We do not know what can be done. But we will know a year from now, by looking at the experience, whether or not there has been an honest effort made to implement this portion of the bill. That and other innovative ideas are going to be tested in the crucible of actual practice.

I know that the Senator from Oklahoma has had a very keen interest in the involvement of educational institutions. That, again, is a new thrust in this bill, trying, in a very real way, to integrate the training with the educational institutions, the employment counseling and the job placement with educational institutions. The bill provides flexibility to do that in new ways. But, again, we shall not know how well it has done until we have had some experience and can see how well it has been administered.

I think a number of us who are supporters of this legislation, who have sponsored or cosponsored other bills that have been merged into this effort, will be

looking with a very sharp eye at how it has worked in practice, to see whether or not the approach that we have made here is worthy of supporting for another year. I, for one, am going to be looking at that with a very close eye.

I think it would be a mistake for us, for instance, to have missed the opportunity to integrate job placement into the vocational training schools of our country. This bill can provide that means. But it does not require it.

Would the Senator from Minnesota care to comment on that?

Mr. HUMPHREY. Indeed. As the Senator from Idaho knows, I have been a strong supporter of the very concept that he has spelled out here today, that is in this legislation. In the work of the Senator from Idaho in the Joint Economic Committee, we have discussed this matter. Not the same, but a similar provision was in the bill introduced by Senator JAVITS and myself. I think it gets right at the heart of the long-term employment opportunities of young people.

That is what we are most concerned about.

Mr. President, I ask the Senator in light of a conflict I have in scheduling if he would be kind enough to yield to me, without losing his right to the floor, for a technical amendment which has been accepted by both the manager of the bill and the ranking member?

Mr. McCLURE. I am happy to yield to the Senator.

Mr. HUMPHREY. The Senator is very gracious.

#### UP AMENDMENT NO. 333

Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Minnesota (Mr. HUMPHREY) proposes an unprinted amendment No. 333.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 34, line 3, strike the period and insert: "and the Soil Conservation Service."

Mr. HUMPHREY. Mr. President, the purpose of the amendment I have proposed is quite simple. It adds the Soil Conservation Service to the Government agencies where youth employment might be used.

The Soil Conservation Service has, in the past, effectively used the youth of our great Nation in various public employment programs.

I am certain that the failure to list the Soil Conservation Service stems from a slight oversight. The administration strongly supports this amendment and the relevant House legislation contains a provision relating to the Soil Conservation Service.

Mr. NELSON. Mr. President, the distinguished Senator from Minnesota is

correct that the Soil Conservation Service should be included. It was unintentionally omitted, as far as I am concerned, and I am prepared to accept the amendment.

Mr. JAVITS. What page is that?

Mr. HUMPHREY. It would be on page 34, line 3, after the words "Forest Service" and would include the words "and the Soil Conservation Service."

Page 34, line 3.

Mr. JAVITS. That is fine.

Mr. HUMPHREY. Strike the period and add the words, "and the Soil Conservation Service."

Mr. JAVITS. It is acceptable to me.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Minnesota.

The amendment was agreed to.

Mr. HUMPHREY. I thank the Senator for yielding.

Mr. McCLURE. The Senator from Minnesota is very welcome.

Mr. President, I shall conclude my remarks very briefly.

Mr. President, in January I introduced, along with 15 other Senators, a bill intended to address the serious problem of unemployment among our Nation's young people. Even though I continue to have restrained misgivings about certain aspects of the bill we are considering today, I am gratified by the timely response of the Human Resources Committee to this pressing problem, and I am particularly pleased that part C of the bill incorporates several of the concepts I advocated in my own youth employment bill.

The basic approach of part C of the bill is similar to my own proposal in that funds are provided to CETA prime sponsors to support a broad range of manpower services. While I wholeheartedly endorse this approach, I would prefer to have seen a broader range of eligible activities to provide greater incentives to private employers to train or employ unemployed or low-income youth. Permanent and meaningful employment of our young people must ultimately be found primarily in the private sector, since the provision of public service jobs can at best provide only a temporary answer without a complete breakdown in our economic system.

But let me emphasize again my firm belief that a targeted approach is essential if this form of structural employment is to be alleviated. The largest group of the structurally unemployed is the Nation's youth. Youth aged 16 to 24 make up 25 percent of the labor force but constitute 50 percent of the unemployment figure, and dollars intended to reach the problem of unemployment in general simply do not trickle down to this large but special group. Structural factors have contributed to higher rates of joblessness among young people. A list of the more important structural aspects of the problem would include:

First. Inadequate skill development and educational levels;

Second. Difficulties associated with the first job search;

Third. High rates of job changing and termination;

Fourth. Seasonal patterns of entry;

Fifth. Lack of mobility; and

Sixth. Poor labor market information.

Because of these factors, youth are the least able to compete for the limited number of jobs that are available.

While some of these same problems have been present in the past, young people made the transition from school to work and with the passage of time, evidenced much the same labor market history as did those workers who preceded them. That is to say as they aged, left home, and established households, job search intensified and career patterns were established and pursued. Many observers, however, feel that this current group of young people will not make the transition as painlessly or successfully as those who have preceded them. Consequently, the high rates of unemployment which exist for youth today will be carried forward into the higher age strata of the civilian labor force. Thus if job creation fails to keep pace with the expanding labor force, many young people will go through their teens and emerge as young adults with no employment history and few marketable job skills.

There are 3.6 million unemployed youth. These youth can be found in the inner city, in the suburbs, and in rural America. The problem is not isolated. Though youth unemployment is no respecter of class, the disadvantaged youth suffer particularly from structural unemployment.

Youth unemployment is a problem throughout our Nation. We cannot ignore the tremendous need. We cannot turn our backs on millions of our sons and daughters. I join with my colleagues today in support of a comprehensive program to help the youth of our country become productive members of society.

Mr. President, I am happy to yield to the Senator from Oklahoma.

Mr. BELLMON. Mr. President, I thank my friend from Idaho.

I wonder if I may have the attention of the Senator from Wisconsin to respond to a couple of questions.

The Senator from Wisconsin may remember that a couple of years ago the Senator from Oklahoma introduced a bill that would have made it possible for our urban youths to locate and accept employment in rural areas, employment on farms. The bill never did go to hearings.

I am curious to know, as to the language in this act, if that objective might not be accomplished here.

On page 34, for instance, in lines 4 through 9, we say:

"(d) (1) The Secretaries of the Interior and Agriculture, pursuant to agreements with the Secretary of Labor, may provide for such transportation, lodging, subsistence, medical treatment, and other services, supplies, equipment, and facilities as they may deem appropriate to carry out the purposes of this part.

Would this make it possible for the Secretary of Labor and the Secretary of Agriculture to work out arrangements whereby urban youths were identified,

who wanted and would accept jobs on farms and ranches, and for the Secretary of Agriculture to identify farmers or ranchers in need of that kind of help and work out an exchange program so that these young people from the cities could have the opportunity to work in rural areas?

Mr. NELSON. First, let me say that I remember very well the proposal of the distinguished Senator providing some mechanism for young people, youths from the cities, to have an opportunity to work on the farms and ranches, which concept I happen to endorse. I think it is a very good concept.

I do not think under this legislation that could be accomplished in the Young Adult Conservation Corps—I will check the language—because I believe corps members are to work on public lands. In other parts of the legislation, nonprofit agencies may be project applicants.

I do not know off the top of my head but perhaps the Senator's proposal falls in the category of on-the-job training with private employers, which is a permissible arrangement.

Mr. BELLMON. If the Senator will yield, there is quite a lot of the agricultural sector that is nonprofit.

Mr. NELSON. I withdraw that. I have a lot of dairy farmers. [Laughter.]

Mr. McCURE. Will the Senator yield for a comment?

Mr. BELLMON. I am glad to yield to the Senator.

Mr. McCURE. Would it not be possible for a local prime sponsor who is a public entity to combine some ranch or farm work experience as part of a proposal under the language which I have made reference to that involves the private sector in job training and job experience?

I would think it would be possible to structure a proposal that would include what the Senator from Oklahoma suggested.

Mr. NELSON. I would not like to answer the Senator's question offhandedly because it is an issue of first impression that was not raised at the hearings, nor in the committee markup.

How would such a program be designed?

Mr. McCURE. I would think it could be designed in exactly the same way a local prime sponsor would involve a young person in a work experience program in an industry in the city, for instance, or in any other private sector employment, private sector job.

It might be more difficult because of logistics involved, but one of the things that surprised me in the studies of youth unemployment is that it is not a big city problem exclusively, that in gross numbers there are almost as many young people unemployed in rural areas of the country as in the inner cities.

We might find a small rural community in which the local prime sponsor could very easily have public training for work experience, place a youngster in that rural setting in a job that is in agriculture and that might be the best approach into future work in their own community.

Mr. NELSON. I am assuming that what is being inquired about is whether or not under this program, the program sponsor itself could become an instrumentality for seeking youth and placing them in an agricultural situation in which the employer, in this case the rancher or farmer, would pay the wages and provide the housing, and so forth, and that the only function here would be as a placement agency, so to speak.

Mr. McCURE. I suggest that it might be possible that the employer would pay the full wage, and it also might be possible that he pay a portion of it, depending upon the way in which the program was put together by the sponsor. It might be a portion of the day, a working experience that tries different kinds of work on the job for different periods of time.

I see nothing in the bill which would make that impossible, and certainly that was within my view of what was a possibility of the private sector involvement under the sections of the bill to which I made reference earlier.

Mr. NELSON. The Senator is not talking about part A of the bill?

Mr. McCURE. No—part C.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. BELLMON. I am happy to yield to the distinguished Senator from New York.

Mr. JAVITS. It is a question of first impression to me. Interestingly enough, this farm boy from New York City joined Senator BELLMON in this bill. As does Senator NELSON, I think it is a very good idea, and I am appalled that I did not push for hearings, which I certainly could have done easily.

It strikes me that there are areas under B and C, perhaps not necessarily precisely along the lines of Senator BELLMON's proposal. For example, I noticed that in part B, which is the 16 to 19 group—generally called Senator STAFFORD's ideas in this particular area—we talk about weatherization.

For example, page 37, line 8, reads:

'Community improvement projects' means projects providing work which would not otherwise be carried out, including, but not limited to, the rehabilitation or improvement of public facilities; neighborhood improvement; weatherization and basic repairs to low income housing . . .

Most of the low-income housing, as a matter of fact, in terms of a relationship to total housing, probably is located in rural areas. They are very poorly housed in many areas.

Of course, part A refers to public lands, and again it raises a problem.

So I think there is latitude as Senator McCURE has described under part C. It would be my duty and my pleasure to press the Labor Department to see what can be done to try out the Senator's concept under such provisions of this bill as allowable, and let us take it from there. I think that is the way to proceed.

Mr. BELLMON. Mr. President, if the Senator will look at page 56, section 838, beginning at line 16, the language is this:

The Secretary of Labor is authorized to provide support for innovative and experimental programs to test new approaches for

dealing with the unemployment problems of youths. In supporting such programs, the Secretary of Labor shall consult, as appropriate, with the Secretary of Commerce, Secretary of Health, Education, and Welfare, Secretary of Housing and Urban Development, the Director of the ACTION Agency, and the Director of the Community Services Administration.

If we could get the Secretary of Agriculture in this program—

Mr. JAVITS. Surely. Consultation certainly is more than appropriate. Why does the Senator not write it in?

Mr. BELLMON. If the Senator from New York will accept this.

Mr. JAVITS. I will accept it.

Mr. BELLMON. Also, this section provides for experimental programs. If we could get an experimental program under the terms of this section, perhaps in a year we would have some guidance.

Mr. JAVITS. Let us say it.

Mr. BELLMON. I should like to raise a question with the Senator from Wisconsin (Mr. NELSON).

Mr. NELSON. The Senator would insert "Secretary of Agriculture" somewhere on line 17, 18, 19, or 20?

Mr. BELLMON. That is right.

Mr. NELSON. Why does the Senator not offer it? On line 19, after "housing and urban development" insert "Secretary of Agriculture." Does the Senator want to offer that?

Mr. BELLMON. I do not have it written down.

Mr. NELSON. As I understand it, the Senator proposes, on line 19, page 56, after the comma following the word "development," to insert "Secretary of Agriculture."

#### UP AMENDMENT NO. 334

Mr. BELLMON. Mr. President, I send the amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Oklahoma (Mr. BELLMON) proposes an unprinted amendment No. 334:

On page 56, line 19, after "development," insert: "Secretary of Agriculture."

Mr. BELLMON. Mr. President, I believe the amendment is acceptable.

Mr. NELSON. I have no objection to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. BELLMON. Mr. President, to be sure that the legislative history is complete, it is the intent of the authors to make it possible for the Secretary of Labor and the Secretary of Agriculture to work out a cooperative program for the placement of urban youth in rural jobs in the private sector.

Mr. NELSON. My answer originally to the question should have been "yes," that it fits in as part of the on-the-job training under the rules and regulations of the Secretary of Labor to carry out the provisions of the legislation.

Mr. BELLMON. I should like to raise another point.

It has been one of my concerns that very often, in our vocational technical schools, the young people are trained

for jobs, and then, once they complete the training courses, they are released into the job market without guidance or followup to be sure that they can find jobs and hold those jobs.

I am curious as to whether there is a provision in this bill to give those who train young people some responsibility in also seeing that once the young people are trained, they can get a job and hold it. I refer to page 48, line 7:

\*\*\* providing for the establishment of cooperative efforts between State and local institutions, including occupational and career guidance and counseling services for in-school and out-of-school youth;

I wonder whether that would include job placement.

Mr. NELSON. Yes, it does.

Mr. BELLMON. There is no mention of job placement, but it is the intent that job placement be part of those services?

Mr. NELSON. That is the way I interpret it.

To make it more specific, we could include "and job placement services."

#### UP AMENDMENT NO. 335

Mr. BELLMON. If the Senator would accept such an amendment, I would offer it.

I send the amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Oklahoma (Mr. BELLMON) proposes an unprinted amendment numbered 335:

On page 48, line 9, after the word "counseling," insert the following: "and placement."

Mr. NELSON. That is my interpretation of what we intended in any event. I have no objection to it if the Senator from New York does not.

Mr. JAVITS. No; I have no objection. I think it is highly acceptable.

The PRESIDING OFFICER (Mr. SASSER). The question is on agreeing to the amendment of the Senator from Oklahoma.

The amendment was agreed to.

#### UP AMENDMENT NO. 336

Mr. DOMENICI. Mr. President, is the Senator from Oklahoma finished?

Mr. BELLMON. I am finished.

Mr. DOMENICI. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposes unprinted amendment No. 336.

Mr. DOMENICI. Mr. President, I ask unanimous consent to dispense with the further reading of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 53, line 10, strike "receive" and insert in lieu thereof "be given."

On page 53, line 11, after the word "training" insert, "and opportunities for appropriate new classifications, occupations, and restructured jobs."

On page 63, line 1, after the word "for" insert "occupations and job classifications of."

On page 63, line 2, strike "in similar occupations."

Mr. DOMENICI. Mr. President, I offer this amendment for myself and in behalf of Senator BELLMON and Senator McCURE.

The manager of the bill and the ranking Republican have a copy of this amendment. The substance of this amendment, I might say, Mr. President, accounts for the delay this morning of a couple of hours while we have been talking about the problem that this amendment will attempt to resolve, and I will address that issue shortly.

First, let me thank Senator BELLMON and Senator McCURE for helping with this amendment in the discussions and the preparation of it, and Senator NELSON and Senator JAVITS for their concern and, in particular, I thank the Senior Senator from New York (Mr. JAVITS) for his ideas and his assistance in trying to get the idea with which I came to the floor this morning into this legislation.

Having said that, let me briefly describe what I am trying to do and what concerns me in the bill.

First, Mr. President, there can be no doubt that one of the most significant problems America has, and which assumes moral responsibilities and moral dimensions, in this Senator's opinion, is youth unemployment.

I need not recite the litany of statistics with reference to this problem of youth unemployment. They are well known, and the record in the Senate in the past 2 months, the record of the committee, is rampant with evidence that America has a major problem when half of its unemployment is youth between the ages of 16 and 21, youth who are unemployed for whatever reason.

Looking at it at this point in our history, there are too many institutions and too many traditions and too many groups that have part of the responsibility for this problem and part of the blame. There are too many to indict here today. The fact remains that the problem is with us.

The second fact is that whether or not the American economy gets the appropriate stimulus and growth either from the private sector or by appropriate monetary and fiscal policies of this Nation, it appears to many of us that youth unemployment will remain and will not respond very significantly to that kind of growth and stimulus.

Having said that, a number of Senators—and I am pleased to be one of them—from both sides of the aisle have in this particular year arrived at the conclusion that we have a responsibility, along with fiscal policy and monetary policy, to target unemployment opportunities into our youth.

Now, I want to generally create the atmosphere that prompts my amendment. There have been a number of Senators and a number of economists, a number of educators, a number of businessmen, and a number of concerned Americans who have indicated that the minimum wage is one of those societal structures that is making it hard for young people to find employment.

I am not saying that is a majority or a uniform view, but I am saying there has been a very significant body of

thought that says that is a problem. That has found its way into legislation in the past few years with the notion of a youth differential or a period of time when young people could work for less than the minimum wage as they move into the work force.

When some Senators and this Senator started working on a youth bill, I went there concerned about shall we create a youth differential in this bill. After much negotiation and thought, I came down on the side of a bill which was introduced carrying the principal sponsorship of Senator McCURE, which did not address that issue, and it said, "We will attempt to solve it and we will not try to create a youth differential."

We came down with the idea that we had to get a bill passed, and we had to move ahead without a frontal assault on that particular idea that is with us in the United States today.

When I got the committee's bill and the report, indeed I thought it was very praiseworthy.

I find literally scores of tremendous ideas; I find significant impact; I find a great deal in the bill that will work, and I am here saying that I support it. But there was one thing that bothered me, and it was this: Whereas a number of us had agreed to not bring into full focus the idea of a frontal attack on the youth differential, I think many of us thought we would be saying to those local sponsors, prime sponsors, in part C of his bill, in particular, that they would have the latitude of starting with a minimum wage and that they would not have to start with a mandate to pay more.

I found some language in the bill that disturbed me because it appeared to mean that we might have been saying in this bill that prime sponsors under the public service part of this bill, part C, would have been forced to pay either the minimum wage or the prevailing rate, whichever is higher. I do not know what that means, except I know enough now that it might mean substantially more than the minimum wage.

I want everyone to understand that I am not against young people getting adequate pay for the work they do. But I was trying to be a part of giving the local sponsors as much flexibility to address the problem as they wanted, and maybe they would have chosen to go with more young people at a minimum wage rather than fewer people at a prevailing wage rate.

On that score I would say the distinguished mayor of Newark, Mayor Kenneth Gibson, president of the U.S. Conference of Mayors, argued before the Budget Committee rather persuasively that on the existing summer youth program he thought it needed authority for a youth differential. He thought local prime sponsors ought to be able to waive the minimum wage to some extent so that they could hire more young people in the summer for the same amount of dollars, and he thought we ought to leave it up to them. I do not think he was one who was espousing this because he did not want to help young people, but rather he was looking at the nature of the problem and trying to address it in the most meaningful way.

Having said that, I found language in section 3, the public service type part of this, and the part that the prime sponsor will try to work with the private sector, as described by Senator McCURE this morning, that would indicate that the prevailing rate might govern for the employment of youth even by a local unit of government rather than giving the latitude to hire youth at the minimum wage as part of this training program that the cities will adopt to put young people to work for them or for the public schools or for the counties or the prime sponsors, being the State through the Governor's prime sponsorship.

In an effort to address that issue, the amendment that I sent to the desk will permit the prevailing rate, wage rate, to be the test where we are filling an existing type job or an existing type classification of a job.

I have conceded there. I have conceded in the interest of the unemployed population that is not youth that might feel that they should be hired by a local school board, a city, a county, or the particular unit that is going to hire them under the prime sponsorship program, if they are filling a job that was either by classification already there and vacant, or that that particular unit of government needed, and was expanded in numbers under an existing classification. In the event this occurs and they are filling that kind of job, then it might be that that young person would receive more than the minimum wage and would receive the prevailing rate. On the other hand, this is the first real American effort at addressing youth unemployment on a large scale with a lot of dollars and with a lot of direction. So it seemed to me that we should clarify that we expect our prime sponsors to address the issue of youth unemployment with the prime focus on trying to put youth in jobs with some training, some work habits being developed, and that these may be new kinds of jobs that that municipality, that school board, that county government, that State government might structure particularly for the young people.

So, the heart of my amendment is to insert on page 53, line 11, words that say among the things that the local prime sponsor will assure the Secretary of opportunities for appropriate new classifications, occupations, and restructured jobs. Among the things that the prime sponsor sends up would be his plan or its plan for that kind of new youth job within that jurisdiction's employment program. And in such event the prevailing rate need not apply for it is covered elsewhere and is defined as I have described it heretofore.

That restructured type of job, new classification permits them the latitude, that is the prime sponsors, gives them the latitude to start with the minimum wage and if that is what the job is classified at in this new structure for youth, this new occupational opportunity for youth, then that is what that city will pay. We are not binding them to it, but we are giving them the opportunity to produce that kind of on-the-job work experience in local government with those kinds of limitations that I have described.

I have taken a great deal of time in describing it. I think it is a matter of genu-

ine concern. I have tried to handle it delicately because I want this bill to have broad bipartisan support. I understand that we have conflicting kinds of concerns in the marketplace in the arena of employment. I understand that there are those who would not like to see a major youth employment program at minimum wage because they are fearful that it will take other jobs from people they represent. I understand unions would have a concern. And I have tried to steer a course that will make this piece of legislation work and will protect to the extent possible those other interests, but not capitulate to them but recognize that there are two kinds of problems and that in the first American effort at youth employment in a major way that we recognize that the prime focus should be on how do we help them. And we have given a little with the prevailing rate language in section C for existing type job classifications. But I think in the overall with this discussion and, if this amendment passes, it will be clearly understood that we want to maximize the opportunities of local government to give our young people an opportunity to fit into the employment structure of that community, that city, that county, that prime sponsor, and we want that prime sponsor to have maximum flexibility in structuring the employment practices to get them on board.

One last comment. One of the new concepts in this bill is that these jobs, although they should be numerous and although the youth should have opportunity, with training and work habits involved, the development of those kinds of things, these jobs also are limited to 12 months. I add that because that should eliminate some of the fear that people might have that young people might take the jobs that others might want, need, and perhaps have applied for.

Having said that, I once again thank the Senator from New York (Mr. JAVITS) for his assistance in drafting and understanding this amendment and for his continued assistance while we together with a number of Senators trying to develop an acceptable youth bill.

Mr. JAVITS. Mr. President, I first thank Senator DOMENICI for his very gracious words about me and about the manager of the bill and the bill generally and then testify to the tremendous assistance which we have had from him, Senator McCURE, and Senator BELLMON in respect of the creative aspects of this bill at every turn, including their willingness to give a point here and there in order to bring about a bill today without an undue amount of confrontation.

I have participated in the development of the language which is contained in the amendment, and the amendment is acceptable to me.

May I just say, so that the record is clear, my thought was that the Secretary shall be the arbiter not any arbitrator, the arbiter and that, therefore, the use of the words on page 53 in the insertion on line 11 "appropriate new classifications" leaves it to the Secretary because that paragraph provides assurances satisfactory to the Secretary. So

he may determine that they are or are not appropriate because the trade unions, I think, have quite a proper concern about moving people around in order to get lower rates of pay, and the suspicions engendered by the arguments over minimum wage, et cetera, always persist. We understand that, and it is our job as managers of the bill to look at both concerns and to try to deal with them the best way we can.

So, the key concept is the fact that we vest authority in the Secretary to be the arbiter as to whether such new classifications, occupations, and restructured jobs are really appropriate to attaining the objectives which are prescribed in this measure and especially in this particular paragraph.

Second, the word "received" is changed to the word "given." I can understand that perfectly because, after all, this is essentially a directed program to accomplish a purpose which the Secretary is called upon to accomplish.

As to the change which is made at page 63, to wit, to eliminate "in similar occupations," which to the proponents of the amendment is too broad a word, anything can be made similar, and so there is no opportunity for some freedom of action or creativity in respect of the job opportunities which will be established for youth under this particular program.

On the other hand, there is the fear of the trade unions that unless we use the word "similar" it will be construed as too restrictive and solely to the letter only what a particular job classification is defined as being by those who may be opposing the union again, trying to move people around and get them into lower or different classification.

So again we have chosen language which is neutral and which leaves the Secretary as the dominant factor in deciding the prevailing rates of pay for occupations and job classifications of the persons actually employed rather than any other standard as being the fairest determinant for the Secretary's judgment.

Mr. DOMENICI. I ask the Senator from New York on that last statement: Is it by the same employer?

Mr. JAVITS. That is exactly right.

Again I emphasize that it is our purpose, and I hope my colleague from Wisconsin will agree with me, that we are putting the Secretary in charge and the language is such as to put him in charge. That is our purpose.

So neither the feelings, the worries of the proponents of the amendment nor the fears of the opponents, to wit, organized labor, will be realized. That, as I see it, is the way we have approached the solution.

Mr. NELSON. Mr. President, I concur with the remarks of the distinguished Senator from New York. It would be repetitious to comment further about it.

I think that this amendment resolves a problem that was of concern to a number of Members, and I think having the final arbiter in any particular circumstance by the Secretary of Labor is a good resolution. I am prepared to accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Mexico.

The amendment was agreed to.

#### UP AMENDMENT 337

Mr. DOMENICI. Mr. President, before I send this amendment to the desk, I would say to the manager of the bill and the ranking Republican member that on yesterday, when we were discussing the CETA bill, I discussed with them the possibility of putting some sense of the Senate or sense of Congress language in the bill, showing that it was the sense of Congress that the Secretary of Labor should provide, under his discretionary authority under title 3 of the CETA, for demonstration projects which coordinate the delivery of manpower and social services; and, second, that it was the sense of Congress that the Secretary of Labor encourage prime sponsors to work with local education agencies on the allocation of public service jobs.

The amendment that I send to the desk will incorporate those two resolutions in one amendment. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposes an unprinted amendment numbered 337.

Mr. DOMENICI. Mr. President, I ask unanimous consent to dispense with further reading of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment will be printed in full in the RECORD.

The amendment is as follows:

At the end of the bill add the following section:

Section 9. (a) It is the sense of the Congress that the Secretary of Labor should provide, under his discretionary authority under Title III of CETA, for demonstration projects which coordinate the delivery of manpower and social services.

(b) It is the sense of Congress that the Secretary of Labor encourage prime sponsors to work with local education agencies in the allocation of public service jobs.

Mr. DOMENICI. Mr. President, I do not intend to say any more on this amendment. Yesterday we discussed both of these propositions at length. If the manager and the ranking Republican member agree to accept them, it will suffice, from this Senator's standpoint, that the record of my statement in addressing these two issues yesterday serve as the justification, from my standpoint, for the adoption of the two resolutions.

Mr. NELSON. Mr. President, I have no objection to the amendment.

Mr. JAVITS. I have no objection to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Mexico.

The amendment was agreed to.

Mr. JAVITS. Mr. President, I know of no further amendments from this side.

SENATOR RANDOLPH SUPPORTS S. 1242, THE YOUTH EMPLOYMENT ACT OF 1977

Mr. RANDOLPH. Mr. President, as a cosponsor and as coauthor of the measure which is now part B of the pending measure, I support S. 1242, the Youth Employment Act of 1977. I am pleased to share the support of colleagues who are concerned with creating new opportunities for gainful employment among our country's jobless young people. The bill will help alleviate the adverse, long-term impact on young people of imposed joblessness at a critical juncture in their development. It should have a beneficial impact on our Nation's economy. The statistics on chronic high unemployment among young people are well known. In the late teenage years, most young people begin the transition from an academic environment to adult society, and early job experience will provide them with the essential link between school and the adult world. We have witnessed the alienation from the work force experienced by many young persons when they reach their early adult years, having had no real connection with work, and no sense of responsibility. They often lack skills as well as an adult, pragmatic view of what is required to obtain and hold a permanent job.

I commend our colleagues, Senator NELSON, floor manager of the bill and chairman of the Subcommittee on Employment, Poverty, and Migratory Labor; Senator WILLIAMS, chairman of the Human Resources Committee which reported S. 1242; and the committee's minority member, Senator JAVITS. They have worked diligently in bringing this important legislation to the Senate. This legislation represents a significantly increased commitment by the administration and the Congress to bring the Nation's youth into the mainstream of productive work in America. S. 1242 is a composite of alternative programs to address several, and vitally important, facets of chronic unemployment among youths. It is our response to the President's call for the "establishment of programs to take rural and urban young people aged 16 to 21 off the streets and put them to useful work helping to conserve, develop, and maintain our natural resources and recreation areas."

In line with the President's recommendations, part A of S. 1242 authorizes the establishment of a National Young Adult Conservation Corps. The program will provide employment and other benefits to youths, aged 16 to 23, who would not otherwise be currently, or productively, employed. This program will be administered by the Department of Labor through interagency agreements with the Secretaries of Interior and Agriculture.

Further, the Youth Conservation Corps programs will insure, to the extent possible, that needed and appropriate projects will be undertaken, and that those projects will be highly labor-intensive, will have a lasting impact, are projects for which work plans can be readily developed, and will provide work experience to youths in skill areas required for accomplishment of productive work. Such

work can include erosion control and flood damage, wildlife habitat improvements, range management, forestry, recreation, natural disasters damage measures, and many others.

In connection with the Youth Conservation Corps, it is important that we express appreciation to the Senator from Washington (Mr. JACKSON) who has been an effective leader in the reestablishment of this program. I have been privileged to work with Senator JACKSON in this endeavor and I know of his constructive actions toward expansion of the Youth Conservation Corps.

Part B of S. 1242, the Youth Community Conservation and Improvement Act, is designed to provide jobs to young Americans in need of initial employment experience. Earlier this year, I cosponsored with the able Senator from Vermont (Mr. STAFFORD) S. 306, the youth community improvement program. The concept of our proposal was adopted as part B of S. 1242. During committee consideration of part B, an amendment was offered by Senator STAFFORD, which I cosponsored, to define "eligible youths" under part B as "those individuals who are unemployed, and at the time of entering employment under this part, are ages 16 through 19 inclusive." We stressed the need to include this age group which is, for the most part, still in school. But it also provides for recent graduates and for school dropouts in that age group. We urge that the educational aspect be stressed so that nongraduates, or dropouts, are encouraged to return to complete their education.

Part C of S. 1242, entitled the comprehensive youth employment and training program, is to be supplementary to, but not a replacement for, programs and activities being conducted under title I of CETA, and is to enhance the job prospects and career opportunities of young persons, including training and employment in community service. Such training and supportive services are necessary to enable participating youths to secure suitable and appropriate, unsubsidized, employment in the public and private sectors of the economy. To the extent possible, training and employment opportunities afforded under part C are to be interrelated and mutually reinforcing so as to achieve the goal of enhancing the job prospects of the persons served.

During committee consideration of part C of S. 1242, an amendment was offered by Senator SCHWEIKER, which I cosponsored, to provide that special consideration be given to community-based organizations such as the Opportunities Industrialization Centers—OIC—the National Urban League, SER-Jobs for Progress, mainstream, community action agencies, union-related organizations, and other similar organizations which have demonstrated effectiveness in the delivery of employment and training services.

Mr. President, S. 1242 is a major advance toward a comprehensive youth services policy designed for the educational, training, employment, and social needs of youth. The bill places emphasis on expanding and improving the role of education in transitioning youth from

school to work, and combines training, work and service in both the public and private sectors. It provides youth with opportunities for work on urban restoration, community service projects of a lasting nature, and rural conservation. During the next year, its implementation, its successes, and its failures will be evident and will provide the Congress with tools to measure the needs of youth not met in this bill, and the kinds of resources required to meet those needs in the future. We will know better at the end of 1 year how our comprehensive youth services policy can be strengthened. I believe this bill will help create a collaborative relationship among local elected officials and their representatives, business, industry, educators, voluntary organizations, parents, youths, and committed citizens, focused on the goal of improving the Nation's economy and the well-being of a vitally important segment of our society—our young people.

ADDITIONAL STATEMENTS SUBMITTED ON  
S. 1242

Mr. MUSKIE. Mr. President, the bill presently under consideration, the Youth Employment and Training Act of 1977, is the culmination of much diligent work on the part of both Senators and the administration to alleviate the severe problems our country's youth are encountering as they attempt to become full participants and productive partners in our economic system.

My able colleagues have eloquently expressed today and over the last few months the gravity and pervasiveness of youth unemployment, and many have submitted their solutions to this problem in the form of legislation for our consideration.

It is not my purpose today to restate the well-documented severity of youth unemployment, nor is it necessary for me to discuss the particulars of the various approaches that have been combined into this single bill to deal with the problem. Rather, it is the process of combining these approaches in a tremendous spirit of cooperation by virtually all the major proponents of youth employment and training initiatives which I applaud.

As various bills to solve youth unemployment began moving through the legislative process and threatened to compete for the limited funds available in the congressional budget, it became clear that competition without cooperation would be detrimental to all.

The Budget Committee has fostered this cooperative spirit since Congress first made allowance for sufficient budget authority and outlays to accommodate major new initiatives in youth employment and training legislation in its assumptions underlying the third budget resolution for 1977. The importance of these initiatives was reaffirmed in the assumptions underlying the first budget resolution for 1978.

The 1978 budget resolution sets targets of \$26.8 billion in budget authority and \$27.2 billion in outlays for function 500, education, training, employment and social services. Carryover funds from fiscal 1977 and funds assumed in the first budget resolution for fiscal 1978 are sufficient to fund this program at the \$1

billion level contemplated by the human resources committee during formulation of this bill. Funding at a higher level would, of course, place in jeopardy initiatives assumed for other education, training, employment, and social services programs.

I intend to support S. 1242, Mr. President, and I wish to single this bill out to my colleagues as an example of how we can maintain budgetary restraint, avoid program duplication and overlap, and at the same time move forward with a balanced attack on a major social problem afflicting the Nation's young people.

THE IMPORTANCE OF A YOUTH EMPLOYMENT  
PROGRAM

Mr. CULVER. Mr. President, I believe that the legislation which we are considering, the Youth Employment and Training Act, is a constructive approach to one of our most serious national problems: Joblessness among teenagers and young adults.

Unemployment is, of course, a heavy economic and psychological burden for any worker. But it seems especially insidious when it strikes the young.

Hitting them at a time when they are ready to develop job skills and to learn the responsibilities and satisfactions of productive work, unemployment tells young people, in effect, that they have no useful role to play in American society.

Hitting them at a time when adult characters and values are taking shape, unemployment places severe emotional strains on youths.

As chairman of the Subcommittee to Investigate Juvenile Delinquency of the Senate Judiciary Committee which has jurisdiction over efforts to combat juvenile crime and drug abuse, I am especially concerned about the effects of youth unemployment in these areas.

Scholars debate about the precise extent to which unemployment contributes to these problems. But few observers can fail to note how often joblessness and a lack of educational and economic opportunity coincide with criminal activity and drug abuse among young people.

At a time when persons 24 and younger commit 6 of every 10 violent crimes, and 8 of every 10 property crimes, we have to give serious attention to improving the social environment which can give rise to this activity.

My own State of Iowa has been relatively fortunate in not suffering the high incidence of juvenile crime and unemployment which have affected other parts of the country.

Nonetheless, the statistics measuring these problems in Iowa are a cause of great concern to me. In 1965, 8,400 youngsters were processed by the juvenile courts in our State. Ten years later that number had grown to over 20,000. And in Iowa, the rate of joblessness among teenagers is three times the rate for adult workers.

I am hopeful that S. 1242 will provide a coordinated, well-developed attack on both youth unemployment and juvenile crime. It will do so through a comprehensive program of putting young Americans to work on projects important to individual communities and the Nation

as a whole. As a complement to the creation of jobs, essential services such as outreach, counseling, occupational information, institutional and on-the-job training and transportation assistance would be provided. These programs and services would be implemented by adding a new title, title VIII, to the Comprehensive Employment and Training Act.

Yesterday, the Senate acted to reauthorize CETA for another year. In supporting that reauthorization, I called to the attention of my colleagues the success of the summer youth employment program for economically disadvantaged youth, which is funded under title III-A of CETA.

That program has provided short-term summer jobs to 880,100 economically disadvantaged young people across the Nation; 5,200 of these were in Iowa. Those who participated in the program performed useful community service as school library and school maintenance workers, as nurse's aides, and as nutrition and day-care assistants.

In addition, this program recognized the connection between unemployment and criminal and drug activity by paying special attention to juvenile offenders. Eligible offenders received drug dependency rehabilitation and counseling as well as useful jobs as an alternative to criminal activity. Reports suggest that the program has shown notable success in introducing unemployed young people to the values and satisfactions of productive work.

I believe that the summer employment opportunities program and its success demonstrates what can be accomplished on a much broader and more comprehensive scale by the enactment of S. 1242.

Basically, S. 1242 consists of three major components.

The first of these is a National Young Adult Conservation Corps administered by the Secretary of Labor in conjunction with the Secretaries of Agriculture and Interior. It would provide for youths ages 16 to 23 jobs likely to have a lasting impact in our Nation's parks and forests. It is estimated that this Conservation Corps could employ up to 35,000 young workers over the next 18 months. It would emphasize employing young people from both urban and rural areas where unemployment is especially severe.

The second major program of the Youth Employment and Training Act is the youth community conservation improvement projects. This program would allow unemployed young people between 16 and 19 years of age to perform useful services for communities which otherwise would not be carried out. Weatherization and repairs of low-income housing, improvement of public facilities, and the conservation of natural resources on non-Federal public lands are examples of the kinds of projects to be carried out. Obviously, this program, which will extend to each community maximum flexibility to select suitable projects, not only serves the needs of jobless teenagers, but makes a vital contribution to neighborhood and community improvements as well. Thirty thousand young Americans should be able to benefit from this portion of the act.

The third program authorized by S. 1241 is comprehensive youth employment and training programs. This program is designed to enhance the job prospects and career opportunities of young people ages 16 to 21. The Secretary of Labor would be able to extend these programs to those aged 14 to 23 if he thought it desirable. Under this component of the legislation such essential support services as outreach, counseling, on-the-job and institutional training, occupational information and transportation assistance will be available. A total of 138,000 employment and training opportunities for young people can be expected under this section of the legislation over the next 18 months.

Mr. President, I believe that the Youth Employment and Training Act gives us a firm foundation for building an assault on the problems stemming from joblessness among our young people. It does so in a way that both fulfills important American needs and helps prepare youths for future productive lives. I hope that the Senate will act quickly and affirmatively to approve this essential legislation.

Mr. KENNEDY. Mr. President, I want to express my strong support for the Youth Employment and Training Act of 1977, and commend the distinguished Senator from Wisconsin and the administration for their quick action on this vital legislation.

The bill provides for a comprehensive approach to the problem of unemployment among our Nation's youth. First the bill establishes a National Young Adult Conservation Corps to engage youth, aged 16 to 21, in programs to maintain and improve public lands and waters. Second, a community conservation and improvement program would be established. This program, funded through CETA prime sponsors, would provide employment and skill training to youth engaged in neighborhood and community improvement projects. Finally, the bill would establish comprehensive youth employment and training programs targeted to low-income, unemployed youth.

There can be no question, Mr. President, about the need for this legislation. To date, we have made little progress in providing meaningful employment and training for youth.

The unemployment rate among youth, aged 16 to 19, currently stands at nearly 18 percent, and nearly 11 percent among those aged 20 to 24. These figures translate into over 3 million unemployed youth.

We must act now to provide hope to these millions of young Americans who have been dealt the cruel blow of joblessness.

This bill recognizes that there are no simple solutions to the problem; that we must begin with a comprehensive, year-round program.

This program will help develop the positive attitudes and necessary skills to make the difficult transition from the classroom to the workplace. The Secretary of Labor must be willing—and he has already expressed his willingness—to explore new concepts, new techniques of dealing with youth unemployment.

These include outreach programs, OJT, vocational counseling, skill training and job sampling.

I wholeheartedly support provisions in this bill which will encourage cooperation between local prime sponsors and educational institutions. Senators HUMPHREY and JAVITS should be congratulated for incorporating this concept into the bill. This type of cooperation is absolutely essential if we are to provide youth with skills needed to secure meaningful, long-term employment.

I am particularly pleased that this legislation contains many of the provisions included in the youth initiatives act of 1977 (S. 20) which I cosponsored with Senator CRANSTON.

That bill also envisioned a national service program, and sought to encourage cooperation between the public and private sectors to provide youth with meaningful job opportunities.

The socioeconomic costs of youth employment are enormous. Millions who could play a productive role in society are idle. This joblessness often leads to crime. And, because the problem of youth unemployment is structural in nature, the current economic recovery alone will not solve it.

These are the reasons why the program before us today is so desperately needed. It will assure useful and productive jobs specifically targeted at youth. It will provide hope to thousands of young Americans.

Mr. President, I urge my colleagues to join me in supporting this vital legislation.

Mr. WILLIAMS. Mr. President, I urge my colleagues to join me in supporting S. 1242, the Youth Employment and Training Act of 1977.

The careful development of this legislation has resulted in an effective program of paramount importance to ease the frustrations of youth and bring them back into the work force. Our action on this bill should stand as a landmark of hope to youth and the Nation.

I wish to stress its importance as a fundamental first step in bringing youth into the mainstream of meaningful, productive employment. This legislation creates work experience and training to help youth develop the marketable skills necessary for permanent employment.

It is gratifying also that the bill is a model of exceptional cooperation between the Congress and the administration.

It confronts the high rates of unemployment among teenagers with three new programs embodied in a new title VIII of the Comprehensive Employment and Training Act. Part A creates a National Young Adult Conservation Corps that will provide jobs for youth in national and State parks and forests, similar to the Civilian Conservation Corps of Depression years. Part B creates a youth community conservation and improvement projects program providing jobs for youth in their communities. And part C created a comprehensive youth employment and training program providing both jobs and training for youth in innovative and experimental programs.

I am particularly pleased that the Committee on Human Resources endorsed the idea of a modern Civilian Conservation Corps, which I have long advocated. There is important work to be done in our parks and forests, and there are young people who are anxious to do it. This bill will revive the spirit of the CCC and make it a reality once again. The CCC was a successful program with an acknowledged record of excellence. It combines the important national priorities of putting the jobless to work and reducing vast inventories of conservation work needed on our public lands. The Department of the Interior has estimated over 370,000 man-years of backlogged work that currently needs to be done.

Our cities, too, show deep scars left by neglect during the recession. Municipal governments have been hampered from improving their communities because of severe budget cutbacks. The need for community improvement projects is unquestioned and youth could contribute to local efforts with meaningful work. This bill goes a long way to serve urban communities while, at the same time, providing hope for some of the most desperately unemployed. Community benefits will last for years through such gains as new recreational facilities, energy conservation projects, and improved public buildings.

Parts B and C provide in-school work experience to enable youth to finish school and to assist them through the difficult transition from school to work. Eligible participants would be granted academic credit. Part C provides additional services to in-school youth such as counseling and career information. The programs are designed to give as much encouragement as possible for youth to complete their basic education and earn the credentials necessary to improve their employability in the labor force.

Youth need jobs and want to work. They have struggled through the job decline of the recession and still face the biggest hurdle unique to their predicament—a lack of skills and experience. No other group in the labor force suffers this disadvantage on such a sweeping scale. Our challenge is to provide the impetus to better their chances. S. 1242 provides exactly the skills and experience that would insure a more stable work force in the future. The most needy among unemployed youth could clear that hurdle in triumph with a meaningful job.

The Nation's overall unemployment rate declined from 7.3 percent in March to 7 percent in April. But the unemployment picture did not improve for teenagers. Their unemployment rate stayed near 18 percent. Their plight is demonstrated month after month at nearly three times the rate of unemployed adults. It does not improve with fluctuations in the economy. Even in the prospect of a better economic footing over the next 18 months, the structural nature of youth unemployment requires our action on this bill. Their outlook for employment could not otherwise improve in stride with the economy.

Youth suffering the most persistent job shortage are those trapped in areas of substantial unemployment where the low level of income and opportunities require special work-experience and guidance before they can enter the labor market with any expectation of a better future. This bill allows local administrators to plan innovative and experimental projects to overcome the unique disadvantages of jobless youth in their areas.

The committee amendments in the bill strengthen significantly our effort to put resources where they are most needed. We have areas of unemployment in this country in which frustration among the jobless has bred unacceptable forms of alternative economic activity in the world of crime.

The committee amended the bill to target somewhat more funds on areas of substantial unemployment where joblessness exceeds 6.5 percent. Youth in these areas of severe unemployment face particular disadvantages because of the greater burden placed on local governments and the difficulty of mounting successful jobs programs in the degree required. Young people must rely, as a result, on increased Federal assistance before they can cling to any hope of future economic legitimacy.

Under the funding proposed for this bill by President Carter, \$1.5 billion would be available to create some 250,000 job and training positions for an estimated 500,000 youth. The committee bill, however, would permit a larger program if the Congress later decides to appropriate additional funds.

The bill targets 37.5 percent of the part C authorization to areas which suffer substantial unemployment; 37.5 percent is allocated on the basis of numbers of unemployed, and 25 percent is allocated on the basis of the number of low-income families within each State.

This formula specifically recognizes that where joblessness is worst, youth have greater difficulty finding work because of competition with adults who have more experience in the work force.

The bill also contains an amendment directing the Secretary of Labor to give special consideration to project applications from nonprofit community based organizations which have proven their ability to train and place youth in jobs.

The potential impact of the bill is further enhanced by establishing, with the Secretary of Labor, a means to pull together the wide variety of national and local manpower efforts, ideas, and resources into a coordinated arm.

Unless we confront the menace of youth unemployment with a comprehensive program like this one, we will continue to pay a greater cost. We can measure the billions of dollars that unemployment costs this Nation, year after year, from public assistance payments, lost revenues, and low productivity. But, we cannot measure the psychological toll of unemployment on its victims, nor the human cost that results in shattered lives, higher crime, neglected health needs, and family deterioration.

The consequences of joblessness among youth affect the core of our so-

cial fabric. We must take care to design job programs for them that will minimize those consequences. This bill will give thousands of unemployed youth the first fighting chance they so desperately need.

#### YOUTH EMPLOYMENT

Mr. MATHIAS. Mr. President, I rise in support of S. 1242, The Youth Employment and Training Act of 1977. The provisions of this bill are essentially those I called for on January 10, 1977, when I introduced Senate Bill No. 1, the first bill introduced in this Congress.

In title II of S. 1, "The Youth Employment Program," I proposed a comprehensive approach to providing productive work for young Americans. I am delighted that the Senate is today ready to act on these proposals.

The importance of this bill is immeasurable. America today is raising young people in the hundreds of thousands who have seldom if ever, held a job. In an article "Senate Bill No. 1—Jobs for Youth" in *Parade* magazine on March 6, 1977, I noted:

Almost half of the 7.8 million unemployed Americans are 24 or younger; unemployment among teenagers has been on the rise for 20 years and is running now at 20 percent.

In the inner cities, where poverty and decay persist even in the best of times, the effects of high unemployment are devastating. Among black teenagers, who are concentrated largely in the cities, unemployment has held at 25 percent or more throughout the past decade, surging in the past two years to epidemic proportions. The Bureau of Labor reports an unemployment rate of 36.1 percent for black teenagers, as against 18.1 for whites the same age. The National Urban League believes the figure for blacks exceeds 60 percent.

I feel today as I felt when I wrote those words: Congress must solve the problem of America's unemployed young. If it fails to do that, a great part of a generation will be consigned to lives of poverty and lawlessness. What we are doing today in acting favorably on this bill goes a long way toward fulfilling our obligations as a Congress to the American people—and particularly to American youth.

The inclusion in the bill before us of the proposals I made in S. 1, as well as their inclusion in President Carter's March 9 message to the Congress on Youth Unemployment, is gratifying, and stands as a tribute to the many people in Maryland and around the country who helped me develop S. 1's Youth Employment Title. A comparison between that title of S. 1 and the bill before us is illustrative.

Just as S. 1 does, the bill before us creates a National Youth Adult Conservation Corps. This Corps will provide work for unemployed youths on environmental projects in the Nation's parks and forests. Thus, while improving our environment, we will help our young people by giving the main important role in meeting one of America's most vital challenges.

This bill also corresponds to S. 1 in authorizing community conservation and improvement projects in which additional young people can find jobs. As proposed in S. 1, this will put unemployed

youths to work on projects in their own cities and neighborhoods and on environmental projects on State lands. The rehabilitation of public facilities, neighborhood improvements, insulation and basic repairs to low-income housing in our cities, as well as conservation work in rural areas, are authorized. It is true that, as said earlier, when advocating the passage of this provision of S. 1, "with so much to be done in our cities, it is intolerable not to link those who need work with the work that needs doing."

The pending bill also authorizes support for a broad range of employment and training programs designed to enhance job prospects and career opportunities for young persons. These include useful work experiences on community improvement projects, and appropriate training and services such as counseling, occupational information, institutional and on-the-job training, and transportation assistance. This is precisely what the training provisions of S. 1 were designed to do and their inclusion in this bill assures that the goals of S. 1 will be met.

The glaring needs of our cities are matched by the improvements we could make in our environment. S. 1 simply asked the question: "Why can't we let our young people—who will inherit this land—find work in preserving it?" The bill we consider today answers that we can. It embodies the concepts and programs that S. 1, the first bill of this Congress, offered the American people. I will vote for this bill with satisfaction. I urge that my colleagues too vote in favor of this bill so that the promise of S. 1 becomes reality today—not tomorrow.

Mr. President, I ask unanimous consent that my March 6 article in *Parade* magazine on S. 1 and the need for a comprehensive youth jobs program be printed at this point in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

SENATE BILL NO. 1—JOBS FOR YOUTH  
(By Sen. CHARLES MATHIAS, JR. (R., Md.))  
WASHINGTON, D.C.

"S. 1" used to be a code number for a bill providing a harsh revision of the U.S. criminal code.

Now S. 1 identifies a new jobs and economic growth bill I introduced on the first day of this 95th Congress.

America today is raising young people in the hundreds of thousands who have seldom, if ever, held a job. Almost half of the 7.8 million unemployed Americans are 24 or younger; unemployment among teenagers has been on the rise for 20 years and is running now at 20 percent.

In the inner cities, where poverty and decay persist even in the best of times, the effects of high unemployment are devastating. Among black teenagers, who are concentrated largely in the cities, unemployment has held at 25 percent or more throughout the past decade, surging in the past two years to epidemic proportions. The Bureau of Labor reports an unemployment rate of 38.1 percent for black teenagers, as against 18.1 for whites the same age. The National Urban League believes the figure for blacks exceeds 60 percent.

Unemployment among the urban young has had grave consequences for all Americans. There is no longer any doubt that

chronic unemployment feeds urban crime. And nearly half of all violent crimes are committed by juveniles. Crime menaces all of us: the poor, the elderly, the shopkeeper, the suburban commuter. High crime rates drive both the black and white middle classes from the cities; recently, businesses have joined the exodus to the suburbs. The cities' tax bases are melting as a result. Bankruptcy has become a clear and present danger for many cities.

#### MANY JOBLESS, FEW SKILLS

As jobs and money leave the cities, young people flood the job market in greater and greater numbers, with fewer and fewer skills to offer. Few find work. Many give up trying. Ronald Brown of the National Urban League believes the result will be disaster. "We are creating a huge population of discouraged and permanently dependent people," he says, "with consequences we can only guess at." Those consequences are hinted at today in deteriorating city blocks, clots of restless, sullen teenagers on street corners, and growing de facto segregation.

The government has not been indifferent. Two billion dollars or more are spent each year on jobs and training for young people. But the programs have had mixed success, and the crisis of unemployment among the young continues. There is growing debate, criticism, and disenchantment.

The present Congress will be wrestling with a number of bills designed to achieve the elusive dream of guaranteeing a job at a decent wage to all Americans who are willing and able to work.

#### REBUILDING NEIGHBORHOODS

S.1 would create a national youth service to employ those people between the ages of 16 and 24. Under contract with the Department of Labor, public and private organizations would hire youths from low-income families to rebuild and beautify their own neighborhoods. There is no panacea to crime and alienation, but if the deprived and troubled young people who are today fighting for survival on our city streets were paid to do productive work in their own communities, I believe our cities could begin to hope again.

Past jobs programs have often failed to train young people in skills that would serve them in future jobs. S.1 would authorize the Secretary of Labor to pay employers who train them for permanent employment. A similar policy has been tried with success in Western Europe. Some Common Market countries pay employers \$100 for every month they employ and train a young person in his first six months out of school.

#### MORE PARKLAND PROJECTS

S.1 would also expand the Youth Conservation Corps from a summer to a year-round program. The YCC hires young people for environmental projects on state and federal lands, much like the Civilian Conservation Corps of the 1930's. But the program is too small and the summer jobs too brief to be of lasting value. S.1 would authorize the hiring of 100,000 young people in its first year, 200,000 in its second, and 300,000 in its third. I believe my bill would roll back the horizon for young people whose lives have been confined to the asphalt world of the city. It would make dramatic and enduring improvements in our state and national parklands.

Most important, it would give the young truly useful work.

S.1 is innovative. But its scope is wide, and it addresses the inadequacies that marred previous jobs programs. And it involves private business in hiring and training, rather than looking solely to government. Congress must solve the problem of America's unemployed young. If it fails to do that, a great part of a generation will be consigned to lives of poverty and lawlessness. All Americans will feel the consequences.

Mr. JACKSON. Mr. President, I rise in support of this legislation.

As you know Mr. President, in the last Congress, Congressman MEEDS and I introduced legislation which would have established a Young Adult Conservation Corps to complement the highly successful Youth Conservation Corps—YCC. Like the YCC, this new program was to be administered by the Secretaries of the Interior and Agriculture and was patterned after the Civilian Conservation Corps of the 1930's. The purpose of this new Young Adult Conservation Corps was twofold:

First, to provide employment opportunities for young adults—age 16-24—and thereby reduce the persistently high rate of youth unemployment; and

Second, to help reduce the large backlog of conservation-related projects on the Nation's public lands and waters.

The House version of this legislation, H.R. 10138, passed that body on May 25, 1976, by a vote of 291 to 70, the Senate Interior and Insular Affairs Committee conducted a hearing on this measure and its Senate companion which I sponsored, S. 2630. We reported the House bill with only a few technical amendments on July 28, 1976. However, because of the press of last minute Senate business prior to adjournment and a less-than-enthusiastic administration, the bill was not enacted last Congress. Congressman MEEDS and I have, as you know, reintroduced our bills this Congress and are both very anxious to see this program or something very similar, enacted this year.

Mr. President, I was very pleased to see President Carter incorporate the Young Adult Conservation Corps concept into his youth employment package. Both the House-passed version of the administration proposal and the measure pending before us now contain sections which generally reflect the Young Adult Conservation Corps concept which many of us have advocated for several years now.

Part A of S. 1242 would create a National Young Adult Conservation Corps designed to provide youths ages 16 to 23, inclusive, with opportunities to perform useful work on projects which are highly labor intensive and are likely to have a lasting impact in the Nation's parks and forests. The Corps would be administered through interagency agreements with the Secretaries of Interior, Agriculture, and Labor.

The Secretary of Labor would be responsible for making arrangements to refer candidates for the Corps from the public employment service, CETA prime sponsors, and other appropriate agencies and the Secretaries of Interior and Agriculture would be responsible for making the final selection of Corps members.

Preference would be given to enrollees in both rural and urban areas with substantial youth unemployment within each State. The maximum period for which individuals could be enrolled in the Corps would be one continuous 12-month period, or for three or less periods which total 12 months.

The Secretaries of the Interior and of Agriculture would be responsible for the

management of the centers on public lands and waters under their respective jurisdictions.

At least 30 percent of the funds would be earmarked for State and local programs and special projects on State and local parks and forests.

Mr. President, I have gone on record on numerous occasions with my colleagues here on the floor in an attempt to make clear legislative history as to the intent of Congress with respect to part A of this legislation. I think we have an excellent record on the major parts of this legislation and I will not belabor the point today. However, there is one issue I would like to clarify regarding the Young Adult Conservation Corps portion of S. 1242.

It has always been my intention, and I know Congressman MEEDS shares my view, that the YACC program complement and supplement the existing summer Youth Conservation Corps program. I want to be sure that creation of this new program in no way limits or hinders the operation of the tremendously successful YCC summer program.

Finally, Mr. President, I want to express my gratitude to Senator WILLIAMS, Senator NELSON, Senator JAVITS, and the other members of the Human Resources Committee who have worked so diligently on this legislation. The committee has moved expeditiously and has, at the same time, fashioned a bill which will go a long way toward solving the nagging problem of youth unemployment.

Mr. STENNIS. Mr. President, I heartily support the purposes and most of the major provisions of this bill, S. 1242, and commend the Senator from Wisconsin and his coworkers for their work on the bill.

This measure seems to meet in a practical way a crying need of our Nation, the training and directing the youth of our Nation in constructive and worthwhile work.

Moreover, the plan includes the effort to teach young people the value and the discipline that goes with real work. However, Mr. President, if real worth and value is to come with the program there must be discipline and definite attainment standards required.

I shall watch with great interest the operation of the program for the trial run first year. I am satisfied that a program similar to this plan is absolutely essential in the years to come, but on a greatly expanded scale.

In fact I think that within the next few years we shall be forced to resort to an extensive program that will register a large percent of the youth of the Nation and offer them a limited choice as to what training they shall take. Many will have to be required to render some service, or semipublic service—for hire of course—even including a certain amount of military training for some.

In any event, I am pleased indeed to see a program started even for 1 year and shall support an appropriation for its operation. Further, I shall watch the program develop for 1 year with the hope the plan will justify itself for an extension after 1 year.

#### YOUTH EMPLOYMENT AND TRAINING OPPORTUNITIES AND SPECIAL VETERANS' EMPHASIS

Mr. CRANSTON. Mr. President, I rise in support of S. 1242, the Youth Employment and Training Act of 1977, as reported from the Committee on Human Resources. This bill, of which I am a cosponsor, would add a new title VIII to the Comprehensive Employment and Training Act of 1973, CETA, as amended, to provide job and job training opportunities for young people through fiscal year 1978. This legislation, which is based on a proposal submitted by the administration on April 6, represents the basis for undertaking a long overdue major effort to deal with the problems of youth in the labor market.

#### THE PROBLEM OF YOUTH UNEMPLOYMENT

Mr. President, during April, 17.8 percent of all youth between the ages of 16 and 19 in the labor force were unemployed—more than 1.6 million persons. Of those persons 20 through 24 years, another nearly 1.6 million—or 10.8 percent were jobless. This is contrasted with the rate for those 25 years and older—4.9 percent in April.

The impact of unemployment, however, has been most severe on black and minority group youths, where inner-city joblessness regularly reaches devastating rates in excess of 40 percent. For example, in the first quarter of 1977, the rate for minority youth ages 16 through 19 in metropolitan poverty areas of the United States was 44.2 percent.

Sadly, Mr. President, the phenomenon of this high youth unemployment rate is not confined to periods of economic hardship. It is a chronic problem, plaguing our Nation even during more prosperous times. Even in the relatively lively labor markets of 1965 and 1973—when adult unemployment was dipping below 4 percent—youth unemployment still averaged around 15 percent.

Between 1960 and 1970, young entrants to the labor force—ages 16 through 24—increased by 7.2 million, or by 56.6 percent. This compares to an increase of 13.8 million, or 19.1 percent, for the work force as a whole. In essence, this means that better than one out of every two new entrants to the labor market during this period was a young jobseeker.

Such young jobseekers are not readily absorbed by our economy, especially when their marketable skills are just beginning to be developed, their career goals being established and modified, and their basic education and training being newly acquired or, in the case of those who have dropped out of school, not complete.

Mr. President, the measure before the Senate today, represents a beginning of our attempts to meet the employment needs of our Nation's young people.

#### BACKGROUND

Mr. President, on January 10, joined by Senator KENNEDY, I introduced S. 20, the Youth Initiatives Act of 1977. That bill, which is designed to stimulate the creation of employment opportunities for youth in the public and private sectors, would establish a national youth service

program and an opportunities in private enterprise program. Through these initiatives young people would be provided with meaningful work experience, an appropriate income, and opportunities to develop a better knowledge of their career interests and aptitudes, further their education and training, and develop their employment skills for entrance into the labor market.

When S. 1242 was introduced, I indicated my intention as a cosponsor to blend into the administration's bill, a number of certain critical elements of S. 20, which I believe are important to include in any initiative which attempts to meet the needs of youth.

At this time, Mr. President, I would like to discuss briefly the major elements of S. 1242, as well as elements of S. 20, that have been interwoven into the legislation.

#### NATIONAL YOUNG ADULT CONSERVATION CORPS

Mr. President, part A of the Youth Employment and Training Act creates a National Young Adult Conservation Corps. This program would provide useful work for unemployed youths—ages 16 through 23—on projects in the Nation's parks and forests. These projects are to be highly labor-intensive. As a result of a suggestion I made, these jobs are also to be likely to have a lasting impact, both in terms of the work performed and the benefit obtained by the participating youth as a result of such work.

The bill provides that the Secretary of Labor would administer the corps program through interagency agreements with the Secretaries of Agriculture and Interior. The Secretary of Labor would be responsible for making arrangements to refer candidates for employment in the corps from the public employment service, CETA prime sponsors, and other appropriate agencies. The Secretaries of Agriculture and Interior would be responsible for the management of the corps' centers on public lands and waters under their respective jurisdictions.

Mr. President, importantly, this measure contains, at my request, a 30-percent earmarking for State and local programs and special projects on State and local parks and forests or joint projects on Federal and non-Federal public lands or waters. This earmarking could be utilized for such initiatives as are underway in California, Michigan, and Wisconsin. For example, in California, the State resources agency, in coordination with the Economic Development Department, is operating a very innovative and exciting program, the California Conservation Corps—the CCC—which provides residential employment and training opportunities for young persons on State lands. This earmarking is designed to provide additional resources for ongoing and future initiatives along these lines, and, hopefully, to avoid duplication and promote coordination of efforts among Federal, State, and local authorities.

#### YOUTH COMMUNITY CONSERVATION AND IMPROVEMENT PROJECTS

Mr. President, under part B of the committee bill, provision is made for the

establishment of a youth community conservation and improvement program. Funds under this part would be used to employ unemployed youths—ages 16 through 19—on labor-intensive community improvement projects which have lasting and beneficial community impact. These projects would involve work that would otherwise not be carried out by a community—such as rehabilitation of housing, weatherization, and neighborhood improvements, and conservation or restoration of natural resources on public lands.

These projects could be carried out by State and local governments or public or private nonprofit agencies. These entities would submit project application to the CETA prime sponsors. The prime sponsors after reviewing and making recommendations on these applications would, in turn, submit to the Secretary of Labor approved project applications. The Secretary would fund the selected projects, making allocations to the States, on the basis of a formula based on relative unemployment, of 75 percent of the part B money. In addition, the Secretary would have 25 percent of part B funds to allocate at his discretion to fund other community improvement projects of merit.

Both this part and part A are open to both economically disadvantaged and noneconomically disadvantaged youth. I believe that this is an important element since, while our major emphasis should be on those who are most in need of services, we must also be cognizant of the fact that the phenomenon of youth unemployment is not restricted to just those who are poor. It is, in reality, a structural fact of our labor market that makes it difficult for any youth—regardless of his or her economic resources—to find a meaningful job.

#### COMPREHENSIVE YOUTH EMPLOYMENT AND TRAINING PROGRAMS

Part C of the legislation, Mr. President, would establish a comprehensive youth employment and training program under which a variety of employment and training opportunities would be established to serve the needs of young persons ages 16 through 21—and, as the Secretary may authorize, youths 14 and 15 years of age as well as those aged 22 and 23.

Mr. President, while these opportunities would include meaningful work experience efforts, this part would also offer training and support services for youth such as outreach, counseling, occupational information, transportation, and placement assistance.

Enrollment in job opportunities provided under this part would be targeted on those youth who are members of families whose family income does not exceed 70 percent of the BLS lower living standard budget. However, in a provision I rewrote from the administration version, the Secretary is authorized to permit certain limited participation of noneconomically disadvantaged young persons in support or training activities such as those noted above.

Mr. President, there are a number of particular items related to part C of which I would like to make special note.

#### YOUTH COUNCILS

First, the measure would require that eligible applicants—which under this part are the prime sponsors—establish youth councils which are to function as subcouncils of the prime sponsors' planning council established under title I of CETA. These youth councils are to be responsible for planning and reviewing activities under this part, as well as under part B, and making recommendations with respect to these programs to the full planning council.

The committee bill requires that the youth council be composed of representatives of local educational agencies, vocational education advisory councils, junior and community colleges, business, unions, the public employment service, local government and nongovernment agencies and organizations which are involved in meeting the special needs of youth, the community, the prime sponsors' planning council, and most importantly, youth themselves.

This provision is based on a similar provision which was contained in S. 20, the Youth Initiative Act, as well as on a provision contained in S. 170, the Comprehensive Youth Employment Act of 1977, introduced by Senators JAVRS and HUMPHREY and others and contained in an amendment which they submitted for printing (No. 184) to S. 1242, as introduced.

I believe that it is not possible to overstate the importance of having representation by reasonable numbers of young persons on the council. This membership by youths will ensure their input into the planning of activities designed to benefit them and their peers. This contribution to the advisory council is fundamental to meeting the needs of youth in an effective, comprehensive manner and in a realistic fashion that will truly assist in assuring that programs are truly responsive to their needs.

#### A ROLE FOR STATES

Second, Mr. President, is the provision in part C, which I suggested, for a 10-percent setaside for special statewide youth services.

As submitted by the administration, S. 1242 did not specify a role for the executive officers of the 50 States. However, I believe very strongly that there is a real need for the States to foster and facilitate comprehensive and coordinated programs and services. The committee report notes at page 15 that funds received by the States under this provision are—

... to be used for joint projects which will coordinate the efforts of the State education system, welfare system, employment service, rehabilitation and correction services, youth services, apprenticeship programs, Federal and State forest and park projects, and other employment and training activities within each State.

I am hopeful that this provision for a State role will enhance the quality of services afforded youth and complement and supplement the programs of prime sponsors, as well as attempt to meet the special needs of certain segments of the youth population—such as young criminal offenders, youths in foster care pro-

grams, or youths in need of drug or alcohol rehabilitation programs.

#### EQUIPMENT, SUPPLIES, MATERIALS, AND ADMINISTRATION

Third, I would like to make note of the way that the bill deals with the expenditures of funds for equipment, supplies, materials, and administrative expenses. While it is our major concern and intention that funds available under this new title VIII of CETA be used principally to provide job and job training opportunities for youth, at the same time we did not want to restrict unduly the programs, projects, and activities that could be carried out. Thus, the committee bill does not provide for any percentage restriction on the expenditure of funds for equipment, supplies, materials, and administration of programs.

However, Mr. President, I would like to point out that there are a number of factors that the committee believes will act to insure that maximum funds are applied to the provision of jobs, training, and support services to youth, including the "soft public-works" nature of work to be carried out under part B, the provisions relating to the Davis-Bacon Act contained in section 851(j)(3) of the legislation, and the application approval process provided in part C wherein the Secretary is expected to work with eligible applicants to insure "low-overhead" costs.

In addition, it is my hope that under part A, the agreements entered into by the Secretary of Labor with the Secretaries of Agriculture and Interior—which as I noted are required to be labor-intensive—will contain reasonable provisions for the costs of administration and that, to the maximum extent feasible, preexisting supplies, equipment, and materials will be utilized.

#### SERVICES TO YOUTH IN SPECIAL NEED

Fourth, the bill contains my amendment to require that efforts be made to insure that youth participating in activities under parts B and C shall be youths who are experiencing severe handicaps in obtaining employment. This includes youth who lack credentials—such as a high school diploma—or who require substantial basic and remedial skill development in order to compete more effectively in the labor market. In addition, these categories of youth could include women and minorities, those who are veterans of military service, those who have a history of involvement in the criminal justice system, or those with other special needs.

Mr. President, with respect to these categories of individuals who would benefit from involvement in job opportunities under parts B and C, I would like to make specific mention of young veterans. Historically, this group suffers disproportionately high rates of joblessness, much of which has been theoretically accounted for by the fact that these individuals enter the labor force at an older age than high school graduates, and very often, while having obtained considerable skills training in the service, find such skills inapplicable to civilian jobs. The rate of unemployment for young male veterans ages 20 through 24 in the first quarter of 1977 was 16.5

percent, while the rate for male non-veterans of the same age group was 10.8 percent.

Undoubtedly, Mr. President, the kind of training and employment opportunities available under this new title would be invaluable to these young veterans, as well as to those individuals who have not spent time in the service.

At the conclusion of this statement, Mr. President, I will describe section 8 of the bill, added by a floor amendment, offered by the distinguished floor manager on my behalf, to add to this bill what was section 4 of H.R. 2992, the CETA extension bill, as reported, which was passed yesterday after that section was deleted so it could be added to the youth bill.

Mr. President, this targeting provision is based on elements contained in S. 20, and represents my conviction that programs established under this title—or under any youth authority—should be tailored to meet the special needs of those groups of young people who are least likely to receive services under other programs. We need to avoid the "most bang for money" approach that results in "creaming" the target population—placing those young persons that will find it relatively easy—as compared with their most disadvantaged peers—to compete in the labor market. Even though it is vital that we equip all youths with adequate skills to make an effective transition from the world of education to the world of work, we need to make sure that the more difficult cases, as well as the easy ones, are provided service. This provision attempts to insure that those most in need are involved in efforts carried out under this title.

#### COUNSELING AND PLACEMENT SERVICES

Fifth, Mr. President, is the provision in the bill that requires all activities—under parts A, B, and C—to provide appropriate counseling and placement services designed to facilitate the transition of youth from participation in these activities to permanent jobs in the public or private sector or to further education or training programs which would improve the quality of their lives.

Mr. President, this, too, is based on the principles of S. 20. I believe that young persons who participate in these new programs must gain something more than just the experience of 1 year of work and wages. It is imperative that youths be better off in terms of their job potential after service than before, and these provisions are an attempt to ensure, through counseling and placement services, that these youth obtain substantially greater assistance.

#### APPROPRIATIONS

Mr. President, the bill as reported from committee contains a "such sums" authorization through fiscal year 1978. The Economic Stimulus Appropriations Act (Public Law 95-29), which was signed by the President on May 13 contains an appropriation of \$1.5 billion for youth employment initiatives. This means that as soon as the authorizing legislation is enacted—or prior to that time if the Department of Labor decides to begin these initiatives under title III

of CETA—these efforts can get underway and we can begin immediately to provide job and job training opportunities to young people.

The administration, in submitting this legislation, indicated its intention to fund this title as follows: Part A, \$350 million for the provision of 35,000 jobs; part B, \$250 million for 30,000 jobs; and part C \$900 million for 138,000 opportunities.

Of course, Mr. President, these more than 200,000 youth slots are just the beginning—but one of the most important beginnings we have had in years in this area and one that represents a true spirit of commitment to solving the problem. I look forward to working closely with the administration and the Congress when we begin to develop more than a 1-year program, in order to make any expansion, extension, or modifications of these provisions necessary to insure the full success of our efforts to provide jobs for as many young people as we possibly can.

#### VETERANS' PROVISION

Mr. President, as I indicated, I would like to make special note of the provisions of section 8 of this bill, which relate to employment and training opportunities for veterans, now incorporated into this legislation by the amendment offered by Senator NELSON on my behalf. I authored these amendments which were originally intended to be a part of this legislation. However, during subcommittee consideration of this pending youth employment legislation and the 1-year extension of CETA—H.R. 2992, which was passed by the Senate yesterday—the provisions were added to the latter bill. Yesterday, in an effort to expedite the enactment of the CETA extension legislation and avoid the necessity of a conference with the House, the provisions I authored related to veterans as well as a provision authored by Senator PELL were deleted from H.R. 2992, and the identical provisions were accepted this morning as amendments to S. 1242.

Mr. President, I want to express my appreciation to the floor managers of these two bills, Mr. NELSON and Mr. JAVRS, for their cooperation in this matter.

Mr. President, the provisions now included in section 8 of S. 1242 direct the Secretary of Labor to take all appropriate steps to provide increased job training and public service employment opportunities under CETA for certain categories of veterans. These categories are defined in the provision as: First, disabled veterans who have a service-connected disability rating of 30 percent or more; and second, Vietnam-era veterans who served for more than 180 days during the Vietnam-era—receiving other than a dishonorable discharge—and who are under 27 years of age.

As chairman of the Senate Veterans' Affairs Committee and as a member of the Subcommittee on Employment, Poverty, and Migratory Labor of the Committee on Human Resources, I have been greatly involved and concerned with meeting the employment needs of our Nation's veterans—particularly those who served our country during the Viet-

nam-era and those who as a result of their service are disabled.

Mr. President, I think it is unforgivable that veterans who bore the brunt of the most unpopular war this country has ever known and those who still bear the scars of battle, are precisely those persons who bear the brunt of most of the heaviest unemployment rates in the labor market.

During April, the Bureau of Labor Statistics reports that there were 474,000 unemployed male veterans 20 through 34 years of age. The rate of unemployment for younger male Vietnam-era veterans those aged 20 through 24 was 14.4 percent—or 138,000 individuals out of work—as compared to 10.1 percent for similarly aged nonveterans. This single category has the highest unemployment rate out of all other categories, except for those under age 20, for which monthly statistics are gathered—a situation which has existed for well over a year. In addition, for four out of the last six quarters, the rates for Vietnam-era veterans aged 25 through 29 have exceeded those for similarly aged nonveterans.

Among minority Vietnam-era veterans aged 20 through 34, the unemployment data is even more distressing. For the first quarter of 1977, the unemployment rate among minority veterans in every age category exceeded rates at the end of the fourth quarter of 1976. The quarterly unemployment rate among these veterans was 15.7 percent, or 12 percent greater than the rate for these veterans for the preceding quarter. In each of the three age categories, the rates for minority veterans for the first quarter of 1977 exceeded the rate for similarly aged nonveterans. Among young minority veterans aged 20 through 24, the unemployment rate was greater than 25 percent—15 percent greater than for similarly aged nonveterans.

#### THE ADMINISTRATION'S PROPOSALS

Mr. President, on January 27, following his swearing-in, Secretary of Labor Marshall announced the administration's commitment to make the plight of the jobless disabled and Vietnam-era veterans a high priority. At that time, the administration unveiled a three-part program designed to help bring these veterans back into the mainstream of America's economic life.

On April 20, Mr. President, in testimony before the Subcommittee on Employment, Poverty, and Migratory Labor, and in responses to my questions regarding the Department's progress in implementing the administration's commitment announced in January, Secretary Ray Marshall and Assistant Secretary of Labor for Employment and Training Ernie Green provided the following information:

First, The President proposed a program called Project HIRE—help through industry retraining and employment program—to enlist the Nation's larger corporations to make private-sector job opportunities and training opportunities available to Vietnam-era veterans. On January 27, Secretary Marshall indicated that—

The delivery systems are in place . . . [and] the funds are available.

He stated that—

With a minimum of delay coupled with a maximum of short-term effort, we can move swiftly to help many jobless veterans gain worthwhile employment.

However, nearly 3½ months later, the effort is still not completely off the planning board. The formal "kick-off" of the program is still 3 weeks away.

Mr. President, the administration testified that the implementation of Project HIRE—which would create 92,000 jobs for veterans—has been delayed because the necessary appropriation of \$120 million contained in the Economic Stimulus Appropriations Act of 1977, had not been approved. I am very hopeful that since funds are now available, this program will be implemented speedily.

Second, The President's program also includes the disabled veterans outreach program whereby outreach units, staffed by disabled Vietnam-era veterans, would be established within employment service offices around the country. These temporary paraprofessionals are to concentrate on identifying disabled veterans in need of services and bringing them into the mainstream of the labor market through jobs, job training, and related services to which they are entitled. This program is to provide 2,000 jobs for disabled veterans outreach workers, and over the 18 month life of the program, is expected to place over 40,000 other disabled veterans.

Mr. President, I ask unanimous consent that a status report of this program as of April 26, 1977, which was submitted by the Department of Labor to the Subcommittee on Employment, Poverty, and Migratory Labor, be printed at this point in the RECORD.

There being no objection, the following was ordered to be printed in the RECORD, as follows:

#### STATUS REPORT ON THE DISABLED VETERANS OUTREACH PROGRAM

##### 1. Staffing Status—

Funding has been approved for hiring 1,911 disabled veterans in the Disabled Veterans Outreach Program at an average position cost of \$11,716 per year. Positions were allocated based upon the proportion of compensable disabled veterans within each State to the national total. An additional 89 positions will be funded by May 13, 1977. A majority of these positions will be distributed among the five States with the largest number of unemployed Vietnam-era veterans.

The program will be phased in over a three month period from April 1, 1977, to June 30, 1977. Approximately one-third of the positions will be filled each month during April, May and June. All positions should be filled by June 30. As of April 26, 1977, 489 positions have been filled. A detailed report of planned positions, funding allocations for FY 1977, and positions filled by State and designated city is included in an attachment.

##### 2. Performance Indicators to Date—

Over the 18 month life of the program, DVOP staff shall place over 40,000 disabled veterans. DVOP staff already hired are currently in training and will begin direct service to veterans near the end of May. Thus, no data on outreach contacts or placements are available. Data on local office performance by DVOP staff will be derived indirectly from the Employment Service Automated Reporting System (ESARS) by comparison of current month and year performance in the categories of new applicants and renewals, referrals to training, job development contacts

and placement to performance recorded in the same month of several previous years. In addition, field staff of the Veterans Employment Service will periodically monitor local offices with DVOP staff to assess the level of service provided to disabled veterans by the local office.

Mr. CRANSTON. Mr. President, I have heard some excellent reports about progress in California under this innovative and promising program, and I am eagerly awaiting important gains for seriously disabled service-connected veterans in the job market when this program has been fully operational for 6 months or so.

Third. The President proposed the provision of increased opportunities for these disabled and young Vietnam-era veterans in public service jobs under the Comprehensive Employment and Training Act of 1973, as amended—CETA. The enactment of the Economic Stimulus Appropriation Act—Public Law 95-29—provides funds for an additional 415,000 public service jobs—PSE—under CETA through fiscal year 1978. The President's proposed legislation for a 1-year extension of CETA included a provision to require that in employing individuals to fill these new PSE jobs a preference be given to certain qualified unemployed disabled and young Vietnam-era veterans, with a proposed national goal that 35 percent of all new CETA PSE hires be these veterans. The House rejected the preference concept in its consideration of this legislation.

#### VETERANS' PROVISIONS IN CETA EXTENSION

Mr. President, during the hearings on the CETA extension and youth employment legislation, Secretary Marshall and Assistant Secretary Green stated, in response to a question, that legislation was definitely necessary in order for the Department to achieve its national goal for the employment of these priority categories of veterans. Therefore, in close cooperation with the administration and members of the Committee on Human Resources, I worked out this amendment, as a substitute to the administration's preference proposal.

Mr. President, I want to make it clear to members that my amendment does not provide a statutory preference about which many reservations have been expressed. Instead, the provision is designed to provide ample latitude and flexibility—without hamstringing prime sponsors or others involved in the delivery of job and job training opportunities—while at the same time giving the Secretary a clear mandate to serve the

needs of these especially hard-hit groups of unemployed veterans.

Mr. President, the amendment specifies many of the steps which the Secretary shall take in serving the employment needs of these veterans, but this list is by no means to be considered exclusive. Whatever means the Secretary deems appropriate and consistent with applicable law are to be carried out. Among the steps specified is providing for individual prime sponsors to develop their own local goals, taking into account the number of eligible veterans in the area served by the prime sponsors, for the placement of such eligible veterans in job vacancies occurring in PSE programs.

The Secretary is also directed to insure full utilization of the provisions of clauses (2) and (5) of section 205(c) of the act—relating to providing jobs for significant segments of the population and providing special consideration in filling jobs to special Vietnam-era veterans—and the provisions of subclause (E) of section 105(a)(3) of the act, requiring prime sponsors to make maximum feasible use of GI Bill apprenticeship and other on-job training—OJT—opportunities under section 1787 of title 38, United States Code.

Mr. President, the need for these provisions arises from the bleak performance record of many prime sponsors in providing PSE jobs for veterans under CETA.

In connection with the GI Bill, OJT provision added to title I by an amendment I offered last year to the Emergency Jobs Program Extension Act of 1977, and which was enacted as part of Public Law 94-444, I point out that that provision stresses the need for the Secretary to monitor closely the comprehensive plans submitted by each prime sponsor to insure that congressional intent is served and that prime sponsors are fully aware of and responsive to the increased job opportunities available from this important source.

As stressed by the Labor and Public Welfare Committee in its report on H.R. 12987, the Emergency Jobs Programs Extension Act of 1976 (S. Rept. No. 94-883), the promotion by both the Department of Labor and prime sponsors of the VA apprenticeship or OJT opportunities would be beneficial to and productive for both eligible veterans and prime sponsors. Under the VA OJT program, an approved employer promises a permanent job to an eligible veteran upon successful completion of the OJT program. During the training program, the employer pays the veteran less than the full regular wage, while the VA, for up to 2 years, supplements this with a training allowance paid directly to the veteran, beginning at \$212 a month for a veteran with no dependents. The amount of the VA OJT benefit is contingent upon the number of veteran's dependents and the length of time the veteran has been in training.

Mr. President, despite congressional emphasis on the importance of effective OJT program coordination between the VA and the Department of Labor, the failure of these agencies to coordinate their efforts has continued. For example,

in 1975 the General Accounting Office reported that of 153,765 VA-approved job training establishments, over 108,000 had no trainees enrolled whatsoever. Recently, when GAO inspected a large Midwestern city, it discovered that local employment service offices still had not been provided with the necessary data—data which is readily available—to direct eligible veterans to VA OJT program openings.

This provision, Mr. President, emphasizes the Congress concerns once more on the need for utilization of the GI Bill OJT program as an important method of battling continued high veteran unemployment.

Mr. President, under CETA titles I, II, and IV, and regulations prescribed thereunder, prime sponsors are required to provide special consideration to certain veterans, specifically service-connected disabled veterans—rated at 30 percent or greater—veterans who served in Indochina or Korea, and all recently discharged veterans—within 48 months of discharge. Yet, despite repeated congressional expressions of dissatisfaction with the level of veteran participation, veteran enrollment in CETA programs has continued at unfavorable levels. This is especially the case in PSE programs in comparison to the rates of participation achieved under the Emergency Employment Act of 1971 when specific hiring goals for veterans were established by the Department in its regulations.

In fiscal year 1976, Mr. President, despite very high rates of veteran unemployment, special Vietnam-era veterans comprised only 5.3 percent of all CETA titles I, II, and VI enrollees, a 23-percent decline from the fiscal year 1975 level of 6.9 percent—a figure cited as low by the Labor and Public Welfare Committee in its report on H.R. 12987, the Emergency Jobs Program Extension Act of 1967 (S. Rept. No. 94-883).

During fiscal year 1976 special veteran enrollment in PSE jobs under title II declined by 11 percent, and under title VI by 30 percent. The committee is concerned that, despite the requirements of the law and regulations, only 10,425 disabled veterans were served by CETA titles I, II, and VI during fiscal year 1976 while unemployment rates for this category remained so tragically high.

Mr. President, the reason for this situation is suggested in several General Accounting Office reports concerning the CETA PSE programs. In a January 23, 1976, report (No. MWD 76-61), the GAO found that the existing CETA hiring procedures of Wilmington, Del., did little to give veterans the required special consideration. In a September 2, 1976, report entitled "Public Service Employment in Southwestern New York State," (No. HRD-76-135) the GAO reported that—

Our examination of the filling of title II and VI public service positions showed no evidence of a system to insure that target groups specified in the Act receive special consideration. For example, an underemployed non-veteran who recently graduated from college was selected over an eligible veteran who had been unemployed for about 1 year and three other eligible applicants who had been unemployed for 12

weeks or more. Our examination of the files and discussions with hiring officials showed that the ability to best perform the job was the overriding criteria [sic] for selection once residency and unemployment criteria were met.

And, finally, Mr. President, in an April 7, 1977, report to the Congress, entitled "More Benefits to Jobless Can Be Attained in Public Service Employment," (No. HRD-77-53), the GAO reported as follows:

The sponsors generally served most segments at and above the levels established in their plans for both titles II and VI during fiscal year 1975. However, some segments, such as special veterans, limited English-speaking persons, and females, were not served at the levels planned. For example, the special veterans, a segment identified by sponsors and specifically cited in CETA for special consideration in obtaining public service employment, were not served as planned by 5 of the 12 sponsors. . . .

Under the provisions of section 8 of the bill, Mr. President, the Secretary would also be directed to make a renewed effort to fulfill more effectively his responsibilities under other provisions of law.

Notably, under chapter 41 of title 38, United States Code, the Secretary is mandated to establish administrative controls to insure that each eligible veteran who requests assistance at any U.S. Employment Service—USES—office is promptly placed in a satisfactory job or job training opportunity or receives some other form of assistance designed to enhance such veteran's employment prospects substantially.

Despite this legislative mandate, USES' record in providing services has been poor. Between the end of fiscal year 1975 and October 1, 1976, the Department's Employment Automated Reporting System, ESARS, data indicate a steep decline in service for veterans. For example, the percentage of qualified service-connected disabled veterans applying at State employment offices whose files were inactivated without having received any reportable service rose from 29.7 to 33.8 percent, an increase of 12.1 percent; the percentage counseled declined from 11.1 to 10.4 percent—a decrease of 6.3 percent; enrollment in training declined from 1.4 to 1 percent—a drop of 28.6 percent; and the number tested declined from 3 to 2.75 percent—an overall decrease of 8 percent.

These ESARS data also showed a decline in employment services for Vietnam-era veterans. The percentage of Vietnam-era veterans applying for assistance whose files were inactivated without having received any reportable service rose from 30.9 to 34.1 percent, an increase of 10.3 percent; their enrollment in training fell from 1.5 to 1 percent—a drop of 33.3 percent; their enrollment in CETA fell from 0.8 percent to 0.6 percent—a decrease of 25 percent; and the number of Vietnam-era veterans who were tested declined from 3.4 to 3.2 percent—a decline of 5.9 percent.

Mr. President, my amendment also emphasizes the need for effective implementation of section 602 of Public Law 94-502, the Veterans' Education and Employment Assistance Act of 1976. That

provision, amending section 2003 of title 38, United States Code, clarifies and makes specific the responsibility of the State Veterans' Employment Representative—SVER—and the Assistant Veterans' Employment Representative—AVER—for the promotion and monitoring of veterans participation in programs operating under CETA to assure that eligible veterans receive special consideration or other opportunities when required. In this regard, the committee report stresses that SVER's and AVER's should devote sufficient time monitoring prime sponsors' programs to ascertain compliance by prime sponsors with both veteran special consideration requirements and grant narrative assurances regarding veterans.

Prior to enactment of Public Law 94-502, no official within the Department of Labor was specifically responsible for overseeing and monitoring these special consideration mandates. The importance of such monitoring by SVER's and AVER's—who are Federal employees—is underscored by findings by the General Accounting Office in its February 16, 1977, report to Congress, entitled "Followup Report on Services to Veterans Under Title VI of the Comprehensive Employment and Training Act" (No. HRD-77-16), a followup report to GAO Report No. MWD-76-61, which I discussed earlier. In the recent report, GAO found that although the prime sponsor for Wilmington, Del., had not been providing eligible veterans with the required special consideration, the responsible SVER had not been monitoring the implementation of the title VI program but rather was "merely impressing upon program officials the need for special service to veterans."

This failure of the appropriate Federal Government official to monitor CETA program implementation insofar as eligible veterans are concerned should be corrected by vigorous implementation of the section 602 amendments to title 38 so as to assure that SVER's and AVER's not only promote eligible veteran participation in CETA programs but also monitor the implementation and operation of the programs to assure that eligible veterans receive the required special consideration.

Further, Mr. President, section 2004 of title 38 requires, except as may be determined otherwise by the Secretary, that each employment service office shall have at least one employee—known as the local veterans employment representative, LVER—whose service shall be fully devoted to discharging the veteran job counselling, training, and placement services mandated by chapter 41. Studies have shown that the most effective employment service offices insofar as unemployed veterans are concerned are those where the LVER devotes all of his or her time—as generally required by law—to discharging chapter 41 responsibilities. However, according to recent reports, many LVER's do not devote the required time to performing chapter 41 responsibilities and, as a result, service to unemployed veterans generally suffers.

To correct this situation, the Secretary is expected to undertake vigorous efforts

to assure that, where required, local offices will have a full-time LVER. Additionally, Mr. President, the Secretary is to assure that, in those local offices where the LVER is not required to devote full time to performing chapter 41 responsibilities, the LVER will devote sufficient time to assure that all affected veterans receive some form of assistance designed to increase their employability.

Mr. President, congressional oversight of the mandatory job-listing requirement in section 2012 of title 38, United States Code, has revealed that the Department of Labor has not required compliance with this provision with the vigor necessary to assure the success of the program. Section 2012 requires every Federal contractor and subcontractor thereof with a contract of \$10,000 or more to list all "suitable employment openings" with the local employment service office. During the 48-hour period immediately following the listing of an employment opening pursuant to section 2012, only eligible veterans may be referred to the listing company for the involved position. There is no requirement that the company hire the referred veteran, but the 48-hour hold provides the veteran with a headstart over non-veteran job-seekers.

The Wall Street Journal in a May 11, 1976, article described this program as laxly enforced. And, indeed, Mr. President, final Department of Labor fiscal year 1976 figures seem to indicate the validity of the Journal's assertion. The total number of positions listed in 1976 was 985,000, the exact number of positions listed in fiscal year 1974. Further, the Wall Street Journal reported that—

The Labor Department estimates that only "between one-third and one-half" of all employers are complying with the rule; it can't be more specific since it isn't even sure how many federal contractors the rule affects.

The committee bill envisions that the Secretary will undertake vigorous efforts to determine how many contractors are in compliance with the mandatory job-listing requirements.

Mr. President, section 2012 of title 38 also requires each such Federal contractor and subcontractor to take affirmative action to employ and advance in employment qualified disabled veterans and veterans of the Vietnam era. Mandated in 1974, implementing regulations did not take effect until July 1976, more than 18 months after passage. This affirmative action program also requires far greater attention and greater implementation by the administration. The provisions of the bill, as reported, require that the Secretary fully fulfill his responsibilities in this regard.

Mr. President, in addition, my amendment would require the temporary appointment of representatives of veterans organizations or groups to local and State manpower planning councils established under CETA and to the National Commission on Manpower Policy. This provision differs from an amendment I authored to the Senate-passed legislation in 1973, S. 1559, eventually enacted as CETA, which would have required such representation, on a temporary basis now, will increase the prime

sponsors' responsiveness to the President's program and enable them to serve more fully the needs of veterans.

The provisions of section 8 would also stress the Secretary's responsibilities—in conjunction with the VA Administrator and the Secretary of HEW—under section 104(b) of the Emergency Jobs and Unemployment Assistance Act of 1974, Public Law 93-567, as reaffirmed last year in Public Law 94-444, to conduct an outreach and public information program to promote maximum employment and training opportunities for veterans. In the past, this program has suffered from administration apathy, lack of adequate funding, and low visibility.

The Department's initial progress report on the initiative tended to emphasize future plans rather than efforts undertaken successfully. The Secretary is required, pursuant to the provisions of the bill as reported, to implement fully his responsibilities under this program. The need for this provision is further highlighted by the fact that a second progress report on this program, required to be submitted to the Congress within 90 days after the enactment of Public Law 94-444, is now almost 5 months late.

In fulfilling his responsibilities under this provision, the Secretary is directed to work closely in consultation with the newly established Deputy Assistant Secretary for Veterans' Employment and with the Administrator of Veterans' Affairs. The Secretary is also expected to act promptly to secure adequate funding and staff to carry out fully and effectively his responsibilities under the provision. To this end, the Secretary is directed to report to the Congress and the President within 60 days of enactment on the funding and staff made available for these purposes.

Mr. President, the need for section 8 of the bill is clear. The statistics and the performance record both require the enactment of this provision. The administration has made its commitment to serve those who have served. It is now time for those of us in the Congress to renew our commitment.

Mr. President, several matters which relate to the issue of veterans employment are forthcoming from the Senate Veterans' Affairs Committee which I would like at this time to call to the attention of my colleagues:

First, on June 9, the Senate Committee on Human Resources and the Veterans' Affairs Committee have scheduled a joint hearing on the nomination expected to be forthcoming shortly of the Deputy Assistant Secretary of Labor for Veterans' Employment. This post was established by section 601 of the Vietnam Era Veterans Education and Employment Assistance Act of 1976 (Public Law 94-502).

Second, the Subcommittee on Health and Readjustment on the Veterans' Affairs Committee, which I chair, will be holding a hearing on June 17 on oversight of veterans employment programs generally.

#### CONCLUSION

Mr. President, in closing, I would like to take this opportunity to commend the

members of the Human Resources Committee who have devoted much time and attention to this legislation—especially the chairman of the committee (Mr. WILLIAMS), the chairman of the Subcommittee on Employment, Poverty, and Migratory Labor (Mr. NELSON), and the ranking minority member of the committee (Mr. JAVITS). Their cooperation in working to report this bill and their dedication and that of their staffs to the most critical issue of meeting the employment needs of our Nation's young people has been invaluable. Their staffs and mine—Dick Johnson, Scott Ginsberg, Martin Jensen, Jim O'Connell, Babette Polzer, Gary Sellers, and Jon Steinberg—have worked long and arduous hours in presenting this legislation to the Senate and I am grateful to them for it.

Also, I want to congratulate the administration for the deep concern reflected in this legislation—specifically Secretary Marshall and Under Secretary Green and Deputy Under Secretary Nik Edes and his deputy, Sandy Kisla, and Bill Langbhen. The cooperation shown to members and staff of the Committee on Human Resources by the executive branch in developing this bill has been outstanding. Their expertise and involvement in this area, as well as what I believe is a genuine commitment to developing meaningful and effective legislation, is laudatory.

I look forward to continuing these relationships throughout as we work together to achieve effective implementation of the results of our endeavor.

Mr. President, although this legislation is only effective through fiscal year 1978, it will provide us with the basics and the experience necessary to make a full-fledged national commitment to youth a reality before the end of the 1970's. I urge the Senate to take favorable action on this legislation.

(This concludes additional statements submitted on S. 1242.)

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendments to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill (S. 1242) was ordered to be engrossed for a third reading, and was read the third time.

Mr. NELSON. Mr. President, I move that the Senate proceed to the immediate consideration of H.R. 6138, the House-passed Youth Employment and Training Act of 1977.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 6138) to provide employment and training opportunities for youth.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Wisconsin.

The motion was agreed to.

Mr. NELSON. Mr. President, I move

that H.R. 6138 be amended by striking out all after the enacting clause and inserting in lieu thereof the text of S. 1242, as amended.

The motion was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill (H.R. 6138) was read the third time.

Mr. NELSON. Mr. President, I am not aware of any further amendments.

The PRESIDING OFFICER. The Chair is advised that it is too late for further amendments, third reading already having been had.

Mr. NELSON. Mr. President, I ask for the yeas and nays on final passage.

The PRESIDING OFFICER. Is there a sufficient second? There is not a sufficient second.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. DeCONCINI). Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is, Shall the bill, as amended, pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Idaho (Mr. CHURCH), the Senator from Louisiana (Mr. LONG), the Senator from Arkansas (Mr. McCLELLAN), the Senator from New York (Mr. MOYNIHAN), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL), the Senator from Rhode Island (Mr. PELL), and the Senator from Connecticut (Mr. RIBICOFF) are absent on official business.

I further announce that, if present and voting, the Senator from West Virginia (Mr. RANDOLPH), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Michigan (Mr. RIEGLE), the Senator from New York (Mr. MOYNIHAN), and the Senator from Rhode Island (Mr. PELL) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Utah (Mr. HATCH), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Nevada (Mr. LAXALT), the Senator from Kansas (Mr. PEARSON), the Senator from Illinois (Mr. PERCY), the Senator from Vermont (Mr. STAFFORD), the Senator from Texas (Mr. TOWER), and the Senator from Connecticut

(Mr. WEICKER) are necessarily absent.

I further announce that, if present and voting, the Senator from Utah (Mr. HATCH), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Illinois (Mr. PERCY), and the Senator from Vermont (Mr. STAFFORD) would each vote "yea."

The result was announced—yeas 80, nays 3, as follows:

[Rollcall Vote No. 170 Leg.]

YEAS—80

So, the bill (H.R. 6138), as amended, was passed, as follows:

That this Act may be cited as the "Youth Employment and Training Act of 1977".

Sec. 2. The Comprehensive Employment and Training Act of 1973 is amended by adding at the end thereof the following new title:

# "TITLE VIII—YOUTH EMPLOYMENT AND TRAINING"

## "AUTHORIZATION OF APPROPRIATIONS"

"Sec. 800. There are authorized to be appropriated such sums as may be necessary for the fiscal year ending September 30, 1978, to carry out the provisions of this title.

## "PART A—NATIONAL YOUNG ADULT CONSERVATION CORPS"

### "STATEMENT OF PURPOSE"

"Sec. 801. It is the purpose of this part to establish a National Young Adult Conservation Corps to provide employment and other benefits to youths who would not otherwise be currently productively employed, through a period of service during which they engage in useful conservation work and assist in completing other projects of a public nature on Federal and non-Federal public lands and waters.

### "ESTABLISHMENT OF NATIONAL YOUNG ADULT CONSERVATION CORPS"

"Sec. 802. To carry out the purposes of this part, there is hereby established a National Young Adult Conservation Corps to carry out projects on Federal or non-Federal public lands or waters. The Secretary of Labor shall administer this part through interagency agreements with the Secretaries of the Interior and Agriculture. Pursuant to such interagency agreements, the Secretaries of the

Interior and Agriculture shall have a responsibility for the management of each Corps center, including determination of Corps members' work assignments, selection, training, discipline, and termination, and shall be responsible for an effective program at each center.

### "SELECTION OF ENROLLEES"

"Sec. 803. (a) Enrollees of the Corps shall be selected by the Secretaries of the Interior and Agriculture only from candidates referred by the Secretary of Labor.

"(b) Membership in the Corps shall be limited to persons who, at the time of enrollment, are—

"(1) individuals who are unemployed;

"(2) individuals who are ages sixteen to twenty-three inclusive;

"(3) shall be citizens or lawfully permanent residents of the United States or lawfully admitted refugees or parolees; and

"(4) shall be physically and mentally capable, as determined by the Secretary of Labor, of carrying out the work of the Corps for the estimated duration of each such individual's enrollment.

"(c) The Secretary of Labor shall make arrangements for obtaining referral of candidates for the Corps from the public employment service, prime sponsors qualified under section 102 of this Act, sponsors of Native American programs qualified under section 302 of this Act, sponsors of migrant and seasonal farmworker programs under section 303 of this Act, the Secretaries of the Interior and Agriculture, and such other agencies and organizations as the Secretary of Labor may deem appropriate. The Secretary of Labor shall undertake to assure that an equitable proportion of candidates shall be referred from each State and that no less than one-half of 1 per centum of the total number of youth candidates so referred shall be from any one State.

"(d) In referring candidates from each State in accordance with subsection (c), preference shall be given to rural and urban areas within each such State having substantial youth unemployment, including areas of substantial unemployment determined by the Secretary of Labor under section 204(d) of this Act to have rates of unemployment equal to or in excess of 6.5 per centum.

"(e) (1) No individual may be enrolled in the Corps for a total period of more than twelve months, with such maximum period consisting of either one continuous twelve-month period, or three or less periods which total twelve months, except that an individual who attains the maximum permissible enrollment age may continue in the Corps up to the twelve-month limit provided in this subsection only as long as the individual's enrollment is continuous after having attained the maximum age.

"(2) No individual shall be enrolled in the Corps if solely for purposes of membership for the normal period between school terms.

### "ACTIVITIES OF THE CORPS"

"Sec. 804. (a) Consistent with each interagency agreement, the Secretary of the Interior or Agriculture, as appropriate, in consultation with the Secretary of Labor shall determine the location of each residential and nonresidential campsite. The Corps shall perform work on projects in such fields as—

"(1) tree nursery operations, planting, pruning, thinning, and other silvicultural measures;

"(2) erosion control and flood damage;

"(3) wildlife habitat improvements and preservation;

"(4) range management improvements;

"(5) drought damage measures;

"(6) recreation development, rehabilitation, and maintenance;

"(7) fish habitat and culture measures;

"(8) forest insect and disease prevention and control;

"(9) road and trail maintenance and improvements;

"(10) general sanitation, cleanup, and maintenance; and

"(11) natural disasters damage measures.

"(b) The Secretaries of the Interior and Agriculture shall undertake to assure that projects on which work is performed under this part are consistent with the Forest and Rangeland Renewable Resources Planning Act of 1974, as amended by the National Forest Management Act of 1976, and such other standards relating to such projects as each Secretary shall prescribe consistent with other provisions of Federal law.

"(c) To the maximum extent practicable, appropriate projects shall—

"(1) be highly labor intensive;

"(2) be projects for which work plans could be readily developed;

"(3) be able to be initiated promptly;

"(4) be projects likely to have a lasting impact both as to the work performed and the benefit to the youths participating;

"(5) provide work experience to participants in skill areas required for the accomplishment of productive work on the projects;

"(6) if a residential program, be located in areas where existing residential facilities for the Corps members are available; and

"(7) be similar to activities of persons employed in seasonal and part-time employment in agencies such as the National Park Service, United States Fish and Wildlife Service, Bureau of Reclamation, Bureau of Land Management, Bureau of Indian Affairs, and the Forest Service and the Soil Conservation Service.

"(d)(1) The Secretaries of the Interior and Agriculture, pursuant to agreements with the Secretary of Labor, may provide for such transportation, lodging, subsistence, medical treatment, and other services, supplies, equipment, and facilities as they may deem appropriate to carry out the purposes of this part.

"(2) Whenever economically feasible, existing but unoccupied or underutilized Federal, State and local government facilities, and equipment of all types, including military facilities and equipment, shall, where appropriate, be utilized for the purposes of the Corps work camps with the approval of the Federal agency, State, or local government involved.

#### "CONDITIONS APPLICABLE TO CORPS ENROLLEES

"Sec. 805. (a) Members of the Corps shall not be deemed Federal employees except for purposes of chapter 171 of title 28, United States Code, chapter 81 of title 5, United States Code, and title II of the Social Security Act (42 U.S.C. 401, et seq.).

"(b) The Secretary of Labor shall, in consultation with the Secretaries of the Interior and Agriculture, establish standards for—

"(1) rates of pay which shall be at least at the rate set forth in section 6(a)(1) of the Fair Labor Standards Act of 1938, as amended;

"(2) reasonable hours and conditions of employment; and

"(3) safe and healthful working and living conditions.

"(c) To minimize transportation costs, Corps members shall be assigned to projects as near to their homes as practicable.

#### "STATE AND LOCAL PROGRAMS AND SPECIAL PROJECTS

"Sec. 806. (a) Consistent with interagency agreements with the Secretary of Labor, the Secretaries of the Interior and Agriculture may make grants or enter into other agreements—

"(1) after consultation with the Governor, with any State agency or institution;

"(2) after consultation with appropriate State and local officials, with (A) any unit of general local government, or (B) (i) any public agency or organization, or (ii) any

private nonprofit agency or organization which has been in existence for at least two years;

for the conduct under this part of any State or local component of the Corps or of any project on non-Federal public lands or waters or any project involving work on both non-Federal and Federal lands and waters.

"(b) For the purposes of carrying out this section, there shall be reserved an amount which shall be not less than 30 per centum of the funds available to carry out this part for any fiscal year.

#### "TRANSFER OF FUNDS

"Sec. 807. Funds necessary to carry out their responsibilities under part A shall be made available to the Secretaries of the Interior and Agriculture in accord with interagency agreements between the Secretary of Labor and the Secretaries of the Interior and Agriculture.

#### "PART B—YOUTH COMMUNITY CONSERVATION AND IMPROVEMENT PROJECTS

##### "STATEMENT OF PURPOSE

"Sec. 811. It is the purpose of this part to establish a program of community conservation and improvement projects to provide employment, work experience, skill training, and opportunities for community service to eligible youths, for a period not to exceed twelve months, supplementary to but not replacing opportunities available under title I of this Act.

##### "DEFINITIONS

"Sec. 812. As used in this part, the term—

"(1) 'eligible applicant' means any prime sponsor qualified under section 102 of this Act, sponsors of Native American programs qualified under section 302(c)(1) of this Act, and sponsors of migrant and seasonal farmworker programs qualified under section 303 of this Act.

"(2) 'project applicant' shall have the same meaning as in section 701(a)(15) of this Act.

"(3) 'eligible youths' means individuals who are unemployed and, at the time of entering employment under this part, are ages sixteen to nineteen, inclusive.

"(4) 'community improvement projects' means projects providing work which would not otherwise be carried out, including, but not limited to, the rehabilitation or improvement of public facilities; neighborhood improvements; weatherization and basic repairs to low-income housing; and conservation, maintenance, or restoration of natural resources on publicly held lands other than Federal lands.

##### "ALLOCATION OF FUNDS

"Sec. 813. (a) Funds available to carry out this part for any fiscal year shall be allocated in such a manner that not less than 75 per centum of such funds shall be allocated among the States on the basis of the relative number of unemployed persons within each State as compared to all States, except that not less than one-half of 1 per centum of such funds shall be allocated for projects under this part within any one State and not less than one-half of 1 per centum of such funds shall be allocated in the aggregate for projects in Guam, the Virgin Islands, American Samoa, the Northern Marianas, and the Trust Territory of the Pacific Islands.

"(b) Of the funds available for this part, 2½ per centum shall be available for projects for Native American eligible youths, and 2½ per centum shall be available for projects for eligible youths in migrant and seasonal farmworker families.

"(c) The remainder of the funds available for this part shall be allocated as the Secretary deems appropriate.

##### "COMMUNITY CONSERVATION AND IMPROVEMENT YOUTH EMPLOYMENT PROGRAM

"Sec. 814. The Secretary is authorized, in accordance with the provisions of this part, to enter into agreements with eligible ap-

plicants to pay the costs of community conservation and improvement youth employment programs, including work on community improvement projects to be carried out by project applicants employing eligible youths and appropriate supervisory personnel.

##### "PROJECT APPLICATIONS

"Sec. 815. (a) Project applicants shall submit applications for funding of projects under this part to the appropriate eligible applicant.

"(b) In accordance with regulations prescribed by the Secretary, each project application shall—

"(1) provide a description of the work to be accomplished by the project, the jobs to be filled, and the appropriate duration for which eligible youths would be assigned to such jobs;

"(2) describe the wages or salaries to be paid persons employed in jobs assisted under this part;

"(3) set forth assurances that there will be an adequate number of supervisory personnel on the project and that the supervisory personnel are adequately trained in skills needed to carry out the project and can instruct participating eligible youths in skills needed to carry out a project;

"(4) set forth assurances that any income generated by the project will be applied toward the cost of the project;

"(5) set forth assurances for acquiring such space, supplies, materials, and equipment as necessary, including reasonable payment for the purchase or rental thereof;

"(6) set forth assurances that, to the maximum extent feasible, projects carried out under this part shall be labor intensive; and

"(7) set forth such other assurances, arrangements, and conditions as the Secretary deems appropriate to carry out the purposes of this part.

##### "PROPOSED AGREEMENTS

"Sec. 816. (a)(1) Each eligible applicant desiring funds under this part shall submit a proposed agreement to the Secretary, together with all project applications approved by the eligible applicant and all project applications approved by any program agent within the area served by the eligible applicant. With its transmittal of the proposed agreement, the eligible applicant shall provide descriptions of the project applications approved by the eligible applicant and by any program agent within the area served by the eligible applicant, accompanied by the recommendations of the eligible applicant concerning the relative priority attached to each project.

"(2) The definition and functions of a program agent shall be as set forth in section 204(d) of this Act.

"(b) The proposed agreement submitted by any eligible applicant shall—

"(1) describe the method of recruiting eligible youths, including a description of how such recruitment will be coordinated with plans under other parts of this title and with arrangements required by section 105 of this Act, and also including a description of arrangements with school systems and the public employment service (including school cooperative programs); and

"(2) provide a description of job training and skill development opportunities that will be made available to participating eligible youths, as well as a description of plans to coordinate the training and work experience with school-related programs, including the awarding of academic credit;

"(3) set forth such other assurances as the Secretary may require to carry out the purposes of this part.

"(c)(1) In order for a project application submitted by a project applicant to be submitted to the Secretary by any eligible applicant, copies of such application shall have been submitted at the time of such applica-

tion to the prime sponsor's planning council established under section 104 of this Act (or an appropriate planning organization in the case of sponsors of Native American programs under section 302 of this Act or migrant and seasonal farmworker programs under section 303 of this Act) for the purpose of affording such council (and the youth council established under section 836(a)(5)) an opportunity to submit comments and recommendations with respect to that application to the eligible applicant. No member of any council (or organization) shall cast a vote on any matter in connection with a project in which that member, or any organization with which that member is associated, has a direct interest.

"(2) Consistent with procedures established by the eligible applicant in accordance with regulations which the Secretary shall prescribe, the eligible applicant shall not disapprove a project application submitted by a project applicant unless it has first considered any comments and recommendations made by the appropriate council (or organization) and unless it has provided such applicant and council (or organization) with a written statement of its reasons for such disapproval.

#### "APPROVAL OF AGREEMENTS

"SEC. 817. (a) The Secretary may approve or deny on an individual basis any of the project applications submitted with any proposed agreement.

"(b) No funds shall be made available to any eligible applicant except pursuant to an agreement entered into between the Secretary and the eligible applicant which provides assurances satisfactory to the Secretary that—

"(1) the standards set forth in part D of this title will be satisfied;

"(2) projects will be conducted in such manner as to permit eligible youths employed in the project who are in school to coordinate their jobs with classroom instruction and, to the extent feasible, to permit such eligible youths to receive credit from the appropriate educational agency, postsecondary institution, or particular school involved; and

"(3) meet such other assurances, arrangements, and conditions as the Secretary deems appropriate to carry out the purposes of this part.

#### "WORK LIMITATION

"SEC. 818. No eligible youth shall be employed for more than twelve months in work financed under this part, except as prescribed by the Secretary.

#### "PART C—COMPREHENSIVE YOUTH EMPLOYMENT AND TRAINING PROGRAMS

##### "STATEMENT OF PURPOSE

"SEC. 831. It is the purpose of this part to establish comprehensive programs, supplementary to but not replacing programs and activities available under title I of this Act, to enhance the job prospects and career opportunities of young persons, including employment, community service opportunities and such training and supportive services as are necessary to enable participants to secure suitable and appropriate unsubsidized employment in the public and private sectors of the economy. To the maximum extent feasible, training and employment opportunities afforded under this part shall be interrelated and mutually reinforcing so as to achieve the goal of enhancing the job prospects and career opportunities of persons served under this part.

##### "PROGRAMS AUTHORIZED

"SEC. 832. The Secretary is authorized to provide financial assistance to enable eligible applicants (as defined in section 834) to provide employment opportunities and appropriate training and supporting services for

eligible participants including but not limited to:

"(1) useful experience opportunities in a wide range of community betterment activities such as rehabilitation of public properties, assistance in the weatherization of homes occupied by low-income families, demonstrations of energy-conserving measures including solar energy techniques (especially those utilizing materials and supplies available without cost), park establishment and upgrading, neighborhood revitalization, conservation and improvement, and related activities;

"(2) meaningful and productive employment and work experience in fields such as education, health care, neighborhood transportation services, crime prevention and control, environmental quality control, preservation of historic sites, and maintenance of visitor facilities; or

"(3) appropriate training and services to support the purpose of this part, including but not limited to—

"(A) outreach, assessment, and orientation;

"(B) counseling;

"(C) activities promoting education-to-work transition;

"(D) provision of occupational, educational, and training information;

"(E) services to youths to help them obtain and retain employment;

"(F) literacy, including appropriate services for persons with limited English-speaking ability;

"(G) attainment of certificates of high school equivalency or attainment of postsecondary degrees;

"(H) job sampling, including vocational exploration in the public and private sector;

"(I) institutional and on-the-job training;

"(J) transportation assistance; or

"(K) other necessary supportive services.

##### "ALLOCATION OF FUNDS

"SEC. 833. (a) Seventy-five per centum of the funds available for this part for any fiscal year shall be allocated in accordance with the provisions of subsection (b).

"(b) Of the sums available under subsection (a) of this section—

"(1) an amount equal to 10 per centum of the total funds available for this part shall be made available for special statewide youth services under subsection (d) of this section;

"(2) an amount equal to 15 per centum of the total funds available for this part shall be made available for programs for in-school youth pursuant to agreements between prime sponsors and local educational agencies under subsection (e) of this section; and

"(3) an amount equal to 50 per centum of the total funds available for this part shall be made available to prime sponsors for programs authorized under section 832 of this Act.

"(c) (1) Amounts available for each of the purposes set forth in subsection (b) shall be allocated among the States, subject to the provisions of paragraph (3) of this subsection, in such a manner that—

"(A) 37.5 per centum thereof shall be allocated in accordance with the relative number of unemployed persons within each State as compared to the total number of such unemployed persons in all States;

"(B) 37.5 per centum thereof shall be allocated in accordance with the relative number of unemployed persons residing in areas of substantial unemployment (as defined in section 204(c) of this Act) within each State as compared to the total number of unemployed persons residing in all such areas in all States; and

"(C) 25 per centum thereof shall be allocated in accordance with the relative number of persons in families with an annual income below the low-income level (as defined in section 701(a)(4) of this Act) within

each State as compared to the total number of such persons in all States.

"(2) In determining allocations under clauses (A) and (B) of paragraph (1) of this subsection, the Secretary shall use data for that period of three consecutive months for which each qualifying area had the highest number of unemployed persons during the preceding calendar year.

"(3) Not less than one-half of 1 per centum of the amounts allocated in accordance with this subsection shall be allocated for use within each State and not less than one-half of 1 per centum of such amounts shall be allocated in the aggregate for use in Guam, the Virgin Islands, American Samoa, the Northern Marianas, and the Trust Territory of the Pacific Islands.

"(4) Amounts available to prime sponsors under paragraphs (2) and (3) of subsection (b) of this section shall, out of the total amounts allocated to each State under such paragraphs, be allocated by the Secretary among prime sponsors within each State, in accordance with the factors set forth in paragraph (1) of this subsection.

"(d) The amount available to each State under paragraph (1) of subsection (b) of this section shall be used in accordance with a special statewide youth services plan, approved by the Secretary, for such purposes as—

"(1) providing financial assistance for employment and training opportunities for eligible youths who are under the supervision of the State;

"(2) providing labor market and occupational information to prime sponsors and local educational agencies, without reimbursement;

"(3) providing for the establishment of cooperative efforts between State and local institutions, including occupational and career guidance and counseling and placement services for in-school and out-of-school youth;

"(4) providing financial assistance for expanded and experimental programs in apprenticeship trades, or development of new apprenticeship arrangements, in concert with appropriate businesses and labor unions or State apprenticeship councils;

"(5) carrying out special model employment and training programs and related services between appropriate State agencies and prime sponsors in the State, or any combination of such prime sponsors, including subcontractors selected by prime sponsors, with particular emphasis on experimental job training within the private sector.

"(e) The amount available to each prime sponsor under paragraph (2) of subsection (b) of this section shall be used for programs carried out pursuant to agreements between prime sponsors and local educational agencies. Each such agreement shall describe in detail the employment opportunities and appropriate training and supportive services which shall be provided to eligible participants who are enrolled or who agree to enroll in a full-time program leading to a secondary school diploma, a junior or community college degree, or a technical trade school certificate of completion.

"(f) Prime sponsors receiving assistance under paragraph (3) of subsection (b) of this section shall give special consideration to community-based organizations, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, and other similar organizations which have demonstrated effectiveness in the delivery of employment and training services, in carrying out programs authorized under section 832 of this Act.

"(g) The remaining 25 per centum of the funds available for this part for any fiscal year shall be available as follows:

"(1) not less than 2½ per centum of the amounts available for this part shall be made available for employment and training programs for Native American eligible youths, and not less than 2½ per centum of the amounts available for this part shall be made available for employment and training programs for eligible youths in migrant and seasonal farmworker families; and

"(2) the remainder shall be available for innovative and experimental programs authorized under section 838.

#### "ELIGIBLE APPLICANTS

"SEC. 834. Eligible applicants for purposes of this part are prime sponsors qualified under section 102 of this Act, sponsors of Native American programs qualified under section 302(c)(1) of this Act, and sponsors of migrant and seasonal farmworker programs qualified under section 303 of this Act.

#### "ELIGIBLE PARTICIPANTS

"SEC. 835. (a) Eligible participants for programs authorized under this part shall be persons who—

"(1) (A) are unemployed or are in school and (i) are ages sixteen to twenty-one, inclusive, or (ii) if authorized under such regulations as the Secretary may prescribe, are ages twenty-two to twenty-three, inclusive; or (B) if authorized under such regulations as the Secretary may prescribe, are in school and are ages fourteen to fifteen, inclusive; and

"(2) are not members of households which have current gross family income, adjusted to an annualized basis (exclusive of unemployment compensation and all Federal, State, and local income-tested or needs-tested public payments) at a rate exceeding 70 per centum of the lower living standard income level, except that, pursuant to regulations which the Secretary shall prescribe, persons who do not meet the requirements of this subparagraph but who are otherwise eligible under this part may participate in appropriate activities of the type authorized under paragraph (3) of section 832.

"(b) For purposes of this section, the term 'lower living standard income level' means that income level (adjusted for regional and metropolitan and urban and rural differences and family size) determined annually by the Secretary based upon the most recent 'lower living standard budget' issued by the Bureau of Labor Statistics of the Department of Labor.

#### "CONDITIONS FOR RECEIPT OF FINANCIAL ASSISTANCE

"SEC. 836. (a) The Secretary shall not provide financial assistance to an eligible applicant for programs authorized under section 832 unless such eligible applicant provides assurances that the standards set forth in part D of this title will be met and—

"(1) includes in its comprehensive manpower plan submitted pursuant to section 105 or section 302(c)(1) of this Act (or an amendment or supplement thereto) a description of the program to be provided to eligible participants, together with a description of the relationship and coordination of services provided to eligible participants under this part to similar services offered by local educational agencies, postsecondary institutions, the public employment service, other youth programs, community-based organizations, businesses, and labor organizations consistent with the requirements of sections 105 and 106 of this Act;

"(2) provides assurances, satisfactory to the Secretary, that in the implementation of programs under this part, there will be coordination, to the extent appropriate, with local educational agencies, postsecondary institutions, other youth programs, community-based organizations, businesses, labor organiza-

tions, other job training programs, the apprenticeship system, and (with respect to the referral of prospective youth participants to the program) the public employment service system;

"(3) provides assurances satisfactory to the Secretary that, to the maximum extent feasible, programs or components of programs conducted under this part will be linked, to the extent appropriate, to comprehensive work and training programs conducted by prime sponsors under title I of this Act;

"(4) provides assurances satisfactory to the Secretary that allowances will be paid in accordance with the provisions of section 111 (a) of this Act and such regulations as the Secretary may prescribe for this part;

"(5) establishes a youth council under the planning council of such eligible applicant (established under section 104 of this Act) in accordance with subsection (b) of this section;

"(6) provides assurances satisfactory to the Secretary that effective means will be provided through which youths participating in the projects, programs, and activities may acquire appropriate job skills and be given necessary basic education and training and opportunities for appropriate new classifications, occupations, and restructured jobs, and that procedures will be established in order to certify the extent to which each such youth has acquired skills, education, and training;

"(7) provides that the funds available under section 833(e) shall be used for programs authorized under section 832 for in-school youth who are eligible participants through arrangements to be carried out by a local educational agency or agencies or postsecondary educational institution or institutions; and

"(8) provides such other information and assurance as the Secretary may deem appropriate to carry out the purposes of this Act.

"(b) Each youth council established by an eligible applicant shall be responsible for making recommendations to the planning council established under section 104 of this Act with respect to the planning and for the review of activities conducted under this part and part B. Each such youth council's membership shall include representation from the local educational agency, local vocational education advisory council, junior and community colleges, business, unions, the public employment service, local government and nongovernment agencies and organizations which are involved in meeting the special needs of youths, the community served by such applicant, the prime sponsor, and youths themselves.

"(c) No program of work experience for in-school youth supported under this title shall be entered into unless an agreement has been made between the prime sponsor and a local educational agency or agencies, after review by the youth council established under subsection (b) of this section. Each such agreement shall—

"(1) set forth assurances that participating youths will be provided meaningful work experience, which shall improve their ability to make career decisions and which shall provide them with basic work skills needed for regular employment not subsidized under this in-school program;

"(2) be administered, under contracts with the prime sponsor, by a local educational agency or local educational agencies or a postsecondary educational institution or institutions within the area served by the prime sponsor, and that such contracts have been reviewed by the youth council established under subsection (b) of this section.

"(3) set forth assurances that job information, counseling, guidance, and placement services shall be made available to participating youths and that funds provided under

this program shall be available to, and utilized by, the local educational agency or agencies to the extent necessary to pay the cost of school-based counselors to carry out the provisions of this in-school program;

"(4) set forth assurances that jobs provided under this program shall be certified by the participating educational agency or institution as relevant to the educational and career goals of the participating youths;

"(5) set forth assurances that the eligible applicant will advise participating youths of the availability of other employment and training resources provided under this Act, and other resources available in the local community to assist such youths in obtaining employment;

"(6) set forth assurances that youth participants shall be chosen, to the maximum extent possible, from among youths who are in lower living standard income level families and who need work to remain in school, and shall be selected by the appropriate educational agency or institution, based on the certification for each participating youth by the school-based guidance counselor that the work experience provided is an appropriate component of the overall educational program of the youth.

#### "REVIEW OF PLANS BY SECRETARY

"SEC. 837. The provisions of sections 108, 109, and 110 of this Act shall apply to all programs and activities authorized under section 832.

#### "INNOVATIVE AND EXPERIMENTAL PROGRAMS

"SEC. 838. (a) The Secretary of Labor is authorized to provide support for innovative and experimental programs to test new approaches for dealing with the unemployment problems of youths. In supporting such programs, the Secretary of Labor shall consult, as appropriate, with the Secretary of Commerce, Secretary of Health, Education, and Welfare, Secretary of Housing and Urban Development, the Secretary of Agriculture, the Director of the ACTION Agency, and the Director of the Community Services Administration. Such programs shall include, where appropriate, cooperative arrangements with educational agencies to provide special programs and services for eligible participants enrolled in secondary schools, junior and community colleges, and technical and trade schools, including job experience, counseling and guidance prior to the completion of secondary or postsecondary education and making available occupational, educational, and training information through statewide career information systems.

"(b) (1) One-half of the funds available under section 833(g)(2) to carry out this section shall be provided to eligible applicants on the basis of applications submitted to the Secretary. The Secretary shall review and approve such applications, on the basis of criteria which the Secretary shall establish, which shall include but not be limited to—

"(A) standards of local need, as evidenced by the severity of unemployment problems among eligible youths in the area to be served;

"(B) demonstrated effectiveness in dealing with the unemployment problems of youths, as indicated by the past performance record of the eligible applicant; and

"(C) the quality of the program proposal, as determined by the Secretary in accord with such standards as the Secretary shall establish.

"(2) Eligible applicants receiving assistance under this subsection shall give special consideration to community-based organizations, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, and other similar organiza-

tions which have demonstrated effectiveness in the delivery of employment and training services, in carrying out innovative and experimental programs funded under this section.

"(c) The remaining funds available under section 833(g)(2) to carry out this section shall be used in the Secretary's discretion to enable public or private agencies to carry out innovative and experimental programs for eligible participants, for the purposes of preparing them for, enhancing their prospects for, or securing their employment in jobs through which they may reasonably be expected to advance to productive working lives. The Secretary shall give special consideration to community-based organizations, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, and other similar organizations which have demonstrated effectiveness in the delivery of employment and training services, in carrying out the innovative and experimental programs authorized under this subsection. Funds available under this subsection may be transferred to other Federal departments and agencies to carry out functions delegated to them pursuant to agreements with the Secretary.

"(d) (1) In carrying out its responsibilities under this subsection and under section 161 of the Vocational Education Act, the National Occupational Information Coordinating Committee shall give special attention to the problems of unemployed youths. The Committee shall also carry out other activities consistent with the purposes of this title, including but not limited to the following:

"(A) assisting and encouraging local areas to adopt methods of translating national aggregate occupational outlook data into local terms;

"(B) assisting and encouraging the development of State occupational information systems, to be used in the maintenance of local computerized job banks and job vacancy reports, and accessible via computer terminals located in school district offices;

"(C) in cooperation with State and local correctional agencies, encouraging programs of counseling and employment services for youths in correctional institutions;

"(D) providing technical assistance for programs of computer on-line terminals and other facilities to utilize and implement occupational and career outlook information and projections supplied by State employment service offices and to improve the match of youth career desires with available and anticipated labor demand;

"(E) in cooperation with State and local educational agencies, and other appropriate persons and organizations, encouraging programs to bring employment and career counseling to presecondary youths; and

"(F) providing technical assistance for programs designed to encourage public and private employers to list all available job opportunities for youths with the appropriate eligible applicant conducting occupational information and career counseling programs and to encourage cooperation and contact between such eligible applicants and employers.

"(2) All funds available to the National Occupational Information Coordinating Committee under this Act and under section 161 of the Vocational Education Act may be used by the Committee to carry out any of its functions and responsibilities authorized by law.

#### "ACADEMIC CREDIT

"Sec. 839. In carrying out this part, appropriate efforts shall be made to encourage the granting by the educational agency or

school involved of academic credit to eligible participants who are in school.

#### "PART D—GENERAL PROVISIONS

##### "SPECIAL CONDITIONS

"Sec. 851. (a) The Secretary shall provide financial assistance under this title only if he determines that the activities to be assisted meet the requirements of this section.

"(b) The Secretary shall determine that the activities assisted under this title—

"(1) will result in an increase in employment opportunities over those opportunities which would otherwise be available,

"(2) will not result in the displacement of currently employed workers (including partial displacement such as reduction in the hours of non-overtime work or wages or employment benefits),

"(3) will not impair existing contracts for services or result in the substitution of Federal for other funds in connection with work that would otherwise be performed, and

"(4) will not substitute jobs assisted under this title for existing federally assisted jobs.

"(c) The project applicant will not employ any youth when any other person is on layoff by such applicant from the same or any substantially equivalent job.

"(d) No funds received under this title will be used to employ any person to fill a job opening created by the act of an employer in laying off or terminating employment of any regular employee, or otherwise reducing the regular work force not supported under this title in anticipation of filling the vacancy so created by hiring a youth to be supported under this title.

"(e) The jobs in each promotional line will in no way infringe upon the promotional opportunities which would otherwise be available to persons currently employed in public services not subsidized under this title and no job will be filled in other than an entry level position in each promotional line.

"(f) Members of the youth population to be served by the program shall be consulted and their views taken into consideration.

"(g) Where a labor organization represents employees who are engaged in similar work in the same area to that proposed to be performed under the program for which an application is being developed for submission under this title, such organization shall be notified and shall be afforded a reasonable period of time prior to the submission of the application in which to make comments to the applicant and to the Secretary.

"(h) The provisions of section 605(b) of this Act shall apply.

"(i) Activities funded under this title shall meet such other standards as the Secretary may deem appropriate to carry out the purposes of this Act.

"(j) Rates of pay under parts B and C shall be no lower than the highest of—

"(1) the minimum wage under section 6 (a)(1) of the Fair Labor Standards Act of 1938;

"(2) the State or local minimum wage for the most nearly comparable employment; or

"(3) the prevailing rates of pay for occupations and job classifications of persons employed by the same employer: *Provided, however,* That in the case of projects to which the provisions of the Davis-Bacon Act (or of any Federal law containing labor standards in accordance with the Davis-Bacon Act) otherwise apply, the Secretary is authorized, for projects financed under parts B and C of this title of under \$5,000, to prescribe rates of pay for youth participants which are not less than the applicable minimum wage but not more than the wage rate of the entering apprentice in the most nearly comparable apprenticeable trade, and to prescribe the appropriate ratio of journeymen to such participating youths.

"(k) Funds under this title shall not be used to provide full-time employment opportunities (1) for any person who has not attained the age with respect to which the requirement of compulsory education ceases to apply under the laws of the State in which such individual resides, except where such employment is undertaken in cooperation with school-related programs awarding academic credit for the work experience, or (2) for any person who has not attained a high school degree or its equivalent if it is determined, in accordance with procedures established by the Secretary of Labor, that there is substantial evidence that such person left school in order to participate in any program under either such part.

#### "SPECIAL PROVISIONS FOR PARTS B AND C

"Sec. 852. (a) Appropriate efforts shall be made to insure that youths participating in programs, projects, and activities under parts B and C of this title shall be youths who are experiencing severe handicaps in obtaining employment, including but not limited to those who lack credentials (such as a high school diploma), those who require substantial basic and remedial skill development, those who are women and minorities, those who are veterans of military service, those who have a history of involvement in the criminal justice system or have participated in programs designed to divert youths from the criminal system, or those who have otherwise demonstrated special need, as determined by the Secretary.

"(b) The Secretary is authorized to make such reallocation as he or she deems appropriate of any amount of any allocation under part B or part C of this title to the extent that the Secretary determines that an eligible applicant or sponsor will not be able to use such amount within a reasonable period of time. Any such amount may be reallocated only if the Secretary has provided thirty days' advance notice of the proposed reallocation to the eligible applicant or to the sponsor and to the Governor of the State of the proposed reallocation, during which period of time the eligible applicant or sponsor and the Governor may submit comments to the Secretary. After considering any comments submitted during such period of time, the Secretary shall notify the Governor and affected eligible applicants or sponsors of any decision to reallocate funds, and shall publish any such decision in the Federal Register. Priority shall be given in reallocating such funds to other areas within the same State.

#### "EDUCATION CREDIT, COUNSELING AND PLACEMENT SERVICES, AND BASIC SKILLS DEVELOPMENT

"Sec. 853. (a) The Secretary, in carrying out the purposes of this title, shall work with the Department of Health, Education, and Welfare to make suitable arrangements with appropriate State and local education officials whereby academic credit may be awarded, consistent with applicable State law, by educational institutions and agencies for competencies derived from work experience obtained through programs established under this title.

"(b) All activities funded under this title, pursuant to such regulations as the Secretary shall prescribe, shall provide appropriate counseling and placement services designed to facilitate the transition of youth from participation in the project to (1) permanent jobs in the public or private sector, or (2) education or training programs.

#### "EVALUATION

"Sec. 854. Programs provided under this title shall be subject to continuing performance evaluation pursuant to the provisions of section 313(a) of this Act.

**"TRAINING AND TECHNICAL ASSISTANCE"**

"SEC. 855. Training and technical assistance may be provided to eligible applicants conducting programs and activities under parts B and C of this title in accordance with the provisions of section 315 of this Act. Technical assistance to be provided by the Secretary shall emphasize the development and exchange of viable and proven program models and program information to assist eligible applicants in the design and modification of local program initiatives."

**"RELATION TO OTHER PROVISIONS"**

"SEC. 856. The provisions of title VII of this Act shall apply to this title, except to the extent that any such provision may be inconsistent with the provisions of this title."

**TRANSITION PROVISIONS**

SEC. 4. In order to provide for an orderly transition to youth employment and training activities funded under title VIII of the Comprehensive Employment and Training Act of 1973 (as added by this Act), the Secretary of Labor shall use the funds available from appropriations under the Economic Stimulus Appropriations Act of 1977 for youth employment and training activities to the maximum extent consistent with law, in such a manner as to be in accordance with the provisions of such title VIII.

**TRANSFER OF FUNDS TO NATIONAL OCCUPATIONAL INFORMATION COORDINATING COMMITTEE**

SEC. 5. Section 4 of the Comprehensive Employment and Training Act of 1973 is amended by adding at the end thereof the following new subsection:

"(f) Of the amounts available for the Secretary's discretionary use under this Act, the Secretary shall transfer an amount which shall be not less than \$3,000,000 and not more than \$5,000,000 for any fiscal year to the National Occupational Information Coordinating Committee established pursuant to 161(b) of the Vocational Education Act of 1963, for the purposes described in section 838(d)(1) of this Act."

**NATIVE AMERICAN PROGRAMS**

SEC. 6. (a) The heading of section 302 of the Comprehensive Employment and Training Act of 1973 is amended to read as follows:

"NATIVE AMERICAN EMPLOYMENT AND TRAINING PROGRAMS"

(b) Section 302(a) of such Act is amended (1) by striking out the word "and" in clause (1) of such section and inserting in lieu thereof a comma, and (2) by inserting after "native" in such clause (1) a comma and the following: "and Hawaiian native".

(c) Section 302(b) of such Act is amended by adding at the end of clause (2) a comma and the following: "and Hawaiian natives".

(d) The first sentence in section 302(c)(1) of such Act is amended by inserting after "body," the following: "and such public and private nonprofit agencies as the Secretary determines will best serve Hawaiian natives."

(e) Section 701(a) of the Comprehensive Employment and Training Act of 1973 is amended by adding at the end thereof the following:

"(16) 'Hawaiian native' means any individual any of whose ancestors were native of the area which consisted of the Hawaiian Island prior to 1778."

**WAIVER OF LIMITATION ON FUNDS FOR TITLES III AND IV**

SEC. 7. Section 4(e) of the Comprehensive Employment and Training Act of 1973 shall be deemed ineffective with respect to fiscal years 1977 and 1978.

**SPECIAL VETERANS PROVISIONS**

SEC. 8. (a) With respect to programs carried out with funds appropriated after January 1, 1977, for each of the fiscal years 1977 and 1978 under the Comprehensive Employ-

ment and Training Act of 1973, as amended, the Secretary of Labor (hereinafter in this section referred to as the "Secretary") shall take appropriate steps to provide for the increased participation in public service employment programs and job training opportunities supported under such Act of qualified disabled veterans (as defined in section 201(1) of title 38, United States Code) and those qualified Vietnam-era veterans (as defined in section 201(2)(A) of such title) who are under twenty-seven years of age (hereinafter in this section referred to collectively as "eligible veterans"), including, but not limited to—

(1) providing for individual prime sponsors to develop local goals, taking into account the number of eligible veterans in the area served by such sponsors, for the placement of such eligible veterans in job vacancies occurring in such public service employment programs;

(2) full implementation of the provisions of section 104(b) of the Emergency Jobs and Unemployment Assistance Act of 1974, as amended (relating to the conduct of an outreach and public information program to promote employment and training opportunities for veterans);

(3) the carrying out of the Secretary's responsibilities under (A) chapter 41 of title 38, United States Code (relating to job counseling, training, and placement services for veterans) to provide the maximum of employment and training opportunities through existing programs, coordination and merger of programs, and implementation of new programs; (B) chapter 42 of such title (relating to opportunities for employment and training for disabled and Vietnam-era veterans, including mandatory listing and the promotion of maximum employment and job advancement opportunities with the Federal Government); and (C) chapter 43 of such title (relating to veterans' reemployment rights);

(4) full utilization of the provisions of clauses (2) and (5) of section 205(c) of the Comprehensive Employment and Training Act of 1973, as amended (relating to service to significant segments of the population and special consideration for special Vietnam-era veterans) and the provisions of subclause (E) of section 105(a)(3) of such Act (relating to maximum use of apprenticeship or other on-job training opportunities available under section 1787 of title 38, United States Code); and

(5) requiring that representatives of appropriate veterans organizations or groups be invited to serve as temporary members of prime sponsors' planning councils (established under section 104 of such Act), the States' Manpower Services Councils (established under section 107(a)(1) of such Act), and the National Commission for Manpower Policy (established under section 502(a) of such Act).

(b) The Secretary shall make available such sums and shall assign such personnel as may be necessary to carry out fully and effectively his responsibilities under subsection (a). The Secretary shall report to the Congress within 60 days of enactment of this section on the amount so made available and the personnel so assigned.

(c) The Secretary shall carry out his responsibilities under this section in consultation with the Deputy Assistant Secretary for Veterans' Employment (established by section 601 of the Veterans' Education and Employment Assistance Act of 1976, Public Law 94-502). The Secretary, in carrying out his responsibilities under this section, shall also consult with and solicit the cooperation of the Administrator of Veterans' Affairs.

**SPECIAL CONSIDERATION**

SEC. 9. (a) Section 205 of the Comprehensive Employment and Training Act of 1973 is

amended by adding at the end thereof the following new subsection:

"(d) In filling teaching positions in elementary and secondary schools with financial assistance under this title, each eligible applicant shall give special consideration to unemployed persons with previous teaching experience who are certified by the State in which that applicant is located and who are otherwise eligible under the provisions of this title."

(b) Section 602 of such Act is amended by adding at the end thereof the following new subsection:

"(f) In filling teaching positions in elementary and secondary schools with financial assistance under this title, each eligible applicant shall give special consideration to unemployed persons with previous teaching experience who are certified by the State in which that applicant is located and who are otherwise eligible under the provisions of this title."

**CLARIFYING AMENDMENT**

SEC. 10. Clause (A) of section 608(a)(1) of the Comprehensive Employment and Training Act of 1973 is amended to read as follows:

"(A) who has been eligible for unemployment compensation benefits for fifteen or more weeks;"

**DEMONSTRATION PROJECTS**

SEC. 11. (a) It is the sense of the Congress that the Secretary of Labor should provide, under his discretionary authority under title III of the Comprehensive Employment and Training Act of 1973, for demonstration projects which coordinate the delivery of manpower and social services.

(b) It is the sense of the Congress that the Secretary of Labor encourage prime sponsors to work with local education agencies in the allocation of public service jobs.

**EFFECTIVE DATE**

SEC. 12. The provisions of this Act shall become effective upon enactment.

Amend the title so as to read: "an act to provide employment and training opportunities for youth, and to provide for other improvements in employment and training programs."

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. NELSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

**UP AMENDMENT NO. 338**

Mr. NELSON. Mr. President, I move that the title of H.R. 6138 be amended to read as follows:

An act to provide employment and training opportunities for youths, and to provide for other improvements in employment and training programs.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

Mr. NELSON. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of the Senate amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, I move that the Senate insist upon its amendments to H.R. 6138 and request a conference with the House thereon, and that the Chair be authorized to appoint conferees on the part of the Senate.

The motion was agreed to; and the President Officer (Mr. DeCONCINI) ap-

pointed Mr. NELSON, Mr. CRANSTON, Mr. HATHAWAY, Mr. RIEGLE, Mr. WILLIAMS, Mr. RANDOLPH, Mr. PELL, Mr. KENNEDY, Mr. JAVITS, Mr. HATCH, Mr. CHAFFEE, Mr. SCHWEIKER, and Mr. STAFFORD conferees on the part of the Senate.

Mr. NELSON. Mr. President, I ask unanimous consent that consideration of S. 1242 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I wish to note the enormous job done on this bill by my colleague (Mr. NELSON) and other members of the committee, and the cooperation of Senator BELLMON, Senator DOMENICI, and Senator MCCLURE, as well as the cooperation of Senator CRANSTON, Senator ZORINSKY, and others.

I wish especially to note the extraordinarily gifted work of the majority staff under Dick Johnson, and the minority staff, under Jim O'Connell. It was really an extraordinary job, and I want to pay tribute to them.

Mr. NELSON. Mr. President, I wish to associate myself with the remarks of the distinguished Senator from New York. It was a great opportunity to work with Senator JAVITS and all the rest who were involved in this legislation. As I said earlier, I did not contribute to the substance or the concept. I am merely the chairman of the Subcommittee on Employment, Poverty, and Migratory Labor, and as chairman I conducted the hearings. But a number of the Members in the Senate contributed the ideas and the concepts that were put together in this one bill, and I commend those Members who worked so hard on this legislation.

#### TANKER AND VESSEL SAFETY ACT OF 1977

The PRESIDING OFFICER. The hour of 1:30 having arrived, under the previous order, the Senate will now resume consideration of S. 682, which the clerk will state by title.

The assistant legislative clerk read as follows:

A bill (S. 682) to amend the Ports and Waterways Safety Act of 1972; to increase the use of vessels of the United States to carry imported oil, and for other purposes.

The Senate resumed the consideration of the bill.

#### LAND AND WATER CONSERVATION FUND ACT

Mr. JACKSON. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 5306, a bill to amend the Land and Water Conservation Fund Act.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

*Resolved*, That the House agree to the amendments of the Senate numbered 1 and 3 to the bill (H.R. 5306) entitled "An Act to amend the Land and Water Conservation Fund Act of 1965, and for other purposes."

*Resolved*, That the House agree to the amendment of the Senate numbered 2 to the aforesaid bill with an amendment as follows:

Strike out the matter stricken by said amendment, and insert:

(5) Section 7 is amended by adding the following new subsection:

"(c) BOUNDARY CHANGES: DONATIONS.—Whenever the Secretary of the Interior determines that to do so will contribute to, and is necessary for, the proper preservation, protection, interpretation, or management of an area of the national park system, he may, following timely notice in writing to the Committee on Interior and Insular Affairs of the House of Representatives and to the Committee on Energy and Natural Resources of the Senate of his intention to do so, and by publication of a revised boundary map or other description in the Federal Register, (1) make minor revisions of the boundary of the area, and moneys appropriated from the fund shall be available for acquisition of any lands, waters, and interests therein added to the area by such boundary revision subject to such statutory limitations, if any, on methods of acquisition and appropriations therefor as may be specifically applicable to such area: *Provided however*, that such authority shall expire ten years from the date of enactment of the authorizing legislation establishing such boundaries; and (2) acquire by donation, purchase with donated funds, transfer from any other Federal agency, or exchange, lands, waters, or interests therein adjacent to such area, except that in exercising his authority under this clause (2) the Secretary may not alienate property administered as part of the national park system in order to acquire lands by exchange, the Secretary may not acquire property without the consent of the owner, and the Secretary may acquire property owned by a State or political subdivision thereof only by donation. Prior to making a determination under this subsection, the Secretary shall consult with the duly elected governing body of the county, city, town or other jurisdiction or jurisdictions having primary taxing authority over the land or interest to be acquired as to the impacts of such proposed action, and he shall also take such steps as he may deem appropriate to advance local public awareness of the proposed action. Lands, waters, and interests therein acquired in accordance with this subsection shall be administered as part of the area to which they are added, subject to the laws and regulations applicable thereto."

Mr. JACKSON. Mr. President, H.R. 5306 was passed by the House earlier this session and was passed by the Senate on May 18, 1977, with three amendments. The House has concurred in two of the amendments of the Senate and has offered compromise language on the third Senate amendment.

Mr. President, I ask unanimous consent that a brief discussion of the House amendment to the Senate amendments to H.R. 5306 be printed at this point in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

#### BRIEF DISCUSSION OF HOUSE AMENDMENT TO H.R. 5306

1. All Congressional intent language with respect to acquiring the backlog of Park lands by a date certain has been deleted. This is identical to the Senate-passed bill.

2. Senator Haskell's amendment providing the Forest Service with the authority to use LWCF monies to purchase land in the Big Thompson Canyon at pre-flood value was retained by the House. This too is identical to the Senate-passed bill.

3. The House adopted some compromise language with regard to boundary changes and donated lands. Under the current House proposal, the Secretary would be given the

authority to make minor boundary adjustments in units of the national park system provided that such authority shall expire ten years from the date of enactment of the authorizing legislation establishing such boundaries.

With respect to donated lands, the House amendment gives the Secretary the authority to accept adjacent lands outside park boundaries by donation, but only after consultation with the duly elected governing body of the county, city, town or other jurisdiction having primary taxing authority over the affected lands. The Secretary shall also provide advance public notice of his proposed action.

Mr. JACKSON. Mr. President, the House modified language is acceptable to the sponsors of the legislation as well as to the members of the Committee on Energy and Natural Resources.

Mr. President, this has also been cleared with the minority side.

Mr. CASE. Mr. President, S. 682 is a bill that evolved from the Senate Commerce Committee's consideration of a wide range of proposals to deal with a very serious and growing problem of oil spills caused by tanker accidents.

I am happy to note that, in many respects, the bill resembles legislation I introduced earlier in this session. Indeed, I was pleased to see a copy of a letter from Senator MAGNUSON, the chairman of the Commerce Committee, to Senator SPARKMAN, the chairman of the Foreign Relations Committee, in which Senator MAGNUSON said:

In drafting these amendments we have used the basic concept of "port state authority" contained in Senator Case's bill, S. 715.

I intend to support S. 682 as a step in the right direction, although it does not contain all of the provisions of my bill.

S. 682 contains a provision requiring all self-propelled vessels of 20,000 dead-weight tons or larger carrying oil in bulk to be equipped with double bottoms. My bill, S. 715, would have required these ships to be equipped with complete double hulls. Double-bottom tankers provide protection against grounding accidents but not against collisions involving the sides of the tanker. Therefore, I prefer a requirement for double hulls, but I will support the provision for double bottoms as a step in the right direction.

My bill provides for a special inspection of any tanker that has been in service for 10 years or more. A study by the Office of Technology Assessment showed that most oil tanker accidents involved ships 10 years old or older. It is my hope that this type of provision can be added to the law in the future.

Meanwhile, it is important, in my view, to enact the many improvements contained in S. 682 as soon as possible and it is for that reason that I support this bill at this time.

Mr. JACKSON. Mr. President, I move that the Senate concur in the amendment of the House to H.R. 5306.

The PRESIDING OFFICER. The question is on agreeing to the motion to concur.

The motion to concur was agreed to. Mr. JACKSON. Mr. President, I move

to reconsider the vote by which the motion was agreed to.

Mr. MELCHER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### TANKER AND VESSEL SAFETY ACT OF 1977

The Senate continued with the consideration of the bill (S. 682) to amend the Ports and Waterways Safety Act of 1972; to increase the use of vessels of the United States to carry imported oil; and for other purposes.

Mr. MELCHER. Mr. President, I ask unanimous consent that a member of my staff, Buddy Faught, be granted privilege of the floor during the debate and vote on S. 682.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MELCHER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, what is the pending business?

The PRESIDING OFFICER. S. 682.

Mr. MAGNUSON. Mr. President, on Monday of this week, the Secretary of Transportation, Brock Adams, flew to London, England, for the express purpose of addressing the ruling council of the Intergovernmental Maritime Consultative Organization, IMCO. IMCO is the specialized agency of the United Nations which establishes international standards governing vessel safety. Secretary Adams outlined for the council the recent tanker initiatives proposed by the President and urged them to give rapid consideration to them. In addition he explained S. 682, the legislation now under consideration by the Senate, to the delegates at IMCO. He made clear, in no uncertain terms, that the United States will wait a reasonable period of time for the international community to respond to President Carter's proposals for increased tanker safety, and if action is not taken, then we are going to have to take some other action unilaterally. We are relying upon the bill to show these other countries that we mean business about tanker safety. This is what he later stated in a press conference in London, that we mean business.

I ask unanimous consent that Secretary Adams' speech to the IMCO Council be printed in its entirety in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE HONORABLE BROCK ADAMS

Thank you, Mr. Chairman.

Mr. Chairman, Secretary-General Srivastava, Distinguished Delegates. I appreciate the opportunity to speak to Council at this time. I did come to London specifically for this purpose and regret very much that my

duties do not permit my remaining for the full Council session. I thank the members of Council for so courteously accommodating the U.S. delegation and allowing me to make this statement so early in your proceedings.

My subject, Fellow Delegates, is oil tankers. My Government is seriously concerned about oil tankers—as they affect the waters and coasts and ports of the United States and as they affect the oceans of the world. We are concerned about the safety of oil tankers and about the continuing threat they pose to the marine environment. Today I shall report to you what has happened in the recent past to catalyze our concerns into a call for action. I shall tell you what we are proposing be done now. And I shall describe to you what we hope can be achieved in the near future. Our call for action, our proposals, and our efforts at finding solutions are directed to the international community and are focused on this organization. That is what brings me to the IMCO Council today.

President Carter and the new administration took office in January of this year at a time when problems associated with oil tankers were under intense scrutiny by the American public and the Congress. The now notorious grounding of the Liberian tanker "Argo Merchant" off Nantucket on December 15, 1976, had been followed by no less than fifteen incidents involving tankers in or near U.S. waters within a three and a half month period. This series of unfortunate events kept oil tankers in the forefront of public consciousness and produced rising concern. Members of Congress were also attentive. Congressional committees held a number of public hearings, examining all aspects of tanker operations, pollution controls, and adequacy of national and international mechanisms to deal with the problem.

President Carter, soon after taking office, directed that several federal government agencies form a task force to address the tanker problem and to devise an action plan. As Secretary of Transportation, I took immediate steps to improve navigational safety through domestic regulation and I formed a special task force within my own Department to deal with marine safety issues at the highest level of departmental policymaking. The Congress held hearings on a number of bills which treated tanker safety and pollution control in a variety of ways. The approaches adopted by both the Executive Branch and the Congress were comprehensive, contemplating a wide range of pollution and safety problems, not just the most apparent causes of the tanker incidents. A whole gamut of issues had been raised involving tankers, oil pollution, sufficiency of national regulation, and congestion of shipping in and near U.S. waters. Each of these issues was examined.

On March 17, President Carter addressed a Message to the Congress. He announced a "diverse but interrelated group of measures" designed to reduce the risks associated with marine transportation of oil. He called for U.S. ratification of the 1973 Marine Pollution Convention. He directed the Secretary of Transportation to prepare, within sixty days, proposed regulations on tanker construction and equipment. He added the qualification that, where technological improvements and alternatives can be shown to achieve the same degree of protection against pollution, the regulations would allow their use.

The President instructed the Department of State and the Coast Guard to begin diplomatic efforts to improve the present international system of inspection and certification. He directed that licensing and qualification standards for American crews be raised and that renewed emphasis be placed by the U.S. Government on the International Conference on Training and Certification of Seafarers scheduled for 1978. He announced an

augmented program for boarding tankers in U.S. ports, together with sanctions to be employed against those having records of poor maintenance, accidents, or pollution violations. He submitted legislation to Congress to establish a national standard of strict liability for oil spills and a fund to compensate victims for oil pollution damages. And, finally, the President ordered improvement of the Federal government's capabilities to respond to pollution emergencies.

President Carter placed heavy emphasis on international negotiations as a primary means of advancing his initiatives. He recommended the scheduling of a special international conference to consider the construction and inspection measures described in his Message. And he made clear to officials of his Administration that he expected every effort would be made to seek effective international action, saying "Pollution of the oceans by oil is a global problem requiring global solutions."

Three distinct initiatives emerge from the President's Message, each of which concentrates on improvement of existing international standards. These are, first, tanker construction and equipment standards, second, tanker certification and inspection standards and practices, and third, crew licensing and qualification standards. Let me describe to you now, with respect to each initiative, what the U.S. is doing nationally and what we propose be done internationally.

As directed by the President, the Department of Transportation, through the Coast Guard, published proposed regulations on oil tanker construction and equipment standards. These "notices of proposed rulemaking," dated May 16, have a dual role with respect to the President's program. They are a necessary first step if the standards are to be implemented nationally and they also serve as a set of technical proposals for consideration internationally. Applicable to all tankers of 20,000 deadweight tons or more entering U.S. ports, the proposed rules would require segregated ballast, with double bottom construction for new tankers; inert gas systems; backup radars with collision avoidance systems, and improved emergency steering standards. But the terms of the proposed standards, either for national implementation or for international consideration, are not inflexible. Substitution of "technological improvements and alternatives" is clearly contemplated, provided the substitute measures afford the "same degree of protection against pollution."

I must emphasize that the regulations published on May 16 are proposed rules. The "notices of proposed rulemaking" ask for comments, which can be provided to my Department during a specified time period. In addition to this general opportunity to comment, public hearings will be held where any person may make an oral statement for the record, offer written comments, or ask questions to be answered on the spot. The proposed rules will be very widely distributed and comments from all quarters—both from within the U.S. and without—are earnestly desired. All comments received will be taken into account in formulating final regulations. The views of other governments, received through discussions in IMCO or otherwise, will be given due weight in our reevaluation of the initial proposals. Further, any eventual rulemaking will of course reflect the outcome of successful international efforts to reach agreement on new standards.

I offer the foregoing explanation for two reasons. First, the U.S. practice of publicly proposing regulations and soliciting wide public comment may not be well understood and, as a result, could be mistaken for publication of final rules which take immediate effect. My second reason for explaining is to illustrate that the publication of these proposed rules does not preempt the international process. Options remain open and we

continue to negotiate in good faith. In fact, the proposed rules should complement the negotiating process because they translate into specifics the general guidelines in President Carter's Message.

Because we believe the proposed rules should be well understood in the context of our international negotiations, we have provided the May 16 "notices of proposed rule-making" to governments through their embassies in Washington. We also are providing copies to attendees of technical meetings which meet here at IMCO Headquarters to consider the proposals made by the U.S. and others.

Let me turn now to the second U.S. initiative, improvement of tanker certification and inspection standards and practices. Nationally, we have expanded the Coast Guard program for boarding and examining foreign tankers entering U.S. ports. Almost a thousand vessels have been examined since January 21. Approximately half were found to have deficiencies, most in cargo venting systems, pump rooms, cargo piping systems, and electrical systems. Where deficiencies pose a hazard in cargo handling, cargo operations are stopped until repairs are made or some alternative measure is taken. Tankers which make temporary repairs are required to arrange permanent repairs on a timely basis. Vessels found to have deficiencies impairing seaworthiness are detained under Regulation 19, Chapter 1 of the SOLAS Convention. All interventions are reported to IMCO in accordance with the agreed procedure. Deficiencies are entered into the U.S. Marine Safety Information System so that tankers with a continuing record of serious deficiencies can be readily identified. Such ships may be denied entry into U.S. ports unless their condition shows marked improvement.

We are very concerned about the high number of tanker deficiencies we have found. It indicates that the existing system of inspection and certification for SOLAS compliance is ineffective. Accordingly, the U.S. proposes that international action be taken to improve the situation substantially. Our proposals, if implemented, would tighten controls, specify survey intervals according to type, improve the quality of inspection and certification procedures, and establish accountability of governments, owners, and surveyors. While our proposals are under consideration internationally, we will continue our boarding and examination program. Where necessary, we will devise new methods to identify poor surveys and questionable certificates so that proper sanctions can be imposed against those ships not meeting international standards.

The third U.S. initiative concerns crew training, certification, and qualification. This is in recognition of the fact that 80-85 percent of tanker accidents involves human error on the part of the crew or embarked pilots. While the United States already imposes strict standards for the U.S. merchant marine, we are moving to raise those standards further. Requirements will include experience by size and class of vessel, or training and demonstration of proficiency on ship simulators. Emphasis will be placed on requiring deck officers to demonstrate important skills, such as radar operation and interpretation, rather than relying on written examinations. Crewmembers in charge of cargo transfer operations will be specially trained and examined.

The United States looks to the 1978 International Conference on Training and Certification of Seafarers to elaborate a truly comprehensive and effective convention on crew standards. While we are generally satisfied with the provisions included thus far in the draft convention, we are asking that some provisions now proposed as recommended be adopted as mandatory. Further, we urge that the conference, now

scheduled for the fall of 1978, be rescheduled for earlier in the year.

At the Maritime Safety Committee last month, the United States Delegation described the U.S. initiatives and presented substantive proposals for consideration by IMCO technical bodies. The U.S. also proposed a schedule of work which would culminate in an international conference on tanker safety and which would facilitate rescheduling the Conference on Training and Certification of Seafarers to June 1978. The Maritime Safety Committee agreed, subject to approval of Council, that urgent action should be taken with regard to the two conferences and the preparatory work program.

On behalf of the U.S. Delegation, I earnestly solicit favorable Council decisions on these matters, which you will be considering later in your proceedings here. President Carter stressed in his Message to Congress, and to me and others in his Administration, that he prefers international solutions to problems which spring from international commerce. He has also emphasized the need for timely and effective action. These views received wide concurrence at the Maritime Safety Committee last month and the Committee's agreed course of action will, if approved, offer the real prospect of finding solutions satisfactory to all. We hope that Council will see fit to grant approval.

Having set forth the U.S. proposals and having indicated that they are intended as the basis for international action, I ask the aid of all interested nations in working together with the U.S. to refine these proposed standards, so that we may achieve the goal of reaching international accord on an effective course of action. In previous discussions with U.S. representatives, many of your governments have indicated their willingness to work with the U.S., and with your help, I believe our joint efforts will be a success.

I should, before closing, deal with a related matter which has arisen since the April session of the Maritime Safety Committee and which seems to have caused considerable dismay in some quarters. That is the consideration of a bill on tanker safety by the United States Senate. The bill is entitled, "The Tanker and Vessel Safety Act of 1977," bears the number S. 682, and was introduced by Senator Warren Magnuson of the State of Washington, the Chairman of the Committee on Commerce, Science, and Transportation. I will not attempt to deliver a short lecture on the workings of the U.S. Congress or on the relationships between the Executive and Legislative Branches of the U.S. Government. It is fair to observe, however, that such subjects often are not well understood, especially by those outside our country, and perhaps such a lack of understanding led to the dismay which I mentioned earlier.

In plain terms, let me state that the bill S. 682, in the form recommended by the Commerce Committee and now under consideration by the Senate, is generally consistent with the initiatives announced by President Carter on March 17. The bill contains provisions allowing adoption of alternatives or equivalents to its specified construction and equipment standards. And it has a provision allowing modification of its standards to comply with international agreements ratified by the United States. Other provisions are specifically designed to take international relationships into account. Thus, the bill does not signify rampant unilateralism or a breach of faith with IMCO, as has been claimed. It does not change the U.S. position as described at the Maritime Safety Committee and it does not foreclose good faith negotiations regarding U.S. proposals made at MSC and repeated here.

I would urge any of the distinguished delegates who may have doubts on this or who have further questions on the bill to contact members of the U.S. Delegation during the course of the week. We will be happy to elaborate upon the brief explanation I have offered here this morning.

In closing, Mr. Chairman and Distinguished Delegates, I offer three things: an assurance, an invitation, and an assessment. As to the first, I assure you, on my own behalf and as the President's representative, that the United States submits its proposals with the full intention of negotiating in good faith in an effort to devise international solutions to oil tanker problems. My invitation is for delegates in technical forums to identify mutually acceptable alternatives to any feature of our proposals which may be found unacceptable for technical or economic reasons. And, lastly, an assessment of U.S. intentions regarding oil tankers.

We intend to enforce the conventions to which the United States is party with vigor and determination. Where we ascertain that a convention does not afford the United States sufficient protection, we will endeavor in international forums to raise its standards, improve its enforcement mechanisms, or otherwise enhance its effectiveness in protecting life, property, and the marine environment. My government recognizes, as do the other governments here represented, that the needs of nations and the world community change as technology evolves and patterns of commerce shift. The United States will act responsibly to meet the new needs.

Thank you, Mr. Chairman.

UP AMENDMENT NO. 339

Mr. MAGNUSON. Now, Mr. President, we are back on the bill, I propose an amendment, one that is a somewhat technical amendment, to satisfy the Budget Committee. On page 71, line 5, strike the word "There" and insert in lieu thereof "Beginning October 1, 1977, there".

The purpose of the amendment is to make clear the Senate's intent that S. 682 authorizes no funds for fiscal year 1977.

The PRESIDING OFFICER. The clerk will report the amendment.

The legislative clerk read as follows:

The Senator from Washington (Mr. Magnuson) proposes unprinted amendment No. 339:

On page 71, line 5, strike the word "There" and insert in lieu thereof "Beginning October 1, 1977, there".

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Washington.

The amendment was agreed to.

Mr. MAGNUSON. Mr. President, I yield to the Senator from Maine.

UP AMENDMENT NO. 340

Mr. MUSKIE. Mr. President, I send an amendment to the desk and ask that it be reported.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Maine (Mr. Muskie) proposes an unprinted amendment No. 340.

Mr. MUSKIE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 46, line 6, after "The Secretary" insert a comma and "in cooperation with the Secretary of the Army."

On page 46, line 12, strike "environmental harm," and insert in lieu thereof "vessel operation damage, destruction or loss or from structure damage, destruction or loss."

On page 47, line 1, after "activity" insert "of vessels".

Mr. MUSKIE. Mr. President, may I say, first of all, with respect to this piece of legislation that I regard S. 682 as an important legislative proposal. That may not have appeared to be clear to my good friend from Washington, Senator Magnuson, but this is a bill which intends to expand the mandate to the Secretary of Transportation to require that tankers bearing oil and hazardous materials be designed, constructed, operated and manned so as to minimize hazards to safety and to the environment. I support this legislation.

My State of Maine and the citizens of Maine rely on oil transported by tanker for our basic energy demands. The State of Maine is the port of entry for much of the oil that fuels the Province of Quebec. The Portland Harbor is one of the principal ports of entry for oil in the United States. The design, the construction, the operation and the manning of tankers is thus critical to the people of Maine and the marine environment on which we depend for fishery and recreational purposes.

So I do support this legislation. The questions that I have raised with Senator Magnuson, I hope, will not imply a lack of appreciation on my part of the basic thrust and purpose of the bill.

The first question I have raised, and that I think we have worked out in the form of the amendment which is at the desk, relates to section 102 of the bill.

Section 102 of S. 682 authorizes the Secretary of Transportation to act to protect the Nation's navigable waters and the resources therein from environmental harm. I do not know what this provision means. It is not explained in the report of the committee. There is a passing reference in a comment from the Secretary of Transportation which states that the use of the word navigable waters suggests the definition of navigable waters found in the Water Pollution Control Act.

Mr. President, this section of this legislation is as broad as that provision of the Refuse Act of 1899 which when discovered in 1972 authorized the Secretary of the Army to prohibit any discharge from anyplace into the navigable waters of the United States. This provision grants to the Secretary of Transportation absolute authority to regulate any activity with respect to navigable waters of the United States to "protect the navigable water and resources therein from environmental harm." This provision authorizes the Secretary of Transportation to mandate controls on access to or activity on any waters or shorelines of the United States. As noted above, waters are not defined but the term "navigable waters" is used. In the context of the current controversy regarding Section

404 of the Water Pollution Control Act one has to assume that "navigable waters" for the purpose of this section means at least waters which flow at more than 5 cubic feet per second. And Mr. President there are no smaller streams which I have been able to discover.

As to protection of shorelines there is no definition either. Shorelines may be a few feet or a few miles. The Secretary of Transportation is given an opportunity to control the life blood of communities located along the coast—and on lands which border the Nation's rivers.

Mr. President, I am sure the Senate Commerce Committee did not intend the effect of this amendment. I am sure that the shortness of time associated with reporting this bill caused this provision to be drafted in an unintended manner. I am sure that the Senate Commerce Committee intended as it stated in its report that this provision be an authorization for the Secretary of Transportation to regulate tanker activities so as to protect waters and shorelines.

Mr. President, the amendment at the desk has this effect: It would modify those portions of this section which authorize the Secretary of Transportation to engage in absolute control over the use of land in, on, under, and around the Nation's navigable waters. My amendment would limit specifically any authority under section 102 to regulation of the movement of tankers to and from the waters of the United States so as to protect vessels, structures, waters, and shore areas and other safety requirements.

Further, my amendment would make clear that the Secretary's authority under the law stops at the vessel because the Secretary, acting through the Coast Guard, has ample authority to clean up pollution from tankers under section 311 of the Federal Water Pollution Control Act.

That statement, Mr. President, identifies the nature of my concern, and I repeat that I doubt very much that the Committee on Commerce intended any such broad-ranging effect. But, nevertheless, to clarify the intent, the language of this amendment has been worked out, I think, by the staffs of both committees, and I submit the amendment.

Mr. MAGNUSON. I will say to the Senator from Maine that, inasmuch as the language does clarify our intent, we never intended the language to be as broad as is suggested by the Senator from Maine. We intended the language to recite existing law.

This is a complicated bill and everybody sees hobgoblins all over every place. But surely we never intended to suggest or do what has been intimated it will do. Anyway, this language clarifies it.

Mr. MUSKIE. I appreciate the comments of my good friend from Washington.

Mr. MAGNUSON. But it is important that we pass this bill and get it moving.

Mr. MUSKIE. I would agree with the Senator, and I think nothing further needs to be said on this subject.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Maine.

The amendment was agreed to.

The PRESIDING OFFICER. The Senator from Washington.

Mr. MAGNUSON. Mr. President, during the consideration of S. 682, the continuing problem of Senate committee jurisdiction surfaced once again. Title II of the bill seems to be the source of the problem. When we in the Committee on Commerce, Science, and Transportation considered the problem of tanker safety, it became obvious that research and monitoring of ocean pollution at the Federal level was in disarray.

And when we sought answers to questions about the effects of oil pollution on fish and other life in the seas, knowledgeable scientists tell us that little is really known. There are differences of opinion and certainly nothing that can be called definitive. Therefore, in S. 682 we called for a comprehensive program of ocean—I underline ocean—pollution research and monitoring.

Yet, Mr. President, Senate Resolution 4 establishing committee jurisdiction, provides the Committee on Environment and Public Works with jurisdiction over environmental research, while the Committee on Commerce, Science, and Transportation has the jurisdiction over science and technology and ocean policy, generally, and marine science. Ocean pollution research does, of course, relate to environmental research and to the public works jurisdictional mandate.

Consequently, I believe, and I hope, this will be cleared up sooner or later before we run into this problem again, which will stop important bills over a jurisdictional argument: "It does not make much difference whether the bill passes or not, we want our jurisdiction." I do not think we should be doing business that way here, and if there is some question about jurisdiction we should get it cleared up. I thought Senate Resolution 4 did, clear up the problem. I carefully looked at the hearings on it and the testimony we gave, but apparently there are a lot of people around here who want to look around and grab more jurisdiction. We do not get good legislation passed that way.

Senators know who I am talking about, too.

I do not like to have a contest between, for instance, the Senator from Maine and myself over who has some jurisdiction because it ends up being some kind of contest between who has the most influence on Senators, and it will end up putting us between some staffs that maybe sometimes make mistakes. I do not know who will win that contest. I think I might win it, and he thinks he might win it, but that does not pass legislation.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. MUSKIE. I would not want to contest with the senior Senator from Washington on that basis. I do not think I have a chance. But I appreciate the Senator's observations. I think it is impor-

tant that we try to resolve whatever jurisdictional questions are involved. I have no desire and I find it very unpleasant to get involved in jurisdictional disagreements.

Mr. MAGNUSON. The Senator will agree with me that on this matter we are going to have to have either the Rules Committee or someone clear up these matters because they are constantly going to occur.

Mr. MUSKIE. I think it would be very helpful.

Mr. MAGNUSON. Yes, and I hope the Senator will join with me. We will go before the Rules Committee, and we will bow down and plead: "Here we are two people who do not want to fight each other, and we ask your advice and guidance which will clear it up for us."

Mr. MUSKIE. I think I will join. I do not know that I would bow down.

Mr. MAGNUSON. We have to before the Rules Committee to get anything done; we better bow down.

Mr. MUSKIE. I will be happy to join the Senator.

Mr. MAGNUSON. All right.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. MAGNUSON. It will be just a minute until I finish my statement, and then I shall yield.

In view of this fact, there is a real urgency in view of the London conference, and all these things that are going on, to get the bill passed. Of course, title II is not the major part of the bill. The bill has a major thrust of safety.

Mr. MUSKIE. Title I is very important, may I say.

Mr. MAGNUSON. I intend to move to strike title II from the bill, introduce it as a separate bill and ask unanimous consent that it be referred to the Committee on Environment and Public Works for not to exceed 30 days which would keep the joint jurisdiction. We have many bills on which we have joint jurisdiction. There is the oil spill liability which the two committees are working on.

So, without giving up any of the arguments that may be made on both sides or giving up anything, we are going to do that and I have no doubt that they will concur. I know the committee will concur—the Senator pointed out that he surely would himself—to the general need of the legislation, and we can obtain swift enactment of that particular portion of the bill.

Mr. MUSKIE. I think we can, may I say to my good friend.

Mr. MAGNUSON. I yield to the distinguished Senator.

Mr. STEVENS. Mr. President, I state that I concur with the chairman with regard to taking this action now for the purpose of assuring that the tanker safety bill in title I will not be delayed, but on the basis that the action we are taking certainly does not, at least in my opinion, concede the jurisdictional challenge that has been raised by Senator MUSKIE's committee.

Our committee does have exclusive jurisdiction over the NOAA activities. We

have exclusive jurisdiction over the oceans and marine safety. The monitoring of marine accidents on the oceans is done by the Coast Guard, and the Commerce Committee has exclusive jurisdiction over activities of the Coast Guard.

We went into this whole question of research that apparently has provoked this challenge in terms of the ocean pollution research monitoring program because of the *Argo Merchant* accident and its effect on marine fisheries, and we have jurisdiction over marine fisheries. We have jurisdiction over the merchant marine, and we have jurisdiction over the technology portion of the activities of the merchant marine that should be involved in vessel construction to prevent environment damage.

The question, as I understand it, is the Environment and Public Works Committee bases its jurisdiction on their grant of jurisdiction under Senate Resolution 4 over water pollution.

Mr. MUSKIE. No, it is more extensive than that. And if the Senator will yield, I will make a statement on the definition of standards following the statement of the Senator from Alaska.

Mr. STEVENS. I appreciate that and I think it should be defined in the Record. I think we should get this subject resolved by the Rules Committee, as the chairman of our committee indicated.

The impact, what we are dealing with in this area, requires a recognition of the sensitivity of timing, and if we are to institute the programs that are necessary to meet the development of technology in pollution control and avoidance, which falls short of, as I understand it, the jurisdiction of the Environment Committee, we particularly in terms of our new jurisdiction in science, engineering, technology, and the research capacity that we should have in terms of that function that was given to us, as many other functions were taken away from us, then I cannot see that we should be subjected to joint referrals of bills that we have worked on that are designed to prevent coming into the jurisdictional area of the Public Works Committee.

I, for one, again join with the chairman in this one instance. But I believe we must have capability for authorization of research by the agencies we deal with. We must have the legislative oversight of that research and the ability to formulate legislation to deal with the problems that are brought forth as a result of that research and the environmental aspects and water pollution aspects of the Committee on Environment and Public Works should not lead us to the position where we are going to have joint referrals. If that is the result, then Senate Resolution 4 failed.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. STEVENS. I yield.

Mr. MUSKIE. I assure the Senator I find this afternoon the necessity of discussing this question one of the most unpleasant aspects of my duties as a Senator. I do not like it at all. If the Senator thinks I enjoy coming to the floor to

argue with my distinguished friend from Washington or my good friend from Alaska, he is mistaken.

There is a misunderstanding here and a disagreement, and it is an honest one on both sides. But I suggest to the Senator we do not challenge the Commerce Committee's jurisdiction to do those things within its jurisdiction to prevent pollution. But what we are saying is that we have jurisdiction as granted to us—if it is taken away that is fine—to deal with what has been created. That happens in territorial waters; it happens in a contiguous zone. We are not challenging the committee's jurisdiction over tankers. But in Senate Resolution 4 the committee was given jurisdiction over environmental research and development.

Not technological research, but environmental research and development. Ocean dumping, environmental aspects of the Outer Continental Shelf lands, environmental aspects of deep water ports, water pollution—all of that deals with the consequences of pollutants that are not prevented by proper technology or proper operation of tankers, and so on.

We do not challenge that aspect of the Commerce Committee's jurisdiction. Indeed, I do not want to challenge the Commerce Committee at all, if I had my druthers. But Senate Resolution 4 undertook to give us certain jurisdiction, enlarged it in some respects, and changed the name of our committee to the Committee on Environment and Public Works. Unfortunately, Senate Resolution 4 left some ambiguities, at least in the perception of some people, and we are caught up in one of them.

I am sorry about that. I do not like it. I do not enjoy it, and I hope it does not happen again. But each of us feels a sense of responsibility with respect to protecting his committee's interests as he sees them.

I do not disagree with Senator MAGNUSON's right to do that, and no one can do it more effectively than he. And I certainly do not disagree with that of the Senator from Alaska. But here we have a problem of environmental research; it is not technological research. If the committee's title 2 were technological research, I would have no quarrel with it. But it is environmental research, and that gets into the question of pollution after it takes place. That is the area that we have got to fight out somehow, to resolve, and I think the pragmatic solution we have taken this afternoon is realistic.

Neither of us can seize the ultimate argument, but we have agreed that to deal with this problem, we will refer it to the Environment and Public Works Committee, and then maybe in the meantime follow through on Senator MAGNUSON's suggestion that we sit down together, sit down with the Rules Committee, and find out where these various responsibilities ought to be established.

Whatever the result, I assure my good friend from Alaska it is fine with me. I have plenty of work to do without enlarging any of my committees' jurisdiction.

tions. But if a matter is within my jurisdiction—and this is the attitude that Senator MAGNUSON expressed to me, and I applaud it—if a matter is within my jurisdiction, then I have a responsibility with respect to it, and so does the Senator from Alaska.

Having stated that, it seems to me maybe we have taken the first step toward resolving our differences.

(Mr. DURKIN assumed the chair as Presiding Officer.)

Mr. STEVENS. Mr. President, I agree with my good friend to a certain extent. We agreed to joint jurisdiction on oil spill liability because of the obvious—

Mr. MUSKIE. No, we have not agreed to that.

Mr. STEVENS. We did in the promulgation of Senate Resolution 4.

Mr. MUSKIE. No, we did not.

Mr. STEVENS. Well, we have a bigger fight than the Senator thinks, then.

Mr. MUSKIE. Well, I suspect we have, then. I saw it coming in January. If it comes, it comes. I tried to avoid precipitating it around this bill, because Senator MAGNUSON wants this bill to go forward, and I am all for that.

But I do not agree to a blanket judgment on that final question. We will get to it when we get to it.

Mr. STEVENS. I thought we got to it on Senate Resolution 4, before the Rules Committee. At any rate, that is my memory. But what my friend is saying is that those of us who have the problem of dealing with tanker safety, and want to set up a program for monitoring that, which means monitoring the effect of antipollution mechanisms, the Senator's committee is authorized to assert jurisdiction in connection with those antipollution safety mechanisms.

We find ourselves in the position, in these tankers, that this whole problem is related to tanker safety so far as I am concerned. It is not dealing with what the Senator's committee is dealing with in terms of pollution once it occurs. We are talking in terms of actions taken to prevent it from occurring.

The Senator is saying that when we do that, we must automatically move over and give his committee jurisdiction to begin with. I say that is not the way I understood it in connection with Senate Resolution 4. I do not want to prolong this, but if the Senator is correct, Senate Resolution 4 increased the work of the Senate by requiring more Senators to look at more legislation in a redundant matter, rather than permitting us to deal with legislation in a more objective, orderly fashion.

I believe joint referrals can really spell not only the delay, but at times the death of legislation.

Mr. MUSKIE. I do, too.

Mr. STEVENS. I am sure my friend knows that.

We ought not to be involved in jurisdictional battles over Senate Resolution 4 in this area. The Senator has the Environment and Public Works Committee. I know of nothing we do in the Senate that does not in some way affect the environment. The Senator from Maine also has the Budget Committee, and I know of nothing we do here that does not in some way affect the budget.

If we are not careful, we will find we are all members of the Senator's two committees, because I really think they are two all-embracing subjects, the budget and the environment, and that everything we do as Congress has some connection with them.

With due respect to him, the Senator does not quite fit the definition of a bottleneck, but if everything we do with respect to tanker safety has to go through a bottleneck, I think we made a mistake in adopting Senate Resolution 4.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. STEVENS. Yes.

Mr. MUSKIE. Long before this controversy arose I reached that conclusion about Senate Resolution 4. I do not think Senate Resolution 4 has done anything, irrespective of this disagreement, to reduce workloads or make schedules more convenient for Senators, or anything like that.

Would the Senator like to know how his argument sounds to me?

Mr. STEVENS. Yes.

Mr. MUSKIE. If the Senator's argument is valid, I reach this conclusion: All pollution is generated by technology of one kind or another; so if those who have jurisdiction over the technology have jurisdiction over the environmental consequences as well, then they are the ones who have universal jurisdiction, not I.

I do not think any such arbitrary black and white judgment is necessary to resolve this issue. I have no difficulty with identifying what I consider a legitimate line between our jurisdictions that requires no joint referral.

Mr. STEVENS. I hope we can. I do not think we would ever assert that jurisdiction. In the first place, all pollution does not come from technology. I saw some great natural pollution last weekend when I was visiting Juneau and saw the ice break up.

Mr. MUSKIE. I think the Senator knows what we are talking about.

Mr. STEVENS. But we do not claim that, and we would not claim jurisdiction over matters that deal with water pollution. But I do think we must be able to deal with the aspects of pollution, in order to determine what in fact must be the criteria of tanker safety; or we should be told what the aspects of pollution are, and then we should deal with tanker safety after your committee determines the criteria.

Mr. MUSKIE. Why do you not ask for jurisdiction over clean air? It is the same thing. You know, the effect of machinery and one thing and another that has an effect on air pollution.

Mr. STEVENS. We have never claimed jurisdiction over clean air.

Mr. MUSKIE. I know you have not, but I am curious to know why not.

Mr. STEVENS. I am sure the Senator could claim jurisdiction over bills we bring out in terms of automobile safety, in terms of restricting the size of engines, the elevation of the ground, and the construction of the bodies, because of their impact upon energy consumption, which in fact impacts clean air. If you want to move that way, I am sure you will get it on those, too.

Mr. MUSKIE. In the Clean Air Act, we have never yet tried to mandate anything with respect to the way in which an automobile is designed. All we have said is that it must achieve a certain health result. We have not told them how to build it. We have not told them what specifications to build into it, what horsepower, what weight. We have done nothing of that kind. We have stayed away from it. We have dealt only with the health consequences. We stayed away from the technological side.

That is not to say that setting health standards does not have an effect on what automobile companies must do in building an automobile, but we do not try to design it. We would not presume to. We do not have the capability, the expertise, or the background.

I would not do it to tankers. Tankers are none of my business, except when they leave a given stretch of water they leave behind them certain pollutants which are our responsibility. That is all. To me, that is a fairly simple line to draw. Apparently, I am oversimplistic.

Mr. STEVENS. What I am saying is this life is short enough. I do not see any reason why two groups of Senators should go over the same legislation unless there is a substantial conflict concerning the jurisdictions of their committees. Setting up an organization to monitor the effectiveness of ocean pollution mechanisms and the research that is under way—that is what we are setting up in this bill—does not seem to me to be invading the Senator's jurisdiction over authorizing the research that EPA is doing, the National Science Foundation, or anybody else. We want to monitor. I believe it is within our jurisdiction to do so.

Mr. MUSKIE. By unilateral judgment?

Mr. STEVENS. In the matter of judgment as to when is there a substantial conflict. That is the problem. This is the first one. I say to the Senator, I know there are two other bills where we have this conflict coming with the Senator's committee.

I do believe tanker safety is important enough, Mr. President, and has to move. There is no use prolonging this, so far as I am concerned. I will not oppose it. But I will give notice that I will oppose it in terms of the expanded jurisdiction that the terms "ocean pollution" means in relation to the jurisdiction of our committee on the next occasion. I hope we have explained it in a way that it will avoid difficulty. In terms of whether or not the parliamentary situation is strained and we will have a clear decision, if the Rules Committee will not make it, then it will be made by the Senate, that our committee has the oceans jurisdiction.

We must, I feel, have the oceans jurisdiction in order to deal with the oceans as a generic subject matter to solve some of the problems that I see coming in the balance of this century.

Mr. MUSKIE. The word "pollution" does not appear in the Senator's jurisdiction.

ENVIRONMENTAL RESEARCH AND DEVELOPMENT

Mr. CULVER. Mr. President, title II of the legislation before us today—S. 682—

establishes a comprehensive ocean pollution research and monitoring program, including the effects of petroleum in the marine environment, and authorizes the National Oceanic and Atmospheric Administration—NOAA—to act as a lead agency for coordinating ocean pollution research. The office of Science and Technology is designated to assist NOAA in this coordination.

Mr. President, environmental research and development is a \$1.8 billion Federal investment, and it is conducted by many Federal agencies and departments. I strongly agree with the members of the Committee on Commerce, Science, and Technology that there is little cooperation among Federal agencies on ocean pollution research. As a matter of fact, there is little cooperation among Federal agencies on environmental research in general. Such research is often duplicative and the exchange of information between agencies is poor. As a 1976 study by the General Accounting Office concluded, there "is no overall Federal leadership for environmental research nor does there appear to be adequate coordination" of research efforts.

The report by the Senate Commerce Committee accompanying S. 682 indicates that the purpose of title II is to end the neglect and unnecessary duplication of ocean pollution research. I agree that this problem should be corrected. Senate Resolution 4 clearly vested all the responsibility for "environmental research and development" in the Public Works Committee rather than the Commerce Committee. Such a jurisdiction over environmental research for the Public Works Committee is appropriate. As chairman of the Subcommittee on Resource Protection, I believe we will be able to rationally order research activities only if they are considered as a whole. Fortunately, the Committee on Environment and Public Works is taking the necessary steps to address these shortcomings.

To develop a systematic mechanism for coordinating environmental research, the Public Works Committee recently reported legislation authorizing funding for EPA's environmental research and development program for fiscal year 1978. In addition to requiring specific funding for long-range research, this legislation directs the Administrator of the Environmental Protection Agency to coordinate environmental research activities with other Federal agencies in order to minimize unnecessary duplication. EPA is the logical starting point for this coordinating responsibility because it is familiar with all forms of environmental research, including ocean pollution.

In addition, S. 1417 authorizes the Council on Environmental Quality to inventory all environmental research by the Federal Government and to make appropriate recommendations to the Congress by January 1, 1978, regarding improvements in the coordination of such research activities. This is an important step forward, and I believe it is a proper way to begin a rational ordering of a critically significant investment. Only through effective environmental research

can we predict adverse environmental damage and develop effective pollution control programs.

Unfortunately, title II of S. 682 would run counter to what the Public Works Committee has already proposed. The designation of NOAA as the lead agency at this time could well result in greater fragmentation and unnecessary overlap of research responsibilities.

The Senate Resource Protection Subcommittee will conduct further hearings on environmental research and on CEQ's findings in the future. We should first wait and see what research is being done and by whom so as to insure the most effective and economical attention of research resource efforts.

The agreement reached today by the distinguished chairman of the Committee on Commerce, Science, and Technology (Mr. MAGNUSON), and by the chairman of Environmental Pollution Subcommittee (Mr. MUSKIE) properly addresses the misunderstanding concerning the jurisdiction over title II of S. 682 and lets the Senate continue its consideration of this important measure. I am confident, the Public Works Committee will expedite its consideration of this ocean pollution research provision.

Mr. MAGNUSON. Mr. President, if the Senator from Maine will give me his attention, this is like the house being on fire and two fire departments show up, one from the north and one from the south. They get into an argument as to who is going to handle the hose and the house burns down. To keep the house from burning down, I am going to offer an amendment, but I am going to associate myself with the remarks of the Senator from Alaska. The next time it comes up we are going to meet it head on and have a vote on the Senate floor.

Mr. MUSKIE. That is fine with me.

UP AMENDMENT NO. 341

Mr. MAGNUSON. Mr. President, I move to strike out all the language on page 71, line 21, through page 79, line 16. I send an amendment to the desk, Mr. President, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Washington (Mr. MAGNUSON) proposes an unprinted amendment No. 341.

On page 71, line 21, Strike out all language through page 79, line 16.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. CHAFEE. Mr. President, may I make a brief statement on this bill?

The PRESIDING OFFICER. The Senator from Rhode Island.

Mr. CHAFEE. Mr. President, the Tanker and Vessel Safety Act of 1977, which we have before us today, deserves the enthusiastic support of this Congress. Rhode Islanders, fresh from the memory of the *Argo Merchant* last fall, and citizens of all the other eastern seaboard States, appreciate the need to protect our coastal waters from tanker accident spillage.

As we find ourselves importing more and more petroleum from abroad to

meet our energy needs, all Americans, not just those on the coast, must concern themselves with the establishment of strict standards for tankers and vessels, and this act does that. The increased quantity of oil spillage into our ocean environment is directly related to the increase in the amount of imported oil.

There are two principal means of attacking this, Mr. President: first of all, strict standards of safety of tanker operation, and, second, stricter construction standards. I am pleased that this legislation takes decisive steps forward in each of these areas.

According to a 1976 National Academy of Sciences report, 80 percent of the accidental oil spills are the result of human error. This bill will provide for improved pilot requirements for vessels in U.S. waters, more effective tanker inspection authority, and mandatory installation of safety and navigation equipment.

The stringent construction standards mandated by this legislation should afford significant protection from pollution resulting from both accidents and current practices of tank cleaning in the deballasting operation. Double bottom construction and installation of segregated ballast systems are prime factors of these new requirements.

The small increase in the cost of transporting oil which will result from these new requirements is well worth it. I think it has been estimated at just some 2 percent of the transportation cost, not the total cost of oil but just the transportation.

In 1975 alone, the National Academy of Sciences estimated that 2.1 million metric tons of oil were dumped in the marine environment. Of this amount, as much as 85 percent could have been prevented if tankers were equipped with segregated ballast systems alone.

Mr. President, the new standards and requirements set forth in this bill coupled with the Secretary of Transportation's clear authority to bar substandard vessels from operating in U.S. waters, are urgently needed. I urge my colleagues to give their strong support to this legislation.

I congratulate the chairman of the Commerce Committee, the senior Senator from Washington, and the ranking member for the excellent job they have done with this bill. Thank you, Mr. President.

ADDITIONAL STATEMENTS SUBMITTED ON S. 682

Mr. MUSKIE. The Environment and Public Works Committee's jurisdiction over title II of S. 682 rests on two clear jurisdictional claims: responsibility for all environmental research and development, and authority over water pollution and the marine environment generally. In fact, this more general jurisdiction over protecting the marine environment covers aspects of the entire tanker safety bill, not just title II.

When the Select Committee to Study the Senate Committee System first proposed a reorganization of Senate committee jurisdiction, one main principle from which they worked was the consolidation of all environmental jurisdiction in one committee. There was some dif-

fusion of that principle as the Rules Committee and the Senate marked up Senate Resolution 4, on a few points where environmental concerns were difficult to segregate from other responsibilities.

Senate Resolution 4, however, did contain clear consolidation of environmental jurisdiction in the Committee on Environment and Public Works. This included specific grants of jurisdiction over matters relating to protection of the marine environment. Before the adoption of Senate Resolution 4, the Committee on Environment and Public Works jurisdiction over environmental protection rested primarily on the phrase "oil and other pollution of the navigable waters," and the extension of that jurisdiction to cover new environmental issues such as air pollution, noise, and solid waste. The new rules used the more general phrase "water pollution" to cover oil and all other pollution of all the waters within the jurisdiction of the United States.

In addition, Senate Resolution 4 provided specific jurisdiction for the Committee on Environment and Public Works over "ocean dumping"—the placing or spilling of anything in the ocean from a vessel, "the environmental aspects of Outer Continental Shelf lands"—which covers the total marine environment to the extent of the U.S. jurisdiction, and "the environmental aspects of deep water ports"—which covers protection of the environment on the high seas and in U.S. waters from such ports.

This amounts to almost total responsibility for regulating activities affecting the marine environment, including both coastal and ocean waters. I understand that the Commerce Committee has jurisdiction over navigation, safety, transportation, and commerce aspects of coastal and ocean waters, and has ocean policy generally when jurisdiction is not specifically granted to another committee. The Rules Committee, however, in its report on Senate Resolution 4 addressed this relationship. That report said:

The jurisdiction of the Committee on Commerce, Science, and Transportation includes "marine and ocean navigation, safety, and transportation, including navigational aspects of deepwater ports". The use of the word "safety" is not intended to impinge upon the jurisdiction of the Committee on Environment and Public Works over environmental policy and environmental aspects of Outer Continental Shelf lands and deepwater ports . . . the term "safety" in the jurisdiction of the Commerce Committee is to apply generally to the navigational and transportation aspects related to the new and existing marine technologies, construction, and operation of marine structures and vessels.

Therefore, the Commerce Committee may have jurisdiction over tanker or other vessel standards and operations. The Committee on Environment and Public Works has sole jurisdiction over the environmental aspects of ocean related activities, including oil spill clean-up and liability measures.

Rule XXV now contains two other clear grants of consolidated jurisdiction to the Committee on Environment and Public Works. Item 1 is "environmental policy,"

item 2, "environmental research and development." Nothing in any of the other committees' jurisdiction cast doubt on or conflicts with these exclusive jurisdictional statements. Title II of S. 682 is called the Ocean Pollution Research Program Act. It gives particular emphasis to the effects of petroleum in the marine environment. Pollution research and oil pollution are exclusive within the jurisdiction of the Committee on Environment and Public Works. That committee has recently reported legislation, S. 1417, which is in conflict with the provisions of title II.

Under Senate rule XLV, added by Senate Resolution 4:

It shall not be in order to consider any proposed committee amendment . . . which contains any significant matter not within the jurisdiction of the committee proposing such amendment.

An entire title of S. 682 is within jurisdiction of the Committee on Environment and Public Works. We are not asking for referral of the entire bill. The amendments we have offered to title I preserve our jurisdiction with respect to that title. We are urging that, however, title II be removed from the bill so that it may be considered by the committee with jurisdiction over it. This would make clear that the Senate in adopting Senate Resolution 4 did, in fact, intend for the Committee on Environment and Public Works to have jurisdiction over all environmental research and regulatory legislation, including the marine environment.

Mr. SCHMITT. I would like to direct a question to the Senator from South Carolina (Mr. HOLLINGS) regarding his amendment to S. 682 which was accepted yesterday. My understanding is that under section 104, your amendment established a preliminary deadline on July 1, 1980, for having segregated ballast and inerting gas systems retrofitted in tankers. Your amendment does not delete any existing requirements of section 104, but is in addition to it. Am I correct in saying, then, that your retrofit incentive fee is operative only for the period from July 1, 1980, to June 30, 1983, and would not continue after that date?

Mr. HOLLINGS. That is correct. As of June 30, 1983, vessels that have not met the requirements by that date would not receive a certificate for carrying oil and other hazardous material in U.S. navigable waters and would be prohibited from doing so. Thus the retrofit incentive fee would no longer be necessary, since lack of proper certification is a more serious sanction. The retrofit incentive fee is an encouragement for vessel owners to begin retrofitting segregated ballast and inerting gas systems as early as possible, so we will not have a last minute run on limited shipyard facilities and disrupt the flow of oil by tankers into this country.

Mr. SCHMITT. Thank you, Senator HOLLINGS. I just wanted to make certain that my understanding was correct.

Mr. DURKIN. Mr. President, a few months ago we witnessed one disastrous tanker accident after another, on all coasts of the United States. Among these

was the *Argo Merchant* oil spill off the Northeastern coast, the most severe in this Nation's history. Old, foreign rust-buckets poured millions of gallons of oil into American coastal waters as a deadly libation to inadequate protection of our coastal environment. The American people joined the Coast Guard in helplessly witnessing the destruction of ocean and coastal wildlife, the waste of needed and precious fuel, and adverse environmental impacts to an extent which as of now cannot be fully measured. Particularly in the Northeast, we could not and cannot afford these losses.

All but one of these tankers was registered under a foreign flag. Not one of the tankers involved in these oil spills was less than 10 years old; many of these tankers were over 20 years old. Some had been involved in multiple previous accidents, and had continued to steam away unregulated and unchecked. Moreover, the largest of these tankers did not exceed 100,000 deadweight tons. Construction of tanker superships in the early 1970's looms as an ominous and foreboding shadow should any one of these very large new ships run aground, collide, or otherwise sustain structural damage leading to an oil spill.

The time has come for us to move quickly to close the loopholes in our tanker safety standards from which oily destruction pours. The Coast Guard had, until President Carter's March 1977 order, resisted unilateral action by this country in the face of international conventions dealing with maritime issues. However, these international conventions produced lax operating, construction and safety standards. Moreover, the record shows effective unilateral Coast Guard regulations made operative with respect to liquefied natural gas—LNG—carriers.

The bill before this Senate today steps firmly and knowledgeably into the breach, mandating needed standards for construction and operation of all tankers entering our navigable waters and ports. It is particularly important for Congress to pass this clear, and hopefully effective, statement, conveying direction, and undisputed jurisdiction to the executive branch to combat energy waste, pollution, and polluters. The regulatory history of the 1972 act should be a sufficient rejoinder to those who would leave non-mandatory discretion in the hands of a reluctant bureaucracy. Let the Coast Guard now show its commitment by vigorous enforcement of the requirements in this bill, which represents the collective wisdom of numerous studies and experts.

For example, numerous studies have advocated the stiffening of maritime licensing requirements to include formal and recurrent training of pilots and other personnel, performance testing, periodic renewal and proficiency checks, and restrictive licensing based on the size and class vessel involved. The absence of such regulation becomes all the more appalling when we read statistics and reports indicating that over one-half of all tanker accidents are caused by some degree of human failure, and that almost 80 percent of merchant marine casualties are

related to human error. S. 682 states minimum requirements for pilotage based in part on Coast Guard determinations of sufficient training and proficiency. The Secretary of Transportation is also to develop such standards for uniform adoption by the States. I hope to see the administration active and effective in this area, obviating the need for Congress to readdress this issue 4 years down the road.

In addition, the apparent Coast Guard inability to deal effectively with major oil spills and disasters in all but the calmest seas must be investigated. Title II of this bill, providing for research on oil spill detection and control techniques, and on the environmental impact of oil spills, is needed in order for us to discover and assess better alternatives for protection of our environment.

Mr. President, I was pleased to cosponsor this important bill, and I urge its passage.

The PRESIDING OFFICER. The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

Mr. STEVENS. Mr. President, a parliamentary inquiry. It has just been called to my attention—really not a parliamentary inquiry but it is just a statement—that section 207 which dealt with the monitoring system with regard to the Fisheries Conservation and Management Act has nothing to do with pollution. It has to do with the monitoring of the space satellite techniques, of observation and reporting on the position, identification and course of vessels within the 200-mile limit. That study has really nothing to do with this controversy. Section 207 provides for the study and section 208(b) authorizes it.

I wonder if the Senator from Maine would agree that we might take section 207 and section 208(b) and add it to title I and not refer those sections to his committee. If he will examine them, they have nothing to do with the problem. It really has to do with the Administrator, the Secretary of Commerce, and the Secretary of Transportation trying to use the satellite capability to monitor vessel traffic in the 200-mile limit.

Mr. MUSKIE. Yes, that would be acceptable.

Mr. STEVENS. I might say to the Senator from Washington that we did in fact authorize funds in our committee for this study already. We are trying to put them into the markup.

What is the parliamentary situation with regard to the bill, Mr. President?

The PRESIDING OFFICER. It will

take unanimous consent to further amend it.

Mr. STEVENS. I ask unanimous consent that we revert back to second reading for the purpose of a specific amendment to the Senator's amendment.

The PRESIDING OFFICER. Notwithstanding third reading and the agreement to the committee amendment in the nature of a substitute, without objection, the bill will be amended by inserting section 207 and 208 (b) at the appropriate place.

Mr. STEVENS. I move that the clerk be permitted to renumber the sections appropriately as they are renumbered here.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the amendment (UP Amendment No. 342) is as follows:

On page 71, after line 20, insert the following:

#### SEC. 207. STUDY OF MONITORING SYSTEMS.

(a) CONTENT.—The Secretary of Transportation, in consultation with the Administrator, the Secretary of Commerce, and other appropriate agencies or instrumentalities of the Federal Government, shall evaluate various shore-station monitoring systems of vessels, including fishing vessels, within the fishery conservation zone as defined in section 3(8) of the Fishery Conservation and Management Act of 1976. Each system examined shall be capable of reporting vessel position, identification, course, and speed using either a land, sea, or space monitoring technique.

(b) REPORT.—Within 2 years after the date of the enactment of this Act, the Secretary shall report his findings to Congress. This report shall describe the capabilities, limitations, and cost effectiveness of each monitoring system examined from the standpoint of both the Federal Government and any vessel owners who would be affected by the imposition of each approach. The report shall also include the Secretary's recommendation for a single, comprehensive, cost effective shore station monitoring system within the fishery conservation zone.

#### SEC. 208. AUTHORIZATION FOR APPROPRIATIONS.

There are authorized to be appropriated to the Secretary for the purposes of section 207, not to exceed \$500,000 for the fiscal year ending September 30, 1978, and not to exceed \$500,000 for the fiscal year ending September 30, 1979.

Mr. MAGNUSON. Mr. President, before we have the final vote, I ask unanimous consent that the bill be reprinted in the Record as passed and that copies be printed for the use of the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Before passage, the Senator from West Virginia has been seeking recognition.

Mr. RANDOLPH. Mr. President, Senator STAFFORD, Senator HATCH, and I attended the White House Conference on Handicapped Individuals. Senator STAFFORD and I were speakers at that luncheon on the final day of conference. I lay this groundwork to express my understanding of what has been done and to say why I was not here.

While I am on my feet, I point out that the Youth Employment Act, a measure which had the cosponsorship of Senator STAFFORD and myself, was voted on in the Senate. I am gratified to say, with only three dissenting votes, 80 Members voting for it.

Now, Mr. President, I was in conference with Senator MUSKIE on the subject matter of what has been discussed here today. I want the record to indicate that, in general, I am in agreement with the statements by Senator MUSKIE, chairman of our Subcommittee on Environmental Pollution. We are in agreement as to the jurisdiction of the Committee on Environment and Public Works. We understand very well the position of the Committee on Commerce, chaired by the able Senator from Washington (Mr. MAGNUSON).

The action proposed by the Senator from Washington, I think, was a realistic manner of moving forward with S. 682. I say to my colleagues from the Committee on Commerce and the Environment and Public Works Committee, I think that we shall be able to act expeditiously on a proposal on a comprehensive ocean pollution research program in June.

While we may not have completely resolved the question of jurisdiction over ocean pollution this afternoon, a useful step has been taken. Members have spoken very earnestly—Senator MUSKIE is not only capable of that, but he does it, and I commend him for it. If I had had the opportunity, I would have spoken likewise. Senator MAGNUSON and Senator STEVENS also have presented a very positive point of view from the standpoint of the Committee on Commerce.

Out of all this discussion, there comes just one point that the Senator from West Virginia wishes to stress. That is that both of these committees are in partnership on this important problem and its various facets—the oceans; how we deal with the oceans; the contributions of the oceans.

I am appreciative of the time to express my desire not only to work with others, but to be tolerant of others and, certainly, to understand the viewpoints of the Members of the Senate. I am appreciative of the fact that we can now move from this matter and, hopefully, be on affirmative ground in the weeks ahead.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

The bill (S. 682) was passed as follows:

S. 682

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Tanker and Vessel Safety Act of 1977".*

#### TITLE I—AMENDMENTS TO THE PORTS AND WATERWAYS SAFETY ACT

##### SECTION 101. SHORT TITLE.

This title may be cited as the "Ports and Waterways Safety Act Amendments of 1977".

##### SEC. 102. DECLARATION ON POLICY AND DEFINITIONS.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by inserting the following new sections immediately after the first section thereof and immediately before title I:

"SEC. 2. FINDINGS, PURPOSES, AND POLICY.  
"(a) FINDINGS.—The Congress finds and declares the following:

"(1) Navigation and vessel safety and protection of the marine environment are matters of major national importance. Increased vessel traffic in the Nation's ports and waterways creates substantial hazard to life, property, and the marine environment.

"(2) International standards for navigation and vessel safety and protection of the marine environment are incomplete and fail to provide adequate protection of the marine environment. The Federal Government should seek to require more stringent standards for any vessel using (A) any port of the United States or (B) operating in the navigable waters of the United States.

"(3) Standards developed through regulations under this Act shall incorporate the best available technology. Such standards shall be required unless clearly shown to create undue economic hardship which is not outweighed by environmental benefits.

"(4) Increased inspection and enforcement efforts by the Federal Government are necessary to reduce the possibility of vessel or cargo loss, or damage to life, property, or the marine environment.

"(b) PURPOSES.—It is therefore the purposes of Congress in this Act—

"(1) to authorize a comprehensive inspection and enforcement program for increased navigation and vessel safety and enhanced protection of the marine environment;

"(2) to direct the Federal Government to establish stringent standards for the design, construction, equipment, maintenance, alteration, repair, operation, and manning of all vessels which (A) use any port of the United States or (B) operate in the navigable waters of the United States; and

"(3) to establish a program to prevent any substandard vessel from (A) using any port of the United States or (B) operating in the navigable waters of the United States.

"(c) POLICY.—It is further declared to be the policy of the Congress in this Act—

"(1) to authorize no impediment to, or interference with, the right of innocent passage or any recognized legitimate use of the high seas; and

"(2) to support and encourage continued active United States efforts to obtain international agreements concerning navigation and vessel safety and protection of the marine environment.

#### "SEC. 3. DEFINITIONS.

"As used in this Act, unless the context otherwise requires:

"(1) The term 'discharge' includes, but is not limited to, any spilling, leaking, pumping, pouring, or emptying, however caused.

"(2) The term 'domestic trade' means trade between ports or places in the United States, its territories or possessions, either directly or via a foreign port, including trade on the navigable waters of the United States.

"(3) The term 'foreign trade' means any trade other than the domestic trade.

"(4) The term 'foreign vessel' or 'vessel of a foreign nation' means any vessel documented or numbered under the laws of any nation other than the United States.

"(5) The term 'hazardous material' means any material or substance which is—

"(A) flammable or combustible;

"(B) designated a hazardous polluting substance under section 311(b) of the Federal Water Pollution Control Act Amendments of 1972 (33 U.S.C. 1321); or

"(C) designated a hazardous material under section 104 of the Hazardous Materials Transportation Act (49 U.S.C. 1803).

"(6) The term 'high seas' means all waters beyond the territorial sea of the United States and beyond the territorial sea of any foreign nation, to the extent that such sea is recognized by the United States.

"(7) The term 'marine environment' means the coastal zone, defined in section 304(1) of the Coastal Zone Management Act of 1972 (16 U.S.C. 1453(1)); the seabed, subsoil, natural resources, and waters of the territorial sea of the United States; the waters of the

contiguous zone; the waters and fishery resources of any zone over which the United States asserts exclusive fishery management authority; the waters of the high seas; and the seabed and subsoil of the Outer Continental Shelf of the United States.

"(8) The term 'oil' means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil.

"(9) The term 'person' means any individual (whether or not a citizen or national of the United States), or any corporation, partnership, association, or other entity (whether or not organized or existing under the laws of any State), and any Federal, State, local, or foreign government or any entity of any such government.

"(10) The term 'public vessel' means a vessel which—

"(A) is owned, or chartered by demise, and operated by the United States or any foreign government; and

"(B) is not engaged in commercial service.

"(11) The term 'Secretary' means Secretary of Transportation.

"(12) The term 'State' means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands, Guam, and any other commonwealth, territory, or possession of the United States, including the Trust Territory of the Pacific Islands.

"(13) The term 'United States', when used in the geographical context, means all the States thereof.

"(14) The term 'vessel' means every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation through or on water.

"(15) The term 'vessel of the United States' means any vessel documented or numbered under the laws of the United States."

#### SEC. 103. NAVIGATIONAL AND VESSEL SAFETY AND PROTECTION OF THE MARINE ENVIRONMENT.

Title I of the Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221-1227) is amended to read as follows:

##### "TITLE I—NAVIGATION AND VESSEL SAFETY AND PROTECTION OF THE MARINE ENVIRONMENT

###### "SEC. 101. VESSEL TRAFFIC SERVICES.

"(a) IN GENERAL.—The Secretary, in accordance with section 103, may, in the ports, harbors, navigable waters of the United States and in any area covered by any international agreement negotiated pursuant to section 303—

"(1) establish, operate, and maintain vessel traffic services;

"(2) require any vessel except self-propelled or recreational vessels under three hundred deadweight tons; which operates within waters subject to any vessel traffic service, to utilize or comply with any such service, including requiring the installation and use of any electronic or other device necessary for such utilization or compliance;

"(3) control vessel traffic by—

"(A) specifying times of entry, movement, or departure;

"(B) establishing vessel traffic routing schemes;

"(C) establishing vessel size and speed limitations and vessel operating conditions; and

"(D) restricting operation, in any hazardous area or under hazardous conditions, by any vessel which has particular operating characteristics or capabilities, in a manner deemed necessary for safe operation under the circumstances.

The Secretary shall publish and distribute any relevant information with regard to actions taken under this section to all interested persons, including citizens of any foreign country.

"(b) SPECIAL POWERS.—The Secretary may order any vessel to operate or anchor in a manner he directs if—

"(1) he has reasonable cause to believe such vessel does not comply with any regulation promulgated under this Act or any other applicable law or treaty;

"(2) he determines that such vessel does not satisfy the conditions for port entry set forth in section 106; or

"(3) by reason of weather, visibility, sea conditions, or the condition of such vessel, he is satisfied that such directive is justified in the interest of safety.

"(c) EXTENDED SERVICES.—The Secretary shall, in accordance with section 103, establish advisory vessel traffic services in appropriate areas of the high seas. The Secretary shall take appropriate action to have any routing measures associated with such services adopted by the relevant international organization.

"(d) EXCEPTION.—This title shall not apply to any vessel of any foreign nation (1) that is in transit through, the navigable waters of the United States which form a part of any international strait, and (2) that is destined for any port outside the United States, except pursuant to international treaty, convention, or agreement.

#### "SEC. 102. WATERFRONT SAFETY.

"The Secretary, in cooperation with the Secretary of the Army, may take such action as is necessary (1) to prevent damage to, or the destruction or loss of, any dock, bridge, or other structure on or in the navigable waters of the United States, or any structure on land, or any shore area, immediately adjacent to any such waters; and (2) to protect the navigable waters and the resources therein from vessel operation damage, destruction or loss or from structure damage, destruction or loss. Such action may include, but need not be limited to—

"(A) establishing procedures, measures, and standards for the handling, loading, unloading, storage, stowage, and movement on any such structure (including the emergency removal, control, and disposition) of any oil or hazardous materials;

"(B) prescribing minimum safety equipment requirements for any such structure to assure adequate protection from fire, explosion, natural disasters, and other serious accidents or casualties;

"(C) establishing water or waterfront safety zones, or other measures for limited, controlled, or conditional access and activity of vessels when necessary for the protection of any vessel, structure, waters, or shore area; and

"(D) establishing procedures for inspection to assure compliance with minimum safety requirements for such structures.

#### "SEC. 103. CONSIDERATIONS BY SECRETARY.

"The Secretary shall, in carrying out his duties and responsibilities under section 101, take into account all relevant factors concerning navigation and vessel safety and protection of the marine environment, including, but not limited to—

"(1) the scope and degree of the risk or hazard involved;

"(2) vessel traffic characteristics and trends including traffic volume, the sizes and types of vessels involved, potential interference with the flow of commercial traffic, the presence of any unusual cargoes, and other similar factors;

"(3) port and waterway configurations and variations in local conditions of geography, climate, and other similar factors;

"(4) the proximity of fishing grounds, oil and gas drilling and production operations, or any other potential or actual conflicting activity;

"(5) environmental factors;

"(6) economic impact and effects;

"(7) existing vessel traffic services;

"(8) local practices and customs, includ-

ing voluntary arrangements and agreements within the maritime community; and

"(9) the Secretary shall establish procedures for consulting with, and receiving and considering the views of, officials of State and local governments, and persons within the maritime community, who are knowledgeable about and experienced in dealing with local problems of vessel traffic.

**"SEC. 104. PILOTAGE.**

"The Secretary may require a pilot on (1) any self-propelled vessel of the United States engaged in the foreign trade, and (2) any foreign vessel, operating in the navigable waters of the United States in areas and under circumstances where a pilot is not otherwise required by State law. Such pilot may be required until the State involved establishes a requirement for a pilot in any such area or under the circumstances involved.

**"SEC. 105. INVESTIGATORY POWERS.**

"(a) SECRETARY.—The Secretary may investigate any incident, accident, or act which—

"(1) results in any loss or destruction of, or damage to, any structure or area referred to in section 102, or any vessel; or

"(2) affects, or may affect, vessel safety or environmental quality in any port, harbor, or the navigable waters of the United States.

"(b) BOARD.—The National Transportation Safety Board may investigate any transportation-related incident, accident, or act which—

"(A) results in any loss or destruction of, or damage to, any structure or area referred to in section 102, or any vessel; or

"(B) affects, or may effect, transportation or vessel safety in any port, harbor, or the navigable waters of the United States.

"(2) Investigations conducted by the Board under this section shall be for the purpose of determining the facts, circumstances, and the cause or probable cause, of any accident, incident, or act investigated under paragraph (1).

"(c) POWERS.—In any such investigation, the Secretary or the Board may issue subpoenas to require the attendance of any witness and the production of any document or other evidence relating to any such incident, accident, or act. If any person refuses to obey any such subpoena, the Secretary or the Board may request the Attorney General to invoke the aid of the appropriate district court of the United States to compel compliance with such a subpoena. Any of the district courts of the United States may, in the case of such refusal to obey such a subpoena, issue an order requiring compliance with such subpoena, and any failure to obey such order may be punished by the court as a contempt thereof. Witnesses may be paid fees for travel and attendance at such rates not exceeding those allowed in a district court of the United States.

**"SEC. 106. CONDITIONS FOR ENTRY TO PORTS OF THE UNITED STATES.**

"(a) IN GENERAL.—No vessel which carries, or is designed to carry, oil or any hazardous material in bulk as cargo shall operate in the navigable waters of the United States, or transfer cargo in, any port or place under the jurisdiction of the United States if such vessel—

"(1) has a history of accidents, pollution incidents, or serious repair problems which, as determined by the Secretary, creates reason to believe that such vessel may (A) be unsafe or (B) create a threat to the marine environment;

"(2) fails to comply with any applicable regulation issued under this Act or any other law or treaty;

"(3) discharges any oil in violation (A) of any treaty to which the United States is a party or (B) of any law of the United States; or

"(4) does not comply with any vessel

traffic service established by the Secretary under section 101;

unless and until the owner of such vessel proves, to the satisfaction of the Secretary, that such vessel is (A) no longer unsafe or a threat to the marine environment, or (B) complies with the applicable regulation, law, or treaty, as appropriate.

"(b) EFFECTIVE DATE.—This section shall become effective on the date of enactment of the Ports and Waterways Safety Act Amendments of 1977, except subsection (a) (3) shall not become effective until January 1, 1979, unless before such date, the Secretary by regulation, provides that such subsection will become effective before January 1, 1979, in which case, such subsection (a) (3) shall become effective on the date provided by the Secretary.

**"SEC. 107. MARINE SAFETY INFORMATION SYSTEM.**

"(a) IN GENERAL.—The Secretary shall establish a marine safety information system. Such system shall contain information with regard to any vessel (which carries, or is designed to carry, oil or any hazardous material in bulk as cargo) which enters, or transfers cargo in, any port or place under the jurisdiction of the United States. Such information shall include, but need not be limited to—

"(1) the names of any person with an ownership interests in any such vessel, in accordance with regulations prescribed by the Secretary;

"(2) financial responsibility information, if required for any vessel under section 311 (p) of the Federal Water Pollution Control Act Amendments of 1972 (33 U.S.C. 3121);

"(3) registration information, including all changes in the name of any such vessel;

"(4) the history of accidents or serious repair problems of any such vessel;

"(5) a record of all inspections or examinations of any such vessel conducted under section 202; and

"(6) any other data or information which the Secretary deems appropriate to carry out the purposes of this Act.

"(b) INTERAGENCY COOPERATION.—The head of each department, agency, or other instrumentality of the Federal Government shall, upon a written request from the Secretary, furnish any available data or information which the Secretary deems necessary to carry out the provisions of this Act.

**"SEC. 108. LIGHTERING.**

"(a) IN GENERAL.—After June 30, 1978, no vessel may unload any cargo of oil or hazardous material at any port of the United States if such cargo has been transferred from another vessel on the high seas or in the navigable waters of the United States, unless such transfer was conducted in accordance with regulations prescribed by the Secretary pursuant to subsection (b).

"(b) REGULATIONS.—The Secretary shall, by June 30, 1978, prescribe, and may amend or repeal, regulations for transferring, in whole or in part, any cargo of oil or hazardous material on the high seas or in the navigable waters of the United States. Regulations prescribed by the Secretary under this subsection shall include, but need not be limited to, standards for—

"(1) minimum safe operating conditions, including sea state, wave height, weather, proximity to channels or shipping lanes, and other similar factors;

"(2) prevention of oil spills;

"(3) equipment for responding to any oil spill;

"(4) prevention of any unreasonable interference with international navigation or other reasonable uses of the high seas, as defined by treaty, convention, or customary international law; and

"(5) other matters which the Secretary deems necessary to promote navigation and

vessel safety and protect the marine environment.

"(c) PROHIBITION.—No transfer of cargo at sea may be authorized under this section if such transfer is engaged in for the purpose of aiding the avoidance of standards relating to the design, construction, equipment, maintenance, alteration, repair, operation or manning of vessels promulgated under this Act or section 4417a of the Revised Statutes of the United States.

**"SEC. 109. APPLICATION OF TITLE.**

"This title shall not apply to the Panama Canal. The authority granted the Secretary under this title may be delegated to the Saint Lawrence Seaway Development Corporation to the extent the Secretary determines such delegation is necessary for the proper operation of the Seaway."

**SEC. 104. VESSELS CARRYING CERTAIN CARGOES IN BULK.**

Section 4417a of the Revised Statutes of the United States (46 U.S.C. 391a) is amended to read as follows:

"Sec. 4417a. (1) APPLICABILITY.—Except as provided in subsections (2) and (3), this section shall apply to any vessel—

"(A) regardless of tonnage, size, or manner of propulsion;

"(B) whether self-propelled or not;

"(C) whether carrying freight or passengers for hire or not;

"(D) which is documented or numbered under the laws of the United States, which operates in the navigable waters of the United States, or which transfers cargo in any port or place under the jurisdiction of the United States; and

"(E) which carries, or is designed to carry, oil or any hazardous material in bulk as cargo.

Any such vessel shall be deemed to be a steam vessel for the purposes of title 52 of the Revised Statutes of the United States and shall be subject to the provisions thereof.

"(2) EXCEPTIONS.—This section shall not apply to—

"(A) any public vessel;

"(B) any vessel of not more than 500 gross tons documented in the service of oil exploitation which are not tank vessels and which would be subject to this section only because of the transfer of fuel from fuel supply tanks of such vessel to offshore drilling or production facilities; or

"(C) any vessel of any foreign nation (1) that is in transit in navigable waters of the United States which form a part of any international strait and (2) that is destined for any port or place outside the United States.

"(3) FISHING VESSELS.—Notwithstanding the other provisions of this section, cannery tenders, fishing tenders, and fishing vessels of not more than 500 gross tons used in the salmon or crab fisheries of the States of Oregon, Washington, or Alaska, when engaged exclusively in the fishing industry, shall be allowed to have on board inflammable or combustible cargo in bulk to the extent and upon conditions as may be required by regulations promulgated by the Secretary.

"(4) STANDARD-SETTING AUTHORITY.—(A) The Secretary shall issue, and may from time to time amend or repeal, regulations containing standards for the design, construction, alteration, repair, operation, manning, or maintenance of vessels to which this section applies, as may be necessary for increased navigation and vessel safety and enhanced protection of the marine environment. The standards issued by the Secretary under this subsection shall be in addition to any other standards, promulgated under other provisions of law, that may apply to such vessels. The standards issued by the Secretary under this subsection shall in-

clude, but need not be limited to, standards relating to—

"(i) superstructures, hulls, cargo holds or tanks, fittings, equipment, appliances, propulsion machinery, auxiliary machinery, and boilers;

"(ii) the handling or stowage of cargo, the manner of such handling or stowage of cargo, and the machinery and appliances used in such handling or stowage;

"(iii) equipment and appliances for life saving, fire protection, and prevention and mitigation of damage to the marine environment;

"(iv) requirements for the manning of such vessels and the duties and qualifications of the officers and crew, in accordance with subsection (7);

"(v) improvements in vessel maneuvering and stopping ability and other features which reduce the possibility of collision, grounding, or other accidents;

"(vi) the reduction of cargo loss in the event of a collision, grounding, or other accident;

"(vii) the reduction or elimination of discharges during ballasting, deballasting, cargo handling, or other such activity; and

"(viii) the reduction or elimination of discharges aboard vessels during cargo handling, tank cleaning, ballasting, deballasting, and other such activity.

"(B) In establishing standards under paragraph (A), the Secretary shall give due consideration to the kinds and grades of cargo permitted to be on board any such vessel.

"(5) MINIMUM STANDARDS.—In addition to any standards prescribed by the Secretary pursuant to subsection (4), or pursuant to any other law, any self-propelled vessel in excess of 20,000 deadweight tons which carries, or is designed to carry, oil in bulk, as cargo shall—

"(A) not later than June 30, 1979, be equipped with—

"(i) a dual radar system, one with short-range and one with long-range capabilities and each with true-north features;

"(ii) a collision avoidance system;

"(iii) a long-range navigation aid;

"(iv) adequate communications equipment;

"(v) a fathometer;

"(vi) a gyrocompass;

"(vii) up-to-date charts; and

"(B) not later than June 30, 1983, be equipped with—

"(i) a segregated ballast system;

"(ii) a transponder, or such other appropriate position-finding equipment as the Secretary determines to be appropriate;

"(iii) a gas inerting system; and

"(iv) for any vessel the construction of which is contracted for, or actually commenced, after January 1, 1980, a double bottom (fitted throughout the cargo length of such vessel).

The Secretary may prescribe standards to substitute for any standard listed above if such substitute standard provides, as appropriate, equivalent or improved navigation accuracy, vessel safety, or environmental protection. Such equivalency or improvement shall be determined by the Secretary on the record after a hearing in accordance with section 553 of title 5, United States Code.

"(6) EVIDENCE OF COMPLIANCE.—(A) No vessel of the United States to which this section applies, shall have on board oil or hazardous materials in bulk as cargo until (i) it has been issued a certificate of inspection issued under the provisions of title 52 of the Revised Statutes of the United States, and (ii) such certificate has been endorsed to indicate that the vessel is in compliance with the rules and regulations established under this section. If any vessel is found not to be in compliance, the Secretary shall notify the owner of the vessel and indicate how the vessel may be brought into compliance.

"(B) No foreign vessel to which this section applies, shall operate in the navigable waters of the United States or transfer cargo in any port or place under the jurisdiction of the United States unless such vessel has been issued a certificate of compliance by the Secretary. The Secretary shall not issue such certificate until the vessel has been examined by the Secretary and found to be in compliance with the provisions of this section and the rules and regulations promulgated hereunder. If any such vessel is found not to be in compliance, the Secretary shall notify the owner of the vessel and indicate how the vessel may be brought into compliance. The Secretary may allow provisional entry for the purposes of conducting the examination.

"(C) The Secretary may accept, as evidence of compliance with this section (in whole or in part), a certificate, endorsement, or document issued by any foreign nation pursuant to any treaty, convention, or other international agreement to which the United States is a party.

"(D) No vessel may carry any kind of grade of cargo unless its certificate of compliance is endorsed to allow such carriage. No such endorsement may allow any vessel to carry any material prohibited by section 4472(3) of this title.

"(E) A certificate of compliance, or an endorsement, issued under this subsection shall be valid for a period not to exceed 1 year, as specified by the Secretary, and may be renewed. The Secretary may issue a temporary certificate of compliance, or a temporary endorsement, under this subsection in appropriate circumstances; except that such temporary certificate or endorsement shall be valid for not more than 30 days. Any certificate or endorsement shall be revoked or suspended if the Secretary finds that the vessel involved no longer complies with the conditions upon which such certificate or endorsement was issued.

"(7) RETROFIT OF CERTAIN MANDATORY REQUIREMENTS.—(A) On and after July 1, 1980, the Secretary shall not issue a certificate of compliance to any vessel to which subsection (5) applies, unless—

"(i) such vessel has a segregated ballast system (as required under subsection (5) (B) (i)) and a gas inerting system (as required under subsection (5) (B) (iii)); or

"(ii) the Secretary determines that tanks in such vessel have been designated for, and are used only for carrying ballast water alone; and the owner of such vessel has paid a retrofit incentive fee levied on such vessel by the Secretary.

"(B) The Secretary shall determine the amount of the retrofit incentive fee applicable to any vessel (according to classes of vessels based on size, displacement, and configuration) by determining for vessels in each such class the estimated annualized cost of compliance with the requirements of subsections (5) (B) (i) and (5) (B) (iii). The Secretary shall estimate the annualized cost of compliance, based on a retrofit technique that he determines would enable typical vessels in each class to comply with such requirements, taking into account planning and design costs, equipment costs (including purchase, transportation, installation, and start-up or testing), operating and maintenance costs, cost of capital, inflation, taxes, and other relevant costs. The Secretary shall propose retrofit incentive fees for each class of vessels not later than July 1, 1979, and shall adopt fees, in accordance with section 553 of title 5, United States Code, not later than January 1, 1980. The Secretary may by regulation adjust the fee for a class of vessels if he determines that the fee varies significantly from the actual or probable annualized costs of compliance with such requirements, and he may provide for the automatic adjustment of a fee based on the performance of a suitable index or indices. The Secretary may, in his discretion, waive

the fee if he determines that a good faith effort has been made to comply with the provisions of this paragraph.

"(C) Any interested person may seek judicial review of the action taken by the Secretary under paragraph (B) to establish retrofit incentive fees by filing a petition therefor in the Court of Appeals of the United States for the circuit in which such person resides. Such petition shall be filed within ninety days after the date of such action, or, if such petition is based solely on grounds which arose after such ninetieth day, any time thereafter. Action by the Secretary with respect to which review could have been obtained under this paragraph shall not be subject to judicial review in any civil or criminal proceeding relating to enforcement or collection of the fee established by such action. In any action brought under this paragraph, no court shall grant any stay, injunction or other similar relief before final judgment by such court in such action.

"(D) The Secretary shall prescribe, and may from time to time modify or repeal, such regulations as he deems necessary to carry out this subsection. Such regulations may include, but need not be limited to, requirements respecting—

"(i) submission of technical and cost information relating to compliance with the requirements of subsections (5) (B) (i) and (5) (B) (iii);

"(ii) marking areas designated as ballast areas for easy identification; and

"(iii) reporting of information relating to the designation of areas as ballast areas and the installation of segregated ballast and gas inerting systems.

"(E) Any retrofit incentive fee which is not paid in a timely basis shall be subject to a late payment penalty in an amount determined by the Secretary, but which shall not be more than 20 percent of the amount of such fee unpaid.

"(F) If any person or vessel fails to comply with any provision of this subsection, in addition to denying certification (as provided in paragraph (A) of this subsection), assessing a late payment penalty (as provided in paragraph (E) of this subsection), and assessing a civil penalty (as provided in section 203(a) of the Ports and Waterways Safety Act of 1972), the Secretary may pursue any other appropriate remedy authorized by any other applicable provision of law.

"(8) MANNING AND TRAINING REQUIREMENTS.—The Secretary shall prescribe standards for the manning of any vessel subject to the provisions of this section and the duties, qualifications, and training of the officers and crew thereof, including, but not limited to, standards relating to—

"(A) instruction in vessel and cargo handling and vessel navigation under normal operating conditions in coastal and confined waters and on the high seas;

"(B) instruction in vessel and cargo handling and vessel navigation in emergency situations and under accident or potential accident conditions;

"(C) license qualifications by specific class and size of vessels;

"(D) measurement of qualifications for licenses by use of simulators developed for the training of marine-oriented skills;

"(E) health and physical fitness criteria for all personnel;

"(F) periodic, retraining, and special training for upgrading positions, changing vessel class or size, or assuming new responsibilities;

"(G) determination of licenses, conditions of licensing, and period of licensing by reference to experience, amount of training completed, and regular performance testing; and

"(H) recordation of safety and pollution control violations on licenses.

"(9) MODIFICATIONS.—The Secretary may modify any regulation or standard prescribed under this section to conform to an inter-

national treaty, convention, agreement, or an amendment thereto, which is ratified by the United States."

#### SEC. 105. IMPROVED PILOTAGE STANDARDS.

(a) Section 4442 of the Revised Statutes of the United States (46 U.S.C. 214) is amended to read as follows:

"Sec. 4442. (a) The Commandant of the United States Coast Guard shall, in accordance with subsection (b) of this section, establish eligibility requirements for the issuance of a license to pilot any steam vessel.

"(b) No person may be issued a license to pilot any steam vessel unless he—

"(1) is at least 21 years of age;

"(2) is of sound health and has no physical limitations which would hinder or prevent the performance of a pilot's duties;

"(3) agrees to have a thorough physical examination each year while holding a pilot's license;

"(4) demonstrates, to the Commandant's satisfaction, that he possesses the requisite general knowledge and skill to hold a pilot's license;

"(5) maintains adequate knowledge of the waters to be navigated as a pilot;

"(6) has sufficient experience, as determined by the Commandant, to evidence his ability to handle any vessel of the type and size which he may be endorsed to pilot; and

"(7) meets any other requirement which the Commandant considers reasonable and necessary.

"(c) No license to pilot any steam vessel shall be valid for a term longer than 5 years. Upon expiration of any such license, the holder may reapply for an additional term and may be reissued a license if he meets the requirements specified under subsection (b) of this section.

"(d) The Commandant may revoke or suspend any license to pilot any steam vessel, after notice and an opportunity for a hearing, upon satisfactory evidence of—

"(1) negligence;

"(2) unskillfulness;

"(3) failure to adhere to any requirements for a license;

"(4) willful violation of title 52 of the Revised Statutes; or

"(5) other just cause related to the performance of pilot duties, including conduct when acting solely under the authority of a State pilot license."

"(e) The Secretary shall develop and shall seek adoption by the States of uniform minimum standards relating to the regulation of pilotage at least equal to those required of federally licensed pilots."

(b) Section 304(a)(9)(B) of the Independent Safety Board Act of 1974 (49 U.S.C. 1903(a)(9)(B)) is hereby amended by replacing the final period with a semicolon, and adding: "or Section 4442 of the Revised Statutes of the United States (46 U.S.C. 214)."

#### SEC. 106. INSPECTION AND ENFORCEMENT.

Title II of the Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended to read as follows:

##### "TITLE II—INSPECTION AND ENFORCEMENT"

###### "SEC. 201. PROHIBITED ACTS.

"It is unlawful—

"(1) for any person—

"(A) to violate any provision of this Act or any regulation issued pursuant to this Act or section 4417a of the Revised Statutes of the United States;

"(B) to refuse to permit any officer authorized by the Secretary to enforce the provisions of this Act or section 4417a of the Revised Statutes of the United States to board any vessel, or enter any shore area, place, or premises, under such person's control for purposes of inspection pursuant to this Act or section 4417a of the Revised Statutes of the United States; or

"(C) to refuse to obey any lawful directive issued pursuant to this Act or section 4417a

of the Revised Statutes of the United States; and

"(2) for any vessel subject to the provisions of this Act or section 4417a of the Revised Statutes of the United States—

"(A) to operate in the navigable waters of the United States while not in compliance with any provision of this Act or any regulation issued pursuant to this Act or section 4417a of the Revised Statutes of the United States; or

"(B) to fail to comply with any lawful directive issued pursuant to this Act or section 4417a of the Revised Statutes of the United States.

###### "SEC. 202. INSPECTION.

"(a) NATIONAL PROGRAM.—(1) The Secretary shall establish a national program for inspection of any vessel subject to section 4417a of the Revised Statutes of the United States. Each such vessel shall be inspected or examined at least once each year. Any such vessel over 10 years in age shall undergo a special and detailed inspection of structural strength and hull integrity, as specified by the Secretary.

"(2) An inspection or examination may be conducted by any officer authorized by the Secretary. If any such officer is not reasonably available, the Secretary may contract for the conduct of inspections or examinations in the United States and in foreign countries. Under such contract, an inspector may be authorized to act on behalf of the Secretary; except that no such inspector may issue a certificate of inspection or compliance, but may issue a temporary such certificate.

"(3) The Secretary shall prescribe by regulation reasonable fees for any inspection or examination conducted pursuant to this section based on the cost incurred. The owner of any vessel inspected or examined by the Secretary or his designee shall be liable for such fee. Amounts received as fees under this paragraph shall be credited to the appropriations bearing the cost of such inspection or examination.

"(b) VESSEL DOCUMENTS.—Any vessel subject to the provisions of this section shall have on board such documents as the Secretary deems necessary for inspection or enforcement under this Act, including, but not limited to, documents indicating—

"(1) the kind, grade, and approximate quantities of any cargo on board such vessel;

"(2) the shipper and consignee of such cargo;

"(3) the points of origin and destination of such vessel; and

"(4) the name of an agent in the United States authorized to accept legal process.

"(c) RECIPROCITY.—The Secretary may accept, as evidence of compliance with the provisions of this Act, any certificate or document issued by any foreign nation pursuant to any treaty, convention, or other international agreement to which the United States is a party.

###### "SEC. 203. PENALTIES.

"(a) CIVIL PENALTY.—(1) Any person who is found by the Secretary, after notice and an opportunity for a hearing to have committed an act prohibited by this Act or by section 4417a of the Revised Statutes of the United States shall be liable to the United States for a civil penalty, not to exceed \$25,000 for each violation. Each day of a continuing violation shall constitute a separate offense. The amount of such civil penalty shall be assessed by the Secretary, or his designee, by written notice. In determining the amount of such penalty, the Secretary shall take into account the nature, circumstances, extent, and gravity of the prohibited acts committed and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require.

"(2) The Secretary may compromise, modify, or remit, with or without conditions, any civil penalty which is subject to imposi-

tion or which has been imposed under this subsection.

"(3) If any person fails to pay an assessment of a civil penalty after it has become final, the Secretary may refer the matter to the Attorney General of the United States, for collection in any appropriate district court of the United States.

"(b) CRIMINAL PENALTY.—(1) A person is guilty of an offense if—

"(A) in reckless disregard of the risk that his conduct would cause damage to property, he commits any act prohibited by subparagraphs 202(1)(A) or 202(2)(A); or

"(B) he willfully and knowingly commits any other act prohibited by section 202.

"(2) Any offense described in paragraph (1) is punishable by a fine of not more than \$50,000, or imprisonment for not more than 6 months, or both; except that if in the commission of any such offense the person uses a dangerous weapon, engages in conduct that causes bodily injury to any officer authorized to enforce the provisions of this Act, or places any such officer in fear of imminent bodily injury, the offense is punishable by a fine of not more than \$100,000, or imprisonment for not more than 10 years, or both.

"(3) As used in this subsection, a person's state of mind is 'reckless' with respect to:

"(A) an existing circumstance if he is aware of a risk that the circumstance exists but disregards the risk; and

"(B) a result of his conduct if he is aware of a risk that the result will occur but disregards the risk.

The risk must be of such a nature and degree that its disregard constitutes a gross deviation from the standard of care that a reasonable person would exercise in such a situation.

"(c) FEDERAL JURISDICTION.—There is Federal jurisdiction over any offense described in this section.

"(d) IN REM LIABILITY.—Any vessel subject to the provisions of this Act and found to be in violation of this Act shall be liable in rem and may be proceeded against in the United States district court for any district in which such vessel may be found.

"(e) INJUNCTION.—The United States district courts shall have jurisdiction to restrain violations of this Act or regulations issued hereunder, for cause shown."

#### SEC. 107. MISCELLANEOUS PROVISIONS.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by adding the following new title at the end thereof:

##### "TITLE III—MISCELLANEOUS PROVISIONS"

###### "SEC. 301. REGULATIONS.

"The Secretary is authorized to issue, amend, or repeal regulations to carry out the purposes and provisions of this Act, in accordance with the provisions of section 553 of title 5, United States Code. In preparing such regulations, the Secretary shall provide an opportunity for full consultation and cooperation with all other interested Federal agencies and departments (in particular the Environmental Protection Agency, the Department of Commerce, and the Department of State), and the States, and for consideration of views presented by any members of the general public, including representatives of the maritime community, environmental groups, consumer organizations, and persons concerned with navigation and vessel safety and protection of the marine environment.

###### "SEC. 302. REPORT.

"Within 6 months after the end of each fiscal year, the Secretary shall submit to the Congress (1) a report on the administration of this Act during the preceding fiscal year; (2) a summary of inspection and enforcement activities during the preceding fiscal year; and (3) recommendations to the Congress for any additional legislative authority necessary to improve navigation and

vessel safety and protection of the marine environment.

**"SEC. 303. INTERNATIONAL AGREEMENTS.**

**"(a) TRANSMITTAL OF REGULATIONS.**—The Secretary and the Secretary of State shall undertake international negotiations, utilizing the appropriate international bodies or forums, to achieve acceptance of regulations promulgated or required under this Act as international standards.

**"(b) NEGOTIATIONS.**—The Secretary of State may—

**"(1)** enter into negotiations, in cooperation with the Secretary, with Canada and Mexico, and any other neighboring nation, to establish compatible vessel standards and vessel traffic services in appropriate areas and circumstances;

**"(2)** enter into negotiations through appropriate international bodies—

**"(A)** to establish mandatory vessel traffic services in appropriate areas of the high seas, and

**"(B)** to prohibit any discharge of oil in appropriate areas of the high seas;

**"(3)** enter into negotiations, in cooperation with the Secretary, with Canada and Mexico, and any other neighboring nation to establish, operate, and maintain international vessel traffic services in appropriate areas; and

**"(4)** enter into such other negotiations as may be necessary and appropriate to further the purposes, policy, and provisions of this Act.

**"(c) OPERATIONS.**—The Secretary, pursuant to any agreement negotiated under subsection (b), may—

**"(1)** require vessels to utilize or to comply with the vessel traffic service, including the carrying or installation of electronic or other devices necessary for the use of the service; and

**"(2)** waive, by order or regulation, the application of any law or regulation concerning the design, construction, manning, and equipment standards of vessels operating in waters over which the United States exercises jurisdiction if such vessel is not enroute to or from a United States port, and if vessels enroute to or ports of the United States are accorded equivalent waivers of laws and regulations of the foreign nation.

**"SEC. 305. AUTHORIZATIONS OF APPROPRIATIONS.**

"Beginning October 1, 1977, there are authorized to be appropriated to the Secretary, for the purpose of carrying out the provisions of this Act, such sums as may be necessary."

**SEC. 108. SAVING CLAUSE.**

Regulations previously issued under statutory provisions repealed, modified, or amended by this Act shall continue in effect as though promulgated under the authority of section 4417a of the Revised Statutes of the United States (46 U.S.C. 391a) or the Ports and Waterways Safety Act of 1972 as amended by this Act, as the case may be, until expressly abrogated, modified, or amended by the Secretary. Any proceeding under section 4417a of the Revised Statutes of the United States or the Ports and Waterways Safety Act of 1972 for a violation which occurred before the effective date of this Act may be initiated or continued to conclusion as though such section or Act had not been amended thereby.

**SEC. 109. STUDY OF MONITORING SYSTEMS.**

**(a) CONTENT.**—The Secretary of Transportation, in consultation with the Administrator, the Secretary of Commerce, and other appropriate agencies or instrumentalities of the Federal government, shall to evaluate various shore-station monitoring systems of vessels, including fishing vessels, within the fishery conservation zone as defined in section 3(8) of the Fishery Conservation and Management Act of 1976. Each system examined shall be capable of reporting

vessel position, identification, course, and speed using either a land, sea, or space monitoring technique.

**(b) REPORT.**—Within 2 years after the date of the enactment of this Act, the Secretary shall report his findings to Congress. This report shall describe the capabilities, limitations, and cost effectiveness of each monitoring system examined from the standpoint of both the Federal Government and any vessel owners who would be affected by the imposition of each approach. The report shall also include the Secretary's recommendation for a single, comprehensive, cost effective shore station monitoring system within the fishery conservation zone.

**SEC. 110. AUTHORIZATION FOR APPROPRIATIONS.**

There are authorized to be appropriated to the Secretary for the purposes of section 109, not to exceed \$500,000 for the fiscal year ending September 30, 1978, and not to exceed \$500,000 for the fiscal year ending September 30, 1979.

Mr. MAGNUSON. Mr. President, I move to reconsider the vote by which the bill passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Without objection, the title of the bill is appropriately amended.

The title was amended as to read:

A bill to amend the Ports and Waterways Safety Act of 1972, to establish a program of oil pollution research, and for other purposes.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the Secretary be authorized to make technical and clerical corrections in the engrossment of S. 682.

The PRESIDING OFFICER. Without objection, it is so ordered.

**DEPARTMENT OF STATE AUTHORIZATIONS, 1977**

Mr. McGOVERN. Mr. President, I ask the Chair to lay before the Senate a message from the House on H.R. 5040.

The Presiding Officer laid before the Senate the following message from the House of Representatives:

*Resolved*, That the House agree to the amendments of the Senate numbered 1, 2, 3, 4, 5, 6, 8, 9, and 10 to the bill (H.R. 5040) entitled "An Act to authorize additional appropriations for the Department of State for fiscal year 1977."

*Resolved*, That the House agree to the amendment of the Senate numbered 7 with an amendment as follows:

In lieu of the matter proposed by said amendment, insert:

**(3)** by amending the third sentence to read as follows: "Not more than seven of the appointees from the Senate shall be of the same political party."; and

Mr. McGOVERN. Mr. President, this morning the House accepted the Senate amendments to the fiscal year 1977 State Department Supplemental legislation (H.R. 5040)—with one minor amendment.

As passed by the House and the Senate, H.R. 5040 expands the size of the American group of the North Atlantic Assembly from 18 to 24—a delegation of 12 from each side—12 from the House, 12 from the Senate.

The House leadership objects, however, to a requirement added on the

Senate floor that not more than seven Members of each delegation be from one political party. The House, in floor action this morning, eliminated the requirement as it pertains to the House delegation, but left intact this language that the Senate had previously approved, as far as the Senate is concerned.

Since this will not affect the bill in any way of interest to the Senate, I move that the Senate agree to the House amendment to the Senate amendment to H.R. 5040.

Mr. STEVENS. Mr. President, it is my understanding that that is the only change the House made. There has been inquiry from this side of the aisle as to whether there were any amendments made by the House that affected the Korean troop situation.

Mr. McGOVERN. No. This is the supplemental bill which the Senate previously acted on. The House took the Senate amendments in their entirety. But there were no other changes made other than this one which was made in the distribution on the North Atlantic delegation.

But only insofar as it affects the computation of the House delegation. It has nothing to do with the matter the Senator queried me about. No other change is made.

Mr. STEVENS. Is there funding here for Korean movement?

Mr. McGOVERN. No.

Mr. STEVENS. United States troop removal from Korea?

Mr. McGOVERN. No. This bill made no changes at all after it left the Senate, other than this one I have just referred to.

Mr. STEVENS. I thank the Senator.

I appreciate the Senator's courtesy in allowing us a chance to review it.

I have no objection.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from South Dakota.

The motion was agreed to.

**OPERATION OF ARMORY BOARD OF THE DISTRICT OF COLUMBIA**

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 206.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1062) to amend section 441 of the District of Columbia Self-Government and Governmental Reorganization Act.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill? There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Governmental Affairs with an amendment on page 1, beginning with line 10, insert the following:

SEC. 2. Section 10 of the Act "To establish a District of Columbia Armory Board and for other purposes", approved June 4, 1948 (D.C. Code, sec. 2-1710), is amended by striking out "January" and inserting in lieu thereof "July".

SEC. 3. Section 10 of the District of Columbia Stadium Act of 1957, approved September 7, 1957 (D.C. Code, sec. 2-1728), is

amended by striking out "January" and inserting in lieu thereof "July".

So as to make the bill read:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 441 of the District of Columbia Self-Government and Governmental Reorganization Act (D.C. Code sec. 47-101) as amended by Public Law 93-395 (88 Stat. 793) is further amended by adding at the end thereof: "However, the fiscal year for the Armory Board shall begin on the first day of January and shall end on the thirty-first day of December of each calendar year."

SEC. 2. Section 10 of the Act "To establish a District of Columbia Armory Board and for other purposes", approved June 4, 1948 (D.C. Code, sec. 2-1710), is amended by striking out "January" and inserting in lieu thereof "July".

SEC. 3. Section 10 of the District of Columbia Stadium Act of 1957, approved September 7, 1957 (D.C. Code, sec. 2-1728), is amended by striking out "January" and inserting in lieu thereof "July".

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CRANSTON. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-225), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

#### PURPOSE OF THE LEGISLATION

The objective of S. 1062 is to allow the Armory Board of the District of Columbia—which manages Robert F. Kennedy Stadium, and the D.C. Armory—to operate under a fiscal year coinciding with the calendar year, rather than the October 1-September 30 schedule observed by other Government agencies. Such an exception would acknowledge and better accommodate the special, seasonal nature of the revenues earned by Board concerns, and would, in addition, simplify and improve the financial reporting required of that body.

#### BACKGROUND AND NEED FOR THE LEGISLATION

The three-member Armory Board was established by the Congress in 1948 (Public Law 80-605) to exercise control and jurisdiction over the District of Columbia National Guard Armory. Its authority to construct and operate the Robert F. Kennedy Stadium as well was granted in 1957, with passage of Public Law 85-300.

Both the aforementioned acts provided for the Board's submission each January of annual reports on the finances of the two facilities. In the succeeding years, however, experience has indicated that the purpose of such reports—provisions of a comprehensive and meaningful review of the financial status of stadium and armory—has not been well served by the Board's legal requirement, as an independent agency of the District government, to adhere to the fiscal year used by the city and Federal governments.

Under the existing October 1-September 30 system, revenues generated in a single season by the Board's most lucrative enterprise—football at Robert F. Kennedy Stadium—are divided illogically into 2 fiscal years and must

be treated accordingly, in two separate, annual reports. Thus: receipts from the first half of the autumn schedule are included in one report, those from the second half in the next one.

Such division substantially, and unnecessarily, complicates the Board's recordkeeping and reporting tasks, and can as well produce financial figures which may be misleading.

To reduce the susceptibility of its reports to misinterpretation and simplify the efforts required to produce them, the Armory Board has requested that its fiscal year be changed from the uniform period to the January 1-December 31 calendar year. The proposal has received the approval of the District's Office of Budget and Management Systems, Office of Municipal Audit and Corporation Counsel.

This change, which would be effected by passage of S. 1062, would necessitate a corresponding shift in the filing dates for the Board's reports to Congress.

As previously noted, existing law specifies that certain data regarding stadium and armory operations—financial statements, reports of activities and business in the preceding fiscal year, and recommendations concerning their future use and control—be submitted to Congress by the Board each January. Because use of a fiscal year ending December 31 would not allow sufficient time for preparation of materials due the following month, the Board has asked that S. 1062 be amended to move the filing date to July.

#### PROVISIONS OF S. 1062

Section 1 of the legislation would amend the District of Columbia Self-Government and Governmental Reorganization Act—commonly called the Home Rule Act—to exempt the Armory Board from the uniform use of an October 1-September 30 fiscal year required of all city government agencies. Instead, the Board's fiscal, budget and accounting year would extend from January 1 to December 31.

Section 2 of the bill, as amended, changes the filing date for the Board's annual reports concerning the National Guard Armory from January of each year to July.

Section 3 of the bill, as amended, effects an identical shift in the dates for submission of required reports on Robert F. Kennedy Stadium. Previously due in January, they would instead be filed annually, in July.

#### HEARINGS AND COMMITTEE VOTE

A hearing was held April 27, 1977, on S. 1062, by the Subcommittee on Governmental Efficiency and the District of Columbia of the Committee on Governmental Affairs. Robert Sigholtz, manager of the District of Columbia Armory Board, and Comer S. Cople, special assistant to the Mayor of the District of Columbia for budget and management systems, testified in support of the legislation; no statements or testimony in opposition were received.

The Committee on Governmental Affairs, by a unanimous vote, ordered the measure favorably reported on May 12, 1977, after discharging the subcommittee from further consideration of the bill.

#### CONGRESSIONAL BUDGET OFFICE ESTIMATE AND COMPARISON

No estimate and comparison of costs has been received by the committee from the director of the Congressional Budget Office pursuant to section 403 of the Congressional Budget and Impoundment Control Act of 1974.

#### COSTS

Enactment of the proposed legislation will involve no added costs for the Federal Government or for the government of the District of Columbia.

#### INFLATIONARY IMPACT

The bill, if enacted into law, will have no foreseeable inflationary impact on prices or costs in the operation of the national economy.

#### REGULATORY OR PRIVACY IMPACT

In accordance with rule XXIX there is no regulatory or privacy impact caused by this legislation.

#### GEORGE WASHINGTON UNIVERSITY

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 207.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1060) to amend the Act of February 9, 1821, to restate the charter of the George Washington University.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Governmental Affairs with amendments.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments were agreed to en bloc.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That "An Act to incorporate the Columbia College in the District of Columbia", approved February 8, 1821 (6 Stat. 255), as amended and supplemented, is amended to read as follows:

#### "ESTABLISHMENT

"SECTION 1. There is established in the District of Columbia The George Washington University (hereafter in this Act referred to as the 'university') as a university and a body corporate which shall have perpetual succession.

#### "PURPOSES

"SEC. 2. The purposes of the university are—

"(1) to educate individuals in liberal arts, languages, sciences, learned professions, and other courses and subjects of study,

"(2) to conduct scholarly research and publish the findings of such research,

"(3) to operate hospital and medical facilities, and

"(4) to engage in any activity incidental to the foregoing purposes.

Such purposes shall be accomplished without regard to the race, color, creed, sex, or national origin of any individual.

#### "POWERS

"SEC. 3. In order to carry out the purposes of the university, the university may—

"(1) grant or confer academic and honorary degrees, diplomas, and certificates under the seal of the university,

"(2) establish any school, division, or department of learning to become a part of the university,

"(3) receive, invest, and administer any gift or endowment of money or real or personal property,

"(4) borrow money, with or without any security for repayment, at rates of interest determined by the board of trustees of the university without regard to the restrictions of any usury law, but may not plead any usury laws as a defense in any action,

"(5) enter into any agreement with any institution of learning for the purpose of providing to students registered at such institution the educational facilities of the univer-

sity and the facilities of any agency of the United States available to the university.

"(6) exercise all powers described in section 5 of the District of Columbia Nonprofit Corporation Act (D.C. Code, sec. 29-1005) on the date of the enactment of *The George Washington University Charter Restatement Act* and not inconsistent with the purposes of the university, and

"(7) exercise all powers necessary, incidental, or convenient to the conduct of the purposes, business, and affairs of the university.

#### "BOARD OF TRUSTEES"

"Sec. 4. (a) The management, direction, and government of the university shall be vested in a board of trustees (hereafter in this Act referred to as the 'board'). The bylaws of the university shall provide for the election, number, term of office, residency requirements, qualifications, manner of election, filling of vacancies, and removal of members of the board. The bylaws may provide that members of the board be elected to terms of office commencing on different dates. The bylaws shall provide for appointment of an executive committee and other committees composed of members of the board with any power and authority, including any power and authority of the board, provided for in the bylaws of the university.

"(b) Each individual who is a member of the board on the date of the enactment of *The George Washington University Charter Restatement Act* shall continue to serve as a member until the membership termination date applicable to such individual.

"(c) No bylaw of the university which establishes qualifications for membership on the board may permit any individual (except the president of the university) to serve as a member of the board during the period in which the individual is serving as an officer, professor, lecturer, teacher, tutor, or employee of the university.

#### "AUTHORITY OF THE BOARD OF TRUSTEES"

"Sec. 5. (a) The board shall be responsible for the exercise of all powers and the discharge of all duties of the university in a manner consistent with this Act, shall have full authority over all personnel and activities of the university, and may appoint or elect any person to serve as an officer, professor, lecturer, teacher, tutor, agent or employee of the university. Any person so appointed or elected may be removed by the board.

"(b) The board may, by a vote of two-thirds of the individuals then serving as members of the board, adopt, amend, or repeal any bylaw of the university for—

"(1) the conduct of the purposes, business, and affairs of the university, or

"(2) the regulation of the internal government of the university.

"(c) The board may, by a vote of two-thirds of the individuals then serving as members of the board, vote to merge with any other nonprofit organization."

SEC. 2. The amendments made by the first section of this Act constitute a complete restatement of the charter of the university and supersede all prior charter provisions contained in the Act of February 9, 1821 (6 Stat. 255) and all amendments and supplements thereto prior to the date of the enactment of this Act, without disturbing the present and continuing corporate status of the university.

SEC. 3. This Act may be cited as "*The George Washington University Charter Restatement Act*."

The title was amended so as to read: "A bill to amend the Act of February 9, 1821, to restate the charter of *The George Washington University*."

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CRANSTON. Mr. President, I ask unanimous consent to have printed in the *RECORD* an excerpt from the report (No. 95-226), explaining the purpose of the measure.

There being no objection, the excerpt was ordered to be printed in the *RECORD*, as follows:

#### PURPOSE OF THE LEGISLATION

The objective of S. 1060, requested by the administration of the George Washington University, is to restate completely the school's charter, substituting a more adequate, flexible and modern document for the cumbersome and now-antiquated original granted in 1821.

Congressional action is required to effect the change, as it was by means of a statute enacted by Congress that the institution was established as a federally chartered university.

#### BACKGROUND AND NEED FOR THE LEGISLATION

On February 9, 1821, the Congress of the United States enacted the initial statute creating in the Nation's Capital the major, national university then known as Columbian College. The name was changed to "*The George Washington University*" on January 23, 1904—one of eight occasions on which the charter has been amended since its original enactment; other revisions were made in 1871, 1873, 1878, 1893, 1898, 1905 and, most recently, in 1970.

Had the act of 1821 contained the language provided in S. 1060, none of the eight amendments would have been required.

The basic changes contained in the legislation are intended to consolidate the original charter and subsequent amendments into a single, simple document with sufficient flexibility to accommodate the university's normal processes of change without requiring additional legislative action.

The primary purpose of S. 1060 is to confer upon the governing body of the university a modern, comprehensive charter, free of outdated and unnecessary restrictions included in the earlier version. For example, the existing charter requires that the majority of the members of the university's board of trustees be residents of the District of Columbia. As it is in the interest of the school to permit election to the board of those best qualified to serve, without reference to their places of residence, section 4(a) of the new charter provides in part that any such requirements be prescribed by the university's bylaws. The change is consistent with general corporate laws, including those of the District of Columbia, which do not require the trustees of nonprofit corporations to reside in any particular jurisdiction. See, e.g., 29 District of Columbia Code 1018 (1973 ed.).

This legislation also conforms to the university's wishes to preserve the longstanding and historical significance of its status as a school chartered by an act of the Congress of the United States.

The provisions of S. 1060 were passed by the Senate in the closing days of the 94th Congress, in the form of an amendment to H.R. 14971; the bill, however, was not enacted prior to the end of the session.

#### PROVISIONS OF 1060

Section 1 of the bill would amend the charter of *The George Washington University* by substituting entirely new language, summarized as follows:

Section 1 provides for establishment of the university and, as amended at the request of the institution, changes its name from "*George Washington University*" to "*The*

*George Washington University*" to conform with common usage.

Section 2 cites the school's purposes—education, research, operation of medical facilities—and states explicitly that a policy of nondiscrimination must govern its pursuit of those objectives.

Section 3 enumerates the specific powers of the university to control and direct its operations. An open ended authority over the conduct of the school's affairs also is granted.

Section 4 provides for creation of a board of trustees and its executive committee. The detailed requirements of the original charter—governing board membership, elections, duties and activities, and including the residency requirements cited previously—are replaced in this section by reference to university bylaws. Section 4(b) establishes the continuity of the existing board, according to the terms set upon appointment of current members. Subsection (c) prohibits all school employees, with the exception of the president of the university, from serving as trustees.

Section 5 vests in the board the powers granted the university in section 3, in addition to authority over school personnel and the university's bylaws (which may be changed upon approval of two-thirds of the board's membership). The trustees also are empowered to merge the university with other nonprofit organizations, again with the concurrence of two-thirds of the board.

Section 2 of S. 1060 directs that the language provided in section 1 supplant in toto the language of the act of 1821, as amended, serving as a complete and sufficient charter in itself. It also ensures the continuity of the school's corporate status despite the change in the institution's charter.

Section 3, as amended, entitles S. 1060 "*The George Washington University Charter Restatement Act*."

#### HEARINGS AND COMMITTEE VOTE

A hearing was held April 27, 1977, on S. 1060, by the Subcommittee on Governmental Efficiency and the District of Columbia, of the Committee on Governmental Affairs. Dr. Lloyd H. Elliott, president of *The George Washington University*, testified in support of the legislation on behalf of the school; no witnesses spoke in opposition.

The Committee on Governmental Affairs, by a unanimous vote, ordered the measure favorably reported on May 12, 1977, after discharging the subcommittee from further consideration of the bill.

#### CONGRESSIONAL BUDGET OFFICE AND COMPARISON

No estimate and comparison of costs has been received by the committee from the director of the Congressional Budget Office, pursuant to section 403 of the Congressional Budget and Impoundment Control Act of 1974.

#### REGULATORY AND PRIVACY IMPACT

In accordance with rule XXIX there is no regulatory or privacy impact involved in the passage of this legislation.

#### COSTS

The enactment of the proposed legislation will involve no added costs for the Federal Government or the government of the District of Columbia.

#### INFLATIONARY IMPACT

The bill, if enacted into law, will have no foreseeable inflationary impact on prices or costs in the operation of the national economy.

#### PAYMENTS FOR COLLEGE AND UNIVERSITY FACILITIES

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 208.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1063) to amend Public Law 93-198.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Governmental Affairs with amendments.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments were agreed to en bloc.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 490 of the District of Columbia Self-Government and Governmental Reorganization Act is amended by adding the following:

"(f) Payments authorized or required to be made by or pursuant to any act authorizing the issuance of revenue bonds, notes, or other obligations for college and university facilities under this section shall be made without further authorization or approval."

The title was amended so as to read: "A bill to amend the District of Columbia Self-Government and Governmental Reorganization Act."

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CRANSTON. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-227), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

#### PURPOSE OF THE BILL

The purpose of the bill, S. 1063, is to allow the proceeds of revenue bonds which have been sold under acts approved by the District of Columbia Council and the Congress to be remitted to entity for whose benefit the bonds were issued without further legislative action.

#### BACKGROUND AND NEED FOR LEGISLATION

The Home Rule Act for the District of Columbia, (Public Law 93-198), specifically authorizes that—

"The Council may issue revenue bonds, notes, or other obligations (including refunding bonds, notes, or other obligations) to borrow money to finance or assist in the financing of undertakings in the areas of housing, health facilities, transit and utility facilities, recreational facilities, college and university facilities, and industrial and commercial development."

The section further provides that—

"Any and all such bonds, notes or other obligations shall not be general obligations of the District and shall not be a pledge of or involve the faith and credit or the taxing power of the District, shall not constitute a debt of the District, and shall not constitute lending of the public credit for private undertakings."

Under other provisions of the Home Rule

Act, all expenditures of the District government from its treasury must have the prior approval of Congress.

The District of Columbia on behalf of the members of the Consortium of Universities of Washington, D.C., is desirous of authorizing the issuance of revenue bonds which would have as their purpose the improvement of facilities of higher education in the District of Columbia. The bonds issued would be guaranteed by the institution of higher education which was receiving the benefit of the use of the funds.

During the course of the review of the steps required in order to successfully issue and market such bonds, bond counsel strongly advised the District that the elimination of the congressional approval of the transfer of the money to the benefiting college or university would improve the marketability of the bonds without in any way reducing the authority of the local and Federal Governments over the uses to which such bonds are put.

The District of Columbia government asked that the amendment contained in the legislation be made applicable to all types of revenue bonds. The committee decided that this might be too broad a delegation and that it was advisable to see how the delegation worked prior to increasing its scope.

#### PROVISIONS OF S. 1063

The bill would add a new subsection to the section of the Home Rule Act authorizing the issuance of revenue bonds to state that payments made pursuant to acts authorizing the issuance of revenue bonds may be made without further authorization or approval.

#### HEARING AND COMMITTEE VOTE

The Subcommittee on Governmental Efficiency and the District of Columbia held a hearing on S. 1063 on April 27, 1977. The Committee on Governmental Affairs unanimously ordered the bill reported on May 12, 1977, after discharging the subcommittee from further consideration of the legislation.

The District government and representatives of various colleges and universities testified in favor of the legislation. No one appeared or submitted a statement in opposition to the legislation.

#### CONGRESSIONAL BUDGET OFFICE ESTIMATE AND COMPARISON

No estimate and comparison of costs has been received by the committee from the Director of the Congressional Budget Office, pursuant to section 403 of the Congressional Budget and Impoundment Control Act of 1974. See cost estimate below by this committee.

#### COSTS

The enactment of this proposed legislation will involve no added costs to the District of Columbia government nor to the Federal Government.

#### INFLATION IMPACT

The bill, if enacted, will have no foreseeable inflationary impact on prices or costs in the operation of the national economy.

#### REGULATING OR PRIVACY IMPACT

In accordance with rule XXIX there is a regulating or privacy impact caused by this legislation.

#### DISTRICT OF COLUMBIA RECIPROCAL TAX COLLECTION ACT

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 209.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1103) to permit States the reciprocal right to sue in the Superior Court of

the District of Columbia to recover taxes due the State.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Governmental Affairs with amendments as follows:

On page 2, beginning with line 16, strike through and including line 24, and insert the following:

Sec. 4. In any State, territory, or possession, or subdivision thereof, in which the District of Columbia is authorized under the laws of such State, territory, or possession, to bring suit for the purpose of recovering of such taxes, the Corporation Counsel or any of his assistants is authorized to bring such suit in the name of the District of Columbia in the courts of such State, territory, or possession, or subdivision. The Mayor of the District of Columbia is authorized, in connection with any such suit, to procure professional and other services, at such rates as may be usual and customary for such services in the jurisdiction concerned.

On page 3, line 12, strike "Act", and shall become effective as of the date of enactment of this act," and insert "Act";

So as to make the bill read:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SECTION 1. Any State, territory, or possession, by and through its lawfully authorized officials, shall have the right to sue in the Superior Court of the District of Columbia to recover any tax lawfully due and owing to it when the reciprocal right is accorded to the district by such State, territory, or possession, whether such right is granted by statutory authority or as a matter of comity.

SEC. 2. The certificate of the secretary of state or other authorized official of any State, territory, or possession, or subdivision thereof, to the effect that the official instituting the suit for collection of taxes in the Superior Court of the District of Columbia has the authority to institute such suit and collect such taxes shall be conclusive proof of that authority.

SEC. 3. For the purposes of this title, the term "taxes" shall include—

(1) any and all tax assessments lawfully made, whether they be based upon a return or other disclosure of the taxpayer, or upon the information and belief of the taxing authority, or otherwise;

(2) any and all penalties lawfully imposed pursuant to a taxing statute, ordinance, or regulation; and

(3) interest charges lawfully added to the tax liability which constitutes the subject of the suit.

SEC. 4. In any State, territory, or possession, or subdivision thereof, in which the District of Columbia is authorized under the laws of such State, territory, or possession, to bring suit for the purpose of recovering of such taxes, the Corporation Counsel or any of his assistants is authorized to bring such suit in the name of the District of Columbia in the courts of such State, territory, or possession, or subdivision. The Mayor of the District of Columbia is authorized, in connection with any such suit, to procure professional and other services, at such rates as may be usual and customary for such services in the jurisdiction concerned.

SEC. 5. This title may be cited as the "District of Columbia Reciprocal Tax Collection Act".

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CRANSTON. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-228), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

#### PURPOSE OF THE LEGISLATION

The proposed legislation would authorize the several States of the United States to sue in the Superior Court of the District of Columbia to recover any taxes lawfully due that State, if a reciprocal right is accorded to the District of Columbia.

#### BACKGROUND

At the present time, 44 states grant each other the reciprocal right to sue for taxes owing that state in the courts of the other states. There is no such law in the District of Columbia. The Congress has been requested to grant such a right on a reciprocal basis by the District of Columbia Government. It is the District's belief, as was indicated by the appropriate officials at the hearings, that the passage of this legislation would aid in the enforcement of the tax laws of the District of Columbia.

#### SUMMARY OF THE LEGISLATION

Section 1 authorizes any State, territory or possession to bring suit in the Superior Court of the District of Columbia to recover any tax lawfully due and owing to it, if a reciprocal right is accorded to the District by such State, territory or possession.

Section 2 indicates that the certificate of the secretary of state or other authorized official of that State, territory or possession of the effect that the official bringing the suit is so authorized by the State shall be conclusive proof of that authority.

Section 3 defines the term "taxes" to include (1) tax assessments, (2) penalties lawfully imposed, and (3) interest charges lawfully added to the tax liability.

Section 4, as amended, authorizes the Corporation Counsel of the District of Columbia to bring suit for the purposes of recovering taxes.

Section 5 states the short title of the bill.

#### HEARING AND COMMITTEE VOTE

The Subcommittee on Governmental Efficiency and the District of Columbia held a hearing on S. 1061 on April 27, 1977. The Committee on Governmental Affairs unanimously ordered the bill reported on May 12, 1977, after discharging the subcommittee from further consideration of the legislation.

#### CONGRESSIONAL BUDGET OFFICE ESTIMATE AND COMPARISON

No estimate and comparison of costs has been received by the committee from the Director of the Congressional Budget Office, pursuant to section 403 of the Congressional Budget and Impoundment Control Act of 1974. See cost estimate below by this committee.

#### COSTS

The enactment of this proposed legislation will involve no added costs to the District of Columbia government nor to the Federal Government.

#### INFLATIONARY IMPACT

The bill, if enacted into law, will have no foreseeable inflationary impact on prices or costs in the operation of the national economy.

#### REGULATORY OR INFLATIONARY IMPACT

In accordance with rule XXIX there is no right or privacy impact caused by this legislation.

#### "GIVE YOURSELF CREDIT: GUIDE TO CONSUMER CREDIT LAWS"

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 213.

The PRESIDING OFFICER. The concurrent resolution will be stated by title. The legislative clerk read as follows:

A concurrent resolution (H. Con. Res. 162) for the printing of twenty thousand additional copies of the subcommittee print of the Subcommittee on Consumer Affairs of the Committee on Banking, Finance, and Urban Affairs, entitled "Give Yourself Credit: Guide to Consumer Credit Laws."

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the concurrent resolution was considered and agreed to.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CRANSTON. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-230), explaining the purposes of the measure.

There being objection, the excerpt was ordered to be printed in the RECORD, as follows:

House Concurrent Resolution 162 would provide (1) that the report by the Subcommittee on Consumer Affairs of the House Committee on Banking, Finance and Urban Affairs, entitled "Give Yourself Credit: Guide to Consumer Credit Laws" be printed as a House document; and (2) that there be printed 20,000 additional copies of such document for the use of the Subcommittee on Consumer Affairs.

The printing-cost estimate on House Concurrent Resolution 162, as agreed to by the House of Representatives, is as follows:

| Printing-cost estimate                                   |            |
|--|------------|
| To print as a document (1,500 copies) .....              | \$1,906.00 |
| 20,000 additional copies, at \$377.49 per thousand ..... | 7,549.80   |

#### "U.S. PARTICIPATION IN INTERNATIONAL ORGANIZATIONS"

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 214.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 154) authorizing the printing of the committee print entitled "U.S. Participation in International Organizations" as a Senate document.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution was considered and agreed to, as follows:

Resolved, That the committee print of the Committee on Governmental Affairs entitled "U.S. Participation in International Organizations" be printed as a Senate document, and there be printed two thousand additional copies of such document for the use of the committee.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CRANSTON. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-231), explaining the purpose of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Senate Resolution 154 would provide (1) that the committee print of the Committee on Governmental Affairs entitled "U.S. Participation in International Organizations" be printed as a Senate document; and (2) that there be printed 2,000 additional copies of such document for the use of that committee.

The printing-cost estimate, supplied by the Public Printer, is as follows:

| Printing-cost estimate                                  |            |
|---|------------|
| To print as a document (1,500 copies) .....             | \$2,073.29 |
| 2,000 additional copies, at \$420.62 per thousand ..... | 841.24     |
| Total estimated cost, S. Res. 154 .....                 | 2,914.53   |

A joint letter in support of Senate Resolution 154 addressed to Senator Howard W. Cannon, chairman of the Committee on Rules and Administration, by Senator Abraham Ribicoff and Senator Charles H. Percy, chairman and ranking minority member, respectively, of the Committee on Governmental Affairs, is as follows:

#### U.S. SENATE,

COMMITTEE ON GOVERNMENTAL AFFAIRS,  
Washington, D.C., May 2, 1977.

HON. HOWARD W. CANNON,

Chairman, Committee on Rules and Administration, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: On April 27, 1977, we submitted, to the Senate, Senate Resolution 154 providing for the printing of 2,000 copies of the Committee Print entitled, "U.S. Participation in International Organizations" as a Senate document. The report represents the preliminary findings of a committee study undertaken pursuant to the Senate Rules which direct the Governmental Affairs Committee to study "the intergovernmental relationships . . . between the United States and international organizations of which the United States is a member."

This report represents the first overall congressional study of the specialized agencies of the United Nations and other similar international organizations since the Government Operations Committee looked into this area 25 years ago. In addition to providing a compilation of data regarding international organizations which is not available in any other document, the report identifies and analyzes a number of issues concerning U.S. participation in international organizations and reviews ways of improving our Government's participation in the organizations.

When the committee released the report in February it received numerous requests for copies. We distribute over 1,400 of the 1,500

copies available to us within 2 weeks and now have less than 30 copies on hand. We continue to receive additional requests for the publication which we have not been able to fill and we understand that the Government Printing Office has now exhausted its supply of 1,000 reports as well.

The committee feels that 2,000 additional reports are needed because of the continuing interest in this study. We would like to be able to fill requests; furthermore, we anticipate that when public hearings are held on the committee's work, there be many additional demands for this volume.

We respectfully request that the Senate Rules Committee approve Senate Resolution 154.

Sincerely,

ARE RIBICOFF,

Chairman.

CHARLES H. PERCY,

Ranking Minority Member.

#### PRIVILEGE OF THE FLOOR

Mr. FORD. Mr. President, I ask unanimous consent that the following staff members have the privilege of the floor during consideration of S. 957: Thomas Allison, Dan Jaffe, Ed Merlis, Mal Sterrett, Steve Halloway, and Amy Bondorant.

#### PEACE CORPS ACT AMENDMENTS

Mr. CRANSTON. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 142.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1235) to further amend the Peace Corps Act.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Foreign Relations with amendments as follows:

On page 1, line 6, strike "and for fiscal year 1979 such sums as may be necessary" and insert "not to exceed \$84,800,000";

On page 2, beginning with line 1, strike "years 1978 and 1979" and insert "year 1978";

On page 2, line 2, strike "years 1978 and 1979 such sums as may be necessary" and insert "year 1978 \$1,000,000";

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That so much of section 3(b) of the Peace Corps Act (22 U.S.C. 2502(b)) as precedes the first proviso thereof is amended to read as follows: "There are authorized to be appropriated for fiscal year 1978 not to exceed \$84,800,000 to carry out the purposes of this Act."

SEC. 2. Section 3(c) of the Peace Corps Act (22 U.S.C. 2502(c)) is amended to read as follows:

"(c) In addition to the amounts authorized for fiscal year 1978, there are authorized to be appropriated for fiscal year 1978 \$1,000,000 for increases in salary, pay, retirement, or other employee benefits authorized by law."

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. CRANSTON. Mr. President, I move

to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### QUORUM CALL

Mr. CRANSTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. THURMOND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. JOHNSTON). Without objection, it is so ordered.

#### WITHDRAWAL OF U.S. TROOPS FROM KOREA

Mr. THURMOND. Mr. President, it was with a degree of shock that I read in the Wednesday, May 25 issue of the Washington Evening Star that President Park of Korea had been informed all U.S. ground forces would be removed from that country over the next 4 years.

Just last week I was briefed on this subject by the President's representatives, Chairman of the Joint Chiefs of Staff, Gen. George Brown, and Ambassador Philip C. Habib.

At no time during our conversation was it indicated to me that all 33,000 U.S. ground forces were in the plans for removal from Korea.

It was my impression that some units of the Army's 2d Division would be removed in a gradual drawdown and that further withdrawals would not be made until a study of the situation at that time was carefully conducted.

Mr. President, I am opposed to the withdrawal of any significant number of troops from Korea and so advised General Brown and Ambassador Habib. It is my understanding that my views on this subject are shared not only by practically all military officers, but many key Members of the Congress, as well.

In 1974 I visited Korea and at that time U.S. Forces there amounted to about 30,000 Army troops, 7,500 Air Force personnel, 200 Navy personnel, and 50 Marines.

Today current Defense Department charts show the following breakout of U.S. Forces in Korea as follows: Army, 33,000; Air Force, 7,200; Marines, 300; and Navy, 200.

Mr. President, it is easy to see from the above cited figures that the plan is to reduce U.S. Forces in Korea by over three-fourths. In my judgement, this would be a serious mistake and could invite a North Korean attack which may involve us again in a war on the Asian continent. This is the last thing we want or need.

The Army today is structured at 16 divisions, and needs to stay at that level. Moving the 2d Division to some other location will not save money, but rather cost money initially. We are, therefore, asking for trouble in Korea without gaining any benefits whatsoever.

In 1974 Senator WILLIAM SCOTT joined

me in visiting Korea and we filed with the Senate Armed Services Committee a report which was published as a committee print. I ask unanimous consent that the portion of our report on Korea be inserted in the Record following these remarks.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibit 1.)

Mr. THURMOND. It disturbs me that the U.S. military leaders in Korea were not consulted reference the advisability of this move. Further, they have been given no rationale for the withdrawal. Most military and defense opinion in Washington is opposed to the withdrawal, and it therefore appears to be a strictly political decision based on a campaign promise.

I have the greatest respect for President Carter. I know he wants only what is best for our country. However, one would think the Secretary of Defense would give him the military opinion of the Korean withdrawal before he makes a final decision. As Commander-in-Chief he should demand such opinion. It is my understanding the Joint Chiefs were never asked to comment on the withdrawal of the 2d Division, but rather to merely give options to that withdrawal.

No one denies that the North Koreans have a clear overall military superiority on that divided peninsula. That government is one of the most militant Communist dictatorships in the world. Their leader, Kim Il-Sung, frequently vows to liberate Korea. Their brutality is well known as evidenced by the hatchet slayings of American officers some months ago. The tunnels they dug into South Korea are but another example of the way they operate. They have attempted to assassinate President Park. The list of their deeds is endless and infamous.

The American public should never forget that North Korean forces along the truce line in Korea are but 20 miles from the South Korean capital. A surprise attack could wipe out the South Korean Government overnight. It is a dangerous situation, and will remain so as long as the present government maintains power in North Korea.

Mr. President, I have written President Carter, urging he go slow on his plans and hopefully reverse his decision. In making his decision I urge him to consult directly with his military officers, both in Korea and Washington. Direct consultation is necessary when important decisions are to be made.

Mr. President, I am frankly disturbed by reports reaching me that our military leaders are not being consulted on important military matters, such as Korea and SALT. While civilian authority is the final authority, the new policy of not consulting with military advisers is a very dangerous approach to decision-making.

The Senate Armed Services Committee should hold hearings on Korean troop withdrawals, if necessary, to establish the risks of such withdrawals and what is taking place in the decisionmaking councils of the Defense Department. Such hearings are essential if serious matters are to be managed as they have been managed in the Korean situation.

It is unfortunate that an outstanding officer such as Maj. Gen. John K. Singlaub has been caught up in the controversy regarding Korean withdrawals. Had his views and those of the other commanders in Korea been sought in the proper way, he probably would not have stumbled into his present situation. Certainly he and other officers in Korea must be frustrated that the administration's policy decisions on troop withdrawals would be made without the views of the soldiers on the line of resistance.

Mr. President, in conclusion, I ask unanimous consent that three articles be printed in the RECORD at the end of my remarks. These include articles on May 25 by Rowland Evans and Robert Novak entitled, "A Muzzle on the Military?" in The Washington Post; by James Wiegart entitled, "Korea: Silencing the General, Not the Debate" in the New York News; and by Vernon A. Guldry, Jr., entitled, "Singlaub Cites Wide Objection to U.S. Pullout" in the Washington Star.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From The Washington Post, May 25, 1977]  
A MUZZLE ON THE MILITARY?

(By Rowland Evans and Robert Novak)

Just as President Carter was publicly rebuking Maj. Gen. John K. Singlaub, resentment among senior military officers was given a stronger impetus when the Joint Chiefs of Staff belatedly learned about the latest proposal for the strategic arms limitation talks.

The JCS was briefed only last week on the new U.S. arms-control plan some two weeks after it was submitted to the Russians. The new proposals embrace basic questions of U.S. military strength, including retarded development of the cruise missile. That has generated rising resentment among senior officers that reaches into the JCS itself.

This is similar to both the cause and the underlying meaning of the Singlaub affair. His out-of-order public criticism of troop withdrawals from Korea reflected widespread frustration among the generals for not having been consulted in shaping that policy. So, in both Korea and SALT, the military's complaint is not so much that it disagrees with a policy but that it is ignored in policy formation.

Herein lies an unhealthy situation not fully comprehended at the White House. While nobody questions civilian supremacy, senior officers grumble that they are given no chance to submit their views but are simply handed a completed policy—along with a muzzle.

Oddly, JCS Chairman George Brown plays no part in this simmering revolt. Kept at his post by sufferance of President Ford and now Carter after his string of indiscreet public remarks, Brown wants to serve out his term without further trouble. But other senior officers, including members of the chiefs, want a greater policy voice. Gen. Bernard Rogers, Army Chief of Staff, has pushed particularly hard for a military role in SALT policymaking.

The Army is at the center of Pentagon discontent mainly because of concern with Korea. When Carter entered office, he did not ask the Pentagon's advice on whether to remove troops from South Korea but merely requested their comments on the best way to do it (as he did on his plan for drastic mutual reduction in long-range missiles).

The troop withdrawal had been decided on by Carter long before he became President. Admittedly a novice in foreign affairs, candidate Carter based his decision more on the imperatives of presidential politics than any exhaustive study of the Korean situation.

Singlaub's view stated to The Washington Post that Carter's Korean policy will lead to war is nearly universally shared by other U.S. generals, as well as many of the most politically sensitive Japanese. Since the understrength U.S. 2nd Infantry Division is obviously not a significant military factor, the question is whether its departure along with U.S. support troops, will be interpreted by Communist North Korea as an invitation to attack. While the debate clearly has two sides, the generals resent not having a chance to argue their case.

That resentment was intensified by the President's ordering Singlaub to the Oval Office. Old hands in Washington were amazed that the President had chosen public humiliation of a distinguished officer when a quiet reprimand and transfer would have sufficed.

To some officers, it appeared Carter was seeking to emulate Harry Truman's historic sacking of Gen. Douglas MacArthur. But MacArthur was a major political figure who repeatedly defied his President; Singlaub is a subordinate (third-ranking officer in Korea) guilty of one indiscreet interview. Actually, senior officers are even more concerned about the sudden exclusion of the military from SALT policymaking. While the Pentagon helped prepare Secretary of State Cyrus Vance's negotiating position in Moscow, it had no part in devising the new, softer stand in Geneva.

The possibility of a pattern here is suggested by the downgrading of military intelligence units, putting the CIA in a monopolistic status. While deprived of a full advisory voice before positions are taken, the officers are barred by the Constitution from commenting afterwards—as John Singlaub has learned.

The gagged condition of the military contrasts starkly with the rest of the open-mouthed administration, most conspicuously Secretary of Labor Ray Marshall criticizing the President's economic policies and U.N. Ambassador Andrew Young saying whatever comes to his mind. At a time of U.S. military decline in relation to the Soviet Union, this anomaly breeds angry frustration among the military.

[From the New York News, May 25, 1977]

KOREA: SILENCING THE GENERAL, NOT THE DEBATE

(By James Wiegart)

WASHINGTON.—The burst of favorable reaction President Carter received for sacking Maj. Gen. John K. Singlaub as chief of staff for U.S. army forces in South Korea is symptomatic of why American Presidents, at least most recent ones, prefer foreign policy over domestic policy.

With the exception of a few disgruntled Republican conservatives like Ronald Reagan, who called Carter's action "disgraceful," most everyone applauded Carter's decisive move against Singlaub following the general's comment that the President's plan to gradually withdraw U.S. forces from South Korea "would lead to war."

Democrats like former Defense Secretary Robert McNamara thought Carter handled Singlaub's insubordination "just right." By acting swiftly and firmly and not too harshly (after all, Carter only removed Singlaub, he didn't fire him), the President strengthened the principle of civilian control over the military and he sent a message to the top brass to keep their noses out of politics.

Former Defense Secretary Melvin R. Laird, a Republican also backed Carter, but understandably with less zeal, Laird and former President Gerald Ford are less sanguine about the ultimate wisdom of withdrawing all U.S. troops from South Korea, but they certainly stand four square behind the notion that the President, as Commander-in-Chief, should be obeyed by the military once

he makes a decision. So, out with Singlaub, a 34 year veteran of three wars. Never mind that he regretted his remarks and did not intend them for publication. Also, never mind the possibility that Singlaub might just be right and Carter wrong about the wisdom of withdrawing the American forces.

Now in what domestic problem area could Carter act so forcefully, so dramatically and so swiftly where the ultimate wisdom of his action is in serious question, without precipitating a wave of opposition and dissent? Certainly not on energy, or tax policy or welfare reform or national health care. Probably not even in such blander areas as government reorganization or farm policy.

It's not because domestic problems are more intractable or controversial that Presidents seem to have greater freedom of action in dealing with foreign policy issues. What's more complicated than trying to keep the peace between two nations bent on destroying each other and is more stirring to the emotions than the threat of conflict?

It's just that foreign policy issues seem more remote and less urgent than problems at home and Presidents have traditionally (and Constitutionally) been given more freedom of action in the world arena. The trouble with all this table-thumping applause for Carter's clampdown on Singlaub is that it gives the impression that Singlaub's position that the presence of 42,000 U.S. troops in South Korea is a major factor in keeping the peace in that area of the world and their withdrawal could trigger a resumption of the fighting between North and South, is without merit.

For another set of reasons, I do not feel constrained to join in the hosannas for the misfortune visited upon the general, who is after all, a man and not a symbol. In the first place, Singlaub clearly had no intention of being insubordinate. Unlike Gen. MacArthur, Singlaub did not publicly repudiate an order from his Commander-in-Chief. He tried to make that clear in the hubbub that followed the Washington Post story.

But more importantly there is a possibility that Singlaub's assessment is right and Carter's is wrong. There is no question that, next to the Middle East, the most dangerous place in the world today—in terms of a potential conflict that could rapidly involve the major powers—is the Korean peninsula, with Tokyo, Peking and Vladivostok less than one hour away by jet. Korea is obviously a strategic piece of real estate. Both North and South are armed to the teeth and headed by military dictators anxious to reunite the country, by force if necessary. North Korean Premier Kim Il Sung is particularly dangerous, being both belligerent and unstable. Finally, the United States is directly committed to come to South Korea's aid if attacked and North Korea probably has a similar treaty arrangement with the Soviet Union.

The 42,000 American troops in Korea not only contribute towards keeping the peace there, but they are concrete evidence of the U.S. commitment to remain a Pacific power—an important consideration to the value of continued good relations with the United States on the part of both Japan and the Peoples Republic of China.

It would be unfortunate if the removal of Singlaub is taken as a signal that the debate and discussion over Carter's decision to pull out of Korea is now over.

[From the Washington Star, May 25, 1977]

SINGLAUB CITES WIDE OBJECTION TO U.S. PULLOUT

(By Vernon A. Guldry, Jr.)

Maj. Gen. John K. Singlaub said today that no American officer in a responsible position in South Korea agrees with the Carter administration's plan to withdraw all U.S. ground troops there.

Singlaub testified before the House Armed

Services subcommittee on investigations. He repeated his own estimate that withdrawal would mean war with North Korea.

(In Seoul, President Carter's two special envoys, Philip C. Habib and Gen. George S. Brown, today told President Park Chung Hee of plans to withdraw 33,000 American troops from Korea in four to five years, the Associated Press reported.)

(Park did not welcome the plan, but agreed to accept it as America's "established policy," an aide said. He said Park asked for U.S. help in strengthening South Korea's military.)

Singlaub, who was fired from his job as chief of staff of U.S. forces in Korea by President Carter and recalled to this country, said it was the opinion of senior officers of the South Korean armed forces that withdrawal of the U.S. ground troops would mean "flat-out, clearly, unequivocally" that North Korea would attack.

Singlaub said that on purely military grounds "I agree with that." The general said that it also was his impression that senior U.S. civilian officials also believed the withdrawal of American ground forces to be a mistake.

Subcommittee Chairman Samuel S. Stratton, D-N.Y., asked Singlaub if the "overwhelming majority" of official Americans in Korea opposed withdrawal.

"That is absolutely correct," he replied.

What then was the reason for the withdrawal, Stratton wanted to know.

Singlaub said the Korean command wanted to know that, too.

The general continued that requests from the Korean command for a rationale for the withdrawal had brought no response, including a query directed to the Joint Chiefs of Staff.

Singlaub did not accept the proposition that the balance of forces between North and South Korea would permit withdrawal. He said there was "a clear military superiority of the North over the South" that would only be worsened by withdrawal of U.S. ground troops.

The general was fired from his post after an interview in which he expressed similar views was published in the Washington Post. Today he said he had thought his remarks to a reporter were "on background," a phrase that indicates the information may be printed but not attributed to the speaker by name.

"I realize that some will believe that regardless of whether I thought that my remarks were for non-attribution my aim was still the same—to take issue with our country's stated national security policy. However, I can state categorically that such was not my intent," the general said.

He said that as a professional military officer he supports the administration's policy. His contrary testimony was prompted under a convention of congressional testimony spelled out by Stratton. That permits committee members to solicit the personal views of military men after they have testified in favor of whatever it is their bosses want to do.

#### EXHIBIT 1 B. KOREA

1. Summary of Findings.—We found North Korea the most intransigent and Stalinist of all Communist nations, and remains intent on expanding its control into South Korea. This is evidenced by the recent discovery of a tunnel constructed beneath the demilitarized zone. President Park estimated as many as 6,000 men could be moved through this tunnel within a one-hour period. U.S. military officials stated the North Korean forces are tough, well-trained, highly disciplined and its Air Force is markedly larger than that of the Republic of Korea. In the event of attack by North Korea, U.S. forces probably would be involved from the beginning, to a minor degree, in a self-defense role.

U.S. military forces in South Korea total approximately 37,000. Three-fourths are Army personnel with the major tactical unit being the 2d Infantry Division. Other large units, organized under General Stilwell's 8th Army forces, include support, air defense and missile units.

The U.S. Air Force has some 7,500 personnel in South Korea, distributed among a division headquarters, two tactical fighter wings, one equipped with F-4Ds and a composite wing with F-4Es and OV-10s.

The U.S. Navy has operational control of all naval forces. These forces consist entirely of Republic of Korea personnel and equipment. U.S. Navy strength is about 225.

All forces are under a United Nations umbrella, although only two nations, the U.S. and South Korea, are actually participating. This situation is related to the fact that the Korean War ended in a truce as opposed to a final settlement.

The troubling aspect of the military situation is that the DMZ is about 25 miles from Seoul and an all-out thrust would immediately endanger South Korea's capital city. Further, such a thrust in all probability, would require the use of air power not now in country.

2. Recommendations.—We recommend for consideration by the appropriate and responsible authorities the following actions:

(a) That further headquarters reductions be undertaken and some transfers of various defense missions to the Republic of Korea be considered.

(b) That there be no decrease in U.S. Air Force units until modernization and expansion of the ROK Air Force is completed.

(c) That the newly consolidated U.S. headquarters now establish a combined headquarters with the Republic of Korea Armed Forces.

(d) That the Honest John elements of the 4th Missile Command be retained.

(e) That the U.S. 2d division be designated as a PACOM contingency force and that the division or portions thereof, occasionally deploy to other Pacific areas on training exercises.

(f) That the U.S. 2d Division be augmented with additional air mobile assets.

(g) That USAF tactical aircrews fly more close air support training sorties under the direction of ROK controllers, either air or ground.

(h) That the ROK Armed Forces modernization plan be adequately funded and there be no slippage from the currently approved schedule.

(i) That special attention and emphasis be given to improving the ROK Armed Forces tactical and secure communication equipment and capability.

(j) That the I Corps (US-ROK) Group be turned over to ROK control.

#### ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Marks, one of his secretaries.

#### EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages

from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

#### MESSAGES FROM THE HOUSE

At 12:10 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that:

The House agrees to the amendments of the Senate numbered 1 and 3 to the bill (H.R. 5306) to amend the Land and Water Conservation Fund Act of 1965, and for other purposes; and the House agrees to the amendment of the Senate numbered 2 with an amendment in which it requests the concurrence of the Senate.

The House agrees to the amendments of the Senate numbered 1, 2, 3, 4, 5, 6, 8, 9, and 10 to the bill (H.R. 5040) to authorize additional appropriations for the Department of State for fiscal year 1977; and the House agrees to the amendment of the Senate numbered 7 with an amendment in which it requests the concurrence of the Senate.

The House disagrees to the amendment of the Senate to the bill (H.R. 2) to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes; requests a conference with the Senate on the disagreeing votes of the two Houses thereon; and that Mr. UDALL, Mr. PHILIP BURTON, Mr. SEIBERLING, Mr. RONCALIO, Mr. BINGHAM, Mr. SKUBITZ, and Mr. BAUMAN were appointed managers of the conference on the part of the House.

The House disagrees to the amendment of the Senate to the bill (H.R. 4991) to authorize appropriations for activities of the National Science Foundation, and for other purposes; agrees to the conference requested by the Senate on the disagreeing votes of the two Houses thereon; and that Mr. TEAGUE, Mr. THORNTON, Mr. FUQUA, Mr. HARKIN, Mr. KRUEGER, Mr. WYDLER, and Mr. HOLLENBECK were appointed managers of the conference on the part of the House.

The House disagrees to the amendment of the Senate to the bill (H.R. 4991) to authorize appropriations for activities of the National Science Foundation, and for other purposes; agrees to the conference requested by the Senate on the disagreeing votes of the two Houses thereon; and that Mr. TEAGUE, Mr. THORNTON, Mr. FUQUA, Mr. HARKIN, Mr. KRUEGER, Mr. WYDLER, and Mr. HOLLENBECK were appointed managers of the conference on the part of the House.

The House has passed the following bill in which it requests the concurrence of the Senate:

H.R. 6884. An act to amend the Foreign Assistance Act of 1961 to authorize international security assistance programs for fiscal year 1978, to amend the Arms Export Control Act to make certain

changes in the authorities of that Act, and for other purposes.

#### COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1391. A letter from the Assistant Secretary of Defense transmitting, pursuant to law, notice of the intent to obligate \$17.4 million of funds available in the DoD Stock Fund for war reserve inventory for the Marine Corps (with an accompanying report); to the Committee on Appropriations.

EC-1392. A letter from the Assistant Secretary of Defense transmitting, pursuant to law, a listing of contract award dates for the period May 15, 1977 to August 15, 1977 (with an accompanying report); to the Committee on Armed Services.

EC-1393. A letter from the Deputy Secretary of Agriculture transmitting a draft of proposed legislation to amend Title V of the Housing Act of 1949 (with accompanying papers); to the Committee on Banking, Housing, and Urban Affairs.

EC-1394. A letter from the President of the National Academy of Sciences transmitting, pursuant to law, a summary report on drinking water and health (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

EC-1395. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, Energy Action No. 12 to establish targets of 250 million barrels of oil in storage by the end of 1978 and 500 million barrels of oil by the end of 1980 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-1396. A letter from the Acting Assistant General Counsel for International, Conservation and Resource Development Programs for the Federal Energy Administration transmitting, pursuant to law, notice of a meeting related to the International Energy Program (with an accompanying attachment); to the Committee on Energy and Natural Resources.

EC-1397. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, the monthly report on gasoline service station market shares for January 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-1398. A letter from the Secretary of Transportation transmitting a revised version of the estimate of the cost of completing the National System of Interstate and Defense Highways (with an accompanying report); to the Committee on Environment and Public Works.

EC-1399. A letter from the Attorney General of the United States transmitting, pursuant to law, notice of the proposal to alter a system of records maintained by the Civil Division, in accordance with the Privacy Act (with an accompanying report); to the Committee on Governmental Affairs.

#### PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM-207. A petition from Grace Emerson, Palm Springs, California urging the President and Congress of the United States to stop the surrender of the Panama Canal by the United States of America; to the Committee on Foreign Relations.

POM-208. A concurrent Resolution adopted by the Legislature of the State of South Carolina requesting the Immigration and Naturalization Service of the United States

Department of Justice to reevaluate and change its decision revoking the application for citizenship of Dr. Kostadin Vaklev and allow him to render vital medical services to the residents of Jasper County; to the Committee on the Judiciary:

#### "CONCURRENT RESOLUTION

"Whereas, it is an accepted fact that there is a need for doctors in the rural areas of the State and Nation; and

"Whereas, Jasper County had the good fortune of locating and obtaining the services of an able and qualified medical practitioner, Dr. Kostadin Vaklev, who was an alien, coming to Jasper County from the Bahama Islands; and

"Whereas, for the first time in recent history the residents of Jasper County were able to obtain the services of a medical doctor without the necessity of going out of the county; and

"Whereas, Dr. Vaklev, believing that he had complied with the requirements of the United States Immigration and Naturalization Service and would in due time become a citizen of the United States, without knowing the consequences of his action, returned to the Bahama Islands for the purpose of moving his personal effects to Ridgeland in Jasper County; and

"Whereas, this action was a technical violation of the immigration and naturalization laws, which resulted in the revocation of his application for citizenship and a notice from the Immigration and Naturalization Service that he would have to leave the country in the near future; and

"Whereas, the people of Jasper County will suffer a great loss if this outstanding doctor is forced to leave the Jasper County community because of an innocent act.

"Now, therefore, be it resolved by the House of Representatives, the Senate concurring:

"That the Immigration and Naturalization Service of the United States Department of Justice is hereby requested to reevaluate and change its decision to revoke the application for citizenship of Dr. Kostadin Vaklev and allow him to continue to render vital medical services to the people of Jasper County.

"Be it further resolved that a copy of this resolution be sent to the Attorney General of the United States, the head of the Immigration and Naturalization Service of such department, the Vice President of the United States, the Speaker of the United States House of Representatives and each member of Congress representing South Carolina."

POM-209. Resolution No. 26-18-1977 adopted by the Saipan Municipal Council, Saipan, Mariana Islands congratulating the President of the United States and the Members of the Ninety-Fifth United States Congress on their election, and offering them the best wishes of the People of Saipan throughout the course of their respective terms; ordered to lie on the table;

#### "A RESOLUTION

"Whereas, on November 9, 1977, the people of the United States of America elected James Earl Carter as their Thirty-Ninth President, and elected the Ninety-Fifth United States Congress; and

"Whereas, in their election of President Carter and the Members of the U.S. Congress, the people of the United States reaffirmed their faith in democracy and their hope and desire that the United States of America might continue as the greatest nation in the world; and

"Whereas, in President Carter and the Members of the U.S. Congress, the people of America can be assured that their highest elective officials will do their utmost to assure the continued progress of American society toward the fulfillment of the aspirations of the people; and

"Whereas, the people of the Municipality of Saipan, as constituents of the newest member of the United States Political Fam-

ily, wish to express their congratulations and best wishes to the President and the Congress, now, therefore,

"Be it resolved by the Twenty-Sixth Saipan Municipal Council, Second Regular Session, 1977, that the Council, on behalf of the people of Saipan, Northern Mariana Islands, hereby extends its sincere congratulations and best wishes to President James Earl Carter upon his election as the Thirty-Ninth President of the United States, and to the Members of the Ninety-Fifth United States Congress upon their election, and extends its best wishes for a fruitful and productive term of office; and

"Be it further resolved, that certified copies of this Resolution be transmitted to the President of the United States, to the President of the United States Senate, and to the Speaker of the United States House of Representatives."

#### REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. ROBERT C. BYRD (for Mr. McCLELLAN), from the Committee on Appropriations:

Report entitled "Allocation to Subcommittees of Budget Totals from the First Concurrent Resolution for Fiscal Year 1978" (Rept. No. 95-232).

#### EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. WILLIAMS, from the Committee on Human Resources.

Eleanor Holmes Norton, of New York, to be a member of the Equal Employment Opportunity Commission.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. EASTLAND, from the Committee on the Judiciary:

Robert L. Wright, of Kentucky, to be U.S. marshal for the western district of Kentucky.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. STENNIS, from the Committee on Armed Services:

Robert L. Nelson, of the District of Columbia, to be an Assistant Secretary of the Army.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

Mr. STENNIS, Mr. President, as in executive session, from the Committee on Armed Services, I report favorably the nominations of Gen. William E. DePuy, U.S. Army, to be placed on the retired list in the grade of general; and Lt. Gen. Henry E. Emerson, U.S. Army, to be placed on the retired list in the grade of lieutenant general; and Lt. Gen. Walter T. Galligan, U.S. Air Force, to be placed

on the retired list in the grade of lieutenant general. Also, Maj. Gen. Benjamin N. Bellis, U.S. Air Force, to be lieutenant general; and Vice Adm. Edwin K. Snyder, U.S. Navy, for appointment to the grade of vice admiral on the retired list; and 21 in the Marine Corps and Marine Corps Reserve for appointment to the grade of major general and brigadier general—list beginning with Warren R. Johnson. Also, Lt. Gen. Sanford K. Moats, U.S. Air Force, to be placed on the retired list in the grade of lieutenant general. Also, Adm. Daniel J. Murphy, U.S. Navy, for appointment to the grade of admiral on the retired list. I ask that these nominations be placed on the Executive Calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. In addition, there are 133 in the Air Force for promotion to the grade of colonel—list beginning with Lee F. Bernhard; and 867 U.S. Air Force Academy cadets for appointment in the Regular Air Force in the grade of second lieutenant—list beginning with Randy D. Abele; and 366 in the Reserve of the Army for promotion to the grade of colonel and below—list beginning with John C. Avampato. Also, there are 276 in the Navy for temporary and permanent appointment to the grade of commander and below—list beginning with Albert J. Werr; and 20 in the Navy for appointment to the grade as permanent and temporary lieutenants and ensigns—list beginning with George B. Foley. Also, there are 4,247 in the Navy for permanent promotion to the grade of lieutenant—list beginning with Roy Vernon Aasen. Also, 853 midshipmen from the U.S. Naval Academy to be permanent ensigns in the Navy—list beginning with Philip J. Aarons. Since these names have already appeared in the CONGRESSIONAL RECORD and to save the expense of printing again, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of May 13 and 24, 1977, at the end of the Senate proceedings.)

#### BILL PLACED ON CALENDAR

The following bill was read twice by its title and ordered placed on the Calendar:

H.R. 6884. An act to amend the Foreign Assistance Act of 1961 to authorize international security assistance programs for fiscal year 1978, to amend the Arms Export Control Act to make certain changes in the authorities of that Act, and for other purposes.

#### INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. BENTSEN:

S. 1609. A bill to amend the Tariff Schedules of the United States to increase from \$100 to \$300 the value of articles which may be imported duty free by, or for the account

of, any person arriving in the United States who is a returning resident of the United States; to the Committee on Finance.

By Mr. ALLEN (for himself and Mr. CRANSTON):

S. 1610. A bill to authorize the payment of attorneys' fees in tax cases; to the Committee on the Judiciary.

By Mr. CULVER:

S. 1611. A bill to amend the Internal Revenue Code of 1954 to provide for a deduction for additions to a reserve for product liability losses; to the Committee on Finance.

By Mr. DECONCINI (by request):

S. 1612. A bill to enlarge and amend the trial jurisdiction of United States magistrates in misdemeanor cases; to the Committee on the Judiciary.

By Mr. DECONCINI (for himself and Mr. ROBERT C. BYRD):

S. 1613. A bill to improve access to the Federal courts by enlarging the civil and criminal jurisdiction of United States magistrates, and for other purposes; to the Committee on the Judiciary.

By Mr. HAYAKAWA (for himself, Mr. DOLE, Mr. DOMENICI, Mr. McCLEURE, Mr. TOWER, Mr. YOUNG, and Mr. ZORINSKY):

S. 1614. A bill to establish the Western States Conservation Program; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. JOHNSTON:

S. 1615. A bill to amend the Federal-Aid Highway Act of 1973 in order to increase the Federal share of the cost of certain railroad highway crossing demonstration projects; to the Committee on Environment and Public Works.

By Mr. CLARK:

S. 1616. A bill to establish a national policy concerning agricultural, range, and forest land; to establish on Agricultural Land Review Commission; to establish a demonstration program for protecting agricultural, range, and forest land from being used for nonagricultural purposes; and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

#### STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. CULVER.

S. 1611. A bill to amend the Internal Revenue Code of 1954 to provide for a deduction for additions to a reserve for product liability losses; to the Committee on Finance.

Mr. CULVER. Mr. President, the legislation I introduced today would make it possible for businesses to receive a tax deduction for funds reserved to pay losses on product liability claims.

This bill, together with the reinsurance bill Senator NELSON and I introduced on January 30 (S. 527), responds to the threat to the business community posed by difficulties in obtaining product liability insurance.

Under the present tax code, businesses are, with a very few exceptions, generally prohibited from taking a tax deduction for reserves against losses. Thus, while a business may deduct the amount of premiums paid to an insurer for liability protection, the same amount placed into a reserve account to provide such protection would not receive the same tax treatment.

There is more at stake here, however, than matters of tax equity. In circumstances where insurance is readily available in the private market, one might argue that protection is most appropriate

through the transferral of the product liability risk to the insurance market; thus there would be little need for a mechanism by which businesses could more easily retain the risks associated with their product liability. But the Senate Small Business Committee has heard testimony from many observers who contend that product liability insurance is not readily available in the market.

As my colleagues on the committee well know, the declining availability and increasing costs of product liability coverage is a serious threat to many sectors of our economy, and is particularly keenly felt by the small business. Mr. President, I hear every day from small firms, both in Iowa and throughout the country, who tell me that they cannot find product liability insurance.

Even those who contend that, with hard work, most firms can obtain product liability insurance, admit that premiums for this coverage have become extremely burdensome. There is, of course, a point at which the high cost of insurance can make it virtually unavailable to a business firm. What are these firms to do? They have but two choices: pay-as-you-go liability or establishment of a loss reserve account.

The first choice has the obvious disadvantage that the business courts bankruptcy if its losses in a year exceed its ability to absorb the payout from current cash flows. It may have to borrow against, or sell, assets in order to meet losses on a contingent basis. Certainly, if a firm retains its risk on this basis, it becomes a matter of chance whether funds will be available to compensate injured parties for damages.

A limited survey conducted in the course of its insurance study by the Interagency Task Force on Product Liability identified approximately 184 firms that are without product liability coverage. The number of uninsured companies nationwide is far higher than this and, according to information compiled by the National Federation of Independent Businesses, could be as high as 40 percent of all small manufacturers. Some method must be found to facilitate the ability of these small firms to self insure against their product liability losses. A firm that is unable to obtain needed insurance coverage should have an option other than the roulette wheel route to bankruptcy. At least it should be able to hedge its bet.

This is the business' second choice: it may carry its product liability risk by setting aside funds in advance of any losses. Thus, a firm may protect itself to some extent by estimating its anticipated losses and providing for the payment of those losses on a regular basis.

The bill that I offer today would facilitate this ability to self-insure by providing that contributions to a retention fund to cover product liability losses can be deducted in the calculation of a firm's Federal income tax liability. A firm's self-retention for product liability risks would thereby receive the same tax treatment as its risk transferral to an insurer. Losses incurred under such a self-retention program are deductible, but because they may be spread irregularly over time,

they may have less favorable tax consequences than regular distributions. The proposed legislation provides a tax deduction when the loss is reserved rather than when it is incurred.

The amount which can be reserved for product liability in any given year is limited to 3 percent of gross sales of that product. This amount is comparable to what the most seriously affected manufacturers are now paying in product liability insurance premiums. The reserved funds would be available only for product liability payments, and withdrawals for any other purpose would be subject to a stiff penalty.

Aside from making self-insurance a more realistic option, the bill I introduce would have several other benefits. For example, many larger corporations purchase insurance when they can well afford to self-insure because they are able to expense their insurance premiums, but not their self-insurance. This contributes to the high demand placed on product liability insurers at a time when undercapitalization has adversely affected their capacity to provide adequate product liability insurance. Allowing larger firms to receive the same tax treatment for self-insurance as for insurance will free some of the capacity in the insurance market so that smaller firms may find it easier to locate affordable product liability insurance.

Mr. President, during the course of the Small Business Committee's study of product liability, we encountered many business firms whose premiums have skyrocketed although their losses have been minimal or nonexistent in the past. These firms may be able to predict their losses more accurately than underwriters, who seldom set rates for small accounts based on the firms' actual loss experience.

Also, a self-insured firm may transfer part of its risk to an insurer. A business could self-insure its liability within a certain range, and insure the remaining liability with primary and excess carriers. The premiums savings from higher deductibles may then be used to help pay for retained losses, to increase the amount of insurance protection against larger losses, or both. The firm that would benefit by retaining all or a portion of its risk would find it easier to accumulate funds for a self-insurance reserve, at once protecting itself and its customers against financial disaster.

In conclusion, I offer as a lucid statement of the benefits of this legislation, a letter I recently received from Dr. Chester McCloskey, of Norac, Inc., in Azusa, Calif. Dr. McCloskey's analysis of the pressures which small, apparently well managed, technically competent companies face today as a result of the product liability crisis is a compelling argument for the kind of legislation I am introducing. I hope my colleagues will heed his words and act quickly to bring about the relief small businesses so urgently require.

I ask unanimous consent that Dr. McCloskey's letter and the text of the bill be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE NORAC COMPANY, INC.,  
Azusa, Calif., May 3, 1977.

Re product liability insurance.

Hon. JOHN C. CULVER,  
Senate Office Building,  
Washington, D.C.

DEAR SENATOR CULVER: I was informed by a newsletter sent out by the Society of the Plastics Industry that you spoke at the March 22nd Annual Meeting of the Society of the Plastics Industry in Washington, D.C. I was very sorry I was unable to attend this meeting due to a conflict of the National Fire Prevention Association Committee meeting on which I serve. It was even of more interest to learn that you are the author of a bill designed to give relief to small businesses plagued with liability insurance problems. This has become a major problem to us, and one in which the survival of our company may depend.

The Norrac Company is a small organic chemical manufacturing company, specializing in the manufacture of organic peroxides and metallic stearates. The former are utilized as polymerization initiators and the latter as lubricants. We ship throughout the world, with 20-30% of our manufacture being exported. At one time there were a number of small manufacturers of organic peroxides in the U.S., but at the present time we are the only one that has not sold out to a large company. We are very proud that we are a responsible, independent company and that our research and development work in the field of industrial safety have been recognized internationally, and reports of our research in this field have been distributed by the Department of Transportation, Office of Hazardous Materials, throughout the world. This research was sponsored and paid for by the Norrac Company. I, personally, serve on the National Fire Prevention Association's committee on the "Storage, Transport and Handling of Hazardous Chemicals" which develops the National Codes in this field. I am also privileged to act as a technical advisor to the U.S. delegate to the United Nations Committee on the Transport of Hazardous Chemicals in the field of organic peroxides, and often attend meetings of the UN Committee as a member of the U.S. delegation when these meetings are directed towards the field of organic peroxides.

We are therefore a responsible, technically oriented, knowledgeable company in our field.

The total payments to date on product liability claims since the formation of the company in 1953 has been only a few hundred dollars. However, the following is what we currently face:

|       |              |             |           |
|-------|--------------|-------------|-----------|
| Date, | coverage,    | deductible, | and cost: |
| 1975, | \$1,300,000, | none,       | \$18,690. |
| 1976, | \$500,000,   | \$500,      | \$31,500. |
| 1977, | \$500,000,   | \$50,000,   | \$62,500. |

The company that carried our insurance in 1975 no longer issues liability insurance of any kind in the State of California. We are informed by our insurance broker, who is quite expert in these matters, that we are very fortunate to obtain any coverage whatsoever. I do not consider that \$500,000 is adequate coverage for a company of our size, as a loss of \$500,000 would simply break us.

We received this week, from one of our large customers, W. R. Grace & Company, a letter stating that it is henceforth their policy to require all suppliers of materials that they resell to guarantee that they will cover them, e.g., W. R. Grace & Co., for any product liability claims that may arise in connection with our product, to the extent of at least \$1,000,000. This is becoming very common in the industry, I am informed.

Our broker suggests that the only way we can survive is to put away at least \$25,000-\$30,000 a year into a reserve to cover such losses as we may incur using the \$50,000 deductible policy as outlined above, until such time that we accumulate in the order of

\$500,000 in the reserve, and then the insurance companies will be willing to cover the amount above that at a more reasonable cost. The problem herein is that in order to put money into a reserve we have to produce this in profit and half of this or more goes as taxes to the State of California and to the Federal Government. Therefore, in order to accumulate even \$50,000 in reserves we have to show a gross profit of over \$100,000. Could not legislation be written so funds can be deposited in a controlled account, e.g., at a bank, Savings & Loan, etc., for a product liability reserve without taxes being paid on the account, unless it becomes excessive or the funds are withdrawn for company use.

I do not see how we can survive as a technically viable company, compete internationally, and at the same time accumulate funds for a reserve for product liability under the present system. A secondary thing that will happen, of course, is that we will be unable to make our annual contributions to the Profit Sharing Fund, from which we hope to accumulate sufficient equity so that our employees, of whom we have approximately 60, can retire gracefully.

The company, and I personally, would be most happy to assist you in any way we can in resolving this most critical matter.

Respectfully yours,  
THE NORAC COMPANY, INC.,  
CHESTER M. McCLOSKEY, Ph. D.,  
President.

S. 1611

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 165 of the Internal Revenue Code of 1954 (relating to losses) is amended by redesignating subsection (i) as (j) and by inserting after subsection (h) the following new subsection:

"(i) Reserve for Product Liability Losses.—

"(1) General rule.—In the case of a taxpayer whose trade or business involves the manufacture, importation, distribution, lease or sale of a product with respect to which there is or may be product liability for the taxpayer, there shall be allowed as a deduction under subsection (a) the amount transferred by the taxpayer for the taxable year to his product liability loss reserve account.

"(2) Determination of amount.—The amount of the deduction allowed by paragraph (1) shall not exceed the lesser of—

"(A) 3 percent of the gross receipts of the taxpayer from the manufacture, importation, distribution or sale of such product, or

"(B) the amount which, when added to the balance of the product liability loss reserve account, equals 15 percent of the taxpayer's average yearly gross receipts from the manufacture, importation, sale, lease or distribution of such product for the shorter of:

"(i) the period during which the product liability reserve deduction has been taken;

"(ii) the five years ending in the taxable year for which the current deduction is taken.

"(3) Disallowance of deduction for losses paid out of account.—In determining the amount of the deduction allowable for the taxable year under subsection (a), no deduction shall be allowed for any product liability loss paid or incurred during the taxable year except to the extent that the amount thereof exceeds the balance of the taxpayer's product liability loss reserve account (disregarding any part of such balance attributable to income from amounts transferred to the account).

"(4) Payment from account for inappropriate purpose.—

"(A) Except as provided in subparagraph (B), if any amount is paid out of a product liability loss reserve account during the taxable year for any purpose other than the

payment of a product liability loss of the taxpayer—

"(1) the amount so paid out shall be included in the taxable income of the taxpayer for the taxable year, and

"(11) the tax liability of the taxpayer for the taxable year shall be increased (after taking into account the amount included in taxable income under clause (1)) by an amount equal to 50 percent of the amount so paid out.

"(B) Subparagraph (A) does not apply to amounts paid out of a product liability loss reserve account within 90 days after the day prescribed by law for filing the taxpayer's return under this chapter (including extensions of time) for the purpose of withdrawing that portion of an amount transferred to the account for the taxable year which is in excess of the amount determined under paragraph (2) for the taxable year and which was included in income for the taxable year.

"(C) For purposes of subparagraph (A), any use of amounts in a product liability loss reserve account which is inconsistent with the provisions of paragraph (6) (C) shall be treated as a payment of such amounts out of the account.

"(5) Special rule for controlled groups.—For the purpose of applying paragraph (2) to a taxpayer which is a member of a controlled group of corporations, the gross receipts taken into account for the taxable year with respect to each member of the group shall be only those gross receipts properly attributable to that member for the taxable year. For the purposes of this paragraph, the term 'controlled group of corporations' has the meaning given to such term by section 1563(a), except that—

"(A) 'more than 50 percent' shall be substituted for 'at least 80 percent' each place it appears in section 1563(a)(1), and

"(B) the determination shall be made without regard to subsections (a)(4) and (e)(3)(C) of section 1563.

"(6) Definitions.—For purposes of this subsection—

"(A) Product liability.—The term 'product liability' includes liability for operations after the operation has been completed or abandoned and means liability for damages arising out of physical injuries to persons or property attributable to negligence in, breach of warranty of, or defects in a product manufactured, imported, distributed, leased or sold by the taxpayer.

"(B) Product liability loss.—The term 'product liability loss' means a loss attributable to product liability of the taxpayer.

"(C) Product liability loss reserve account.—The term 'product liability loss reserve account' means a trust created or organized in the United States for the exclusive purpose of paying product liability losses sustained by the taxpayer—

"(1) the trustee of which is a bank (as defined in section 401(d)(1)) or another person who demonstrates to the satisfaction of the Secretary that the manner in which that other person will administer the trust will be consistent with the purposes for which the trust is established,

"(11) the assets of which will not be commingled with other property except in a common trust fund, and

"(111) the assets of which may not be borrowed, used as security for a loan, or otherwise used by the taxpayer for any purpose other than the payment of product liability losses by the taxpayer."

Sec. 2. The amendments made by this Act apply to taxable years beginning after December 31, 1977.

By Mr. ALLEN (for himself and Mr. CRANSTON):

S. 1610. A bill to authorize the payment of attorneys' fees in tax cases; to the Committee on the Judiciary.

#### TAXPAYER'S ATTORNEY FEE AWARD ACT OF 1977

Mr. ALLEN. Mr. President, in the last Congress during consideration of the Civil Rights Attorney's Fees Awards Act of 1976 (Public Law 94-559) I offered an amendment to permit the award of attorney's fees in tax cases. My amendment was adopted by the Senate and in due course was finalized as part of the new law. Unfortunately, the Tax Court on May 16, 1977, in the case of *Key Buick Company vs. Commission*, 68 T.C. —, rendered my amendment virtually meaningless by holding that the provision adopted would apply only when the taxpayer was a named party defendant in an action brought by or on behalf of the United States as a party plaintiff. I am advised that in roughly 99 percent of all tax cases the United States or the Internal Revenue Service is not a plaintiff but is rather a party defendant notwithstanding the fact that in actuality the Government is in the traditional plaintiff role in seeking to impose a tax liability on the taxpayer. Because of this procedural anomaly, the hastily drafted provision adopted in the last Congress has been effectively vitiated by the Tax Court, and prompt action is therefore now required by the Congress to insure that the purpose of the original provision is carried into effect without further delay.

Mr. President, we all know that the individual taxpayer or the small businessman is no match for the IRS and the vast resources of the Tax Division of the Justice Department of the United States. We have all heard countless stories of Internal Revenue Service intransigence, stubbornness, and willingness to expend vast amounts for legal costs in order to force settlement of disputed tax claims. Against that backdrop the Congress ought again to adopt a provision which would help a taxpayer facing the vast array of resources available to the Government, but only a provision which would apply if the taxpayer's position were proven correct. The chief object of permitting the discretionary award of fees and costs in tax cases is to encourage taxpayers to seek a vindication of their position and to discourage the Government from needlessly litigating disputes for the purpose of forcing settlement notwithstanding the actual merits of the controversy.

The bill Senator CRANSTON and I are today introducing is meant to cover, for example, cases in which a relatively small tax liability is at issue, legal precedent on the subject clearly favors the taxpayer, yet the Government persists in litigating an issue which has been previously resolved or which is fairly obviously going to result in a decision in favor of the taxpayer. In such cases, our bill will permit a court in its discretion to award attorney fees and costs to a taxpayer who elected to "go to the mat" with the Government rather than cave in when faced with the prospect of protracted litigation and substantial attorney fees over an issue involving a relatively small sum. But, Mr. President, the court need not determine that the Government has harassed the taxpayer nor need the court determine that the

Government has in some way acted in bad faith. The bill proposed mentions neither harassment nor bad faith.

Mr. President, a court in exercising its discretion should focus rather on the relative resources of the parties and on the perseverance of the taxpayers in vindicating his position.

So, Mr. President, the idea simply is that in any proceeding in which the Government asserts a taxpayer's liability for a tax and the taxpayer asserts that he is not liable for the tax and thereafter prevails, then a court may award fees to the taxpayer as the court sees fit. The form which the action takes is not of consequence. Since all tax disputes boil down to the Government asserting a liability and a taxpayer denying it, the formal position of the two parties is immaterial. The problem this bill would correct does not relate to procedural formalities; it relates instead to the substantive imbalance in resources available to the Government and to a taxpayer when the two dispute an issue of tax liability. Thus, differing standards with respect to a plaintiff or a defendant, which a court might for policy reasons apply in litigated controversies in other areas of the law, have no proper application in tax disputes.

There is only one kind of tax dispute regardless of who is a named plaintiff or a named defendant, or who is an appellant or an appellee, or who is an auditor or an auditee. A tax dispute is inherently a taxpayer asserting that he is not liable for a tax and the Government insisting that he is. The reasons of public policy which would make proper a discretionary award of fees are thus present or not present in a given tax controversy regardless of the formal position of the parties.

Mr. President, I sincerely regret that the Tax Court did not see fit to give a liberal interpretation to the provision enacted during the last Congress, but I believe the entire matter is of sufficient importance that the Congress ought to address again the issue and clarify through enactment of this bill its original intent to support the discretionary award of attorneys' fees in appropriate tax cases notwithstanding the formal position of the parties to the litigation. Senator CRANSTON and I strongly believe that the bill introduced today will cause a proper interpretation of the original action taken by the Congress and will have far-reaching, beneficial effects on the Government's treatment of small taxpayers and on the present somewhat tarnished public image of the Internal Revenue Service.

By Mr. DECONCINI (by request):

S. 1612. A bill to enlarge and amend the trial jurisdiction of U.S. magistrates in misdemeanor cases; to the Committee on the Judiciary.

Mr. DECONCINI. Mr. President, today I am introducing at the request of the Judicial Conference of the United States a bill designed to enlarge and amend the jurisdiction of U.S. magistrates in misdemeanor cases. The letter of transmittal from the Director of the Adminis-

trative Office of the U.S. Courts, Rowland F. Kirks, explains the purpose of the bill.

Mr. President, I ask unanimous consent that the bill and letter of transmittal from Director Kirks be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1612

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) subsection 3401 of title 18, United States Code, is amended by striking "\$1,000" and substituting in lieu thereof "\$5,000."

(b) Section 3401 of title 18, United States Code, is further amended by inserting into the first sentence of subsection (b) "other than a petty offense" immediately after "minor offense."

SEC. 2. Section 5031 of title 18, United States Code, is amended by inserting "other than a petty offense," immediately following the phrase "law of the United States."

ADMINISTRATIVE OFFICE OF THE UNITED STATES COURTS

Washington, D.C., May 26, 1977.

HON. WALTER F. MONDALE,  
President of the Senate,  
Washington, D.C.

DEAR MR. PRESIDENT: On behalf of the Judicial Conference of the United States, I am transmitting herewith a draft of an omnibus bill to enlarge and amend the trial jurisdiction of United States magistrates in misdemeanor cases. The draft bill consolidates three separate proposals recommended from time to time by the Judicial Conference.

Under existing law the United States district courts may designate United States magistrates to try and to sentence persons accused of certain minor offenses for which the penalty "does not exceed imprisonment for a period of one year or a fine of not more than \$1,000, or both." Section 1 of the draft bill would amend the definition of a "minor offense" to include all misdemeanors where the penalty does not exceed imprisonment for a period of one year or a fine of not more than \$5,000, or both, except for certain enumerated offenses. It is the view of the Judicial Conference that there are a number of misdemeanors in the United States Code not presently included in the term "minor offense" which could properly be tried by United States magistrates. These include the illegal possession of untaxed alcohol (26 U.S.C. 5688) and the illegal possession of certain controlled substances (21 U.S.C. 841(b)). The Conference believes that an increase in the fine limitation for minor offenses from \$1,000 to \$5,000, while retaining certain exceptions presently enumerated in the statute, would provide a beneficial expansion in the trial jurisdiction of United States magistrates and would thereby relieve United States district judges of some of the burden in handling minor crimes which are misdemeanors.

This section of the bill would additionally eliminate the requirement now found in subsection 3401(b) of title 18, United States Code, that a defendant in a federal petty offense case waive in writing his right to be tried by a district judge and consent to be tried before a United States magistrate. A petty offense is defined in section 1 of title 18 as a misdemeanor, the penalty for which does not exceed imprisonment for a period of six months or a fine of not more than \$500, or both. United States magistrates disposed of 78,000 petty offense cases during the fiscal year 1976, including 50,000 traffic cases; 13,000 illegal entry cases; and 5,800 violations of hunting, fishing, and camping regulations

on federal lands. It is the view of the Judicial Conference that the present requirement of a written consent by the defendant to trial before a magistrate is constitutionally unnecessary and creates a needless administrative burden for the magistrate and his staff. The Conference believes that the proposals to eliminate the consent requirement would further the goal of sound judicial administration. The proposal does not affect misdemeanors other than petty offenses, nor does it restrict any right that a defendant may have to a trial before a jury.

The draft bill, Section 2, would make clear that the Juvenile Delinquency Act does not apply in petty offense cases. The largest number of petty offenses are traffic violations committed within federal enclaves, which are generally handled by United States magistrates. However, magistrates are without authority to conduct juvenile proceedings. At the present time, the Juvenile Delinquency Act does not clearly exempt petty offenses from the definition of "juvenile delinquency." Application of the Act in such cases would mean that juveniles who wished to have their traffic cases conducted by a magistrate must undergo a complicated waiver procedure, which is generally unsatisfactory to all concerned. The proposed amendment would clearly allow United States magistrates to process petty offenses involving juveniles, particularly the traffic violations within federal enclaves.

It is the view of the Judicial Conference that the proposals embodied in this draft bill will enable the United States district courts to make more effective use of the United States magistrates and will significantly improve the administration of the trial jurisdiction of United States magistrates.

Representatives of the Judiciary and of this office will be pleased to furnish any further information regarding the proposals contained in this draft bill that may be requested, or to testify before the Committee to which the bill may be referred.

Respectfully yours,

ROWLAND F. KIRKS,  
Director.

Enclosure.

By Mr. DECONCINI (for himself  
and Mr. ROBERT C. BYRD):

S. 1613. A bill to improve access to the Federal courts by enlarging the civil and criminal jurisdiction of U.S. magistrates, and for other purposes; to the Committee on the Judiciary.

MAGISTRATES ACT OF 1977

Mr. DECONCINI. Mr. President, today I am introducing, together with the distinguished major leader, Mr. BYRD, the Magistrates Act of 1977, a bill designed to ease the burden of our district courts in certain civil and criminal cases by expanding the jurisdiction of Federal magistrates while establishing new standards for the appointment of full and part-time magistrates.

The Federal Magistrates Act of 1968 reformed the old U.S. Commissioner System and introduced into the Federal judiciary a new judicial officer having powers and responsibilities far exceeding those previously extended by law to U.S. Commissioners. The jurisdiction given to U.S. magistrates by the act was cast in broad terms. Authorization was given to district courts to assign to magistrates, by local rule of court, "such additional duties as are not inconsistent with the Constitution and laws of the United States." The legislative intent was clear:

magistrates were to assist district judges in performance of their judicial duties, relieving the district courts of some functions and allowing the judicial system to utilize its judges to better advantage. The bill I am introducing today furthers this legislative intent.

The criminal jurisdiction of magistrates will be expanded to a small degree. Magistrates presently have jurisdiction to try persons accused of, and sentence persons convicted of minor offenses; that is, misdemeanors punishable by imprisonment for not more than 1 year, a fine of not more than \$1,000, or both, other than certain specified offenses thought to be "inappropriate" for trial by magistrates—for example, violations of the Federal Corrupt Practices Act. At present, a defendant cannot elect to have his case tried before a jury in magistrate court. If he wants a jury trial, he must elect to have the case heard in district court. The proposed bill would alter this in the following respects:

First. The \$1,000 fine ceiling on magistrates' jurisdiction would be removed and the current exemption of certain offenses would be deleted, with the result that magistrates would be able to try all Federal misdemeanors.

Second. A defendant charged with a "petty" offense—that is, offenses punishable by imprisonment for up to 6 months or a fine of up to \$500 or both—would no longer be able to elect a trial in the district court, but would be tried by a magistrate without a jury. Where the punishment would be in excess of \$500 or 6 months for a misdemeanor, the defendant is given the election of a trial by jury before either the magistrate or the district court.

Third. In cases involving other than petty offenses, the Government as well as the defendant would be permitted to elect a district court trial.

Fourth. Magistrates would be permitted to sentence convicted defendants under the provision of the Youth Corrections Act.

Fifth. Appeals as of right would be to the district court of all magistrates' decisions. This is current law and will not be changed.

The provisions of this bill are in accord with well-settled case law on the defendant's right to trial by jury and on waiver. However, we recognize that the bill is innovative and that there might be constitutional aspects we have not considered. We are, therefore, scheduling hearings to begin June 6, 1977.

Civil jurisdiction will also receive a slight extension. Full-time magistrates specifically designated by the district court may conduct civil jury and non-jury trials without limitation on the amount of damages if both parties consent. This could substantially affect court caseloads in the district courts. Also, once a magistrate enters a judgment, appeal to the district court by right will be permitted. Further appellate review will be confined to discretionary review of matters of law decided by the district court.

Magistrates are indispensable to our judicial system today. Last year 90,166 petty and minor offense cases were dis-

posed of by magistrates. This represents a 6.7 percent increase over the 84,505 handled during fiscal year 1975. The volume of "additional duties" delegated to U.S. magistrates by the district courts under authority of title 28, United States Code, section 636(b) has risen steadily since the inception of the magistrates system. U.S. magistrates now assist the district judges in expediting civil and criminal litigation in the great majority of the 91 district courts served by magistrates. During the past year, for example, magistrates in 61 districts filed written reports and recommendations for disposition of 8,231 prisoner petitions. Magistrates conducted 17,559 civil pretrial conferences for the judges in 61 district courts. In 57 districts they reviewed 9,583 motions in civil cases. During the year magistrates in 54 districts submitted 684 special master reports under Rule 53 of the Federal Rules of Civil Procedure. They filed reports and recommendations on 1,480 social security appeals in 52 districts.

In criminal cases magistrates conducted 18,694 arraignments following indictment under rule 10 of the Federal Rules of Criminal Procedure in 68 districts. They conducted 5,397 pretrial conferences or omnibus hearings in 40 districts and reviewed 7,861 motions in 67 districts.

I urge my colleagues to support this legislation. Innovations are needed in the judicial system to help it cope with the ever-increasing and complex caseload. This legislation is a step in that direction and is "in-step" with basic concepts of justice and due process under American law.

Mr. President, I ask unanimous consent that the bill, and the remarks of the Attorney General in transmitting it, be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

## S. 1613

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Magistrate Act of 1977."

SEC. 2. Section 636 of title 28, United States Code, is amended:

(a) by deleting the word "and" at the end of subsection (a)(2);

(b) by deleting the period at the end of subsection (a)(3) and inserting in lieu thereof "; and";

(c) by adding at the end of subsection (a) the following new paragraph:

"(4) the power to hear and determine civil actions under subsection (c) of this section in conformity with and subject to the limitations of that subsection;"

(d) by redesignating subsections (c) through (e) as subsections (d) through (f), respectively;

(e) by adding after subsection (b) the following new subsection:

"(c) Notwithstanding any provision of law to the contrary—

"(1) when specially designated to exercise such jurisdiction by the court or courts he serves, and under such conditions as may be imposed by the terms of the special designation, any United States magistrate shall have jurisdiction to review, hear, or otherwise determine with the consent of the parties any nonjury or jury civil matter.

"(2) upon entry of a judgment by the magistrate in an action reviewed, heard or determined pursuant to subsection (c) (1) of this section, an aggrieved party may appeal by right on the record to the district court for the district where the action was reviewed, heard or determined. The district court shall have jurisdiction of the appeal and may affirm, reverse or modify the judgment, or may remand the case to the magistrate for further proceedings. Its review shall be under the standard that would be employed by the United States court of appeals, if the action were reviewed, heard or determined in the district court in the first instance.

"(3) upon petition for leave to appeal by a party stating specific objections to a judgment of the district court made pursuant to subsection (c) (2) of this section, the appropriate United States court of appeals may review the judgment. Such review shall be limited to questions of law: *Provided*, That the court of appeals review any action where it appears from the petition for leave to appeal that any prejudicial error of law has been committed.

"(4) in cases in which the court of appeals has reviewed a judgment of the district court under subsection (c) (3) of this section, review of the judgment of the court of appeals may be sought in the Supreme Court of the United States in accordance with section 1254 of this title;" and

(f) by deleting the words "United States Code" in subsection (d), as redesignated, and inserting in lieu thereof the words "or section 2072 of this title, as the case may be".

SEC. 3. Section 631 of title 28, United States Code, is amended:

(a) by deleting the first sentence of subsection (a) and inserting the following in lieu thereof: "Pursuant to the standards and procedures promulgated by the conference, the council of each circuit shall certify a list of persons deemed qualified to serve as United States magistrates. The judges of each United States district court and of the district court of the Virgin Islands shall appoint United States magistrates from the list certified by the council in such numbers and to serve in such locations within the judicial district as the conference may determine under this chapter. *Provided*, however, that such standards and procedures shall be promulgated no later than April 30, 1978. *And provided further*, that from the date of enactment of this amending provision to the promulgation of such standards and procedures, or April 30, 1978, whichever is earlier, no full or part-time magistrate shall be appointed to a new term. Full or part-time magistrates whose terms expire during this period may be reappointed to serve for an additional period not to exceed one year. *Provided also*, nothing in this subsection shall be construed as affecting removal procedures specified in subsection (b) of this section."

(b) by deleting in the first sentence of subsection (b) the colon after "unless" and inserting in lieu thereof "he has been a member of one or more bars of the highest courts of the States (or of the courts specified in subsections b(1)(A), b(1)(B), or b(1)(C) for at least five years, *Provided also*:"

(c) by deleting subsection (b)(2) and renumbering subsections (b)(3) and (5) as (b)(2) and (b)(3), respectively.

(d) by adding at the end of subsection (h) the following sentence: "Standards concerning qualifications promulgated by the conference pursuant to subsection (a) of this section shall be considered when relevant to the question of removal or retention in office under this subsection."

SEC. 4. Section 632 of title 28, United States Code, is amended by inserting at the end of subsection (a) the following: "All

United States magistrates who exercise jurisdiction by special designation under subsection 636(c) of this title or subsection 3401(b) of title 18 shall be full-time magistrates."

SEC. 5. Section 3401 of title 18, United States Code, is amended:

(a) by deleting the words "minor offenses" in subsection (a) and inserting in lieu thereof the word "misdemeanors";

(b) by amending subsection (b) to read as follows:

"(b) If the offense charged is a misdemeanor offense other than a petty offense as defined in subsection 1(3) of this title, however, either the person charged or the government may elect to have the case tried before a judge of the district court for the district in which the offense was committed. Unless the offense charged is a petty offense, or the government elects to have the case tried before a judge of the district court, the magistrate shall carefully explain to the defendant that he has a right to trial before a judge of the district court and that he shall have a right to trial by jury before a magistrate or a district court judge. The magistrate shall not proceed to try the case unless the defendant, after such explanation and with the consent of the government, signs a written consent to be tried before the magistrate that specifically waives with the advice of counsel a trial before a judge of the district court. The case shall be tried with a jury, unless the defendant waives with the advice of counsel a jury trial in writing with the approval of the magistrate and the consent of the government.

(c) By adding the following sentence at the beginning of subsection (d): "A magistrate may impose sentence pursuant to chapter 402 of this title. *Provided, however*, That no such sentence shall include a commitment for more than one year;" and

(d) by amending subsection (f) to read as follows:

(f) As used in this section, the term 'misdemeanors' means misdemeanors punishable under the laws of the United States."

STATEMENT OF ATTORNEY GENERAL GRIFFIN  
B. BELL

## PROPOSED MAGISTRATE ACT OF 1977

The proposed Magistrate Act of 1977 would enlarge the criminal jurisdiction of United States Magistrates and give them case-dispositive jurisdiction in civil actions if the parties and the District Court concur. The Act would also provide for more demanding magistrate appointment standards.

It will be introduced today in the Senate by Senator Dennis DeConcini of Arizona, chairman of the Judiciary Subcommittee on Improvements in Judicial Machinery, with the co-sponsorship of Senate Majority Leader Robert C. Byrd of West Virginia. Representative Peter W. Rodino, chairman of the House Judiciary Committee, has agreed to sponsor the legislation in the House. Thomas Ehrlich, president of Legal Services Corporation, has indicated he will testify in favor of the bill on behalf of the Corporation staff during Senate hearings scheduled for the week of June 5.

## I. U.S. magistrate system

In 1968 Congress enacted the Federal Magistrates Act to replace the commissioner system. Magistrates are officers of the district courts. This Act allowed courts to assign magistrates "minor" nonjury trials which involved no more than one year of potential imprisonment and/or a maximum fine of \$1,000. The defendant's consent to such assignment was required.

In 1976 Congress expanded the duties of the magistrates to allow them to perform pretrial and special master duties at the discretion of, and under the supervision of, the district court.

At present, there are 164 full-time magis-

trates. In addition there are 323 part-time magistrates, many of whom are located in remote regions and deal with minor and preliminary criminal matters. Although the appointment of these part-time magistrates will be affected by the competency provision of the bill, their particular duties will largely remain unaffected.

#### II. Improved access for the less advantaged

The proposed Magistrate Act of 1977 recognizes the growing interest in the use of magistrates to improve access to the courts for all groups, especially the less advantaged. The latter lack the resources to cope with the vagaries of adjudication delay and expense. If their civil cases are forced out of court as a result, they lose all their procedural safeguards. This outcome may be becoming more pronounced as the requirements of the criminal Speedy Trial Act increases its demands on the federal courts. The imaginative supply of magistrate services can help the system cope and prevent inattention to a mounting queue of civil cases pushed to the back of the docket by the Speedy Trial Act.

The bill would allow the increased and more flexible use of fully competent magistrate judicial officers with more limited tenure and salary requirements to improve access to justice on a district-by-district basis. Magistrates would be selectively placed to accommodate litigation peaks in particular districts at particular times. These surges in litigation have characterized, for example, the social security black lung disability cases. All this would be accomplished without resort to the process of congressional confirmation.

#### III. Magistrate appointment

At present there is an unevenness in the ability of magistrates to perform their tasks. Many magistrates were appointed in 1971 when the magistracy was in its infancy and its responsibilities unclear. To meet this problem the bill requires that in most cases the district court and the litigants consent to have their actions tried by magistrates.

The bill would also require the Judicial Conference of the United States to formulate standards and procedures to assure the highest quality of magistrate justice. These standards would be used by the judicial council of each circuit court of appeals to list names of persons qualified to serve as magistrates. The district court judges would select magistrates from this list. The Administrative Office of the United States Courts estimates that over fifty percent of the magistrates will come up for reappointment under these new standards and procedures by the end of 1979.

Under the new salary levels going into effect this summer, magistrates will be paid from \$39,600 to \$42,500, depending on the number of years they have met bar membership requirements. These salary arrangements should attract competent magistrates.

#### IV. Section-by-section analysis

##### A. Selection of Magistrates

Magistrates are currently appointed by the judges of each district court. Among other qualifications specified by Congress, a magistrate must be: (a) a member of the bar; (b) competent to perform the duties of the office (as determined by the appointing court); and (c) unrelated by blood or marriage to a judge of the appointing court. Except when his or her office is abolished, a magistrate may be removed (by the appointing court) only for incompetency, misconduct, neglect of duty, or physical or mental disability.

In order to ensure the selection and retention of qualified persons as magistrates, the bill would empower the Judicial Conference of the United States to promulgate procedures and establish standards to be used by the courts in selecting magistrates and in considering questions of removal or retention

in office. App. A, Sec. 3. In addition, bar membership requirements are expanded to mandate, in general, that no magistrate can be appointed without having been a member for five years of one or more bars of the highest state courts. This requirement is designed to prevent the appointment of those who have not acquired the necessary legal seasoning.

These standards would be used by the judicial council in each circuit to compile a certified list of qualified magistrates. The district courts would choose from this list. It is not anticipated that a candidate will have to be on the certification list at the time a vacancy occurs. He or she will only have to achieve certified status prior to appointment. Further, it is anticipated that the Judicial Conference will provide sufficient flexibility in its certification procedures, so they do not work a hardship on the substantial number of part-time magistrates. These magistrates receive little annual compensation and perform very limited functions.

##### B. Criminal Jurisdiction

Magistrates presently have jurisdiction to try persons accused of "minor offenses"; i.e., misdemeanors punishable by imprisonment for not more than one year, a fine of not more than \$1,000, or both, other than certain specified offenses thought to be "inappropriate" for trial by magistrate (e.g., violations of the Federal Corrupt Practices Act or voting offenses). At present, however, a defendant cannot elect to have his case tried before a jury in magistrate court. He can specify the district court, where he may also have a right to a jury trial.

The proposed bill would alter the magistrate's criminal jurisdiction in the following principal respects:

1. The \$1,000 fine ceiling on magistrate jurisdiction would be removed and the current exemption of certain offenses would be deleted. As a result, magistrates could try all federal misdemeanors, if the district court and the parties (in more serious misdemeanor cases) concur. App. A, Sec. 5.

2. A defendant charged with a petty misdemeanor offense (i.e., an offense involving no more than a six month jail sentence and/or a fine of up to \$500) would no longer be allowed to elect a trial in the district court but would be tried by a magistrate without a jury.

3. In nonpetty misdemeanor offenses (i.e., cases with from six to twelve months imprisonment at issue and/or fines above \$500) the government and the defendant could consent to trial before a full-time magistrate, if the district court concurs.\* The trial could be held with or without a jury. A defendant's decision to be tried by a magistrate would have to be made with the advice of counsel. App. A, Sec. 5.

4. The proposed expansions of the criminal jurisdiction of magistrates should have an appreciable impact in reducing the criminal dockets of the district courts and, as a consequence, in affording speedier and less costly justice to criminal defendants. Although the precise magnitude of this impact is impossible to forecast, it should be substantial since several misdemeanors not now triable by magistrates account for a large portion of district court caseloads (e.g., possession of Controlled Dangerous Substances).

##### C. Civil Jurisdiction

Magistrates presently have no explicit authorization to finally decide civil cases. However, under 28 U.S.C. 636(b) district court judges may designate magistrates to fulfill certain pretrial functions, conduct hearings, and serve as special masters. The proposed bill would explicitly give magistrates case-dispositive jurisdiction over all civil actions if the district court\* and the parties con-

cur. It would provide an appeal of right to the district court and further discretionary review by the court of appeals and the Supreme Court. More particularly, the bill specifies that:

1. Full-time magistrates specially designated by the district court may conduct civil jury or nonjury trials if the parties consent. App. A, Sec. 2. These cases span the entire spectrum of economic interests.

Depending upon the degree to which litigants are willing to have their cases determined by magistrates, the bill could have a very substantial impact on the civil case loads of the district courts. Given the dual consent required by the district court and the parties, it is not possible to forecast accurately the precise extent of this impact.

2. Once a magistrate entered a judgment, appeal to the district court by right would be permitted with respect to all factual and legal issues. App. A, Sec. 2. The standard of review would be the same as that the court of appeals would employ if the case were litigated initially in the district court.

3. Further appellate review would be confined to discretionary review of matters of law decided by the district court. App. A, Sec. 2. In the interest of judicial economy no additional factual review is felt necessary or desirable.

In many cases the administrative findings of fact will already have been reviewed twice—first by the magistrate and again by the district court.

The court of appeals would grant or deny leave to appeal in much the same way it acts on a petition for allowance of appeal in some bankruptcy cases. Refusal to grant such leave would not be reviewable by the Supreme Court. Only court-of-appeals determinations of law, made after the granting of leave to appeal, would be so reviewable.

Mr. ROBERT C. BYRD. Mr. President, I am pleased to join my distinguished colleague from Arizona, Mr. DeCONCINI, in introducing the Magistrates Act of 1977. This legislation will mark a significant step toward reducing the caseload of our Federal district court judges in areas where a well-qualified but non-tenured magistrate can administer justice. The bill is a logical extension of the trend in court administration since the passage of the first Magistrates Act in 1968.

In criminal cases, it will permit our overworked courts to handle a large volume of minor offenses without sacrificing procedural safeguards for the rights of the defendant. In civil cases, where the parties consent, magistrates will have jurisdiction without regard to the amount of recovery sought by the claimant. In areas where similar claims are repeatedly brought, the magistrate will be able to develop an expertise that will facilitate the handling of such cases. Appeals of administrative decisions such as black lung cases, which have caused a tremendous backlog in the district courts of the mining States, will thus be greatly expedited by the use of magistrates.

The District Court for the Southern District of West Virginia provides a dramatic example of the situation our district courts face. That court has a pending caseload of 3,134 cases. Of these, 1,723 are "black lung" or social security cases. Under this legislation, with the consent of both parties, these cases could be expedited and disposed of by a magistrate rather than await trial in the district court. If either party wishes to await such a trial, however, he may do

\* The court might promulgate a rule designating certain cases for magistrate determination.

so. Thus, no one will be deprived of a resolution of his claim by a district court if he desires one.

For these citizens, who have given their labor and their health for this country's coal production, justice has not been swift. This bill would expedite the relief due not only to them, but to all citizens who consent to have their disputes heard by a magistrate.

For those charged with petty offenses and misdemeanors against the United States, this legislation also offers swift and, with its new criteria to insure the selection of qualified magistrates, evenhanded justice.

I strongly support this legislation as a further step in the improvement of our overburdened court system.

By Mr. HAYAKAWA (for himself, Mr. DOLE, Mr. DOMENICI, Mr. McCLEURE, Mr. TOWER, Mr. YOUNG, and Mr. ZORINSKY):

S. 1614. A bill to establish the Western States conservation program; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. HAYAKAWA. Mr. President, I am greatly concerned about the drought in California and the Western States. Today I am submitting a bill to establish the Western States conservation program. This bill will extend the existing Great Plains Conservation Act into the West.

The extension of this program, through the cost-sharing practices, will allow farmers immediate relief in improving their present irrigation systems.

The long-term contractual provisions of the bill, through individual or cooperative efforts, provide for:

The development of irrigation and return irrigation systems;

Drainage and pollution control facilities;

Dairy flush and waste systems to conserve water through reuse;

Reseeding badly depleted rangeland; and,

The enhancement of fish and wildlife habitats.

The act has been good for those who have participated, as shown by a study made at the request of Gov. Richard F. Kneip. The South Dakota study shows that about 35 percent more of the farmers and ranchers with completed Great Plains conservation program contracts had adequate hay, pasture, and water supplies, compared with those who did not participate. Covering 418 farms and ranches, half with Great Plains conservation program contracts and half without, the study also showed that on land not under contract, 36 percent more acres of grassland are overgrazed and 38 percent more acres of cropland have moderate to severe wind erosion damage.

I feel that through the enactment of this bill, which expands the Great Plains conservation program, the Western States will receive great benefit from the improvement of their irrigation systems and better usage of the limited water supplies.

Since the effect of my bill is to expand the existing Great Plains conservation program to include seven new States, I

have removed the present \$300 million authorization limitation.

Mr. President, I ask unanimous consent that a copy of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1614

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Western States Conservation Act of 1977".*

SEC. 2. Section 16(b) (1) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590p (b) (1)) is amended by—

(1) striking out "Great Plains area" in the material preceding the first sentence and inserting in lieu thereof "Western States region";

(2) striking out the third complete sentence and inserting in lieu thereof "Such contracts may be entered into with respect to farms, ranches, and other lands in semiarid counties in the States of Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming, designated by the Secretary as susceptible to serious soil erosion and water depletion by reason of their soil types, terrain, and climatic and other factors";

(3) striking out the fifth complete sentence and inserting in lieu thereof "Such plan may also include practices and measures for (A) enhancing fish and wildlife, (B) improving irrigation systems to conserve water, and (C) reducing or controlling agricultural related pollution"; and

(4) redesignating clause (v) of the eighth complete sentence as clause (vi) and adding after clause (iv) a new clause (v) as follows:

"(v) to forfeit all rights to payments under sections 103 (e) (2), 105 (b) (1), and 107 (c) of the Agricultural Act of 1949, as amended by the Agriculture and Consumer Protection Act of 1973, for any losses sustained because of a natural disaster or condition beyond the control of the producer if such losses were sustained in connection with lands on which permanent conservation measures had been installed under a contract entered into under this section and such conservation measures were destroyed by the owner or operator of the farm or ranch after the expiration of such contract; and"

SEC. 2. Section 16 (a) (7) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 590p (b) (7)) is amended by striking out the colon preceding the word "Provided" and all that follows down to, but not including the first period.

By Mr. CLARK:

S. 1616. A bill to establish a national policy concerning agricultural, range, and forest lands; to establish an Agricultural Land Review Commission; to establish a demonstration program for protecting agricultural, range, and forest land from being used for nonagricultural purposes; and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

NATIONAL AGRICULTURAL LAND POLICY ACT

Mr. CLARK. Mr. President, the agricultural lands of the United States are an irreplaceable treasure and the basis for much of our Nation's economic strength at home and abroad. The vast extent and broad diversity of prime lands have shielded our people from disaster and famine, produced an abundant array

of high-quality food and fiber at low prices, and responded to modern technology and management with increasingly higher yields. Because of these factors, every American farmer today produces the food for himself and 56 other Americans. A single acre of prime farmland in my own State of Iowa produces enough calories to provide the current diet for 15 people in portions of Africa and Asia.

Unfortunately, however, this productivity today is being threatened by pressures which have not been experienced to the same degree in the past. Prime farmlands—those lands with the best combination of soil, moisture, climate and location—are also often the lands most attractive for building the houses, roads, airports, powerplants, and other developments needed by a growing society. As a result, the U.S. Soil Conservation Service estimates that our country is currently losing one million acres of prime land each year in irreversible land-use change. Another million acres of lower-quality crop and pastureland is also being lost each year.

This trend alone would be disturbing enough, given the growing demand for food and fiber in the world. But there are also additional trends which increase the cause for concern: Our Nation is currently preoccupied with the need to cope with emerging energy shortages. Reduced energy availability will drive farm production down as fertilizers and other agricultural inputs rise in price. Accelerated production of coal to meet fuel needs increases the threat of strip mining in agricultural areas. The increases in productivity that have kept production high in the face of declining farm acreages since World War II seem to be leveling off, with new technological breakthroughs not immediately foreseeable. Competition for water grows more keen, and agriculture faces the threat of diversion of essential irrigation water. Climatic fluctuations, such as the current drought conditions in various areas, make dependable production on marginal croplands an unrealized dream.

None of these factors, of and by themselves, constitute an overpowering threat to America's continued agricultural production. Taken in combination, however, they present a picture that must concern us. The trends are all wrong. We are almost certainly facing a squeeze in productive capability only a few years from now. Agriculture Secretary Bergland has called the situation a matter of deep concern.

At a time when the Nation needs increasingly strong leadership to protect our agricultural heritage, it is arguable that the Federal Government is the single largest contributor to the needless waste of prime agricultural lands. In the construction of Federal projects, the granting of Federal permits and the management of Federal resources, farmland is often given little—if any—consideration. Federally funded highways, for example, not only take prime farmland in excessive amounts, they also often cut diagonally across farming areas with the result that much adjacent land is rendered difficult—if not

impossible—to farm with modern machinery and methods. Such practices can and should be avoided. The Federal government should not be in the business of planning land use on the private farmlands of the Nation, but it should exercise full responsibility for the land-use impacts of its own policies and actions.

To better address these problems, I am today introducing the National Agricultural Land Policy Act.

The legislation contains three titles, each providing an essential element if we are to adequately address the agricultural land issue.

Title I establishes national policy to direct each agency of the Federal Government to use all practicable methods, consistent with other considerations of national policy, to retain, protect and improve agricultural land. Such policy, if enacted by the Congress and administered in good faith by the executive branch, can do much to assure that the Federal Government is not the primary cause of needless waste of agricultural lands.

Title II would establish a Land Resources Review Commission to study the use and productivity of agricultural land. The Commission would be composed of knowledgeable people who could evaluate input from citizens, experts and researchers around the Nation and present the President and the Congress with an authoritative evaluation of the situation and trends affecting agricultural land. The Commission would provide an annual report, as well as a final report upon its termination in 1982. These reports will seek to identify what is happening and why—to expose the root causes of agricultural land waste, and suggest remedial actions that can be appropriately and effectively taken. Such reports can provide the President and the Congress with the insights necessary to determine what, if anything, the Federal Government should do to encourage the retention of agricultural land in long-term productive condition and use.

Title III authorizes the Secretary of Agriculture to provide matching grants to State and local governments for carrying out programs to retain farmland in production. Nearly every State now has programs to encourage the retention of farmland, but few appear to be effective where land use competition is severe. Many States are, therefore, considering new and innovative programs. Local governments are concerned as well. In our own State, for example, local ordinances in Black Hawk County have attracted national attention because of their innovative approach to guiding development away from prime agricultural lands.

Clearly, States and local governments feel these programs are important. They are hampered, however, by a lack of resources and technical assistance. Title III of this bill would help solve this problem by providing a measure of Federal help. This help would only be available in limited amounts, however, and only for a period of 5 years, so that many different types of projects could be evalu-

ated as to their cost and effectiveness. These would be pilot demonstration programs, where local and State officials would use their own ingenuity to devise the programs, and then get Federal cost-sharing to carry them out. By spreading these Federal dollars over a broad array of different types of pilot programs scattered widely around the country, the Department of Agriculture can learn much about the economic, legal, environmental, and political advantages and disadvantages of many program approaches.

At the end of the 5-year grant program period, the Secretary of Agriculture would report back to the President and the Congress regarding the impact and effectiveness of these pilot programs. That report, coupled with the Commission's findings and recommendations, will provide the basis for the President and the Congress to effectively evaluate the agricultural land situation and take appropriate action. If we have overestimated the extent of the problem and further Federal action is not warranted, we can choose that option with confidence. If, on the other hand, increasing demands have created a situation where national action is clearly required, we will have invaluable information as to what actions are needed and how effective they will be.

The bill authorizes \$8 million to fund the total operation of the Agricultural Land Review Commission and \$25 million to provide for the operation of the demonstration projects funded under title III.

This legislation can be a landmark in our Nation's efforts to maintain a strong land-resource base and a healthy agriculture. The issue of protecting the land on which our Nation depends for its own food and fiber is not an issue to be dealt with lightly or superficially. I therefore urge my colleagues to join me in support of this legislation.

Mr. President, I ask unanimous consent that a section-by-section analysis of the legislation be printed at this point in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

#### SECTION-BY-SECTION SUMMARY OF THE "NATIONAL AGRICULTURAL LAND POLICY ACT"

##### TITLE I—NATIONAL AGRICULTURAL LAND POLICY

Section 101 establishes national policy to use all practicable methods to retain, protect and improve agricultural land. Consistent with other considerations of national policy, the federal government will exercise responsibility to reduce the amount of land annually converted out of agricultural uses, limit the encroachment of industrial activities where yield-reducing pollution occurs, encourage optimum use of agricultural land for maximum yields, minimize associated losses of high-quality range and forest land, assess effects of major federal actions on agricultural land, carry out a continuing inventory of the amount and condition of agricultural lands, and cooperate with states and their political subdivisions in efforts to retain, protect and improve agricultural land.

##### TITLE II—AGRICULTURAL LAND REVIEW COMMISSION STUDY AND REPORT

Section 201 establishes a 23-member Agricultural Land Review Commission appointed

by the Secretary of Agriculture. Members will not be employees or officers of the federal government. They will be persons knowledgeable on matters related to the protection of agricultural land, represent a geographic cross-section of the nation and comprise no more than 12 members of the same political party. Members will be appointed within 90 days after enactment, serve for the existence of the Commission, and be replaced, if necessary, by the same manner in which the original appointment was made.

Section 202 sets forth the duties of the Commission to study the use and productivity of agricultural land, the relationship of such land to the supply of and demand for food and fiber, the effects of competing land uses on agricultural land, the effect of public actions and investments, the effect of climate predictions, technology and other conditions, the effects of various policies and programs to encourage continued or accelerated crop production, the acquisition of agricultural lands by persons not engaged in agricultural production, methods of developing an improved land information system, the need for delivering data, analytic capability and technical planning assistance from the federal government to state and local governments, the effects of federal, state and local laws, and methods for protecting and improving agricultural land as well as ways of reducing the conversion of agricultural land to nonvital uses.

In carrying out this study, the Commission is authorized to contract for studies from public and private organizations or federal agencies, as well as seek the input of a broad cross-section of people from around the nation. Studies and actions of the Commission are intended to complement and supplement similar activities currently being carried out under other laws of the United States, not duplicate them.

Section 203 requires the Commission to submit annual interim reports and a final report to the President and to each House of Congress. These reports shall describe the findings of the studies carried out by the Commission, plus recommendations for modifications in policies, programs or laws that are necessary to prevent the diversion of agricultural lands, necessary coordination of activities carried out by departments or agencies of the United States, and other matters.

Section 204 calls for the termination of the Commission on September 30, 1982.

Section 205 provides for pay and travel expenses of members of the Commission. It allows \$100 for each day actually served, plus per diem for travel expenses incurred.

Section 206 provides administrative authorities for the Commission, including appointment and pay of staff, hiring of temporary services, gathering of information from federal agencies on a cooperative or reimbursable basis, detail of federal personnel to assist the Commission, holding of hearings, administration of oaths and issuance of subpoenas as needed.

##### TITLE III—DEMONSTRATION PROGRAMS

Section 301 authorizes the Secretary of Agriculture to provide financial and technical assistance to states and local governments for the purpose of demonstrating and testing methods of reducing the amount of land converted from agricultural uses.

Section 302 provides that any state or local subdivision desiring to conduct a pilot project under this title may submit an application to the Secretary under appropriate regulations.

Section 303 directs the Secretary to establish and publish the basis for selection of applicants to receive assistance. Priority is to be given to those projects which will provide timely information at a low cost, provide data not currently available or reliable,

and contribute a broad range of projects in terms of geographic location, types of approaches and improved utilization of agricultural land. Applications will be approved when the Secretary determines that they qualify under the criteria, that they can be completed within five years after funding, that the applicant has the ability to finance its share of the cost, that the applicant has the capability and exhibits the good faith to carry out the project, and that it will provide appropriate reports and necessary fiscal controls.

Section 304 sets the amount of assistance under this title to not exceed 60 percent of the cost of planning, carrying out and issuing reports on the project. The Secretary is responsible for determining that the applicant contributes its share of the costs in a satisfactory manner.

Section 305 requires the Secretary to consult with the Commission in planning and carrying out the demonstration program under this title.

Section 306 requires the Secretary to report to the President and the Congress on September 30, 1982 as to the findings and conclusions of the Secretary regarding the effectiveness of the demonstration programs under this title. The report shall contain such recommendations for legislative or administrative action as the Secretary sees fit to propose.

Section 307 limits the intent of the Act to not authorize the federal government to regulate the use of private land or diminish in any way the rights and responsibilities of the states and their political subdivisions.

#### TITLE V—FUNDING

Section 400 would authorize \$8 million to carry out Title II and \$25 million for Title III, distributed as follows: \$5 million for each of the five fiscal years ending on September 30, 1978; September 30, 1979; September 30, 1980; September 30, 1981, and September 30, 1982.

#### ADDITIONAL COSPONSORS

S. 218

At the request of Mr. HANSEN, the Senator from Idaho (Mr. McCURE) was added as a cosponsor of S. 218.

S. 247

At the request of Mr. GOLDWATER, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 247.

S. 533

At the request of Mr. JAVITS (for Mr. WILLIAMS), the Senator from Maine (Mr. HATHAWAY) was added as a cosponsor of S. 533.

S. 995

At the request of Mr. WILLIAMS, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 995.

S.J. RES. 39

At the request of Mr. BIDEN, the Senator from Nebraska (Mr. ZORINSKY) was added as a cosponsor of Senate Joint Resolution 39.

#### AMENDMENTS SUBMITTED FOR PRINTING

#### HOUSING AND COMMUNITY DEVELOPMENT ACT—S. 1523

AMENDMENT NO. 346

(Ordered to be printed and to lie on the table.)

Mr. PROXMIER. Mr. President, I am today introducing an amendment to S. 1523, the Housing and Community Development Act of 1974: to extend certain housing assistance and mortgage insurance programs; and for other purposes, which would require the appointment of the Chairman of the Board of Governors to be subjected to Senate confirmation upon nomination by the President.

The Federal Reserve carries out the monetary policy of the Nation on behalf of the Congress. The single most important individual involved in the conduct of monetary policy is the Chairman of the Federal Reserve. Monetary policy, of course, exerts an important influence on the economy and on employment, inflation, and growth.

At the present time all seven members of the Federal Reserve Board are appointed by the President by and with the advice and consent of the Senate for 14 year staggered terms. The Chairman is appointed by the President from among the seven members for a term of 4 years. The member selected to be Chairman is not required to be confirmed by the Senate in that capacity.

Since the post of Chairman of the Federal Reserve is one of such enormous influence, the Committee on Banking, Housing, and Urban Affairs last year reported to the Senate a provision which would have required Senate confirmation of the position. However, the provision was contained in a bill that included other controversial matters and the entire bill failed to pass.

I introduced the legislation once again in the current Congress and held hearings on the matter this week. The Board of Governors of the Federal Reserve has no objection to the enactment of this provision into law.

In my judgment it is imperative that the Senate have the opportunity to hold hearings and to debate whomever President Carter appoints to the post.

AMENDMENT NO. 353

(Ordered to be printed and to lie on the table.)

Mr. HATHAWAY. Mr. President, on June 6, when the Senate again reconvenes, the first order of business will be consideration of S. 1523, the Housing and Community Development Act of 1977. During the Senate's deliberations on this measure, I intend to offer, on behalf of myself, the Senator from Minnesota (Mr. ANDERSON), the Senator from Kentucky (Mr. FORD), and the Senator from Montana (Mr. METCALF), an amendment to the proposed new section 119 of the Housing and Community Development Act dealing with grants for severely distressed cities and urban counties.

This amendment would guarantee that not less than 25 percent of the funds appropriated for purposes of this section be reserved for cities of less than 50,000 which are not central cities of a standard metropolitan statistical area.

Mr. President, in order that my colleagues might be aware of my goals in this regard and that they might have the opportunity to study the specific language I shall be offering along with the

Senator from Minnesota, the Senator from Montana, and the Senator from Kentucky, I ask unanimous consent that a copy of a letter I recently sent, an attached statistical table, and the language of the amendment itself, be printed in the RECORD at the conclusion of my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

#### AMENDMENT NO. 353

On page 34, line 24, strike out the closing quotation marks and the second period, and after line 24 insert the following new subsection:

"(1) Not less than twenty-five per centum of the funds made available for grants under this section shall be used for cities under 50,000 population which are not central cities of a Standard Metropolitan Statistical Area."

U.S. SENATE,

Washington, D.C., May 24, 1977.

DEAR COLLEAGUE: The Housing and Community Development Act of 1977 makes sound improvements in the nation's housing and community development efforts. However, in attempting to address the very significant needs of the largest and most distressed cities, the bill would shortchange the nation's smaller cities.

The Housing and Community Development Act of 1974 established the community development block grant program which distributes the funds by formula. Nonmetropolitan communities are guaranteed 20% of the total under the formula. Approximately another 5% goes to small cities within metro counties. While this proportion is significantly below the 34% level which a December, 1976 General Accounting Office study indicates nonmetro areas should receive on the basis of need, it does recognize the importance of guaranteeing small communities a designated minimum of the available CD funds.

The Administration recommended a new Urban Development Action Grant Program which would allow the Secretary to direct a proposed \$400 million to the most distressed cities. No minimum guarantee for small cities was recommended by the Administration. However, in an overwhelming bipartisan vote on the House floor, 279 to 129, 25% of the UDAG funds were directed to communities of under 50,000 population inside and outside of Standard Metropolitan Statistical Areas.

The House recognized the reality that small communities could not compete effectively with larger cities, even though the factors the Secretary is to consider in awarding grants characterize many smaller communities. These factors include age and condition of housing stock, residential abandonment; low average income; population out-migration; and stagnating or declining tax base. On a small scale, many cities of under 50,000 are as distressed as the Newark, Garys and Detroit areas at which the UDAGs are aimed.

The Senate Banking Committee has presented a somewhat more complex picture by adding the so-called Williams formula. Under Senator Williams' amendment, a portion of the funds otherwise available for UDAGs would automatically be provided to certain older distressed cities of over 50,000 population on the basis of their pre-1940 housing stock. The Williams formula thus insures that those metropolitan areas most in need of UDAG funds receive first crack at the \$400 million pool. This UDAG earmarking would be phased in at an estimated level of \$112 million in FY 78, \$198 million in FY 79 and \$277 million in FY 80. Since these funds would be taken from the \$400 million per year

originally intended for UDAG, the UDAG balance would be limited to levels of \$288 million in FY 78, \$202 million in FY 79 and \$123 million in FY 80.

Communities of under 50,000 population are completely cut out of the Williams formula and, while eligible for UDAG balances, as a practical matter very few, if any, would be funded in open competition, due to the realities of grantsmanship. Therefore, while a \$400 million increase in the CD program is being recommended, not one penny is guaranteed for communities of under 50,000 population!

To remedy this I am offering an amendment which would set aside 25% of the UDAG balances for small communities in both nonmetropolitan and metropolitan areas. During the last 3 years, these communities have generally received less than anticipated funding from Community Development discretionary balances because of a heavy drain caused by urban counties.

By supporting this amendment, you would be supporting continued Congressional recognition of the need to provide minimum guarantees of funding for the nation's smaller communities.

I have attached for your information a chart which indicates the population in each state residing in communities of between 2,500 and 50,000 and the percentage of each state's urban population which this figure represents.

If you would like to cosponsor this amendment, or have any questions please contact me, or have your staff contact John Doyle at 4-2523.

Sincerely,

WILLIAM D. HATHAWAY,  
U.S. Senator.

U.S. total — 6,030 60,267,971 45

<sup>1</sup> Number of urban communities between 2,500-50,000.

<sup>2</sup> Population living in communities between 2,500-50,000 (a small part of these may reside in "urban counties" and already be eligible).

<sup>3</sup> Percent of States' urban population.

#### MINE SAFETY—S. 717

AMENDMENTS NOS. 347 THROUGH 352

(Ordered to be printed and to lie on the table.)

Mr. SCHMITT submitted six amendments intended to be proposed by him to the bill (S. 717) to promote safety and health in the mining industry, to prevent recurring disasters in the mining industry, and for other purposes.

#### NOTICES OF HEARINGS

##### RENEGOTIATION ACT

Mr. PROXMIER. Mr. President, the Senate Committee on Banking, Housing and Urban Affairs will hold hearings on the Renegotiation Act on June 13 and June 14, 1977.

##### LATE PAYMENTS BY THE FEDERAL GOVERNMENT TO CONTRACTORS

Mr. NELSON. Mr. President, I wish to announce that the Small Business Committee will hold hearings on Late Payments by the Federal Government to Contractors. The hearings will be held on June 8 and 9, beginning at 10 a.m. in room 424 of the Russell Office Building each day. The Senator from Oregon (Mr. Packwood) will chair the hearings. Witnesses will be announced at a later date. Further information can be obtained from the committee offices, room 424, Russell Office Building, telephone 224-5175.

##### RESTRICTIVE PRACTICES

Mr. NELSON. Mr. President, there will be an additional day of hearings on the restrictive practices in the eyeglass industry and the effect of State restraints on competition. The hearing will be on Tuesday, June 7 at 9:30 a.m. in room 424 Russell Senate Office Building.

##### RURAL DEVELOPMENT SUBCOMMITTEE

Mr. CLARK. Mr. President, I am pleased to announce that on June 14 and 16, the Rural Development Subcommittee of the Committee on Agriculture, Nutrition, and Forestry will resume its oversight work on rural development.

The hearings on both mornings will begin at 10 a.m. in room 322 Russell Senate Office Building.

The Assistant Secretary for Rural Development, Alex P. Mercure, and appropriate Agriculture Department staff will be the only witnesses on both days. The subcommittee will be taking testimony from Secretary Mercure concerning Farmers Home Administration management problems, implementation of the Rural Development Act of 1972, the Assistant Secretary's own views about the role of the Department of Agriculture in rural development, and several other

areas of importance regarding the administration's commitment to rural development.

Additional hearings are to be scheduled for July and August and will focus on farm and rural energy problems and government-wide coordination of rural development policies and programs.

##### THE MAGISTRATES ACT OF 1977

Mr. DECONCINI. Mr. President, I wish to announce open public hearings by the Subcommittee on Improvements in Judiciary Machinery on S. 1612 and S. 1613, two bills which I have today introduced. The bills enlarge the jurisdiction of U.S. magistrates.

Hearings will be held on June 6th, 8th, and 10th in room 2228 Dirksen Senate Office Building. On June 6th and 10th, hearings will commence at 9 a.m. On June 8th, hearings will commence at 8 a.m.

S. 1613, entitled the Magistrates Act of 1977, has been recommended by the Department of Justice and would expand the jurisdiction of Federal magistrates while establishing new standards for the appointment of full and part-time magistrates and, consequently, would ease the burden of our district courts in certain civil and criminal cases. I have also introduced S. 1612 at the request of the Judicial Conference of the United States. It will also enhance the jurisdiction of the U.S. magistrates in both civil and criminal cases.

Witnesses will include representatives from the Justice Department, the Judicial Conference, legal services groups, and practitioners.

Those who wish to testify or submit a statement for inclusion in the record should communicate as soon as possible with the Subcommittee on Improvements in Judiciary Machinery, 6306 Dirksen Senate Office Building, telephone 224-3618.

#### ADDITIONAL STATEMENTS

##### AIR TRANSPORTATION LEADERSHIP

Mr. GOLDWATER. Mr. President, at the time this body turned down the supersonic transport which was being built by the Boeing Aircraft Co., I said that it would be the point that marked the decline of American commercial air superiority and time is proving me right. Not only am I concerned about this apparent slippage but others are. For example, Mr. Harding Lawrence, president of Braniff International, in speaking before the American Airlines Administrative Association of Texas in Dallas, spoke about this entire subject. I ask unanimous consent that his remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

##### AIR TRANSPORTATION LEADERSHIP

(Harding L. Lawrence, chairman and president of Braniff International, recently said he is more deeply concerned about U.S. leadership in the air transport industry than at any previous time in his 30 years in the industry. Speaking before the American Airlines Administrative Assn. airport construction and regulatory reform. Aviation Week & Space

Technology is publishing key excerpts of his remarks below—Ed.)

The supersonic transport in the hands of other nations should be such a shocker that our citizens would rise up and demand that Congress get U.S. aviation moving again. And the Concorde should make us look not just at aviation technology but at every aspect of our air transportation.

Not only is there no supersonic transport under development. There are no new airports being built. There is no plan to make U.S. domestic airlines healthy or U.S. international airlines competitive. I feel some days that the airlines, the airframe and engine manufacturers, the airport operators, the institutional lenders, the air passengers are all waiting for something to happen but they don't know what. The only voices to be heard are those of self-appointed spokesmen who have nothing but negative things to say—in other words, new airports will destroy ecology, airplanes must be retrofitted to reduce noise, the Concorde will disrupt the atmosphere and cause us all to become deaf. Their miracle solution which will make airlines healthy, develop new aircraft, build new airports, and maintain American leadership in air transportation is lower prices.

We cannot let these calls for lower prices, for less noise, less air pollution—no matter how worthy the objectives—distract our attention from the fact that it is leadership in the future of air transportation which will produce the new aircraft, the airports, the systems, and reduce noise and smoke pollution and continue to keep air fares from rising as fast as the consumer price index.

Assuming we want to be leaders for the good of our nation, our economy, our security, then we must initiate vast new programs to regain leadership in aircraft technology; to continue to be the export source of the world's air fleets; to reequip U.S. airline fleets; to build the airport facilities and air traffic controls capable of handling increased flight frequencies; to develop the people handling procedures and hardware to accommodate double the number of today's travelers; to insure the quality and quantity of air service demanded by passengers.

If the claims that the Concorde supersonic doesn't meet noise and air pollution objectives are correct, and they are not correct, then why is not the United States developing a supersonic transport that will?

If present aircraft subsonic fleets cannot be retrofitted to meet noise regulations by the government's deadline in 1981 to 1985, then where is the next generation aircraft that will?

If present jet fleets are wearing out, why are we not now developing the workhorse replacement for the 707 and DC-8s and the follow-on aircraft for the 727, DC-10 and 747?

If aircraft development is being postponed for lack of airline orders which, in turn, require airline profits and loans, where is the financing plan which will provide the cash flow necessary to the airlines or the subsidy to the aircraft manufacturers?

... If we know the number of air travelers in the United States will double and air cargo will at least quadruple by 1985 to 1990, where are the developmental plans to provide the hardware and procedures to handle such mass and bulk? ...

Air traffic control has to be one of our major concerns, where is the plan that will handle increased frequency of flights, more aircraft in the air, whether commercial airliners or general aviation?

There is no miracle needed, no secret plan. What is needed is basic and clear. To secure technological progress, airframe and engine builders must be assured of airline orders. These, in turn, are dependent on capital formation [which] is dependent upon in-

ternal generation of funds and financing from outside the air transport industry.

The keys to internal financing are profits and tax laws. The key to securing outside financing is the ability of the airlines and their lenders and their suppliers to forecast a reasonable rate of return which can service debt. One key to forecasting in our business is stability in route authority and in regulation of air service by the government.

Let me point out further that technological progress is the key to future people productivity which, in turn, is the only offset, other than fare and rate increases and route awards, to meeting the increased cost of providing the quality and quantity of air service the nation itself needs to keep growing....

An airplane to replace DC-8s and 707s is now needed in four years and none is available. The closest aircraft now available is the French/German A-300B and substantial sales of this aircraft in the U.S. can be expected if a suitable U.S. aircraft is not developed soon. Another oil price increase is on us and yet the design of more fuel-efficient airplanes is floundering in this country because the airlines and the manufacturers cannot agree on the size, the range, and even the baggage compartment of the airplanes needed in the 1980s, not to mention the fact that financing isn't available.

The basic research is complete for the airplane of the 1980's. We know we can expect an airplane 5-10 percent more fuel efficient than the existing wide-body types, and we know that it will feature the super-critical wing, higher temperature metallics in the more efficient high bypass engines, and composite secondary structure. These are the sort of fundamental technology building blocks which have kept us in the forefront in the past. Building blocks by themselves, however, are of no value until they are combined into a useful structure.

We must, in 1977, reach a decision on basic design features of at least one new airplane incorporating the latest technology available. This will probably be a 180-passenger, mixed configuration airplane of the two-aisle, LD3 size with a range of about 2,000 statute miles and will probably be powered by three engines in the 20,000- to 22,000-lb.-thrust class. Early decision and development of this airplane is essential. The need for a 707/DC-8 replacement of about 200-passenger configuration with a 5,500- to 6,000-mile range is critical and development of this airplane must be accelerated.

Beyond these short-range targets, the future is more cloudy for the follow-on airplane to the Boeing 727-200, the DC-10, Lockheed 1011 and Boeing 747. Clearly, we must have a selection of airplanes in the small, mid, and large size range for the late 1980s and early 1990s which are 20 to 25 percent more fuel efficient than today's wide-bodies.

The technology for the 1990 aircraft obviously needs additional basic research. The logical organization to do this research is NASA. Government funding for the projects is essential. . . .

#### TESTIMONY OF BRUNO V. BITKER ON THE GENOCIDE CONVENTION BEFORE THE FOREIGN RELATIONS COMMITTEE

Mr. PROXMIRE. Mr. President, the Foreign Relations Committee began hearings Tuesday on the subject of the Genocide Convention. The statements of the initial day of hearings were graced by the testimony of Bruno V. Bitker, chairman of the Section on International Law of the Committee on International

Human Rights of the American Bar Association.

It was the formal opposition to the Genocide Convention by the American Bar Association that provided a major obstacle to Senate ratification of this most important treaty. However, last year the ABA, realizing that its objections had not stood the test of time, unanimously reversed its previous position and recommended adoption of the treaty.

It is my hope that this reversal by the ABA will provide the final impetus for ratification of the Genocide Treaty by this body. We have delayed too long.

Mr. President, I ask unanimous consent that Mr. Bitker's testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

#### STATEMENT OF BRUNO V. BITKER

Mr. Chairman and members of the committee: My name is Bruno Bitker and I am chairman of the American Bar Association's Committee on International Human Rights of the Section on International Law. I am honored to appear before you today on behalf of the American Bar Association to urge the Senate to give its advice and consent to ratification of the Genocide Convention. I have appeared before this Committee at prior hearings, conveying the support of a variety of organizations. I am, however, especially delighted to do so this time on behalf of the ABA, which represents the organized bar of this country. The American Bar Association, as this Committee is aware, did not easily or quickly arrive at its endorsement of the Genocide Convention. In fact, in 1949, prior to the hearings conducted by this Committee, it had decided not to support ratification because the treaty "involves important constitutional questions . . ." not satisfactorily resolved. Subsequently, in 1970, following President Nixon's request to the Senate to act on the Genocide Convention, the ABA again considered the question. But by a divided vote of 130 to 126 in the House of Delegates, it declined to change its earlier stand. Opponents of ratification had frequently cited the ABA position as justifying U.S. inaction. However, upon further study and consideration, in February, 1976, the ABA reversed its position and by an overwhelming vote recommended the ratification of the Convention. A copy of that recommendation and the supporting report is filed with this statement.

Though considerable attention was given to this Convention by the bar association before it decided to support it, it does not match the extensive and thorough analysis of every provision accorded to it by this Committee since President Truman, on June 16, 1949, sought the advice and consent of the Senate to ratification. The published hearings of the subcommittee held in January and February, 1950, contain about everything that could be said on the subject, pro and con. The opposition feared that it might undermine our constitutional structure. On the other hand, the favorable testimony was so meagre, it would be difficult to single out specific references. However, if any Senator or staff member wishes to read the supporting testimony of just one witness, I would suggest the remarkable presentation by Philip B. Perlman, Solicitor General of the United States (p. 22, et seq.).

On May 23, 1950, the subcommittee reported out the Convention favorably with one declaration and four understandings (summarized in *Legislative History of the*

*Committee on Foreign Relations, S. Doc. No. 247, 81st Cong., 2d Sess. at p. 27, 1950).* The full committee however, withheld action and for almost two decades it remained in the Senate's deep freeze. Today it is eligible for a place in the *Guinness Book of World Records* as being the oldest treaty pending before the Senate (U.S. Senate, Legislative Calendar, 95th Congress, March 31, 1977).

Although the Senate had taken no further action following the 1950 hearings, in July, 1963, President Kennedy sent to the Senate three human rights treaties (Political Rights of Women, Abolition of Forced Labor, and a Supplementary Slavery Convention). In the course of the hearings on these conventions in 1967, action on the Genocide Convention was urged. However, no action was taken on it.

In 1968, the year designated by the United Nations as Human Rights Year in honor of the 20th anniversary of the adoption of the International Declaration of Human Rights, the President created a President's Commission for the Observance of Human Rights Year. The Commission urged ratification of the Convention. More particularly, it created a special committee of lawyers headed by Supreme Court Justice Tom C. Clark (retired), which included some of the most prominent lawyers in the country. That committee, on which I was privileged to serve, issued a report on the treaty-making power of the United States in human rights matters. Justice Clark, in his letter of transmittal, said in part:

"I would like to reiterate here, however, our finding, after a thorough review of judicial, congressional and diplomatic precedents, that human rights are matters of international concern; and that the President, with the United States concurring, may, on behalf of the United States, under the treaty power of the Constitution, ratify or adhere to any international human rights convention that does not contravene a specific Constitutional prohibition."

In its conclusion, the report said: "It may seem almost anachronistic that this question continues to be raised. It is nearly a quarter of a century since this country used the treaty power to become a party to the U.N. Charter, one whose basic purposes is the promotion of human rights for all. The list of parties to the various human rights treaties proposed by the U.N. has become longer each year. In each of the last two years the U.S. Senate has approved a human rights treaty without a single dissenting vote. In December, 1968, the Chief Justice of the United States noted that we as a nation should have been the first to ratify the Genocide Convention and the Race Discrimination Convention. And yet the suggestion persists that this Nation is constitutionally impotent to do what we and the rest of the world have, in fact, been doing."

This report will be of value to members of this Committee and to the staff that drafts your report, and because it is now out of print, I ask consent to file my copy as a part of the record of these hearings.

Two other reports prepared by entities of the American Bar Association in support of ratification appear in the printed hearings of the subcommittee held March 10, 1971. One, at page 147, is the report of the ABA Section on Individual Rights and Responsibilities and the other, at page 196, is the report of the ABA Standing Committee on World Order Under Law. I participated in the drafting of the several reports to which I have alluded in this statement.

In February, 1970, President Nixon reminded the Senate that the Convention continued to be unfinished business and urged prompt action. Thereafter, new hearings were held in April and May, and again in March, 1971. The Committee reported out the Con-

vention favorably on December 8, 1970, on May 4, 1971, on March 6, 1973 and again on April 29, 1976.

There is no better or more succinct review of the status of the Convention than as set forth in the Committee's 1976 report. That report includes three understandings and one declaration, which are also included in the ABA's resolution of approval. Attached to the Committee's report is the implementing legislation proposed in accordance with Article V of the Convention. I see no problem concerning this legislation and I understand none has been suggested.

Everything that can be said on the constitutional question has been fully discussed in all these hearings and Committee reports. To save time and to avoid unnecessary repetition, I am not repeating these legal arguments. It is difficult to take seriously any basic constitutional objection to the Convention. It is conceivable, though it has not been urged, that there are public policy objections to ratification. But it would be hiding behind a false front to fail to ratify on spurious constitutional grounds.

As noted in the Committee's last report, no fewer than 82 members of the United Nations (perhaps 83 depending on how China's accession is viewed) have become parties to the Convention. Although the United States was a leader in drafting and securing its adoption in the United States in 1948, it is the outstanding laggard in ratifying it. Its failure to ratify borders on constituting a national disgrace. As the late Chief Justice Earl Warren said in December, 1968, "We as a nation should have been the first to ratify the Genocide Convention . . . Instead we may well be the last . . ."

Since the Committee's 1976 report, a new President of the United States has come into office. President Carter has followed all of his predecessors from Truman through Eisenhower, Kennedy, Johnson, Nixon and Ford in support of America's furthering the cause of international human rights, including ratifying the Genocide Convention. As President Carter stated on March 17th to the United Nations: "Ours is a commitment, and not just a political posture . . . To demonstrate this commitment . . . I will work closely with our own Congress in seeking to support the ratification . . . of the United Nations Genocide Convention."

The legal obligation with respect to human rights is thus noted by Philip C. Jessup, former member of the International Court of Justice:

"It is already law at least for members of the United Nations, that respect for human dignity and fundamental human rights is obligatory. The duty is imposed by the Charter, a treaty to which they are parties."

Certainly nothing is more basic to this obligation which the United States assumed when it ratified the U.N. Charter, than to outlaw mass murder of a national, ethnic, racial or religious group, as such, whether committed in time of peace or war.

I have especially referred in this statement to the endless hearings through which this Committee has sat to emphasize the need to fish or cut bait. The Committee has certainly exhibited great courtesy as well as extreme patience over the years in allowing anyone and everyone to express his or her views on the subject. As it said in 1976, "further hearings on the treaty were not warranted in view of the voluminous record made in hearings in 1950, 1970 and 1971." There appears no provision in the Convention that would support a successful attack on constitutional grounds. No objections asserted on a legal basis justifies delaying ratification. Any conceivable uncertainty as to a few phrases has been cured by the understandings. If there are justifiable reasons of national policy for not ratifying, they have not been advanced. The one new fact to be

noted since the last hearing is the favorable action of the American Bar Association. And that has now been recorded.

Each time the Committee has acted it has reported the Convention favorably. But each time it has reached the Senate floor, an actual or threatened filibuster has prevented the Senate from voting to support a commitment we made on December 9, 1948, when we approved the treaty in the United Nations. It is already past the time to sign on the dotted line.

The United States is now reestablishing its moral leadership in the world. If it now ratified this Convention, it would be a clear demonstration that it is faithful to its pledge under the U.N. Charter. It would also be acting in its own best national interest.

(Resolution adopted by House of Delegates, American Bar Association, February 17, 1976, and the Supporting Report)

#### AMERICAN BAR ASSOCIATION—SECTION OF INTERNATIONAL LAW RECOMMENDATION

The Section of International Law recommends adoption of the following resolutions:

Be it resolved, that the American Bar Association favors the accession of the United States to the United Nations Convention on the Prevention and Punishment of the Crime of Genocide with the following Understandings and Declaration which have been approved by the Senate Committee on Foreign Relations:

1. That the U.S. Government understands and construes the words "intent to destroy, in whole or in part, a national, ethnic, racial or religious group as such" appearing in article II to mean the intent to destroy a national, ethnic, racial or religious group by the acts specified in article II in such manner as to effect a substantial part of the group concerned.

2. That the U.S. Government understands and construes the words "mental harm" appearing in article II(b) of this Convention to mean permanent impairment of mental faculties.

3. That the U.S. Government understands and construes article VI of the Convention in accordance with the agreed language of the Report of the Legal Committee of the United Nations General Assembly that nothing in Article VI shall affect the right of any state to bring to trial before its own tribunals any of its nationals for acts committed outside the state.

4. That the U.S. Government declares that it will not deposit its instrument of ratification until after the implementing legislation referred to in article V has been enacted.

Be it further resolved that the President of the American Bar Association or his designee is hereby authorized to present the views of the Association as herein expressed before the appropriate committees of the Congress and other agencies of the Government of the United States.

#### REPORT

##### Summary of provisions of the convention

#### ARTICLE I

Genocide is a crime under international law, whether committed during peace or war.

<sup>1</sup> S. Exec. Report No. 93-5, 93rd Congress, 1st Sess., (1973).

<sup>2</sup> In preparation of this report the Section considered the testimony presented at the Hearings on Genocide before the Subcommittee of the Senate Committee on Foreign Relations in 1950, the Senate Committee's Report of December 8, 1970, May 4, 1971 and March 6, 1973 as well as previous reports of other sections and committees of the American Bar Association and other pertinent material including a Report in Support of the Treaty Making Power of the United States

The contracting parties undertake to prevent and punish such a crime.

#### ARTICLE II

Acts constituting Genocide are those committed "with intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such" by:

- (a) "Killing members of the group";
- (b) "Causing serious bodily or mental harm to members of the group";
- (c) "Deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part";
- (d) "Imposing measures intended to prevent births within the group";
- (e) "Forcibly transferring children of the group to another group".

#### ARTICLE III

Acts which are punishable are:

- (a) Genocide
- (b) Conspiracy to commit Genocide
- (c) Direct and public incitement to commit Genocide
- (d) Attempt to commit Genocide
- (e) Complicity in Genocide.

#### ARTICLE IV

Persons committing Genocide shall be punished, whether constitutionally responsible rulers, public officials or private individuals.

#### ARTICLE V

The contracting parties shall enact the necessary implementing legislation to enforce provisions of the Convention.

#### ARTICLE VI

Persons charged with a violation of the Convention are to be tried by a competent tribunal in the state where the act was committed or by an international penal tribunal having jurisdiction of the parties.

#### ARTICLE VII

For the purposes of extradition Genocide is not to be considered a political crime. Extradition shall be granted by the contracting parties in accordance to their laws and treaties in force.

#### ARTICLE VIII

Any contracting party may call upon the competent organ of the United Nations for action where appropriate to carry out the purport of the Convention.

#### ARTICLE IX

Disputes relating to "interpretation, application or fulfillment" of provisions of the Convention including those relating to the responsibility of a state for Genocide or other acts punishable by the Convention shall be submitted to the International Court of Justice at the request of the disputing parties.

Article X to XIX are procedural in nature.

#### DISCUSSION

The purpose of the Convention is to make Genocide an international crime whether committed during peace or war. It seeks to prevent and punish when it occurs the destruction, in whole or in part, of a national, ethnical, racial or religious group as such. The Convention defines Genocide, specifies the acts which constitute Genocide, sets forth the obligations of the parties, the place of trial of the accused, and provides for submission of disputes relating to interpretation, application or fulfillment to the International Court of Justice.

The first Understanding makes it clear that where the word "intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such" are used in the defini-

tion of the crime of Genocide that it means an intent to destroy by such acts in such a way as to affect a "substantial" part of the group concerned.

The second Understanding states that where the word "mental harm" is used to define a punishable act, it means a "permanent impairment of mental facilities." It does not include violent expressions or prejudice against individual members of groups. It also would discourage any frivolous allegations of mental harm.

The third Understanding is to take care of the situation where a national of the United States committed an act outside of the state. Pursuant to this understanding the U.S. will have the right to bring to trial before its own tribunals any of its nationals for acts committed. There has been considerable discussion regarding the Convention from the viewpoint of extradition. It should be understood that the Convention itself is not an extradition treaty.

The Convention is not self-executing but requires necessary implementing legislation. The recommended Declaration makes it clear that we must enact necessary federal legislation pursuant to our constitutional procedure prior to depositing our instrument of ratification.

Attached hereto as Appendix A is a copy of Senate Executive Report 93-5, 93rd Cong. 1st Sess., (1973). This Report lists the pertinent provisions of the Convention and gives an interpretation of each provision based upon the testimony offered at the earlier hearings. A copy of the Convention will also be made available to any interested party.

#### CONCLUSION

Eighty-two nations to-date have ratified and/or acceded to the Genocide Convention. The world community has, therefore, defined Genocide as "a crime against the laws of nations". The United States is a party to other treaties that define and establish an international crime. (The Geneva Conventions On Protection Of War Victims, 1949, TIAS 3362-3365; The Conventions For The Regulation of Whaling, 1935, TS 880, 1946, TIAS 1849; the International Convention for the Prevention of the Pollution of the Sea by Oil, 1954, TIAS 4900 and the Single Convention On Narcotic Drugs, 1961, TIAS 6298.) Statements made in the past and raised in the Senate and the ABA House of Delegates are no longer pertinent. The passage of time has confirmed that Genocide is a matter of "international concern" which should be regulated as an international crime. Acceding to the Convention at this time is a positive step in the national interest of our country. The American Bar Association should come forward and place on record its positive support.

This resolution was overwhelmingly approved by the Council of the Section of International Law at its Mid-Winter Meeting on December 5-7, 1975.

Respectfully submitted,

RICHARD P. BROWN, JR.,

Chairman, Section of International Law.  
FEBRUARY 1976.

#### TRIBUTE TO GEN. LEWIS B. HERSHEY

Mr. STENNIS. Mr. President, I want to join in paying richly earned and well-deserved tribute to my late friend, retired Army Gen. Lewis B. Hershey.

General Hershey had a long and distinguished record of service to this country. He served under six Presidents and during four wars as well as in peacetime. After having been appointed as Selective Service Director during World War

II he oversaw the drafting of some 14 million Americans.

Patriotism, loyalty, and devotion to duty were the hallmarks of General Hershey's long years of service to the Nation. I had occasion to work with him and I know that he was a determined, conscientious, direct, and honest man who never backed down no matter how tough the going was. He remained undaunted even during the heights of the protests against the war in Southeast Asia.

Lewis B. Hershey made a unique and singular contribution to his country. He will be long remembered by those who knew him and worked with him. I again pay tribute to his memory and to his long career of outstanding service.

#### A PLAN TO NOURISH ROOTS

Mr. PERCY. Mr. President, the Reverend Jesse L. Jackson, of Chicago, is well known for his philosophy that a strong family unit is the best foundation for a stable society. We know that as a result of Alex Haley's "Roots," there has been a widespread national revival of interest in family history and solidarity, a movement toward rediscovering ourselves through our families, something Rev. Jesse Jackson has preached for years.

I would like to share an article by the Reverend Jackson on the real message of "Roots," which appeared in the Washington Post for Monday May 23. Mr. President, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### A PLAN TO NOURISH ROOTS

(By Jesse L. Jackson)

We all know what Alex Haley was looking for and what he found. For all of the impact "Roots" has had on Americans and our images of our country and ourselves, however, one of Haley's most powerful messages really isn't being heard.

Visiting us in Chicago, Haley patiently retraced and reanswered the "Roots" questions he's heard thousands of times. But when time came for him to speak at length and personally, he talked not about "Roots" but about the roots of a modern American tragedy: the dissolution of the American sense and structure of family. He believes that the aimlessness and anxiety that torture the lives of so many young Americans have their origins in the rootlessness of modern life.

Haley's own quiet words are the best to describe the problem and how he suggests we attack it:

"Tens of thousands of children are growing up in homes without connections to their grandparents. Grandparents have been eased out of the modern American family. Many of them have moved into places with other older people. When that is done, they lose their contact with the children of their families.

"And that's a tragedy. Nobody can do for children what grandparents can. Grandparents sprinkle stardust on the lives of children. Without contact with grandparents, a child loses a vital and natural way to see and understand that he is a part of a continuum, that he has roots, that he is the future and the hope of all those who preceded him.

"We have put such emphasis on technol-

In Human Rights Matters prepared by the Special Committee of Lawyers of the President's Commission for the Observance of Human Rights Year 1969 (See the Appendix 18, House Foreign Affairs Subcommittee Hearings August-December 1973).

ogy and materialism that we are neglecting our greatest cultural treasure—our elders, those we patronizingly call 'senior citizens.' We must not lose what they know, for when they are gone, so will be much of who we are. "We don't have much time, perhaps only a decade, to reconnect with our elders, and, through them, our roots. There is no time to waste.

"There are three things to do:

"First, as quickly as possible, get to the oldest in our families and get everything from them we can about their—our—families. Go back again and again. Carefully, gently, firmly, ask them to go back and back in their memories. When we collect all they can tell us, it needs to be recorded. It needs to be written in clear and simple language, in the most direct way possible. If at all possible, it should be typewritten. Then make as many copies as needed to get a copy into the hands of each family member.

"As part of this effort, we must also preserve those old trunks of photos and clippings that our family members have. Those are our archives. In them, with thought and memories you will find things that will shake you to your soul.

"There is an urgency to this. If we let these elders and their records pass, we'll never know; it'll be lost.

"The third thing: We need to start holding family reunions. When families of diverse places and attitudes come together because of a common bloodline, people will find that they live on in others, though they may never have met or talked before.

"The family records and the reunions will give something important to our young. They will help them realize the drama of their past and so help them focus on being purposeful and proud in their lives."

That is the quiet message Alex Haley is so anxious about. He is challenging us to connect the roots of our past with the fruits of the present to secure our future. We must use the message of the struggles in our past to meet and overcome those of the future.

#### CONGRESSMAN NORMAN MINETA SUPPORTS REGULATORY REFORM

Mr. KENNEDY. Mr. President, Representative NORMAN MINETA, Democrat of California, delivered a very important address on regulatory reform in the air transportation industry. In addressing the Aero Club on Tuesday, May 24, Congressman MINETA articulated clearly and forcefully the major problems associated with the current regulatory scheme. As a respected and active member of the House Aviation Subcommittee, NORMAN MINETA speaks with considerable authority when he says that the Civil Aeronautics Board's entry standards are imprecise, at best, and frivolous and discriminatory, at worst. NORMAN MINETA's insights into the Board's entry policy demonstrate that the perceived protections airlines receive from current regulation are really quite feeble and, in any event, are purchased at a very high cost—carriers must give up certainty, management flexibility and numerous opportunities to grow.

Mr. President, I urge my colleagues to study closely NORMAN MINETA's comments on this important issue. I ask unanimous consent that Congressman MINETA's address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### WHY REFORM?

(By Representative NORM MINETA)

It is a pleasure for me to be here today and to have this opportunity to share some thoughts with you. I've been fortunate in the short time that I've been here in Congress in being able to work with many of you on issues relating to aviation. I want you to know how much I have appreciated your willingness to discuss your concerns about the future of the aviation industry frankly with my staff and me.

Although we share a common interest in many legislative areas related to aviation, such as our on-going effort to establish aviation noise abatement programs, I would like to utilize this forum today to discuss some of the issues relating to the reform of the economic regulation of the nation's airlines. As a member of the House Aviation Subcommittee, and as a former Mayor of San Jose, California, I hope to be able to bring to this discussion substantive comments on the national issues as well as some comments on the situation in California which will be helpful to all of us in achieving our common goal of the best, safest, most economical air transportation system in the world.

As you are well aware, there is a growing momentum in Congress and the Administration to review governmental regulations of all kinds. It is an effort to strike a new, more responsive balance between the regulated, the regulators, and the consumers of regulated services. I have both high hopes and considerable apprehensions about Congressional efforts to achieve aviation regulatory reform. My apprehensions stem from the prospect of two ideologies meeting head-on in endless and hopeless debate. This apprehension was reflected in the testimony last year before the House Aviation Subcommittee, by Lamare Muse, President of Southwest Airlines. Mr. Muse stated, "What the (Interstate Carriers) say is that their problem of not making profits is because they cannot raise their fares enough, even though in the last six months they have had four fare increases."

"They just do not look at this world the way I do, sir, and we just cannot reconcile our differences. I say the way to make money is to cut your fare. They say the way to make money is to raise your fare. And we just do not agree."

Mr. Muse was reflecting two lofty absolutes which, when stated as principles, sound equally convincing, and we get nowhere. I am reminded of a quotation from F. Scott Fitzgerald, "The test of a first-rate intelligence is the ability to hold two opposed ideas in the mind at the same time, and still retain the ability to function." I was certainly ready to claim that "first-rate intelligence" until I realized that the book from which this quotation was excerpted was entitled *The Crack Up*. Frankly, I fear a tendency on both sides to argue from lofty absolutes with Members of Congress forced to navigate between a rock and a hard place!

My hopes are that we will discuss not absolutes, but the down-to-earth realities of the aviation industry; that we will base our positions on the best predictions of real-world effects that a change in the regulations will bring. I would prefer to picture us meeting as mechanics and engineers around a great engine—representing the present aviation industry. We should begin by reminding ourselves that the engine is the best of its kind anywhere in the world, by any measure: route miles, relative size of market, convenience, efficiency and safety. But, like mechanical tinkers anywhere, we would like to devise ways of improving its performance. If we work together, I think we can accomplish that task.

Although there are several legislative proposals being considered in Congress right now, we are not here to discuss one particular proposal. Obviously, any idea and/or combinations of ideas must and will be considered. It will be our job in Congress, based on a thoughtful analysis of the record, to develop a legislative package that is effective, responsive and responsible.

It is easy to figure out how the idealogues would respond to the question of entry into new markets. One side would maintain that total freedom means more competition, lower fares, higher load factors, and improved airline earnings. The other side would claim that anything other than the status quo is a sure-fire path to cut-throat competition, reduced service, and lower profits. It's clear that a reasoned analysis would end up somewhere between these absolutes.

You are all aware of the manner in which the CAB, with its mandate for "public convenience and necessity," has dealt with the matter of entry into new markets. Since 1950, there have been over 80 applications by new firms to provide trunk service, but not one has been granted. The development of service, other than by trunk carriers, has been impressive, including local service, supplemental, all-cargo, and commuter; and yet those categories combined account for only 10% of all air service. Indeed, the Board's route award procedures have been neither fair nor effective in allowing existing carriers to serve new markets. It is apparent that the Board's route award procedures are bad for everyone in the industry—large as well as small carriers. The real question we must address is whether control of entry disadvantages the carriers. As I study this issue again and again, I believe the evidence is that it does. At best, the standards are imprecise; at their worst, they are frivolous and highly discriminatory.

I'm sure there are many "horror" stories associated with this aspect of the Board's procedure. I'd like to share with you one which I find particularly meaningful to this debate.

In 1974, Hawaiian Airlines applied to CAB to serve Vancouver from the Islands. They were turned down—after spending one-quarter of a million dollars trying the case—because, among other things, there was no station in existence at the other end of the route; and in order to serve it, Hawaiian would have had to purchase new jet aircraft.

Now, three weeks after this decision, the CAB ruled in another, unrelated route application filed by Western Airlines. This application was approved—in spite of the fact that it would require several million dollars for a new station at the other end of the route, and that Western would be required to purchase new equipment. In addition, Western was awarded the route because of the Board's interest in favoring smaller airlines to permit them to strengthen their route structure.

Allow me to point out one final irony in these examples. The airline that won the route award to Vancouver sought by Hawaiian was—you guessed it—Western. What had happened to the Board's interest in favoring smaller airlines when Hawaiian was applying? The CAB has provided no opportunity for growth to Hawaiian Airline which, in 1938, served 7 cities and in 1977 serves only eight.

I'll bet representatives of Hawaiian Airlines would support a statement that Ralph Waldo Emerson made in 1860: "The teaching of politics is that the government, which was set for protection and comfort of all good citizens, becomes the principle obstruction and nuisance with which we have to contend."

If we get anything from these and other examples of the Board's actions on route ap-

plications, it must be that their actions are not consistent. Carriers which feel secure and protected by the "guarantee" of route certification, don't get much of a guarantee. If they don't suffer from the inconsistency of decisions, they must be getting increasingly uneasy when they review the other aspects of Board policy on routes. Awards are being made authorizing direct competition in monopoly markets. Direct non-stop service is awarded over an existing carrier's indirect service. Local service carriers are being awarded certificates to replace trunk carriers in many monopoly markets. The current route control set-up encourages carriers to enter markets prematurely—to prevent being foreclosed from new opportunities.

In addition to the uncertainty and difficulty of dealing with the CAB in route certification matters, there are financial costs which cannot be overlooked: the preparation of a case, the costs of litigation, the costs required to "buy in" to a new market—the list goes on and on. These costs must have a significant impact on the profit-making ability of any airline.

The ability of airline management to be responsive to market factors—with its inherent potential of offering more efficient service at lower fares—is an advantage which should not be denied to our existing carriers.

However, no discussion of "entry" would be complete without a statement that whatever form regulatory changes take, freedom of entry must be made gradual enough to allow carriers who have operated under 39 years of tight regulation the time to adjust to a new environment, while allowing phased entry to qualified new carriers. In addition, any regulatory reform program must include adequate safeguards and retention of sufficient regulatory authority to step in when and if serious injury to the public interest appears likely to result.

We concentrate so heavily in our discussions of regulatory reform on its potential impact on the airlines, that the airport operator is often overlooked. As a former Mayor, I know that we must not ignore the impact on the airport itself. Although freer entry, by itself, would not disadvantage local airport operators, the impact of the other side of the coin—freer exit—is often unheeded, and this indeed requires our closest attention. In an environment where freer entry is possible, it must be based on a management decision that is cautious, realistic, and well grounded in the characteristics of the market to be served.

We must recognize that an airline has a responsibility to the market it wishes to develop—and to the airport in that market. Simple economies would seem to dictate that a decision to serve a new market would not be made arbitrarily, but we must not allow a situation in which the airport operator's ability to secure revenue financing is placed in jeopardy. I intend to make sure that as regulatory reform measures proceed through Congress, this impact will not be overlooked.

With regard to service for small communities, I'd like to discuss, first of all, what our present regulation is doing for them. The CAB currently administers a \$70 million program to underwrite otherwise unprofitable but necessary service. Although service to small communities is provided by local service carriers, small certificated carriers, and non-certificated commuter carriers, this CAB subsidy program is limited to certificated airlines.

The smaller certificated airlines are finding it uneconomical to justify high-frequency service with large aircraft at points enplaning only 10 to 20 passengers a day, but the Board is unable to pay a subsidy to those uncertificated carriers which are better suited to provide the service. In addition,

since the Board is prohibited from controlling either equipment or schedules, it has virtually no control over how a town is served in terms of frequency or timing.

What we have is air service unsuited to the special needs of small communities, and a \$70 million Government program which is not doing the job.

In addition, the present system of economic regulation has not prevented certificated carriers from dropping service to small communities. In fact, in the last 15 years, 170 points have lost certificated air service. Even though the Board permitted the airlines to drop these 170 points, presumably because of lack of passengers, unregulated commuter carriers voluntarily serve nearly 100 of those communities today. There is a common belief that airlines provide significant service at a loss to small communities that is subsidized by their highly profitable operations where the CAB protects them from competition. Yet, if we examine those "highly profitable" operations, it appears that they are always quite competitive and generate little or no excess profits to serve towns they would prefer not to serve. A detailed study of two airlines by the Senate Administrative Practice and Procedure Subcommittee and the Department of Transportation strongly confirm that cross-subsidized routes amount to a very small percentage of certificated service.

When John Robson testified before the House Aviation Subcommittee on April 26, 1977, with regard to the CAB's Small Communities proposal, he indicated that the Board took a hard look at two questions. "First, do the certificated carriers provide air service really suited to the special needs of small communities? Second, are the taxpayers receiving their money's worth for local air service?" And he responded: "The answer to both questions is simply 'No.'"

I think we would be discussing a vast improvement in air service to small communities. I think such an improvement is possible and I intend to work with the Aviation Subcommittee of the House to see that improved service to small communities becomes a reality.

Obviously, what I would like to be able to do is to open the door to productive discussions of regulatory reform by showing the industry that regulatory reform is to their advantage, as well as to the advantage of the traveling public and the industry as a whole.

Perhaps a brief discussion of the problems of capital formation would be in order at this point.

As I am sure you are all aware, Richard Ferris of United Airlines recently testified before the Senate Aviation Subcommittee and stated: "The problem is that economic regulation by the CAB does not, and can not, provide the opportunity for most airlines to earn a rate of return sufficient to replace their fleets of aging, obsolescent aircraft." We have all heard the prediction that by 1990 the scheduled airlines will require an estimated \$65 billion to replace aging and inefficient aircraft. \$65 billion! I'm sure I don't need to remind you that in the last five years the airlines have had the lowest collective return on total capital of 30 major industrial groups in the United States. The CAB maintains that a 12% rate of return is "reasonable," yet this rate of return has not been met in a regulated environment. I think the airline industry deserves better.

Regulation is not giving you the capital you need. But I think it is only fair to state that regulatory reform will not guarantee you needed capital either. What we must determine, then, is the environment which is more likely to encourage capital formation.

As you are aware, Braniff recently received an \$80 million loan with long-term financing at the prime rate from a consortium of

20 different banks, . . . on what many would consider the "eve of deregulation." In addition, those airlines that are not regulated have access to money. Solomon Brothers has recently pledged \$70 million dollars to a paper company seeking to provide service from Midway Airport. It looks as though where there are profits, or potential profits—as determined by a very conservative banking community—there is money to loan. A well-managed firm with reasonable profits has access to money in the commercial market whether they are regulated or unregulated. I don't think that economic regulation of the airline industry should be allowed to stand in the way of the economic potential of the airlines. I think carrier management should be able to respond to the demands of the market-place, to reduce government control of management decisions, and to provide needed service at a profit.

One of the most important goals of this regulatory reform is to make air transportation more accessible. I think the intrastate carriers now serving California and Texas certainly provide an example for us in this regard. The fact that lower fares attract more passengers and that more passengers improve the profitability of an airline is supported by the intrastate experience.

Interestingly enough, while supporters of regulatory reform have cited the intrastate experience to support their position, opponents maintain that because intrastates operate in a unique environment their experience is not relevant. I believe that the experience in California and Texas shows that innovative pricing and efficient operations can produce lower cost service to the public, and lower cost service can generate passengers.

I'd like to cite your consideration of the PSA experience in California. I personally watched the development of this airline and the considerable impact which it had on the City of San Jose and its metropolitan area.

PSA service helped stimulate tremendous growth in large markets which were considered by others to be fully developed. They have had considerable success in developing service at our satellite airports and have developed a market in smaller communities as well.

When PSA went into the prime Los Angeles-San Francisco corridor, then considered stable and mature, the market grew from 1.5 million in 1960 to 3.2 million in 1965—an increase of 117 percent.

When PSA began to serve the San Diego-San Francisco market in 1960, it grew from 185,000 passengers to 359,000 passengers in 1965, an increase of 94 percent.

When PSA entered the Los Angeles-Sacramento market in February of 1967, two trunk carriers were providing a reasonable pattern of service with jet equipment. PSA established a fare that was 38 percent lower than those offered by the trunk carriers. Total traffic for all carriers in this market increased from 259,000 in 1966 to 495,000 in 1967. A 91 percent increase in only one year!

In 1966 PSA was authorized by the California Public Utilities Commission to operate between San Jose and Los Angeles. The city of San Jose participated actively in the proceeding before the Commission and submitted extensive exhibits in support of the PSA application. I recall one of the "expert witnesses" who testified that "due to the fact that San Jose (was) a city in close proximity to a large airport, namely San Francisco International, it would never generate sufficient traffic to make it competitive with said large airport and that due to its satellite status San Jose should be happy with its present one-carrier service." (PUC Examiner's Decision).

In 1965 San Jose was served by Pacific Airlines, a predecessor of Hughes Air West, and was generating about 56,000 one-way

passengers per year. PSA entered this market in October, 1965, with all-jet service at a fare that was about 50 percent lower than Pacific's propeller fare. In 1966, traffic increased over 1000 percent to slightly above 600,000 per year. In this case, PSA had a unique opportunity to enter into a large market offering lower fares and also with equipment that was greatly superior to its competition. San Jose is now served by 10 major air carriers, two intrastate carriers, and 8 federally certificated air carriers.

Although the regulatory environments in Texas and California differ substantially, each has encouraged a climate in which marketing and operational decisions have led to improved productivity and lower fares. We cannot overlook the importance of the regulatory climate within each of these two states, where decisions on airport selection, aircraft configuration, and frequency of service have resulted in the establishment of carriers specially designed to serve medium and high-density short-haul markets.

CAB regulation, on the other hand, has produced tight control of entry and tight rate regulation, and has required equal fares for markets of the same distance. This regulation has thus prevented the development of specialized interstate carriers serving short-haul routes of the same density.

I believe that a thoughtful analysis of each system of regulation (Federal, California, and Texas) would result in a determination that each has something to offer this discussion—yet, clearly, each has its own special flaws. Surely, we can learn from the State experience and where possible, apply those experiences to our national aviation industry. There are 60 interstate markets which are similar in distance and density to the intrastate markets in California and Texas. Sixty markets which, but for an artificial legal barrier, could be benefiting from lower cost service.

As Senator Cannon indicated in his remarks before this group on April 26, citing the experience with PSA and Southwest, "A regulatory system which does not even permit the public to benefit from such services when they may be made available is not serving the people or the industry well."

In closing, let me say that I am genuinely concerned about establishing an environment in which we can all make substantive contributions to the issue of airline regulatory reform. You already know the problems we've been discussing for years—entry/exit, price flexibility, predatory pricing, health and safety of the industry, service to the consumer and to small communities, etc. I wish I could have come before you today to tell you that in a flash of divine inspiration last night I had solved the problem of regulatory reform, but we are all familiar enough with this issue and sophisticated enough to know that that's not the way this problem is going to be resolved. The reference to divine inspiration does, however, remind me of the story of the irate farmer who lived next to the field where Orville and Wilbur Wright were experimenting in their bicycle shop. The closer they got to success, the more often the farmer would race out of his farm house, flailing his arms, and shouting "If God had meant for man to fly he would have created a C.A.B.!"

One thing on which we can agree is the commonality of our goal. We all share a desire of the industry to provide safe, reliable, and profitable service. We share the consumers' desire to have the best service and safety at the most reasonable cost.

If regulatory reform is coming, and I think it is, it is up to us to work together to develop the delicate equation that will achieve our common goals and assure the continued success of the best aviation system in the world.

### THE PHANTOM STRIKES AGAIN

Mr. STEVENS. Mr. President, recently I saw an advertisement for a new movie thriller which features a phantom car—minus driver—with a third for reeking havoc and a savage desire to kill. Now, Mr. President, I do not know how the movie turns out but the plot seems nearly as ridiculous as some of those sold around here. As I watched the phantom car, which we are apparently to believe is acting of its own accord, try to murder a family by running them over, I had a sudden and passing moment of empathy for those who feel that somehow guns, acting of their own free will, can, and would like to, murder and maim. Picture, if you will, a large pistol springing from a dark alley, triumphantly firing and then darting off into the night. Sounds like something out of Rod Serling's "Night Gallery"? Of course. As we all know, in real life "guns do not kill people, people kill people."

Yet, apparently there are those who sincerely believe that "gun control is crime control." They feel that the answer to the spiraling crime rate is to take guns "off the streets" and therefore, they believe, out of the hands of the criminals. Both opponents and proponents of gun control do agree on one thing; that the spiraling crime rate must be stopped. The misconception on the part of those who favor gun control as a means of crime control is that they are looking at the problem from the wrong end.

They advocate taking away a constitutionally guaranteed right from the over 45 million American citizens who use guns legitimately to control three tenths of 1 percent of the gun owners who misuse this privilege. The sportsman, the gun collector or the person who feels the need of a gun for self-defense should never be equated with the criminal.

Putting the constitutional issue aside for the moment, there is serious doubt in my mind that gun control or even outright confiscation of all guns would lower the crime rate measurably. Statistics show that strict gun restrictions have had no positive effect. According to the American Enterprise Institute's "Legislative Analysis on Gun Control," the national homicide rate is 9.3 per 100,000 while the rate in States with restrictive gun laws averages 10.5 per 100,000. The national rate is more than a full point lower than the rate in States with restrictive gun laws. Furthermore, while it is safe to assume that most law-abiding citizens—by their very definition—would turn in their handguns, it is utopian to believe that the professional criminal would docilely hand over his gun or even register it. In fact, in *Haynes against United States* (1968) the Supreme Court held that the fifth amendment privilege against self-incrimination conflicted with the registration and possession provisions of the National Firearms Act. In other words, the criminal would probably be legally within his rights not to register his gun. Yet, the average law-abiding citizen who has never abused his second amendment right, who has never robbed

or murdered, is being asked to give up his gun. Frankly, I fail to see how that helps the crime problem. It seems to me that the answer to our rapidly bounding crime rate is not to infringe upon the rights of the law-abiding citizen, but to deal directly and forcefully with its cause—the criminal.

Not only is gun registration or confiscation an unworkable solution, it is blatantly and dangerously unconstitutional. The second amendment clearly states that—

A well regulated Militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed.

There are no ifs, ands, or buts in this amendment. It says the rights of all Americans to keep and bear arms "shall not be infringed." I do not think that it could be any clearer.

There are those who feel that we can nibble away at that right without jeopardizing the protections offered by the U.S. Constitution. These people would have us register our guns and would halt each gun sale until the U.S. Attorney General checked into our backgrounds. This sweeping and arbitrary power to investigate the lives of individuals is approaching a dangerous infringement on personal liberty. The background check, along with the registration system would create yet another example of the proliferating filing systems kept in Washington, D.C. In this day and age when the country is in an uproar about the constitutionality of the numerous lists kept by governmental agencies, and the computer mania which has penetrated the bureaucracy, it seems inconsistent to compile yet another list of law-abiding citizens. It is not only inconsistent, it is downright frightening.

The amount of money that would be needed to cover the cost of any registration program can only be described as staggering. This could better be spent in such a way that: First, it does not infringe upon the rights of law-abiding citizens; second, it is effective; and, third, it goes to the root of the problem instead of working around it. This money should go toward better law enforcement protection and a quicker, more effective court system. We must deal with the criminals themselves in our fight for crime prevention.

In 1975 a crime of violence, such as murder, robbery, assault, or rape occurred once every 31 seconds. Statistics show that 66.3 percent of the criminals released from prison are rearrested for a new crime within 4 years. Often these criminals are out on the streets before their victims have left the hospital. I have cosponsored a bill, S. 31, which would make the commission of a Federal crime with a firearm a separate offense. If enacted, this law would create a mandatory sentence of not less than 1 year for the first conviction and not less than 5 years for the second offense. The judge would have no discretion. If a person is convicted of the offense of using a firearm to commit any felony for which he may be prosecuted in a court of the United States, he must go to jail. I believe that this is the only way of cutting

down the misuse of firearms. The criminal would be dealt with quickly and severely whereas those people, like the people in my home State of Alaska who hunt out of necessity to feed their families, use their guns for relaxation or feel the need of protection, will not be deprived of their second amendment rights.

This is the type of legislation that could alleviate the high crime rate because it deals with the source of the problem, the criminal, and not with his arbitrarily chosen concomitant in crime. The very theory of controlling crime by controlling guns is untenable. Should we also restrict the use of knives or any other instrument that might serve as a weapon? I suggest that we realize the need to find a more than cursory, useless program that would cause greater problems than it would solve. Let us stop chasing ghosts.

I ask unanimous consent that the bill to which I have referred in my statement, S. 31, be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

## S. 31

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 923(c) of the Gun Control Act of 1968 (Public Law 90-618; 18 U.S.C. 924(c)) read as follows:*

"(c) Whoever—

"(1) uses a firearm to commit any felony for which he may be prosecuted in a court of the United States; or

"(2) carries a firearm during the commission of any felony for which he may be prosecuted in a court of the United States, shall, in addition to the punishment provided for the commission of such felony, be sentenced for the additional offense defined in this subsection to a term of imprisonment for not less than one year nor more than ten years. In the case of his second or subsequent conviction under this subsection, such person shall be sentenced to a term of imprisonment for not less than two nor more than twenty-five years.

"The execution or imposition of any term of imprisonment imposed under this subsection may not be suspended, and probation may not be granted. Any term of imprisonment imposed under this subsection may not be imposed to run concurrently with any term or imprisonment imposed for the commission of such felony."

## REPORT OF THE COMMITTEE ON BANKING, HOUSING AND URBAN AFFAIRS

Mr. PROXMIER. Mr. President, in accordance with section 302(b) of the Congressional Budget Act, I submit herewith the report of the Committee on Banking, Housing and Urban Affairs. This report subdivides the allocation of budget outlays and new budget authority allocated to the committee.

I ask unanimous consent that the report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

## COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS—REPORT TO THE SENATE PURSUANT TO SEC. 302(b) OF THE CONGRESSIONAL BUDGET ACT

[In millions of dollars]

## THE FOOD AND AGRICULTURAL PROTECTION ACT OF 1977

Mr. PERCY. Mr. President, on Tuesday the Senate passed S. 275, the Food and Agricultural Protection Act of 1977. The bill is comprehensive, affecting U.S. food, nutrition and agriculture policy through 1982. It contains some very good provisions. But it contains others that could unnecessarily cost American taxpayers millions of dollars.

Provisions of merit included a reformed food stamp program. The most important change in the program is the elimination of the requirement that recipients buy stamps. This change will make it easier for the poorest eligible recipients to participate in the food stamp program. It also will simplify the administration of the program and will help to reduce food.

S. 275 also eliminates present crop allotments policy. As an alternative, the bill sets a new current-acreage planted system. The bill also provides for a much-needed coordinating mechanism and increased agricultural research commitment, including animal and nutrition research.

The provisions which cause me grave concern are those which tie the Government support levels directly to the cost of production. Target prices for wheat and feed grains are set at the cost of production; loan rates are set at 85

percent of the cost of production. The bill sets the target price for wheat at \$2.90 per bushel for 1977 and \$3.10 per bushel for 1978. The bill also guarantees that for the next 4 years, the support levels will be increased automatically as the cost of production rises. Target prices for corn and other feed grains are set at \$2.28 per bushel in 1978 with subsequent increases also tied directly and automatically to increases in the cost of production.

In assessing the current farm market and the support levels set in S. 275, we cannot ignore the fact that the costs of farm production have gone up substantially since enactment of the Agriculture and Consumer Protection Act of 1973. However, I believe the support levels set by S. 275 in response to increased costs incurred by farmers are excessive. In my view, the purpose of target prices is to help farmers remain solvent during lean years—not to guarantee that farmers earn a profit or break even, which is what S. 275 attempts to do.

S. 725 is inflationary for the Federal Government, consumers, and farmers. The costs of these high support levels will have to be borne by the Government and in turn by the taxpayer. High support levels will also increase consumer food costs. Furthermore, they will likely lead to increased land costs and non-

competitive U.S. grain prices in the world market, which would be most harmful to many U.S. farmers, especially in Illinois. Finally, by fixing the loan level at 85 percent of an annually increasing target price, the loan rate could well exceed market prices in future years, especially in the case of wheat. If and when that happens, the Government will become the owner of millions of bushels of grain through defaults on loans. Unless other circumstances change significantly, this will have the same price-depressing effect which Government stocks had in the fifties and sixties.

It is for these reasons that I voted in favor of the amendments to S. 275, introduced by Senator MUSKIE, chairman of the Senate Budget Committee. I feel that the support levels in Senator MUSKIE's amendments were much more appropriate in terms of the needs of farmers and congressional budgetary goals. Furthermore, as indicated in a recent survey I sent to 140,000 Illinois farmers, they prefer lower support levels than those set in S. 275.

I would have voted for S. 275, despite my reservations about the high support levels established in the bill, had I not been required to take a 6 a.m. plane to Chicago to make a previous commitment to deliver the commencement address at Triton College.

My decision to support S. 275 was

based on what I consider to be constructive reforms in the bill and my hope is that when the Senate and House conferees meet to work out the differences in their respective farm bills, they will adopt the lower support levels included in the present House farm bill.

#### TAX REDUCTION AND SPENDING CONTROL

Mr. BIDEN. Mr. President, two of the major objectives of the Senate this year should be a start on bringing Federal spending under control and providing tax relief for the overburdened American taxpayer.

With regard to spending control, I have introduced a bill to slow the upward spiral of Federal spending. This bill is known as the Federal Spending Control Act of 1977 and has three main features:

Spending authorizations for new programs would have to be compared with existing programs with related objectives to be sure there is not overlapping or duplication of activity;

A review of existing authorizations for spending programs would be made every 4 years to determine whether those programs should be discontinued or modified in any way;

All authorizations for spending would be required to state a maximum amount of annual spending for that particular purpose.

I am hopeful that legislation of this kind can be enacted promptly during this session.

On the tax reduction side, the Senate missed a golden opportunity when it passed the Tax Reduction and Simplification Act of 1977. An amendment was offered to that act to target tax relief to those most oppressed by our present tax load, the middle and lower income taxpayers. At the time, I hoped that we might develop a bipartisan movement to give a tax cut to these groups who need it most, but not to those wealthy individuals who can use tax shelters to avoid much taxation.

Unfortunately, the amendment did not pass and the words "tax reduction" in the title of that bill became something of a farce. Most of the "reduction" was a continuation through 1978 of tax cuts originally passed in 1975 although there will be some tax relief for many of those using the standard deduction.

In an editorial in its May 25, 1977 edition, the Wall Street Journal had some excellent comments about the significance of both spending control and the need for tax reduction. In speaking about the Tax Reduction and Simplification Act of 1977, the editorial said in part:

It will actually raise taxes for some 2 million taxpayers who earn \$13,750 or more and use the standard deduction. And the improvements for low-income users of the deduction will be a pittance compared to the higher federal taxes most Americans will pay as inflation moves them into higher wage brackets in coming months.

Economist William Fellner estimates that if the current inflation rate of 9% persists, individual taxes soon will be rising at 15% because of the ratchet effects of the progres-

sive tax structure. A few months ago, when we were getting 5% inflation, the tax escalation was only about half as much. If anyone in Washington is wondering why the stock market is skidding, the latest Consumer Price Index is the best explanation.

If the President and Congress would like the pleasure of knowing they are doing something real rather than illusory for taxpayers they have two choices: stop inflation by bringing the federal budget under control or make genuine tax cuts that would offset the ratchet effect. Stopping inflation would of course be by far the better solution, since it would solve problems that extend beyond tax burdens—public loss of confidence in government itself, for example. But the tax burden issue, particularly as it applies to the most productive members of the economy, is by no means inconsiderable.

There are all sorts of ways of measuring the total weight of government, but one that we find especially interesting is offered by the Tax Foundation. It shows that governments at all levels—federal, state and local—are spending \$9,607 per U.S. household per year, equivalent to 47% of the average household's income. As measured this way, the government spending burden has risen some 85% just since 1970.

Mainly because a lot of this expansion has been financed through borrowing—which helps explain why the U.S. has become so inflation prone—the total direct tax burden hasn't climbed much in the 1970s after its steady rise in the 1950s and 1960s. According to the Tax Foundation, the average American spends about one-third of his working day "working for the government" to pay taxes, compared with about a quarter of his day in 1950. But both the direct tax burden and government borrowing are on the uptick this year.

Mr. President, I believe that those comments summarize very well the importance of these two issues of spending control and tax reduction. I hope that the Senate will face up to both of these issues promptly.

#### MARYLAND RESIDENT TESTIFIES ON ENERGY PROPOSALS

Mr. MATHIAS. Mr. President, on May 20, Walter Shipe, vice president of Asbestos Covering & Roofing Co., of Beltsville, Md., testified before the House Ways and Means Committee on the Tax Aspects of H.R. 6831, the President's Energy Tax Proposals.

Mr. Shipe is an independent insulation contractor, a small businessman, and a member of the National Insulation Contractors Association. He is intimately familiar with insulation-products and the needs of both industry and the American consumer.

As I pointed out in a recent statement on energy, I believe that we can save substantial energy through the proper installation and use of insulation. Mr. Shipe's testimony is informative and timely, that his remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

#### STATEMENT OF WALTER SHIPE

My name is Walter Shipe. I am an independent insulation contractor, a small businessman and a member of the National Insulation Contractors Association (N.I.C.A.). The bulk of NICA members' work is conducted in the commercial and industrial sec-

tors of the construction industry—by far the heaviest users of energy resources. Our projects include insulation for ships, office buildings and manufacturing, petrochemical and power-generating plants. A key concept of the National Energy Policy is to achieve enormous savings in fuel and power use through retrofitting of industrial and commercial buildings. We are involved in this effort by insulating to make cooling and heating and industrial process and power systems more energy-efficient.

Accompanying me is Dr. Robert O. Reid, Vice President of Energy and Environmental Analysis, Inc., Arlington, VA. Dr. Reid, an economist, was former chief investigator for energy studies for the Commerce Department, the Federal Energy Administration, the Environmental Protection Administration and the Energy Research and Development Administration.

We are members of the Insulation Industry Legislative Task Force, organized by NICA. Comprising this Task Force are representatives of the Thermal Insulation Manufacturers Association, the National Mineral Wool Insulation Association and NICA. The Task Force is designed to offer the cooperation of all elements in the commercial, industrial and residential insulation industries with the Congress. We are particularly concerned about the responsibility of your Committee in considering and refining proposals in Title II of the Omnibus Energy Project. Of particular concern is Section 1301, amending the Internal Revenue Code to provide financial incentives for the conservation of energy through retrofitting structures and other measures making them more efficient.

Section 1301 provides for a ten percent (10%) credit for business users' expenditures to conserve energy. This is desirable for a start, but less than sufficient, in our view, in encouraging industry to make the necessary investment to upgrade existing structures in keeping with national energy policy conservation goals.

In the context of the energy crisis today and the near and long-term outlook, the situation is worsening. Energy costs are becoming prohibitive. The rising cost of industrial operations lead to inflationary pressures in terms of higher consumer costs for manufactured goods and services.

We believe financial incentives should, in addition to the Administration-proposed industry credit, include accelerated depreciation. This is imperative to enable decision-makers in industry to determine cost-benefit ratios, cash-flow factors, and upgrading their plant's energy efficiency.

We cite specifically, the justification management must have in order to add energy conserving insulation to existing buildings in this period of soaring energy costs.

One proposal for depreciation treatment of such construction investments has been prepared by the Business Roundtable. It provides for a three-year pay-back on retrofitting which would be good for ten years.

The urgency for passage of such incentives is reflected in the fact that a massive conservation effort could save the equivalent of 3.5 billion barrels of oil through 1980.

In this connection, two timely items merit your attention. The May 12th issue of "Engineering News Record" reports that the Economics Department of McGraw Hill Publications Company finds 26 industries planning a \$2 billion increase in plant and equipment outlays, to a \$141.6 billion level in 1977. This represents an 18% rise from 1976. The respondent companies indicated, however, that much depends on Congressional action with regard to investment tax credits, writeoffs and uncertainty as to the impact that the

<sup>1</sup> Federal Energy Administration's *Economic Thickness for Industrial Insulation (ETI)*, Nov. 26, 1976.

Energy Program will have on economic growth.

Secondly, unemployment in the construction industry dipped in April to about 12%, a two-year low. Compared with a national unemployment rate averaging 7% in April, this may not seem impressive; however, there is reason to believe that favorable action on fiscal and monetary policies would spur activity in an industry heavily reliant on hard-hat workers in two respects:

(1) attainment of conservation goals in the National Energy Plan.

(2) continuing business growth on a healthy basis.

In submitting the National Energy Plan, Dr. Schlesinger and his staff note (page 43) that industry accounts for nearly 37% of U.S. energy consumption. The Plan credits American industry with considerable success in energy conservation since the cutoff of oil imports during the 1973-74 winter. However, there remains a large potential for further savings. Some U.S. industries, according to the Plan, "are substantially less fuel-efficient than their West German counterparts."

In recent days, an estimate has been published blaming factories, stores and offices for 40% of energy waste. The same source suggests such businesses offer the greatest prospects for insulation contracts.<sup>2</sup> The will to invest in such improvements depends largely on what Congress will do in permitting faster write-offs on investments and tax policy in general.

In documenting the case for investment credits and accelerated write-off provisions, we are prepared to submit additional data for the Committee record and to answer your questions.

The member organizations of our Task Force cooperate fully with all agencies concerned with energy conservation, environmental matters, the setting of standards and the like. We believe the terms of Section 1301 with respect to the administration by the Treasury and Energy Departments of tax treatment provisions will be effective in carrying out the intent of the Congress.

On behalf of the National Insulation Contractors Association, I want to thank you for this opportunity to testify on this important matter. I will be glad to answer questions you may have.

[From Federal Energy Administration]

#### SAVINGS OF 3.5 BILLION BARRELS OF OIL POSSIBLE FROM INDUSTRIAL INSULATION

Improved insulation design applications in U.S. industrial plants could save 3.5 billion barrels of oil between now and 1990, says a study made for the Federal Energy Administration.

The study estimates further that more than 122 million barrels of oil could have been saved in 1974 if the industrial sector had made optimum use of economic insulation techniques.

These savings are reported in a 191-page manual, "Economic Thickness for Industrial Insulation," made available by FEA today. The manual was prepared for FEA by York Research Corporation of Stamford, Connecticut.

"U.S. industrial plants and utilities account for more than 50 percent of the Nation's energy consumption," said FEA Administrator Frank G. Zarb. "The conservation of energy through the use of optimal economic insulation thickness has obvious benefits for industry, and equally impressive potential benefits for the U.S. We believe that this design manual will serve as a practical working document in assisting industrial managers and plant engineers to plan and

install effective insulation systems at the lowest possible cost."

The economic thickness manual, developed specifically for the industrial user, will permit companies without extensive engineering capabilities and computer facilities to easily calculate optimal economic insulation use, FEA said. Economic insulation is defined as that thickness providing "the lowest total cost of lost energy and insulation investment over the project life."

The manual is expected to be particularly useful to architects and specifying engineers in designing new industrial construction, utilizing least-cost insulation thickness criteria based on minimum life-cycle costs.

Comprised of 8 chapters, the manual discusses in detail such topics including the economics and costs of insulation, cost of energy, economic thickness determination, condensation control, retrofitting insulation, and sample problems. Also included in the manual is a bibliography, tables, illustrations, and appendices.

Two major industry trade associations, the National Insulation Contractors Association, and the Thermal Insulation Manufacturers Association, and a number of their member companies, provided invaluable assistance to FEA and the York Research Corporation in the development of the manual.

Copies of the "Economic Thickness for Industrial Insulation Manual" are available for purchase from: Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Price \$2.70. Stock No. 041-018-00115-8.

FEA is also producing a 25-minute, 16mm color film on economic thickness for industrial insulation, suitable for use at seminars and workshops for industrial plant managers and other industry officials. Copies of this film will be available for sale, rental and short-term loan. A ¾" color video-tape cassette version will also be available. The film is expected to be completed by mid-December. Film inquiries should be directed to: Federal Energy Administration, Office of Conservation and Environment, Washington, D.C. 20461.

#### VETERANS' BENEFITS FOR THE WOMEN'S AIR FORCE SERVICE PILOTS

Mr. WILLIAMS. Mr. President, we have witnessed many blatant cases of sex discrimination which required remedial congressional action, and we have had lengthy disputes over these institutionalized inequities in our society.

I have been pleased to join in several legislative initiatives to eliminate these injustices. In particular, I am proud to have been among the first to nominate a woman to a service academy, and I was also very pleased to author the original Senate version of the Equal Credit Opportunities Act. Most recently, the wide support for my bill to permit benefits for working women disabled by pregnancy on the same basis as those disabled by other causes has been a source of deep personal satisfaction.

One group that has been the victim of blatant sex discrimination is the Women's Air Force Service Pilots, whose outstanding loyalty and service to their country during World War II has gone unrecognized. For this reason, I have cosponsored S. 247, a bill to provide veterans' benefits to the Women's Air Force Service Pilots.

The most unfortunate aspect of the failure to militarize the Women's Air

Force Service Pilots was that it left them without any rights or veterans' benefits after deactivation; they had no reserve status that might otherwise have been possible; the next of kin of those who died in the service received no insurance, and were even denied the right to display the gold star.

Even with the relative disadvantages which I mentioned, there was an overwhelming response from American women who were eager to serve their country. More than 25,000 women applied for this training. The Government accepted 1,830 and 1,074 were graduated, or 58.7 percent of the total. Of those who were graduated, 900 or 83.6 percent were still with the organization when it was deactivated.

These female pilots flew about 60 million miles for the Army Air Force after their training. They suffered 38 fatalities; that is about one for every 16,000 hours of flying. Their accident and fatality rates compare very favorably with those for male pilots in similar work.

The Women's Air Force Service Pilots program was deactivated on December 20, 1944, as a result of the substantially reduced demand for pilots. But there were few groups of citizens who showed this degree of devotion, loyalty, patriotism and self-sacrifice. As a military pilot during this same period, I would like to say that they also showed remarkable professional ability.

At this time, I would like to direct my colleagues attention to an excellent article that appeared in the Star-Ledger, on Tuesday, April 12, 1977, which reflects one former member of the Women's Air Force Service Pilots sentiments and support for this worthy legislation.

Mr. President, I ask unanimous consent that this article be printed in the Record.

#### WOMAN VET "TAKES OFF" FOR BENEFITS

(By Barbara Kukla)

As the bright yellow World War II training plane touched down at Teterboro Airport the crowd cheered.

Stepping from the cockpit of the 40-year-old Stearman, pilot Velta Benn, who has dedicated her working life to aviation, graciously accepted the accolades.

She had just flown from Washington, D.C., taking 2½ hours, with one stop—in a vehicle which has no radio or other instruments commonplace to modern-day aircraft.

The applause, though appreciated, was not enough.

Velta Benn had made the flight for a distinct purpose—to help gain recognition and veterans' benefits for the 850 living alumnae of the women's Air Force Service Pilots (WASP) and families of 38 women pilots who died in the line of duty.

The women, during World War II, were test pilots, ferry pilots, and flight instructors, flying B29s and other aircraft.

Yesterday's flight, Mrs. Benn explained, was intended to spur support for two bills before Congress which would grant death benefits to the families of the 38 women who died and medical benefits to others. Originally, 1,074 women were trained for such duties.

The inequities were spelled out by Clara Jo Stember, a former WASP who lives in Syosset, N.Y., and teaches art therapy at the College of New Rochelle.

"We (WASPs) paid a lot of dues," she said. "Thirty-eight women were killed. We took

<sup>2</sup> U.S. News & World Report News Letter, Friday, May 6, 1977.

a military oath of service, lived under military discipline, wore military uniforms, flew 16 million miles, yet we were denied military status by Congress because we were women."

As an example of the double-standard, she cited the instance in which a woman copilot and male pilot died in the same crash. "As a man he got all benefits due him," she said. "But the woman got nothing. We (WASPs) passed the hat and took our bodies home."

Why did the women remain WASPs without even the most meager support of the government?

"You've got to remember. That was a war we believed in, before Korea and Vietnam. We were pilots and we gave what we could, even our lives," she said.

From Mrs. Benn's viewpoint the unequal status of women also has cost her a more fruitful livelihood, at least from the financial standpoint.

"For the past 10 years, I've been turned down for just about every job I applied for—general air inspector, National Aeronautic Space Administration (NASA) safety officer, pilot at a Federal Aviation Administration (FAA) hangar—because I have no military preference. Yet my credentials are higher and I am more qualified through experience than any man I know," she said.

As chief flight instructor for a private firm in Prince George, Md., she said, she averages about \$10 an hour in earnings. As an FAA inspector, the hourly rate would be boosted to at least \$30, she said.

The flight yesterday, she explained, was part of a nationwide effort to focus attention on the WASP battle on Capitol Hill.

#### MARQUETTE PARK PREPURCHASE COUNSELING PROGRAM

Mr. PERCY. Mr. President, on May 13, Secretary Patricia Roberts Harris announced that the Department of Housing and Urban Development is initiating an experimental pilot program of mandatory prepurchase counseling for applicants for FHA-insured mortgages in an area in and around Marquette Park, a neighborhood on Chicago's southwest side. The counseling program is the first of its kind in the United States. It is designed to avert the panic peddling and racial steering by real estate brokers often associated with racial change and lax enforcement of credit requirements for FHA-insured mortgages. Some of these problems were brought to widespread public attention through a series of UPI articles which appeared in Illinois newspapers last December. Mr. President, I ask unanimous consent that two of the UPI articles be printed in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

##### EVOLUTION OF A GHETTO

(EDITOR'S NOTE.—Why are America's great cities dying? A UPI team spent five months investigating the slums and changing neighborhoods of Chicago, the nation's most segregated city, to try to find out. Gregory Gordon, 26, a white native of Minnesota, and Albert Swanson, 28, a black who grew up on Chicago's South Side, traced more than 400 real estate transactions, leafed through stacks of courthouse records and interviewed more than 200 persons to file a five-part story of greed, fear and governmental neglect.)

##### PART III: THE MYTH OF OPEN HOUSING

(By Gregory Gordon and Albert Swanson)

CHICAGO.—The small, neat bungalows at the eastern fringe of Marquette Park were

gally decked with Christmas lights and holly in December of 1974.

For two black families the neighborhood bathed in Yuletide cheer seemed an answer to their dreams for a better place to live—an escape from the squalid conditions of the South Side of Chicago.

##### PEACE ON EARTH, GOOD WILL TOWARD MEN . . .

Then came the firebombs.

Before either family could settle into their new homes, there would be terror attacks by whites desperately trying to resist racial change. Civil rights laws had long been in effect, but the promise of open housing would prove to be a modern day myth.

The two families were the first blacks to buy homes in a 34-block strip at the edge of the white, ethnic neighborhood of Marquette Park, a sprawling working class section that separates the inner city from the southwest suburbs.

It was only one week before a firebomb sailed through the living room window of Lillian Brisco's new home. Within five days of the arrival of L. B. Turnipseed and his family, nightriders burned their garage.

It was the start of an 18-month battle involving black activists, Nazis and white home owners fearful of neighborhood change.

This would be a classic war of racial prejudice and fear, but noncombatants would decide the outcome.

Government policies, banks, insurance companies and the business community would define the battleground.

Busy real estate brokers and mortgage investors would reap the bulk of the spoils.

Today, less than two years later, half the whites in the 1,100-home area have fled. Many of the remaining white-owned homes are for sale.

It is a familiar pattern in Chicago, America's most segregated city.

It happens every time a few blacks escape the huge black zone of the South Side and buy homes in the white perimeter. Suddenly the whites are on the run and the fringe area turns solid black.

Now the forces of change were taking their toll of the section east of Marquette Park.

First, there was disinvestment. Insurance companies, lending institutions and businesses turned away from the area, seeking brighter investments. City services declined, clogged sewers were left unattended, aged street curbs cracked and crumbled and street sweepers and tree trimmers were seldom seen.

With the banks and savings and loan companies disinterested, homebuyers turned to the government for mortgage insurance. And with government standards relaxed, buying a home became, as one federal official put it, "easier than buying a new car."

Unqualified buyers were strapped to meet mortgage payments. Defaults and foreclosures soared.

In the fringe area of Marquette Park more than a dozen homes were abandoned and boarded up, a temptation for vandals and arsonists.

The neighborhood was on the way down and the time was right for the real estate agents to go to work.

"A stable neighborhood is not that good for a real estate broker," said University of Illinois urbanologist Calvin Bradford.

But a changing neighborhood means big money.

"If you're a really sharp real estate broker," Bradford said, "you can stay on the crest of the changing movement all the way around the city and the suburbs . . . get lots of sales because there will be that fear which you can keep capitalizing on."

Real estate agents can help make that fear a self-fulfilling prophecy.

United Press International examined 300 sales transactions in the area east of Mar-

quette Park, interviewed more than 120 home buyers and sellers and sent white and blacks to 14 realty offices posing as prospective home buyers.

All of the evidence indicates real estate operators played the biggest role in turning the neighborhood from white to black.

Today's methods are more sophisticated than the outlawed "blockbusting" of the past. They include solicitation and advertising campaigns and the tactic called "racial steering," forbidden under the 1968 fair housing act.

Racial steering was widespread in the Marquette Park area. This is how it worked:

Until the first blacks moved in, white real estate firms sold homes in the area only to whites or Spanish-speaking people. They waited until black brokers sold to the first blacks.

Once the change began, dozens of brokers set up offices near the area and concentrated on peddling homes to blacks. They avoided showing homes in the changing area to whites. They offered no listing in nearby white areas to black buyers.

Most real estate agents in the adjacent all-white neighborhood sold no homes to blacks, limiting the selection for blacks to the changing area.

The brokers used the Federal Housing Administration and Veterans Administration mortgage insurance programs as tools for resegregation. They advertised for black FHA and VA buyers and encouraged white sellers to use government mortgage programs, even though it cost more.

It is ironic that the white neighbors who peered through their curtains when Mrs. Brisco and the Turnipseeds moved into the neat brick bungalows remember them for "breaking the neighborhood." Most remember the real estate agents as "nice" people who they "wouldn't want to get in trouble."

Lillie Brisco was carefully inspecting the seven-room house for sale when she heard the sirens grow louder and the fire trucks screech to a stop outside. The tall, attractive black woman looked for smoke or some sign of a fire. Then it hit her.

There was no fire. This was her greeting from the white neighborhood.

Mrs. Brisco, a 43-year-old divorcee, had not expected a welcome wagon from the neighbors, but neither had she expected fire trucks.

"We knew right then we weren't going to be accepted," she said.

Despite the incident, Mrs. Brisco, a shipping clerk who earns \$13,500 a year, bought the house and became the first black to move into the area.

Mrs. Brisco's 21-year-old son, Dexter, warned his mother she was asking for problems. But she figured things couldn't be worse than in black West Englewood where her home was robbed four times.

She went to M. L. Barnes Realty, a black-owned firm, to buy a new house.

At about the same time, a white family of four was seeking to sell their cozy seven-room house across the railroad tracks that for five years had served as a natural barrier between the races.

Former residents remember Sam Urso and his family as "troublemakers" and recall that Urso's wife was bent on selling their home, the nicest on the block, "to the niggers."

"She threatened us and we didn't think she was gonna do it and she did," said Mrs. Violet Arangelovich, who used to live two doors away.

The house was the fourth that Barnes Realty showed Lillie Brisco. She put \$1,600 down and bought it with a \$21,400 VA-insured mortgage.

A few days after she and her son moved in, a firebomb smashed through their front window.

In a sense, the Briscos were lucky. A few days later, the Turnipseeds moved in, giving hostile whites a new target.

Some whites were racist, identifying the arrival of blacks with the onset of slum conditions.

"I've been in the ghetto fire department for 10 years," said John Lewis, a Chicago fireman who moved a few blocks west into the sanctuary of Marquette Park. "I don't want to live with them (the blacks). It feels damn good when you can go somewhere and they're not around. I can't help myself."

Some sellers were afraid their property value would drop. But most expressed a different fear—a fear that all their white neighbors would move away.

More than half of 42 former owners interviewed said they would have stayed if the area were stable and integrated. Some even said they preferred a mixed neighborhood.

Dr. John Tulley, his wife, Alice, and their infant child moved into the area knowing it was changing.

The Tulleys had lived in Bridgeport, a white ethnic stronghold, and Mrs. Tulley described it as "the most unhealthy neighborhood I've ever lived in, with their racist attitudes."

"I didn't want to bring up a child in that," she said. "When we had black people visit us there, they were bothered by police."

"We wanted to live in an integrated neighborhood, but we also know there are almost no integrated neighborhoods in Chicago. I don't know how long we'll be able to stay. I don't think it will be good for us to live here when we're the only whites for blocks."

For weeks, the Briscos and the Turnipseeds were the only blacks for blocks. Mrs. Brisco and her son escaped with only a few incidents of harassment, but Turnipseed, a crane operator who earned \$22,000 a year, his wife Frankie, and their six children were to be the victims of neighborhood change.

The Turnipseeds' house was a two-flat and Mrs. Evelyn Taylor, the owner, had threatened to sell to blacks after arguing with a neighbor. She listed the home with Ebony Realty, another black firm.

White real estate brokers would take control of the market, but they were waiting for the black agents to make the first moves, protecting their images before the real selling splurge began.

Walter Apins, a janitor who sold his house in June of 1975, said three white real estate firms didn't even want his business three or four years before the Briscos moved in. They were not ready to sell to blacks.

Apins said he got the same response from Russ Pocock Incorporated Realtors, Cahill Brothers Realty and Old London Realty. He said the salesman at Cahill told him, "If you want a better price, wait three or four years until the colored start moving across the railroad tracks."

Old London finally found a Spanish-speaking buyer and he sold through the FHA.

Mrs. Maureen Boland, who also moved, said a salesman at M.R. Jenkins Realty would not sell her home unless other houses on the block had been sold to blacks.

Once the change began, the story was different. Of 33 former residents who discussed the subject, only four said white buyers were brought to see their homes. Of 75 black buyers, all but one said they were given listings in only all-black or changing areas such as the eastern fringe of Marquette Park.

UPI sent whites and blacks masquerading as buyers to 14 real estate firms in the area, each time asking for the same price range in a brick bungalow.

In 11 cases, the whites were given listings in the white areas west of Western Avenue and the blacks were not. Blacks usually were shown homes east of Western and the whites

were not. One firm led a white buyer down a corridor to a separate office and gave her white area listings. In the front office, a black was given listings in changing areas. Two other firms which gave white buyers listings told a black buyer no homes were available.

Mrs. Turnipseed remembers the saleslady telling her, "The area's changing over. All of these are old settler age people and they're getting out."

It was a prophetic statement.

No sooner did the Briscos and the Turnipseeds move in than their white neighbors' telephones started ringing.

The callers were real estate agents.

Some were blunt. "The area is changing and we are wondering if you would like to sell," they said.

Panic began to spread. It was agitated by violence.

Five days after the Turnipseeds moved in, their garage was set on fire. For six weeks, vandals hurled rocks through their windows and smashed their car windshields.

"Every time we'd get a new window in, they'd break it out," Mr. Turnipseed recalled.

Police cars appeared with regularity at the Turnipseed home and the next door neighbors, Mr. and Mrs. Harvey Foster, grew worried.

Foster suffered from a nervous condition. His blood pressure rose.

"The police cars were there all the time," Mrs. Foster said. "My husband's blood pressure went to 210. My husband said, 'What if they (the vandals) mistake our house for theirs?'"

The Fosters became even more upset when the Turnipseeds' teen-age sons began to make approaches toward their daughter.

"Our doctor advised us to move," Mrs. Foster said.

The white flight had started. Within a year and a half, hundreds of houses would be sold, earning real estate brokers and mortgage bankers huge profits.

The solicitors picked up their pace.

One former resident, George Mundt Jr., said his phone number was nonpublished but one day "right out of a clear blue sky" he got a call from a real estate agent.

John Stanczyk said he got several calls from Thomas Moore Realty and was told, "You'd better sell now, next year your house will not be worth as much." Stanczyk sold to the first black buyer Moore brought.

Ten of 38 former owners said their broker approached them first. Eight said neighbors referred them to the broker. At least one broker offered money in exchange for further listings.

For six months, the worst abuse the Turnipseeds endured was occasionally picking up a bag of garbage left on their front lawn during the night.

Then on Aug. 23, 1975, a white supremacist group marched down 71st Street right past the Turnipseed home to seek support from the community.

That day somebody tossed a firebomb into the Turnipseeds' back yard.

There was another march in October of 1975. The same night a brick broke the Turnipseeds' front window.

Winter brought a respite in the violence, but a family tragedy hit Turnipseed and his older son, L. B. Jr., were killed by carbon monoxide poisoning while they worked on a car in a closed garage.

Mrs. Turnipseed made up her mind to sell the house and buy a smaller home.

But she was still living there on April 13 when she heard a living room window break at 3:30 a.m. She got out of bed to assess the damage.

"My curtains were on fire," she said. "Whatever they threw through the window, it had to explode."

Mrs. Turnipseed hustled her son and four small daughters downstairs in the thick

smoke. Her nephew, his wife and their two infant children along with two of Mrs. Turnipseed's daughters were trapped upstairs and had to crawl onto a neighbor's roof to escape.

Firemen said the blaze was ignited by a faulty wire.

Mrs. Turnipseed and her children were living in a motel July 15 when yet another fire broke out in the house. Firemen again blamed faulty wiring, even though the electricity was off.

Frankie Turnipseed now lives in an apartment in a high rise housing project. She stays inside most of the time and doesn't make her phone number or address known. She doesn't want to go back to the house anymore.

"I don't want to be watching and peering and wondering what's going to be happening tonight or next week," she said. "In my mind, this is what I think . . . they just said, 'Well, they're the first ones to move in on this block. We'll just pick on them for awhile. Maybe later we'll find somebody else.'"

Ebony Realty also caught the backlash although the black firm sold only four or five homes in the area.

The Southwest Parish and Neighborhood Federation, backed by six Roman Catholic parishes, had sought to get banks to finance construction of high-rise apartment buildings in the area as a "buffer zone" between blacks and whites. The federation demanded that James and Jones sign a form vowing not to solicit.

When they refused, Ebony's phone lines were jammed, James was cornered by a crowd in his parking lot and Jones found an angry mob on his front porch.

James said his firm was soliciting in the changing area because he had "never seen the housing market this tight" in 15 years. Other black real estate firms agreed there were thousands of blacks seeking homes, but few listings available.

The temporary answer was the area east of Marquette Park.

There were other changing neighborhoods in Chicago's South Shore, suburban Calumet Park, Beverly Hills and even the southern tip of Bridgeport.

But each of those areas was less conducive to sudden change. Calumet Park had a village ordinance banning soliciting, home prices in Beverly were higher and the homes in Bridgeport were less desirable.

Marquette Park was the best target. Scores of white real estate firms set up offices south of the area, including the Home Buyers Center, Inc., which had six offices in changing areas across the city.

Once the change began, Home Buyers accounted for more than 40 of the first 280 sales. Theodore Bruck, the top company official, was asked why the offices were located near changing neighborhoods.

"Where do people open businesses?" responded Bruck. "Where they think they can make some money."

#### PART IV. GOVERNMENT-FINANCED RESEGREGATION (By Gregory Gordon and Albert Swanson)

CHICAGO.—Sirens blared all afternoon along the tree-shaded streets at the eastern fringe of Marquette Park where Ray McCarthy and Bill Sheridan were neighbors.

It was a sultry July day, the kind of hot, muggy weather that can send tempers flaring. The stifling heat was hardly helping contain the racial tensions which had simmered all summer on the southwest side of Chicago.

Black activists were staging another march down 71st Street to Marquette Park in their fight for open housing. Angry white residents had stockpiled an arsenal of bricks, rocks and bottles to hurl at those who dared enter their white sanctuary under the shield of court-ordered police protection.

McCarthy, a 57-year-old electrician, and Sheridan, a Chicago fireman, were in their own homes seemingly oblivious to all the activity a couple of blocks away.

They were busy packing their belongings so they could move away.

The violence was nothing new. It had begun a year and a half earlier when the first blacks had moved into the area. Now blacks were living right across the street and McCarthy and Sheridan were whites on the run.

Both were bitter at the blacks and afraid of the violence. Most of all, they were resentful of the government's Federal Housing Administration and Veterans Administration mortgage insurance programs.

The two men had good reason to be angry. An extensive UPI investigation into the changing neighborhood revealed that real estate operators and mortgage bankers used the two government programs to turn fast profits and to resegment the previously white neighborhood.

"I'm getting screwed by the federal government, how would you like that?" Sheridan asked sharply. "I can't sell my building any other way than FHA or VA because no one else wants to buy it. So, consequently, I have to go with FHA and VA prices."

Most of the homes in the area were being sold under FHA mortgages which allow the buyer to make downpayments as low as \$200, or through the VA which requires no downpayment on the purchase of a house. Both programs place extra burdens on the seller.

Sheridan said he sold his two-flat, 12-room house for \$21,900 and it cost him more than \$2,000 in real estate commissions, mortgage costs and repair costs to meet city and FHA inspection requirements. His new house, a bungalow, cost \$35,000.

"I had (black) people come and look at my house and between the two of them have a \$25,000 income, yet they're buying FHA," Sheridan said. "They walk up and buy my house for \$550 down. To buy my new house, I have to put \$7,500 down. What is that? Is that liberty and justice for all?"

A few houses away, McCarthy, a father of five, had similar sentiments.

"The whole thing in the back of my mind is the FHA," he said, "because this allows anybody to buy a house. When I went over to buy this house, I had to borrow money for a downpayment. Otherwise I couldn't get the house. But the (black) guy next door needed \$200, the other guy needed nothing."

"That's the difference. The colored come in here, they're not even worried about the payments. They know they've got a year or so before they're thrown out. As soon as enough of them come in with no money down, or \$200 down and they run out the lease as far as payments, the houses go down."

Sheridan and McCarthy are the unintended victims of an FHA program designed to help lift low income families from the slums to decent housing. The program has backfired and helped expand the slums eating away at many of the nation's cities like a cancer.

The FHA has become a major contributor to the neat color line which marks Chicago, according to the U.S. Civil Rights Commission, as the nation's most segregated city.

It started in 1968. For decades, the FHA mortgage insurance program had not been considered the hallmark of good lending with its stringent underwriting policies.

But disinvestment, or redlining, by banks and savings and loans in inner city areas left blacks with little outlet for obtaining a home loan. To quell the riots following the assassination of Martin Luther King Jr. in 1968, Congress decided to make home ownership easier for blacks. It passed the Fair Housing and Urban Redevelopment Act.

If the application is rejected "a sharpie real estate agent will fix it up," said Phyllis

Rogers, new head of the single family mortgage credit division.

The loan processing office files away rejected applications and has no way of detecting falsified applications the second or third time through unless, by coincidence, the same loan specialist gets the application, she said.

Since the cleanup drive began in 1975, the FHA has refused to accept most welfare mothers and has tightened credit checks on other prospective buyers. The crackdown slowed the FHA buyer approval process to several weeks and made mortgage bankers more wary.

Real estate agents responded by steering as many prospective buyers as they could to the VA, which quickly processes applications and places inspection responsibilities in the hands of city officials and private appraisers hired for a fee.

The VA's foreclosure rate has been significantly below the FHA's. Chester Kaitis, assistant loan guarantee officer for the Chicago VA office, said one reason is that the VA has "kept a sane approach" to credit evaluation.

The VA also tries to convince veterans behind on payments to "voluntarily convey" their homes to the VA, which pays off the mortgage company and resells the home.

Since the FHA tightened its standards, the number of VA-insured mortgages nearly doubled in the Chicago area to 800 to 1,000 a month, according to Maurice Crowley, chief of loan processing.

But the VA is no longer scandal-free.

The Metropolitan Area Housing Alliances and UPI recently disclosed that Conteco, Inc., a South Side contractor, bought up scores of HUD homes for an average of \$10,000 and resold them for more than double that amount, nearly all on VA-insured loans. Several of the homebuyers complained they had to spend thousands of dollars on repairs shortly after taking possession.

#### REDEVELOPMENT ACT

The law directed the U.S. Department of Housing and Urban Development to relax mortgage lending standards under the FHA program so hundreds of thousands of low income families could qualify.

"At the same time," recalls John Waner, director of HUD's Chicago area office, "every unethical, unscrupulous real estate broker and lender, many of them so slimy they crawled out from under a rock, looked at this program and said, 'What a gold mine out there!'"

Real Estate brokers and mortgage bankers found that they could make huge profits by selling homes to persons who could barely meet the lenient FHA standards—and some who slipped through with falsified credit information.

When a family missed a payment, the mortgage company quickly foreclosed, ousted the family from the home and collected the full value of the mortgage from HUD which became the holder of thousands of boarded up properties. The scandal cost taxpayers hundreds of millions of dollars.

In Illinois, it was worsened by a state law requiring that abandoned buildings sit vacant for at least a year during foreclosure proceedings. Many of the dormant houses became firetraps or unsightly warnings of neighborhood decline.

In spite of repeated disclosures about new FHA failures, most attempts at reform have failed.

Under pressure for a cleanup, HUD slowed the foreclosure process, improved its credit checks on FHA applicants and tightened inspection procedures so homebuyers would not find themselves greeted with repair costs for collapsing staircases, faulty furnaces, leaky roofs or rotted floors and porches. The reforms slowed the abandonment, but did

not stop abuses by real estate agents and mortgage bankers.

Some brokers turned to the VA, a program for military veterans or their families which does not even send out its own inspectors to approve properties and relies on city inspectors.

Others recognized that both government programs could be used for reaping windfall profits. The government bureaucracy was too cumbersome to prevent it.

The government programs have become a tool of real estate agents and mortgage bankers for resegregation of whole neighborhoods, and, in effect, the financier of sudden neighborhood change.

UPI was able to trace financing on all but six of the 281 real estate transactions to occur in the area just east of Marquette Park in a 20-month period from December of 1974 to August of 1976, a period of sudden racial change which began when the first black family moved in.

Of the 275 purchases, 139, or 51 per cent, were financed through the FHA and another 86, or 31 per cent, were sold through the VA.

Only 44 homes, or 16 per cent, were bought with conventional bank loans requiring a 10 to 20 per cent downpayment. Six homes were sold cash or on contract agreements.

In simpler terms, eight out of 10 homes were financed through government programs. All but a handful of the homes were sold to blacks or Spanish-speaking families.

During the same period, at least 18 homes were sold through the FHA in all-white Marquette Park a few blocks across Western Avenue, the city's newest line of demarcation. None of these homes were sold to blacks. Another 69 homes were sold through the VA in the white area, none to black buyers.

UPI sent whites and blacks posing as buyers to 14 real estate offices in the area asking for home listings in the same price range. In all but three cases, the white buyers were shown homes only west of Western Avenue. The black buyers were given listings only east of Western Avenue.

Federal law prohibits real estate agents from "steering" buyers to certain areas on the basis of race.

Further, the 1968 Fair Housing Act, which mandated the loosening of FHA lending practices, also states that it is government policy "to provide, within constitutional limitations, for fair housing."

Government-financed resegregation also occurred in West Englewood, the all-black neighborhood to the east of Marquette Park. The vast majority of homes in the 160-block area were sold on FHA and VA loans—all to blacks.

Besides racial steering, real estate agents also have steered whites into selling their homes FHA and VA, and blacks into buying through those programs.

"Sure, the real estate brokers are the ones that steer them into FHA," says Dudley Turner, former chief of the FHA's Chicago area single family mortgage credit division.

#### CREDIT DIVISION

John E. Pakel, executive vice president of the Chicago Savings and Loan Association located in Marquette Park, says that in past years financial institutions stopped investing in neighborhoods when they discovered a dropoff of conventional loan applications because it indicated high FHA activity, and probable neighborhood deterioration.

But he blames real estate firms for triggering the disinvestment.

"Now we're fairly certain that real estate brokers would infiltrate the area telling the people that they could only sell their homes with FHA-insured mortgages," Pakel said.

"That being the case, anybody that would want to purchase, or even the people that were living there now that wanted to sell, would not make any attempt to seek out

conventional financing. You see the obvious physical effects—board ups and the merchants start leaving."

UPI interviewed some 45 former residents of the changing area east of Marquette Park and about 80 of the new home buyers.

Most sellers were under the impression that no conventional home loan money was available and at least 13 said real estate agents advised that they use FHA and VA financing. Many of the same brokers advertised, even in the yellow pages, that they had homes for sale through the FHA and VA.

Numerous black buyers said they felt they had more protection from the government programs than from a conventional loan with a bigger downpayment. But foreclosure statistics indicated the opposite.

One mortgage banker, Mortgage Associates, Inc., of Milwaukee, was involved in more than 70 of the first 225 VA and FHA transactions in the area.

Robert McNeal, a Chicago bus driver, and his wife, Bernadette, went out looking for a new apartment last year. They found an ad in the newspaper and phoned Royal Realty.

McNeal's paychecks totaled just \$750 a month and it was tough supporting two children with the money, so he was surprised when the salesman mentioned buying a house.

"I didn't think we could handle a home," McNeal said.

But the salesman said their monthly payments would be \$220.75, not much higher than apartment rent, and the bright bungalow with the biggest yard on the block was too good to pass up.

McNeal and his wife bought the \$20,000 home in January through the FHA with a \$750 downpayment, including closing costs.

Six months later McNeal was worried about keeping the house and his wife was looking for a job.

"It's tight," Mrs. McNeal said. "We moved a little too fast."

But McNeal said, "We're gonna make it—I'm going overboard to make it."

The McNeals may make it but more than 2,000 other FHA and VA homebuyers squeezed by soaring costs give up their homes in Chicago each year, leaving abandoned properties that contribute to neighborhood blight.

Critics blame the problem on loose FHA and VA credit standards, which allow persons to buy homes they cannot afford to keep. The FHA requires no more than a 3 per cent downpayment, including closing costs, on a \$25,000 home.

"Our staff knows in many cases that the purchaser of the home hasn't got a prayer of making it," says Chicago area HUD director John Waner, one of HUD's most outspoken officials.

Waner displayed a copy of a memo he sent to HUD Secretary Carla Hills more than a year ago urging "a complete and timely review and revision" of the mortgage credit standards.

Attached to the memo was a typical FHA single family mortgage application in which the family's net monthly income was \$810 and its savings totaled \$654. Their anticipated monthly housing expense, including mortgage payments and utilities, was \$363.37. The application was approved.

"We are mandated by law to approve a buyer who falls within that category even though the private sector under no circumstance would approve him," Waner said.

He said private lenders, alerted to rising housing expenses, won't approve loans unless the monthly mortgage payments and other housing expenses are 23 per cent or less of the buyer's net monthly income. HUD's limits range from 35 to 50 per cent.

No significant action was taken in response to Waner's memo, or to a bill authored by

Rep. Martin Russo, D-Ill., to increase downpayments on FHA-insured loans and provide counseling for low-income buyers.

The credit problem is amplified by HUD's bureaucracy—easy prey for dishonest real estate agents and mortgage brokers who falsify applications and sometimes even pay the buyer's closing costs. Both practices are illegal.

Turner, who served in the credit office during the scandal-ridden years of 1973-75, said real estate agents and mortgage companies "all teach 'em to lie. It's the greatest unwritten conspiracy in the world."

"Once the loan is closed, everybody vanishes into dust," he said. "Everybody but the buyer."

Mr. PERCY. Mr. President, the pre-purchase counseling will be mandatory for all persons who wish to see homes in the designated area and who may also want to apply for FHA mortgage insurance. HUD Chicago area office staff will counsel prospective buyers individually, providing the following kinds of information:

Information about alternative housing opportunities in the Chicago area market.

Information on the buyer's rights under the Fair Housing laws.

Information on the availability of conventional mortgage financing.

Information on budget management and the responsibilities of homeownership.

Mr. President, I think the last item mentioned above is the most important. Good counseling can be the key to successful homeownership programs. I ask unanimous consent that an article from the Chicago Tribune of May 7 by Oliver Jones, executive vice president of the Mortgage Bankers Association of America, and which stresses the need for counseling, be printed in the RECORD, at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COUNSELING IS SEEN AS HELP TO HOUSING  
(By Oliver Jones)

One of the newer devices for stimulating employment is the provision of federal funds to provide for public service employment.

Some of its critics argue that local governments simply use the funds to meet city payrolls and reduce the pressure on their budgets—no new jobs are added. Others argue that new jobs that are added last only as long as the federal largesse and no product performance is required.

These criticisms are valid, but so is the need for jobs. At the same time, housing subsidy programs need the support of counselors trained in the complexities of federal programs and aware of the problems and needs of low-income families. Why not marry these needs, solve two problems, and end up with a valuable product?

So far funds for counseling have been authorized, but not appropriated, and when appropriated, not spent. Even then, the authorized spendings are far less than those proposed for public service jobs. Despite the negative attitude towards counseling, the Department of Housing and Urban Development's (HUD) own studies indicate that dollars spent in counseling are returned in savings from reduced foreclosures and the consequent losses. Surely, an adequate counseling program would have avoided or greatly reduced the fiascos of recent years experienced in Chicago, Detroit, and Philadelphia.

Why not take a positive approach to public service employment and make counseling available to low-income families in need of shelter in every city in the land. The farm community has benefited from some 17,000 county agents servicing a wide variety of the farmer's needs for a half-century. If we are truly concerned about the nation's cities, can we do less for the farmer's city cousin?

The city's low-income family is only vaguely aware of the wide and complex variety of housing assistance available. Welfare payments, public housing, 235, 236, rent supplements are all common terms in the industry's lexicon. They are not common terms in the public's understanding of what is available, who is eligible, and how to apply for assistance. Moreover, they are designed in HUD's concrete tower in order to stimulate production and sales rather than to meet the individual needs of low-income families. These gaps could be closed by counselors who understand the programs and are sensitive to the varied needs of the poor.

Picture a convenient downtown office where low-income families could go for advice and assistance. They could find out if they are eligible for housing assistance, the type of assistance available, and how to apply. The counselor could help prospective homeowners find a house that fits their needs, teach the family to manage its budget, and learn about the new responsibilities of home ownership, the counselor can see that the assisted family is not ripped off and is not taking on more responsibilities than it can handle. He can aid in housing and negotiating financing.

This suggestion urges counseling from the beginning stages until the counselor feels that the family can go on its own it is not satisfied with the current fad of "default counseling," which comes to bear only after the family is in financial difficulty. It is not just another handout. The funds for housing assistance are being, and have been, spent in billion dollars measures but the delivery system lacks this vital and cost effective element—counseling. As a result, expectations have turned into sour disappointments, one new program after another has turned into failure, and the task of housing the nation's low-income families remains.

Would it not be far wiser to reduce the unemployment figures on a more permanent basis, and, at the same time get a productive result from public service employment as from housing subsidies?

Mr. PERCY. Mr. President, in addition, HUD will re-evaluate appraisal practices utilized by the Department to insure that differential appraisals of comparable properties are not based on the changing racial character of a neighborhood, and HUD will strictly enforce credit requirements for FHA-insured mortgages to prevent the influx of unqualified buyers into the neighborhood.

In announcing the program, Secretary Harris was responding to the requests of two outstanding public interest housing groups in Chicago; the Leadership Council for Metropolitan Open Communities, and the Home Investment Fund of Business and Professional People for the Public Interest. They requested urgent action to prevent racial unrest and block busting in Marquette Park this summer. I have long been an advocate of pre-purchase counseling programs and I commend both Secretary Harris and HUD Region V Director Don Morrow for their prompt action in setting up this experimental program in Chicago.

The May 15 Chicago Sun-Times and the May 18 Chicago Daily News both carried editorials praising the announcement of the prepurchase counseling programs by Secretary Harris. I ask unanimous consent that these editorials be printed in the RECORD at this point.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Sun-Times, May 15, 1977]

#### FIGHTING HOUSING BIAS HERE

Marquette Park, on Chicago's Southwest Side, has a history of racial housing troubles, to put it mildly. Unscrupulous real estate brokers have poisoned the atmosphere further. And the federal government has done its share of harm, too, with lax enforcement of loan standards.

But that neighborhood—and the whole city—has reason to see hope in an announcement late last week from the U.S. Housing and Urban Development Department.

HUD Sec. Patricia Roberts Harris said her department would start a pilot project of prepurchase counseling for Southwest Side home buyers using Federal Housing Administration insured mortgages. Under the plan, HUD counselors will give the buyers financial advice about all available homes in the area. They would try to ensure some stability in terms of white fighting and neighborhood decay.

Coupled with that effort would be a revision in appraisal policies so that the mere fact that a black or Latino family moved in would not necessarily cause panic and a drop in surrounding residential values.

Still another part of the plan would tighten credit checks on buyers. That's vital if rates of mortgage default—and resulting property abandonment and decline—are to be reversed. It could also help prevent credit blots on the records of families with good intentions but poor financial possibilities.

HUD's plan was formulated to settle legal actions filed by several neighborhood groups, the Leadership Council for Metropolitan Open Communities and the Home Investments Fund. All those groups deserve warm thanks for spurring action against racial strife.

If the pilot project works on the Southwest Side, it could work elsewhere, too. Chicago could show the way for other urban centers. As Kale Williams, executive director of one of the groups said, "It could be a significant step in breaking the dual housing market which has separated blacks and whites in major metropolitan areas."

That's a giant task, but it's one that must be undertaken if black and white and brown are to find urban harmony.

[From the Chicago Daily News, May 18, 1977]

#### HELP FOR MARQUETTE PARK

The transition of Chicago neighborhoods from white to black has followed a consistent pattern: Under the severe pressure of their growing numbers, the first blacks move into a white neighborhood in an atmosphere of high tension, hostility, violence. Pressed by real estate profiteers, whites panic and sell out. Lured by the same agents, blacks pour in, some of them too poor to qualify legitimately for home loans, to maintain them and the property they acquire. Mortgages are foreclosed, and the unscrupulous lenders lose nothing because most of the loans are federally insured. Some homes are boarded up, others are allowed to decay. A new ghetto slum has been created.

The process now is under way in an area of Marquette Park bounded by Western and Bell avenues and 63d St. and 74th Pl. Civic organizations, armed with evidence that old patterns can be broken, are fighting the tide.

Central among them is the Leadership Council for Metropolitan Open Communities, which has just won federal action that holds considerable promise for the area.

Acting on suggestions made by the Leadership Council, the Department of Housing and Urban Development has endorsed a three-point demonstration project in Marquette Park that, if it succeeds, can become a model for cities throughout the country. Under new HUD regulations, families seeking FHA loans will be counseled—given financial advice, and told about housing listings throughout the city to encourage integration and stability in Marquette Park itself. To reduce the threat of panic, the government will reform its appraisal practices so that all property in the area is less likely to be valued by the standard of a home or a few homes sold under stress. Mortgage applications will be more closely screened to eliminate unqualified borrowers who have been oversold by the profiteers.

HUD is to be commended for this kind of affirmative action and the Leadership Council for getting the message into the ear of the bureaucratic giant. We hope their efforts succeed.

Another federal agency can speed the progress. There is evidence that some real estate firms operating in Marquette Park have been feeding off the victims of the neighborhood's problems in ways clearly outlawed by the Fair Housing Act of 1968—steering blacks in and whites out, using fear tactics in their solicitations, approving mortgage insurance for unqualified applicants. The Leadership Council and HUD have been turning over such evidence to the U.S. attorney's office. Prosecution undertaken with a sense of urgency could stamp out the parasites and well serve a community and its good citizens.

#### THE \$100 MILLION BARRIER AT FASTER THAN THE SPEED OF SOUND

Mr. PROXMIER. Mr. President, as usual, Art Buchwald's column requires no explanation. Who could duplicate his flair for language, his imaginative use of the obvious to instill humor. The source for his columns is rich indeed—it is the entire Federal Government and with that resource he will have copy for generations to come.

Mr. President, I ask unanimous consent that the Buchwald article titled "The Wild Green Yonder," dealing with the cost estimates of the B-1 bomber, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 24, 1977]

#### THE WILD GREEN YONDER

(By Art Buchwald)

They said it couldn't be done, but the U.S. Air Force managed to do it. It developed an airplane that would cost more than \$100 million. The B-1 bomber, which will be ready for production as soon as President Carter gives the word, will be the most expensive aircraft in history; and since the Air Force wants to build 244 of them, it will cost the taxpayers conservatively \$40 billion, including operating expenses.

I went to the Army-Navy Military Industrial Complex Club as soon as the announcement was made, and there was great rejoicing and excitement. Aircraft contractors were buying drinks for everyone.

"The Navy scoffed at us," an Air Force general said. "The Army laughed at us, and the civilians in the Pentagon said we were out

of our minds. They claimed no matter what we put on the plane we could never break the \$100 million barrier."

"How on earth did you do it?" I asked in admiration.

"We got together with our contractors, and we told them we wanted the most expensive bomber that money could buy. We wanted every sophisticated electronic gimmick they could think of. We wanted a plane that could fly high, a plane that could fly low, a plane that could carry nuclear warheads, supersonic missiles, cruise missiles, and anything else they could think of. We said we wanted the biggest buck for the bang."

"What did the contractors say?" I asked.

"They were thrilled," the general told me. "No one had ever challenged them to make \$100-million aircraft before. It wasn't easy to think up new ideas to add to the cost, but we promised to work with them closely."

"I'll never forget the day the chief engineer from the company came in and said, 'The best we can do is build you a \$75-million bomber. We can't think of another piece of equipment to put on it.'"

"Well, we really blew our stacks and told him if his company couldn't come up with a \$100-million plane we'd find one that could. We explained to him that the B-1 bomber was the Air Force's baby and the most vital strategic deterrent we had. If we couldn't make it expensive enough, the Navy wouldn't take it seriously. The Navy has been trying to sink the B-1 ever since we thought of it. If we brought in our plane for less than \$100 million, the Navy could claim it wasn't a deterrent at all."

"That must have frightened the engineer," I said.

"Scared the pants off him. We sat down with him and asked if he had thought of windshield wipers and he said he hadn't. Then we asked him why the plane didn't have whitewall tires. He couldn't explain it. We pointed out we needed leather seats and not the vinyl ones he had decided on. He kept writing figures down. The big breakthrough came, though, when someone thought of rear-window defrosters. The engineer protested that if he put in rear-window defrosters they would have to completely redesign the plane. "That's what you're paid for," he told him.

"Well, it took some doing, but we got the price up to \$101.7 million, and now the Navy is fit to be tied."

"I wonder what their answer will be?" I said.

"They'll probably try to come up with a plane of their own to match it. But they're fighting among themselves. Half the Navy wants nuclear submarines and the other half wants nuclear carriers. There isn't anybody in the Air Force who doesn't want the B-1 bomber."

"Because you can fly it, boy. What's the sense of having an Air Force if you can't fly a plane? Sure, our missiles are more accurate, but that means you have to sit in a bunker 1,000 feet underground. What the hell does that have to do with the wild blue yonder?"

#### SMALL BUSINESS WEEK

Mr. MATHIAS. Mr. President, the week of May 22 through 28 has recently been designated by President Carter as National Small Business Week. The week will be marked by speeches and ceremonies in Washington and across the country noting the important social and economic role of independent business. And that, I think, is essential.

Mr. Herbert Heaton, president of Support Services Alliance, Inc., has written recently about what small business

means to our country. In his article, "Entrepreneurship and the Alliance Program," Mr. Heaton eloquently reminds us that:

For millions of people, entrepreneurship is a matter of survival because there are not enough jobs to go around. For others, being small but independent is the only way they would like to make a living. Difficult as it is, entrepreneurship is also attractive because it involves the three elements of satisfaction: one's own goals, one's own methods, and feedback. Entrepreneurship is the basis of freedom because freedom requires alternatives which people can pursue. Entrepreneurship is economically essential because a healthy economy requires a mixture of sizes with small enterprises and self-reliant individuals to innovate, take risks and provide efficient individualized services. Art, music, literature and fine crafts, as we know them, are products of entrepreneurial individuals.

His words highlight the great contribution that small business makes to our economy and our way of life. But there are some things occurring today that do not make it easy for the kind of people I have just mentioned to succeed. Unfortunately, some of those obstacles are Government-created.

Recently, I addressed these problems when I visited the Rotary Club in my hometown of Frederick, Md. My talk was titled "Small Business: Problems and Prospects." In it I discussed both the burden of excessive regulation and my efforts to provide an avenue of relief for small business. My bill, S. 49, would establish a Small Business Administrative Review Court that would give a day in court to the little person. It is designed to promote due process and to rationalize the application of the many regulatory controls on small business.

Mr. President, I ask unanimous consent that the text of my remarks to the Frederick Rotary Club be printed in the Record and I salute the small business men and women of our country on the occasion of National Small Business Week.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

**SMALL BUSINESS: PROBLEMS AND PROSPECTS**  
(By Senator CHARLES MCC. MATHIAS, JR.)

I am delighted to be here today to talk with you about the problems and concerns of small business and what we might do about them.

The biggest stumbling block to the conduct of business today is overregulation. The agencies, departments and commissions of the Federal government churn out regulations so fast and furiously that we finally had to set up a Commission on Federal Paperwork. It was given two years to stem the flow of paper and its time has almost run out now with no dramatic results.

The small, independent business people in this country can hardly keep track of the organizations empowered to issue regulations, much less of the regulations themselves. But the problem of excessive government regulation is not confined to business. It affects everyone. In this one area at least the equal opportunity guidelines are scrupulously followed: no race, no class, no age group, no sex is over-looked. Everybody gets the business.

Let me give you some statistics on the flood of paper being generated in Washington:

The government prints over 11 billion forms a year.

There are 50 forms to be filled out each year for every man, woman and child in the country.

GSA reports government forms cost the economy \$20 billion a year to fill out and another \$20 to be read and shuffled about by the bureaucracy.

There are an estimated 6,000 different forms generated by 3,500 government bureaus, agencies and services that maintain 8,000 separate records systems.

I don't want to give the impression that the Congress is innocent in this area. It isn't. Congress has passed 9,000 laws that require reports of some sort and not long ago the Senate Subcommittee studying the burgeoning paper problem issued a 2,200 page report.

When you translate these statistics into human terms, some incredible horror stories emerge. You probably have your own favorites, but here are some of mine:

An Oregon company operating three small TV stations reported that its license renewal application weighed 45 pounds.

In one major corporation, with 40,000 employees, federal reporting requirements in the personnel area alone require the use of 125 file drawers and, because of these requirements, the corporation has had to increase its personnel staff by a third.

Then there's the Federal agency which required that construction vehicles be equipped with bells to warn workers of their approach, while another government agency required the same workers to wear ear muffs against noise pollution.

Another problem with all these regulations is that too little thought is given to the actual effect of strict application. All too often the practical effect of an order, fine or citation is inequitable; sometimes it borders on the ludicrous.

My colleague, Senator Malcolm Wallop of Wyoming, played that theme to a fare-thee-well in his successful campaign to unseat Gale McGee last November and the voters loved it.

The highlight of his onslaught on government regulation was a TV spot attacking a pending government proposal that would have required that a toilet be available to every worker within a two or three minute walk of his workplace.

Wallop's spot showed a Wyoming cowboy leading his packhorse off into the sunset, dragging a portable toilet at the end of his lasso. The voice-over simply said: "This time they've gone too far".

Now, I don't mean to imply that all regulations are bad; many are necessary. But, unfortunately, no matter how carefully a regulation is drafted, there is always the possibility that it will miss the mark when actually applied, or that different agents of the Federal government will apply it in different ways. In some cases, too, regulations do not accurately reflect the intent of the Congress when it passed the law authorizing them.

These are things we can do something about. Right now there are only two avenues of redress for a business when confronted with what it considers an unwarranted Federal order, citation or fine. It can appeal to the administering agency or it can go to court. In practice, small business people have found these avenues ineffective because they entail insupportable expense and delay. The result is that increasing numbers of small business people figure the game isn't worth the candle and they suffer in silence. They have simply given up seeking redress through the avenues established for that purpose.

Now, I would like to tell you what I'm trying to do to remedy this situation. On the first day bills were received in the 95th

Congress, I introduced the "Small Business Review Act" which is designed to enable small businesses to obtain review of their rights at minimum expense to themselves or the taxpayer. Since then, I am happy to say, Senators Heinz of Pennsylvania, Leahy of Vermont and Hayakawa of California have joined me as cosponsors.

My bill was developed with the cooperation and support of the National Federation of Independent Business which is as determined as I am that their nearly half-a-million members, and all other small businesses in this country, have equitable access to a grievance forum when faced with a Federal order, citation or fine. My bill—S. 49—is designed to promote due process and to rationalize the application of the many regulatory controls on small business. It is based on the very successful experience of the U.S. Tax Court in the conduct of "small tax cases". Specifically, S. 49 establishes a court of limited jurisdiction to hear cases involving Federal orders, citations and fines involving \$2,500 or less.

The court may rescind all or any part of a fine, citation or order which it finds inappropriate to the alleged offense, inconsistent with prior interpretations of the regulation or simply inequitable.

The court will not decide whether regulations are good or bad. It will merely attempt to introduce some common sense and equity into the way those regulations are applied.

Any citizen—corporate or private—may petition the court for a hearing. The jurisdiction, however, suggests that most cases will focus on small business. The rationale for a \$2,500 limit is twofold. First, it is generally the small actions which now are being foregone because of cost. Second, this court is directed to act with all due speed on petitions, and it is the large, very high dollar value actions that tend to bog a court down.

To insure that costs of litigation remain low and that rapid review is achieved, the bill incorporates three procedures that have proved effective in the handling of small tax cases by the U.S. Tax Court.

First, decisions rendered by the court are not appealable. Both parties waive their right of appeal once the case is before the Small Business Administrative Review Court.

Second, because there is no appeal, decisions rendered by the court cannot be used as a precedent in any other court. Thus, the court cannot establish its own body of law outside the normal process of judicial review.

Third, the court is designed to be very liberal in its procedure to encourage individuals to represent themselves before the court.

A petitioner has an option to employ an attorney, but is not required to employ one. Therefore, the form to be used by the petitioner is a very simple one, similar to the one-page form now used by the U.S. Tax Court for its small tax cases.

In addition, the filing fee is only \$10, an amount easily within the reach of most people.

The handling of small tax cases by the U.S. Tax Court provides a good illustration of what I am hoping to achieve in the small business regulation area. There, the average time between filing a petition and a decision is 10 months; between trial and opinion it is three months. In close to 95 percent of the cases, the individual acted as his own counsel. The record shows the Tax Court has been neither a patsy for the petitioner nor for the government; cases have been decided almost equally between the two.

I'd like to emphasize that I am not creating a new layer of bureaucracy to control already existing bureaucracies. I have drafted a sunset provision into the bill so that it will automatically expire in five years unless Congress specifically acts to renew the court. The Chief Judge will be required to provide

Congress with an assessment of the court's performance to enable Congress to decide if it's worth continuing.

If the court succeeds in eliminating many of the inequities small businesses now face, as I believe it will, then we will have made significant progress toward achieving due process for a group of citizens whose enterprise, although vital to our society and our economy, is often neglected.

I have brought copies of S. 49 with me in the hope that you will study it and agree to work with me toward getting this important legislation passed in this session of Congress.

#### THE FOOD STAMP REFORM PROVISIONS OF THE FOOD AND AGRICULTURE ACT OF 1977—S. 275

Mr. GLENN. Mr. President, for the second consecutive year, the Senate has completed significant action on food stamp reform. The Agriculture Committee and its distinguished chairman, Senator TALMADGE, are to be commended for their work. I hope that, unlike last year, the House will act speedily so that these badly needed reforms may take place.

Last year, I introduced food stamp reform legislation that was finally embodied in the Senate-passed bill. This year, I was pleased to cosponsor S. 845, many provisions of which were included in the final version of S. 275. I would like to take this opportunity to comment on several of the key food stamp provisions of S. 275.

My three most often-stated goals for reform of the food stamp program are: First, that the program must be directed only to those in real need of food stamps. People in need must receive stamps promptly and efficiently while nonneedy upper income people must be eliminated from the program. Second, the program must be greatly simplified so as to eliminate wasteful, expensive errors, "waiting period" backlogs, bureaucratic chaos, and fraud by vendors and recipients. Third, we must view the food stamp program as simply a necessary stopgap as we proceed to carry out President Carter's pledge to reform and overhaul the entire welfare system. I hope that we can develop a fair, simple, and rational system that brings order out of the chaotic maze and proliferation of income supplement programs. It is with these goals in mind that I approached the food stamp issues of S. 275.

#### ELIMINATION OF THE PURCHASE REQUIREMENT

I believe that eliminating the purchase requirement and establishing a single benefit reduction rate of 30 percent of net income is a major and positive step totally consistent with the three goals that I have expressed. This feature should open up the program so that those who are at the very bottom of poverty, those with little or no funds for the purchase of stamps, can receive stamps. It is this group that needs stamps most and should have them. Additionally, eliminating the requirement for purchasing stamps has the effect of greatly simplifying the program, saving administrative costs, and eliminating vendor fraud by eliminating cash transactions. Much abuse of the program has been by the sellers of the stamps. This provision also has the benefit of removing from circulation roughly

\$3 billion worth of stamps, thus simplifying program administration. Since participation in the program is now limited to the net income of families at or below the poverty level, the arguments of those who raise uninformed specters of "free food stamps" for all are basically groundless. Eliminating the purchase requirement helps those who are in the most need to obtain stamps; it also helps us begin to unclutter administrative chaos and to clean up fraud in the program.

#### REPLACEMENT OF ITEMIZED DEDUCTIONS WITH STANDARD DEDUCTIONS FOR ELIGIBILITY DETERMINATION

It was the possibility of "pyramiding" itemized deductions so as to become eligible for food stamps that allowed the possibility of families with earnings of up to \$16,000 to become eligible for food stamps. This provision encouraged the proliferation of "food stamp lawyers" who advised families on the manipulation of deductions to obtain stamp eligibility. S. 275 eliminates this procedure while providing standard deductions of (a) \$60 per month for all households, (b) 20 percent of gross earnings to compensate for taxes and work-related expenses, (c) a dependent care deduction not to exceed \$85 per month per household for actual dependent care costs necessary to allow a household member to work, and (d) an excess shelter expense deduction for shelter costs incurred in excess of 50 percent of income, not to exceed \$75 per month.

Hopefully, these provisions will allow enough flexibility so as to avoid regional disparities in food stamp benefits. I am greatly concerned that regional differences in cost of living be reflected in food stamp benefit determination. The excess shelter cost standard deduction does address this problem somewhat, perhaps the House will address the question further.

#### TERM OF THE PROGRAM

I voted for a 2-year extension of the program rather than a 5-year extension because I believe, as does President Carter, that there should be no chance of arguing that food stamp reform should somehow substitute for genuine overall welfare reform. I want pressure put on bureaucrats to get the food stamp reforms of S. 275 implemented as rapidly as possible, but the real solution to the problems of food stamps is not 5-year or 2-year food stamp reform. Our solution is to move quickly and effectively to design a fair, efficient, and compassionate welfare system. I support the Carter administration's request for a 2-year food stamp extension with the hope that in 2 years we will be underway with serious overall welfare reform as opposed to a continuation of piecemeal, incremental, program reform.

#### OTHER PROVISIONS

There are other provisions of title XII of S. 275 which I applaud. The increased incentives for States to improve their program administration are especially commendable. I support the provisions that require unemployed participants to engage in job search activities and that require a 60-day period of ineligibility for someone who voluntarily leaves his or her job without good cause.

In summary, Mr. President, I feel that the food stamp reform provisions of S. 275 are basically consistent with my goals of providing assistance to those truly in need in a way that is uncomplicated, fair, and efficient.

#### UNIVERSAL VOTER REGISTRATION

Mr. DOLE. Mr. President, ever since President Carter proposed the so-called Universal Voter Registration Act we have been hearing from State and local elections officials who are deeply concerned about the effect of this legislation on the orderly administration of elections and the integrity of the entire process. Of course, these officials are in the best position to predict what would happen if this legislation were enacted. This Senator believes that we should listen carefully to their concerns.

In particular, I highly value the opinion of our own Kansas Secretary of State, Mrs. Elwill Shanahan, and requested that she write me to express her views so that I might make her opinion of this legislation a matter of public record. I ask unanimous consent that the text of her letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF KANSAS,  
OFFICE OF SECRETARY OF STATE,  
Topeka, Kans., May 11, 1977.

Hon. BOB DOLE,  
Dirksen Senate Office Building,  
Washington, D.C.

DEAR BOB: Thank you for requesting my feelings in regard to the "Universal Voter Registration Act of 1977." My opinion is that it is a "Pandora's box" that once opened could cause fraud, chaos and confusion at the polling place.

Kansas initiated statewide registration in 1972. Prior to January 1, 1972, registration was required only in first and second class cities and county-wide in Johnson, Sedgwick, Shawnee and Wyandotte Counties. The county election officers made every effort to get persons registered in the new areas prior to the primary election that year. However, any person who lived in an area where registration had not been required was allowed to register at the polls at the 1972 primary and general elections. This privilege was not widely used since the county election officers had registered approximately 75 percent of the people before the day of the election.

Since the "Universal Voter Registration Act" will affect urban areas, I can foresee the following: Dual lines at voting places, dual ballots, uncertainty as to the number of ballots and voting machines needed at voting places, additional members of election boards and, of course, long lines of people waiting to vote.

As Secretary of State and chief election officer for the state of Kansas, I think we have good election laws in Kansas. We have made every effort to provide for the secrecy of the ballot and the prevention of fraud. Registration is available during all work days at the offices of the county election officer and city clerk and many outposts. For example, Sedgwick County has 38 outposts and Shawnee County has 27 outposts. The last days before the closing of registration, county election officers provided for registration of voters during the noon hours and until 9 o'clock each night in all first and second class cities.

In 1976 the Kansas legislature enacted the

registration by mail law. This law was passed because of the possibility of passage of the federal postcard registration bill, which failed. Registration by mail has not proved to be as successful as the proponents of the bill anticipated. However, it is available to anyone who wishes to register by that method.

Kansas taxpayers are already overburdened by federal taxes and bureaucracy. What the federal government does not need at this time is another agency. We hear from Washington that we must balance the budget. The minimum cost under the program is estimated at \$50 million every two years. There is no guarantee that funds will be perpetually available. The states may be required to eventually fund a program forced upon them in order to comply with a federal mandate.

Thank you again for giving me the opportunity to express my opinions and feelings in regard to this proposed legislation.

Very sincerely yours,

ELWILL M. SHANAHAN,  
Secretary of State.

#### BALANCED PERSPECTIVE NEEDED TO VIEW SOVIET MILITARY EXPANSION

Mr. PROXMIER. Mr. President, the June 1977 edition of Harper's contains an article dealing with the contending philosophies of arms control and arms buildup. The author, Daniel Yergin, concludes that we need to reexamine the arguments fostered by the advocates of an arms buildup.

Mr. Yergin explains that much of what the arms coalition group argues is based on interpretation of often ambiguous information and not necessarily on the facts. He does not question the sincerity of their motives, but rather the methods that they employ to convey their message. Further, he describes two basic flaws in the arguments put forth by the members of the arms lobby.

Mr. Yergin shows how the relationship between the United States and the Soviet Union depends on the mutual perceptions these nations share. Yet, within the United States, he seems to feel that it is the arms coalition group that has had a more significant impact on framing those perceptions. And he goes on to stress the fact that it would be better for all concerned if the United States could see matters as clearly, honestly, and unemotionally as possible.

The author does not deny that Soviet military strength has been growing over the years. What Mr. Yergin takes issue with is the exaggeration and overstatement of Soviet capabilities with the result of painting a sometimes hysterical and apocalyptic picture of what might happen. In contrast, he portrays what he considers to be the causes for real concern from the Soviet Union in the future.

Mr. President, I believe that Mr. Yergin's article will be of interest to all of us concerned with the security of the United States, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ARMS ZEALOTS  
(By Daniel Yergin)

As has become customary when an old administration departs and a new one marches

in, we are in the midst of a loud and passionate debate about arms. Some of the relevant questions have become familiar over more than three decades of such debates. Are the Russians getting ahead of us? Are they actively seeking world domination? Should we spend more money on arms? Should we rush headlong into new military technologies? Some of the questions are more recent, the result of nuclear parity between the two superpowers and halting steps toward arms control. Is there or is there not a new Soviet military buildup? Is real and secure arms limitation possible with the Russians? Or are they taking advantage of such agreements to achieve nuclear superiority? While the debate is easily fogged in by the special codes used by those who talk about arms (MX, MIRV, PGM) the issues are clear—budgets, jobs, prestige, weapons systems, the structure of Soviet-American relations, the next spiral in the arms race, and that most basic of all matters—survival.

The argument in Washington and throughout the nation is between two "parties." On one side is the arms lobby or what might be called the arms coalition (hereafter to be abbreviated as the AC). Its members are those people, both inside the government (particularly in the Defense Department and the Congress) and outside, who believe that the Soviet Union is an ever-expanding menace. They believe that we are still living in the Cold War, a confrontation emanating from, as they see it, the predatory character of the Soviet Union.

On the other side is the arms-control lobby. Its members believe that the common interest between the Soviet Union and the United States in avoiding conflict, particularly nuclear war, outweighs their differences, and makes arms control not only possible but necessary.

It seems clear to me that these days the public argument is going in favor of the AC. The Carter Administration has already found itself hampered in its efforts to work out further proposals for the strategic-arms-limitation talks. Before negotiating with the Russians it must negotiate with the AC, and that does not leave much room for flexibility. Meanwhile, the propaganda campaign of the AC is growing. For instance, an organization called the American Security Council has produced a film dwelling on Soviet strength, *The Price of Peace and Freedom*, which has been on television stations around the country 225 times. Another 1,250 prints have been dispatched throughout the land. The Emergency Coalition Against Unilateral Disarmament got forty Senators to vote against Carter's nomination of Paul Warnke for arms-control negotiator.

At the same time, various versions of intelligence reports, meant to strike fear into the national heart, regularly find their way into the press. Generals retire from active duty to carry their message to a wider public. The Central Intelligence Agency, usually thought to be beset by critics from the Left, is one of the agencies that does not have a direct vested interest in an expanding defense budget, and its analyses of Soviet strength have, until recently, been the most balanced. But the CIA has been subjected to a powerful assault from the Right, in the course of which it has virtually been charged with purveying Soviet propaganda.

What motivates the AC? One could be rather cynical about the concerns of its members. "It is getting increasingly difficult to find anybody who isn't directly or indirectly connected with some weapons system," Sen. Stuart Symington has complained. "You might say his meal ticket is involved in the future development of weaponry." It is correct to say that part of what is going on here involves not so much the defense of the United States as the defense of the defense budget.

Yet it would be dreadfully unfair to assign

only cynical motives to the members of the AC, many of whom speak from deep conviction. Appalled by the character of the Soviet system, they fear that its empire will be extended even farther. They believe that the basic trends are running in the Russians' favor, and that if those trends are to be arrested, the United States must lay aside its guilt and recover its will and determination. For they are convinced that between the present world and a Communist world stands only the United States. They have come to agree among themselves that, in the words of one of their leaders, we are living in a "pre-war," not "postwar" situation. They charge that we are trying to appease the U.S.S.R. and depend upon its goodwill, just as the Western world sought to do with Hitler, and that such a course is no less foolish today than it was in the 1930s.

Underlying their convictions is a basic feeling of unease. As we have gone on investing resources, so have the Russians, and the days of our overwhelming nuclear superiority are gone. Whether you call it nuclear parity or "rough equivalence," and no matter how inescapable it is, many Americans are unaccustomed to thinking in this way, and do not like it. One can understand, even if one does not share in it, how the AC's view of the world is haunted by the specter of the "Soviet military buildup." Any reasonable person must be concerned about what capabilities the Soviets would have and might be tempted to use in a situation of "crisis instability"—that is, a tense eyeball-to-eyeball confrontation.

But so much in this debate depends upon interpretations of ambiguous information, on intuitions, and not on hard facts. Maybe the AC is right to be so alarmed, and if events bear it out we will have to eat crow and be grateful that some people were bold enough to choose the role of Churchill, and only hope the nation responds in time. We cannot ignore the point Dean Acheson made in 1940: "The judgment of nature upon error is death."

Certainly the AC is correct in its claim that the U.S.S.R. allocates a great deal of its resources to its military establishment. Right across the board, from manpower to advanced missiles, it is enlarging and modernizing its forces. It is also true that the Soviet Union is a closed society. Most of its peoples know as little as we do about the Kremlin's plans, intentions, and military budgets. Indeed, it sometimes seems that Moscow wants to provide material for the "worst case" analyses in the West. The problem is, as the defense correspondent of the *London Observer* put it, "to highlight the omissions and distortions" of those who exaggerate Soviet military strength "without falling into the trap of seeming to pretend that the Soviet buildup is not there."

On the basis of what we know today, there are two big flaws in the arguments put forward by the members of the AC. First, they forget that the Soviet-American arms race is a dialectic, a process of interaction, with each side responding to the initiatives of the other and so carrying the whole process to new levels of destructive power. Factors other than conscious political goals shape the decisions on both sides. "Our present forces cannot be explained entirely by a close reading of statements by high officials on procurement objectives," a panel on "nuclear effects," composed of leading scientists and former Defense Department officials, reported recently to the Senate Foreign Relations Committee. "The forces actually purchased often represent the effects of overreactions to Soviet initiatives, institutional momentum, inter-service rivalries, or the 'manifest technology' of an emerging technology. It would be unrealistic to expect a great deal of consistency from this history." This is the history of Soviet decisions as well.

Second, the available evidence, as we shall see, simply does not make the AC case. It does, however, suggest that the AC may well be doing a disservice to American interests. By working so hard to drive up defense expenditures, it adds fuel to the arms race and can even forestall meaningful arms control at a crucial moment. This happened during the Ford Administration, and may well happen in the Carter Administration. The effect might be not to increase, but to decrease our security.

Of late, the AC has been telling us that what matters is not just the substance of our own and Soviet military power, but the worldwide perception of each. It is the members of the AC, however, who are shaping those perceptions now. Day after day they belittle our formidable military establishment, thereby announcing that we are no longer number one—when, manifestly, we are. They warn us of the danger of "Finlandization," but they promote a process of self-Finlandization. This hysteria tends to obscure the most disturbing aspects of Soviet behavior—in southern Africa, for example. It also distracts attention from matters that do require attention, such as the military balance in Europe.

Of course, we should not delude ourselves about the character, methods, and values of the Soviet system. We cannot depend on the "goodwill" of the Soviets. But, for our own good, we should try to see matters as clearly, honestly, and unemotionally as possible.

George Kistlakowsky, professor emeritus of chemistry at Harvard, has been intimately involved with American defense posture for almost four decades. He played a key role in the atomic-bomb development, was science adviser to President Eisenhower, and has been involved in numerous expert capacities since.

"The leaking of sensitive foreign-intelligence information by professional super-patriots in and out of the government is not new," he has written.

"In the early '50s the press was flooded with stories of a 'bomber gap.' The result of the campaign was the buildup of B-47 and B-52 strategic bomber forces, although gradually it came out that the gap was a myth. In 1957, a major 'top secret' study in the executive office of the President [the Gaither Report] reported to him that 'evidence clearly indicates increasing threat' of the Soviet Union, which would 'become critical by 1959 or the early 1960s' because the USSR would 'acquire significant ICBM delivery capability with megaton warheads by 1959.' It urged increasing United States military budgets and a multibillion dollar civilian defense program to counter that of the Soviets. President Eisenhower took unkindly to most of these recommendations, and so the contents of this 'Gaither' report were leaked out.

"Senator Kennedy used the 'missile gap' in his 1960 campaign and in 1961 the strategic missiles program was greatly expanded, although the missile gap was turning out to be a myth. A couple of years later there was a flurry of stories about the massive Soviet civil defense program that almost resulted in Washington's starting one. Still later stories appeared of a countrywide deployment of an anti-missile defense, nicknamed Tallinn, which would defeat American missiles and thus undermine the U.S. posture of secure deterrence. As some intelligence analysts asserted throughout, the Tallinn system was only for anti-aircraft defense; but in the meantime the U.S. MIRV program got going. The Soviets followed suit and the MIRVed missiles have now greatly increased the already excessive destructiveness of strategic forces on both sides."

Behind all this is oversell, the game of National Security, which has been played for many years, and is being played now. To understand the game, we need to under-

stand how it was set up, and that takes us back to the rise of America's national-security state.

#### THE NATIONAL-SECURITY STATE

At certain moments, unfamiliar phrases suddenly become common articles of political discourse, and the concepts they represent become so embedded in the public mind that they seem always to have been with us. So it was with the phrase *national security* at the end of World War II. It became popular because it encapsulated an outlook on the world, a mentality that expressed the conventional wisdom of policy makers. The doctrine of national security described a changed relationship between the United States and the rest of the world and suggested policies to be followed in the light of this perception. There is a desire among Americans, when it comes to foreign policy, to find a single concept, a commanding idea that integrates contradictory information, suggests and rationalizes courses of action, and, as a court of last resort for both policy makers and public, almost magically puts an end to disputes and debates. "National security" has been the commanding idea of American foreign policy for more than three decades. The eventual result is the national-security state, a state within a state, a complex of attitudes, policies, government bureaucracies, and private organizations that serve and have a stake in a permanent and ever-expanding preparation for war. Of course, this must be balanced off against the grim and much more pervasive "total security state" of the Soviet Union.

Paradoxically, the growth of American power after World War II did not provide a greater sense of security, but instead a greater range of urgent threats. The military services felt under attack in another way—by the unification debate, which pitted the Navy against the Air Force, with each attempting to stake out a new role that would justify a large establishment in the postwar era. The unification battle was a classic case of bureaucratic bloodletting, a bitter half-decade struggle over the postwar organization and reduced budgets of America's military establishment. Throughout World War II, the Army and Navy were entirely separate, each represented by its own Secretary in the Cabinet, while the Air Force was a rebellious, semi-autonomous part of the Army. The idea behind unification was that the Air Force would gain its independence, thus creating three equal services, and that they would all be brought into one department, a Department of Defense. Those pushing unification (and the Navy was resolutely opposed) did so on grounds of efficiency.

In order to win bureaucratic victories, each service sought to define national security as broadly as possible. No one was more effective at this than James Forrestal, the brisk and energetic Wall Street bond salesman who had become Secretary of the Navy. "It has been a fetish of mine that the question of national security is not merely a question of the Army and Navy," he said in the autumn of 1945. "We have to take into account our whole potential for war, our mines, industry, manpower, research, and all the activities that go into normal civilian life. I do not think you can deal with this only by the War and Navy Departments. This has to be a truly global effort."

"After all, somebody said war is merely an extension of policy," he added. "I do not know who said it."

The doctrine of national security could gain meaning and substance only in the presence of a palpable enemy. Forrestal pushed hard to cast the Soviet Union in this role. Russia was a convenient choice for another reason. After the second world war, the Soviet Union was the only power that could possibly challenge the United States mili-

tarily, and, having lived through Munich and its consequences, American leaders were much more inclined to go on the "worst assumption" and not take chances. The U.S.S.R. already had extended its brutal control to Eastern Europe. But one did not have to shut his eyes to the horrors of Stalinism to recognize that the Soviet Union was not capable of actually posing a military challenge to the United States. Russia did not even have a real navy, although Forrestal would never publicly so admit. Some U.S. planners recognized how weak the U.S.S.R. was at this time, but presenting it as a threat did offer a rationale for an expanded mission for the services. In this regard, the Soviet Union's new role in world politics was a blessing for all parties to the unification debate. The manipulation and exaggeration of Soviet "threats" has, ever since, been central to the game of national security.

In July 1948, Forrestal put forward what proved to be a most important proposal in an effort to find a way out of another budgetary impasse. "Since the entire reason for the maintenance of military forces in this country is the safeguarding of our national security," he said in a memorandum to President Truman, "their size, character, and composition should turn upon a careful analysis of existing and potential dangers to our security." He called for the writing of a comprehensive statement of America's "national policy . . . particularly as it relates to the Russians." Such a description, he was sure, would make the case for a larger budget.

Truman did not accept this reasoning, and in March 1949 in effect fired Forrestal from his post of Secretary of Defense. A broken man, Forrestal killed himself two months later.

In late summer of that year, the Russians tested their first atomic device. It dramatically expanded the American sense of danger, and changed Truman's thinking. In January 1950, Truman gave the go-ahead for the "super," as the hydrogen bomb was called, as well as the required delivery systems. At the same time, he retrieved Forrestal's proposal for an overall assessment of America's foreign and domestic policies.

The paper was drafted in February and March of 1950 by State and Defense Department officials, under the leadership of investment banker Paul Nitze, who had succeeded George Kennan as head of the Policy Planning Staff. The document became known as National Security Council memorandum sixty-eight (NSC-68). One of the most important papers in the history of American foreign policy, it has only recently been made available to researchers.

NSC-68 expressed the fully formed Cold War mental set of American leaders. It provided the rationalization for the hydrogen bomb and for a greatly enlarged military establishment. Indeed—and here is its crucial impact—it defined the Soviet threat as limitless and so provided the basis for an endless expansion of the defense budget. NSC-68 was a fitting memorial to James Forrestal.

Its picture of Stalinist Russia was not particularly exaggerated, for at the time few in the West fully comprehended how monstrous Stalin's regime was. But, as terrible as the repression was in the Soviet Union, it did not necessarily follow that the Soviet Union was committed to world domination. Here NSC-68 offered interpretation rather than fact. "The Kremlin is inescapably militant," said the paper, "because it possesses and is possessed by a world-wide revolutionary movement, because it is the inheritor of Russian imperialism, and because it is a totalitarian dictatorship. . . . It is quite clear from Soviet theory and practice that the Kremlin seeks to bring the free world under

its dominion by the methods of the cold war." The Soviet Union's "fundamental design" necessitated the destruction of the U.S.

For the most part, the apocalyptic premises of NSC-68 were instantly and wholeheartedly accepted by American leaders. The only dissenters were two experts on the Soviet Union, George Kennan and Charles Bohlen, neither of whom believed at this point that the Soviets had a world design. Both thought caution guided the Kremlin and that the Soviets sometimes only responded to Western actions.

George Kennan had begun to criticize Washington's exaggeration of Soviet intentions. "It is safer and easier to cease the attempt to analyze the probabilities involved in your enemy's processes or to calculate his weaknesses," Kennan wrote in his diary. "It seems safer to give him the credit of every doubt in matters of strength, and to credit him indiscriminately with all aggressive designs, even when some of them are mutually contradictory." Kennan's comment is as apt today as in 1950.

#### THE DEFENSE OF THE BUDGET

By the middle 1970s, the defense of the defense budget had again become an issue. The heavy military expenditures for Vietnam were coming to an end, and there was much talk about a "peace dividend." Inflation had made everything more expensive, and it worried those with a bureaucratic or economic stake in the development of new technology. Meanwhile, a "McGovernite" spirit on defense spending was alleged to be abroad in the Congress, and the prospect of even small cuts was alarming, as was the possibility of a new Democratic administration in 1977 that would be committed to further arms control.

Suspicion and hostility had developed against Henry Kissinger in almost every agency, including the State Department itself. Defense and the Joint Chiefs felt bitter about the "back channels" and the way they had been shut out of the SALT negotiations. The Yom Kippur war in 1973 created a new skepticism about detente and Soviet intentions, and delivered a traumatic shock to many members of the Jewish community who, until then, had leaned toward arms control. The concurrent rebirth of anti-Semitism in the Soviet Union caused further skepticism. Revelations by Alexandr Solzhenitsyn and other dissidents about the horrors of Stalinism and neo-Stalinism raised questions for many people about the "morality" of detente.

Finally—and this point should not be misinterpreted—the Soviets have increased the size and quality of their military establishment. It really is a society where the military constitutes a very powerful state within a state. (Such an arrangement also provides a means for wasting a great deal of resources.)

Those are the reasons for this broad and diverse coalition, but what about the case? What is the basis for believing that we are confronted with a Soviet military buildup as large-scale and dangerous as the AC would have us believe? The three major "circumstances" that provided the "proof" for the buildup have been handily summarized for us by one of AC's leading publicists, Lt. Gen. Daniel O. Graham (Ret.). Formerly the head of the Defense Intelligence Agency, and controversial because of his role in estimating enemy strength during the Vietnam war,\* he is now a research professor of international studies at the Center for Advanced International Studies at the University of Miami. He recently served on Team B, the high-level review committee charged by President Ford in his departing days with

reevaluating CIA analyses of Soviet strength. Team B apparently concluded that the CIA was much too soft on the subject. General Graham belongs to the National Strategy Committee of the American Security Council, and his articles on the Soviet buildup appear in publications as diverse as *Air Force* magazine and the editorial page of *The Wall Street Journal*.

Let us take the general's "circumstances," as he summarized them for the readers of *The Wall Street Journal*. These circumstances are critical, the heart of the matter, the evidence with which the AC builds its apocalyptic vision of the Soviet military buildup.

Circumstance number one, according to Graham: "We found that our old assessments of Soviet military spending—that it represented only some 6 percent to 8 percent of the U.S.S.R.'s gross national product—were way off-base. It is now agreed in intelligence circles that Russia is devoting two to three times that much."

Estimates of Soviet military spending have often been used as political tools, and these most recent are no exception. General Graham himself was being a little disingenuous in suggesting that the intelligence community had suddenly "discovered" an increase in spending. In an article he wrote in 1976, he himself pointed out that the Defense Intelligence Agency had for some time refused to accept the CIA's estimates. What apparently happened was that, in the period 1974-76, the CIA's analysts had buckled under to pressure from other agencies, and they came to agree that the Soviets were spending 11 to 13 percent of GNP on defense, as opposed to 5.5 percent for the United States.

According to General Graham, we should draw back in terror at these new "estimates," not because they prove that the Soviet Union is stronger but because they prove that the Soviet Union *intends* to be stronger, that they demonstrate, in Graham's words, "Moscow's resolve to extend Soviet military advantages, where they exist, cancel out the few remaining United States advantages, where they exist, and achieve recognition as the prime military power in the world."

These "estimates" demonstrate no such thing, and tell us very little. The revised figures are upward revisions of estimates of what it costs the Soviets to pay for their military force and equipment; they have nothing to do with any real change in the numbers or kinds of weapons. The estimators have even made this admission, but so quietly that it has been submerged under the headlines. The former CIA director, George Bush, explained to a Congressional committee last year that the new estimate "does not signify a dramatic jump in the size of Soviet defense programs. It does reflect an increase in our assessment of the cost of these programs." In the past, it was assumed that Russia's defense sector was insulated from the gross inefficiency that gums up its civilian economy. Now, as another CIA official expressed it last year, "We have come to a realization that the Soviet military production complex is not as efficient as we thought it was; it is about half as efficient as we thought it was, and much closer to civilian efficiency, if you please."

So the Soviets are in actuality *not* spending more, but we have concluded they spend more than we had thought to achieve the same effect.

The AC has another way of demonstrating that the Russians are outspending us. Its members like to quote huge estimates of what the Russians would be spending were they in the position to spend dollars. Such comparisons are notoriously tricky. It's what economists refer to as "the old index-number problem." The method is to figure out what it would cost us in dollars in our society to build this MIG or that Soviet mis-

sile, and to add up all such costs. The question is, How much would it cost the U.S. in dollars to field the Soviet military, given what everything costs here? Thus, if we increase the amount of money we spend—on wages for our soldiers, for instance—the assigned cost of the Soviet army automatically goes up. "Soviet wages are generally much lower than American wages," Rep. Les Aspin has observed. "But by computing Soviet manpower costs at U.S. rates, one discovers a huge Soviet defense manpower 'budget' of over \$50 billion that exists only in American documents. Using this methodology, the largest single reason that Soviet defense spending exceeds our own has been the American decision to switch to an all-volunteer army and to pay its servicemen civilian-level wages. The absurdity of this calculation then becomes clear: If the United States were to shave its military pay scales, Soviet defense 'spending' would fall."

Now, the relative defense efforts can be compared in rubles as well as in dollars. This is no less valid in economic terms. Under this system, we ask what would it cost in rubles for the Russians in their society to build a Minuteman, and so on. That type of comparison leads to the opposite conclusion. "Comparisons in dollars exaggerate Soviet defense expenditures relative to our own," observes Franklin Holzman, professor of economics at Tufts University, and author of *Financial Checks on Soviet Defense Expenditures*. "For example, American GNP is roughly one-and-a-half times the Soviet when both are measured in dollars but three times when both are in rubles. Defense comparisons in rubles are never published—these would exaggerate American defense expenditures relative to the Russians." Very little actual analysis has been done in the way of ruble comparison. The Deputy Director of the CIA politely pointed last year to the "scarcity of resources we have devoted to this problem." One can see why.

In fact, much American military technology is simply beyond Russian capabilities right now. So we can put a dollar price on what they do, but it is virtually impossible to put a ruble price on important things we do. "There's a fundamental problem in trying to price every single weapons system, let's say, of the United States in rubles," said the CIA deputy director. "In many of these the Soviets do not have the technology to produce the very advanced systems. Theoretically the price would be infinite, and we would have to leave some of those weapons out of our calculations, because it wouldn't make any sense." It would also end up making American defense expenditures (expressed in rubles) look much higher.

Circumstance two, according to Graham "has been a new awareness of a large, continuing, Soviet civil-defense effort, which was greatly stepped up after the ABM agreement and the accompanying Strategic Arms Limitation agreement in Moscow in 1972." The significance of a major Soviet civil-defense effort, according to the AC, is that it indicates that Russian leaders believe that many or most of their people and much of the economic infrastructure can survive a nuclear war. American nuclear thinking is based on the idea of deterrence and MAD—Mutual Assured Destruction, a thesis that restricts either side from launching nuclear war because the result would be catastrophe. But, according to Graham, the Soviet Union can now plan for a first strike and victory, confident of a high survival rate.

To many in the AC, the Soviet civil-defense "offensive" is convincing stuff. One of General Graham's most pessimistic collaborators is Maj. Gen. George Keegan, Jr., formerly director of Air Force Intelligence. The Soviet civil-defense effort, Keegan said not long ago, "was the decisive turning point

\*See "Vietnam Cover-up: Playing War with Numbers," by Sam Adams, *Harper's*, May 1975.

in my judgment that we had already lost the strategic balance." His conversion came four years ago, he said, explaining, "The implication is that they have quietly and at great expense taken measures to assure that the essential civilian-military leadership, the fighting capability and the production capacity can continue to function under conditions of total war. What it all means is that the Soviets believe they can survive a nuclear war."

The Soviets do have a more active civil-defense program than we do, and any major effort at "damage limitation" is going to raise questions about the stability of deterrence. But what does Soviet civil defense really signify? And could it be effective?

The AC assumes a Soviet intent to develop a civil-defense system necessary for a first-strike capability. They have yet to support that point with any real evidence. The civil-defense program is far too small-scale for a potential "offensive." One might just as readily conclude that the Russians are afraid of a war. After all, they actually fought military battles with the Chinese in 1969. There is another consideration, which the AC totally ignores. World War II is very much a part of contemporary Soviet culture, and was a very painful period in Soviet history. While American gross national product almost doubled, the Soviet Union was devastated. Twenty million of its citizens died, and virtually every family was touched. Only 2 percent of that number of Americans was killed. Were experiences reversed, most American leaders would feel compelled to pay obeisance to civil defense.

As to the value of the Soviet program, many in the AC believe in the importance of civil defense in this nuclear age. (In fact, they "discovered" the Soviet civil-defense program a couple of years ago, in the course of trying to stir up funding for an American program.) However, their arguments lack persuasiveness. They sometimes reach back to the Strategic Bombing Survey, done shortly after World War II, to suggest that air raids are not so damaging. They make two mistakes in so doing. They forget that the Strategic Bombing Survey was itself a tool in the postwar battle over unification of the military services, and they stretch the bounds of credulity when they suggest that a "survivability" quotient can be derived by comparing the effects of conventional bombing on Germany over four years to the effects of many hundreds of nuclear bombs exploding within minutes. They also underestimate the long-lasting radiation effects.

For a civil-defense program to be effective, there must be practice exercises. We have no evidence that any such have taken place in the Soviet Union. Such exercises are unlikely, for they might well set off a panic that could not be contained.

The AC flourishes sundry Soviet civil-defense manuals. We cannot guess how authoritative these are. After all, our own Civil Defense Preparedness Agency claims to have identified shelter capacity for about 227 million persons, including space for 6 million people in some 2,000 mine shafts—and no one takes all that very seriously. The Soviet literature has the same general quality.

Take, for instance, *Civil Defense: A Soviet View*, translated and published under the auspices of the U.S. Air Force. We are told that it is a very significant document. Many who believe this have obviously not read it. Thirty pages, some 10 percent of the total, is devoted to the proper use of gas masks in case of nuclear war. And here is what it says to do when the nuclear war is over: "The 'all clear' signal is given to inform the population that the threat of attack has passed. The signal is transmitted over the radio with the words: 'Attention! Attention! This is the civil defense staff speaking. Citizens! The danger of attack has passed. The air raid alert is

lifted.' . . . On this signal, all citizens leave the blast shelters and fallout shelters and go about their business."

#### FIGURING THE BALANCE

General Graham's third circumstance involves actual numbers: "U.S. hopes that detente and arms-control negotiations would diminish Soviet emphasis on military power—and hopes that were reflected in earlier national estimates—have been dashed by the unprecedented scope and scale of Russia's military buildup since the inception of detente in May 1972."

There is no question that Soviet military strength has been growing in every realm. Still, the AC has been exaggerating, and, I believe, doing a real disservice by overstating Soviet capabilities and denigrating our own. Much of what the Soviets are deploying today is the result of decisions taken in the early and middle 1960s, when Henry Kissinger was just another Harvard professor.

The question of Soviet might can be broken down into three parts. The first and the most dramatic involves strategic arms—the missiles, bombers, and warheads that would be called into action in a nuclear war.

If one figures the strategic balance one way, the Soviets look better. They have more missiles (2,450 to our 2,123), heavier missiles, and bigger warheads. But, if one figures it another way, the U.S. looks better. Our weapons are more sophisticated and more accurate. Given the deployment of MIRVs (several warheads on one missile), we have 8,500 strategic warheads versus 4,000 for the Russians—and we have added 3,000 during the past five years.

Let us take one of the AC's "worst case" scenarios—an extraordinarily improbable, even fantastic, case. Even if all our land-based ICBMs were destroyed in a Soviet first strike, all of our bombers, and three quarters of our submarines, we would still be able to deliver 1,600 warheads from surviving submarines—not only destroying Soviet society, but also making much of that land mass uninhabitable.

Even to make such a case, the AC must suggest strongly that the Russians intend an unexpected first strike. That is why the AC needs that civil-defense argument so badly.

The kegs of destruction on both sides are vast, much greater than required for the task of destroying either society. The bomb dropped on Hiroshima was the equivalent of about 13,000 tons of TNT. The Soviet nuclear arsenal is equivalent to 5.4 billion tons of TNT; the American arsenal, to 4.2 billion tons. The overkill capacity is fantastic on both sides, and both sides know it. It makes any notion of superiority impossible. A madman might try something, but then God help us all. While the Russian leaders are many things, as George Kennan has pointed out, "they are not mad."

The second part of the question of Soviet might concerns the Soviet naval "buildup"—which involves the most extreme case of over-sell. Certainly, the Soviet navy has grown considerably from what it was—which was virtually nothing. In terms of tonnage, the Soviet bloc navies are about a third of those of the Western allies. But one would think from the headlines that the ratio was reversed. For instance, the Department of Defense claimed last year that the Soviet Union had built 205 "major combatants" between 1965 and 1976, as opposed to 165 for the U.S. But information it subsequently was compelled to provide to Sen. Patrick Leahy indicated otherwise, for it turned out that a large number of the Soviet "major combatants" were nothing more than small escort ships, and that, in fact, between 1961 and 1975, the U.S. had built 122 "major surface combatants" of more than 3,000 tons, while the Russians had built just 57.

The hullabaloo of the "buildup" campaign

tends to obscure the shift in the conventional military balance in Europe, which is the third part of the equation. In the past decade, the Russians have added 130,000 men to their Warsaw Pact forces, and they have introduced new tanks and other advanced weapons at a rapid rate. It is thought they are producing as many as 2,000 tanks a year and are now introducing the Backfire bomber and a new intermediate-range missile, the SS-20. Although these developments are cause for worry, the AC goes on to claim that the Soviets now have the advantage. This is still oversell, and not very helpful for the Europeans. In terms of manpower, the Warsaw Pact is up to 920,000, while NATO has about 700,000. We also have 7,000 tactical nuclear weapons in Europe. Moscow no doubt recognizes the potential unreliability of its Eastern European allies, which could explain some of the Soviet additions. Furthermore, the overall quality of the equipment is still unknown. One recent defector, a high-ranking military official in the Warsaw Pact who was taken seriously by Western intelligence, brought tales of gross malfunctions—one-third of the armored vehicles actually failing to start in maneuvers.

It is absurd to think that the Soviets would want to launch an invasion of Western Europe. If they could get away with it, fine, but the risks are not minimal. "You know, you always have to differentiate when you talk about people," George Kennan has said, "between what they theoretically think would be just dandy, and what they really expect to achieve in the near future. I've often used the example of the businessman who would love to make \$1 million, but he'd be very happy if he could cover his debts for the next two months. Now the Soviet Union remains ideologically committed, surely, to a Communist world. But they live in a real world and their real hopes and plans and their real actions have to be geared to their real possibilities."

Nevertheless, the buildup is real, and may have considerable impact. We do have to be attentive to Soviet strength in Eastern Europe and the ways in which this power is perceived in Western Europe. In the case of a Yugoslavian crisis when Tito dies, for instance, both the reality and the perception of the wealthy could affect decisions on both sides. NATO definitely requires greater commitment and resources.

Another cause for real concern is represented by the Soviet-Cuban adventure in Southern Africa. This kind of involvement is unprecedented for the Soviet Union, which is being helped along by muddled thinking and a weak response on our part. We do not have to believe that the Soviet actions are part of some Kremlin master plan to realize that the Soviets do want to expand their influence and military presence and that our interests require an effective answer.

#### ARMS CONTROL AND SECURITY

Overall, we can identify at least seven reasons for the U.S.S.R. continuing to strengthen its military posture: (1) A feeling of vulnerability; (2) Bureaucratic momentum—they build tanks because they build tanks; (3) Arms-race momentum—when you are in a race, you race; (4) To establish a credible war-fighting capability as a deterrent or in case war should break out; (5) To politically "overawe" their rivals; (6) To better project their power; (7) To get themselves into position for the first strike.

The AC broods mostly about the last of these. Yet, based on what we know, that is the only one that is currently not credible. It is possible that some of the members of the AC do not actually believe in point seven, but feel that they must engage in such over-sell to arouse the attention of a bored or indifferent audience. But it is a very misleading maneuver.

The AC deserves a most serious hearing. After all, if they are right, then we are in trouble. Perhaps it will turn out that we should go ahead with those very expensive B-1 bombers and Trident submarines programs and other new weapons systems that the Pentagon and its allies are trying to get through Congress. But, the AC does have a responsibility to make its case in a fair and accurate way. As we are bombarded with their newspaper broadsides, we should remember that what is at the heart of the debate is not numbers, but interpretation—of Soviet ambitions and intentions—and the AC's interpretation are not terribly convincing.

In the past few years, there has been a subtle but important shift in the arguments of the AC—away from emphasizing the reality of the military balance toward an emphasis on the perception of this balance in the two superpowers and the rest of the world. Perhaps this new concern with perceptions is a result of the Vietnam war, which revealed that even the number-one superpower had its limitations. Today, certainly, the AC often says that because other people in the world regard the Soviets as stronger, they will gain an advantage and get their way. But it is the AC that now shapes those perceptions by overselling Soviet strength and underselling our own. If Europeans are worried, it is because they are told that the West is weak.

The process can be destructive. Gerard Smith, chief delegate to the first SALT talks, came up with ten dos and don'ts for negotiating arms control with the Russians. One of the most important was to discourage—"the practice of underrating our military posture vis-a-vis the Soviets as a means of getting Congressional appropriations for the Defense Department. The strength, variety and flexibility of our forces gave us ample bargaining power at the SALT talks, and in the next round the United States still holds the high card—technological superiority. The Soviets cannot match American scientific, engineering and industrial power."

Yet consider what readers and listeners around the world have been told.

"From the Soviet side, when the silence is broken, come self-assured statements that the Soviet strategic forces have what they need. From our side come expressions of concern about the growth of Soviet forces; worries about the vulnerability of American ICBM's; charges that SALT has endowed us with inferiority; new targeting doctrines and strategic initiatives that resemble efforts to imitate Soviet force structures and their presumed capabilities. It would be ironic if the pattern of poor-mouthing our position at home should lead to a second-best image abroad."

Serious arms control is more likely to promote our own security than an unrestrained arms race. Perhaps, finally, the Russians will turn out to be unwilling to cooperate, but the stakes are so large that we must try. There are risks in trying, but we must remember that all alternative courses of action also involve risks. Among those other courses are a destabilizing arms race that could end in apocalypse. We do well to ask, as the AC plays that old game of national security, whether it is not in the process of selling the United States—our strength, our capabilities, our intelligence, and our real interests—much too short.

#### A SALUTE TO SMALL BUSINESS

Mr. HARRY F. BYRD, JR. Mr. President, recently President Carter, by proclamation, has designated the week of May 22 through 28 as National Small Business Week, and Gov. Mills E. Godwin has made a similar proclamation for the

State of Virginia. I would like to take this opportunity to pay tribute to small businesses in Virginia and throughout the country.

The small business community is the backbone of America's free enterprise economy.

Statistics show that 97 percent of all American enterprises are small businesses. These businesses contribute to 48 percent of the American gross national product and provide 55 percent of all of the jobs in the private sector of our economy.

As significant as these statistics are, they do not tell the full story about small businesses in America.

As chairman of the Finance Subcommittee on Taxation and Debt Management generally, I have had the opportunity to chair and participate in a series of hearings, which will be completed in June, on the question of incentives for economic growth in our economy. Of special concern to me during these hearings have been the views of the small business community and the impact of current capital formation proposals upon small businesses, incorporated, and unincorporated.

Small businesses contribute uniquely to American society.

They are involved in all types of business endeavors. They include such diverse groups as merchants, manufacturers, retail and service establishments, and high technology companies.

We often think of our country as a country composed of big government, big labor, and big business. But the average American's daily contact is not with giant corporations, but with the small businesses that provide jobs, manufacture goods, and provide services in his neighborhood and community.

There are both risks and rewards in operating a small business. But whatever the outcome of such an endeavor, an individual receives the personal satisfaction of knowing the results stem from his own efforts and labor and he has the opportunity to make his own economic destiny.

In observing National Small Business Week, we should examine the adversities which small businesses face today. I do not believe that Congress and our Government have adequately understood and addressed the needs and concerns of small business.

Witnesses before the Subcommittee of Taxation and Debt repeatedly emphasized the adverse impact of big government upon small business.

There is a need today for a stable economic environment which is free from the threat of runaway inflation. Our Congress has not listened to this need. Earlier this month, the Congress voted for a deficit in Federal Government spending in fiscal year 1978 of \$65 billion. This is the second largest deficit in the history of our country, exceeded only by the deficit of \$67 billion in fiscal year 1976.

This huge outlay of Federal funds came at a time when the Federal debt was \$680 billion, the highest in the history of our country, and is expected to grow to \$802 billion in fiscal year 1978.

This trend of more money to the Federal Government means that less capital will be available for the private sector of our economy and leads to greater inflationary pressures.

The Federal Government—big government—is an ever-present partner with small business. The Federal Government through its taxes, shares in the profits of small businesses. To the extent that Federal taxes remain high to account for the high level of Government spending, small businesses are deprived of capital needed for investment for future growth.

The Federal Government affects small businesses in other ways through its rules, regulations, and paperwork. The impact of OSHA and ERISA immediately comes to mind.

In the tax field, the implications on small businesses of changes in our tax laws need to be carefully considered by the Treasury Department when they formulate their proposals and by the Congress when they enact the laws. Simplification of the Tax Code would be of great benefit for small businesses, as well as all American taxpayers.

Despite these adversities, the Virginia small business community is alive and well. This is evidenced by the efforts of Alfred Irvin Mollen who is Virginia's Small Business Person of the Year.

Mr. Mollen has received this award through a nomination made by the Small Business Administration district office in Virginia.

The award is based upon the success of the individual's business over a period of time, its impact on the job market, its continued growth, and improved financial position, its response to adverse conditions, and personal characteristics of the nominee such as entrepreneurial ability and community service efforts.

Mr. Mollen is a native of Richmond, Va., and president of Auto Audio, Inc., and Mollen's Inc. After World War II, Mr. Mollen began as a sales clerk for an auto parts firm and, by the end of 1947, established his own auto parts business. Later, he joined with his brother to venture into the automobile electronics industry.

In 1972, his brother was forced to retire due to failing health, and "Al" Mollen then changed his operation from retail sales and service to primarily wholesale distributorship. Results were astounding and sales increased nearly 800 percent and operating profits over 600 percent.

The Small Business Administration has participated in Al Mollen's success, by providing his venture with funds to get started. He exemplifies the purpose for which SBA was founded "to aid and assist in the growth and prosperity of small business."

My congratulations go to Mr. Mollen and the more than 65,000 other small businesses in Virginia. They are a vital part of the economy of Virginia, providing more than half of the State's employment and 43 percent of its business product.

I join with my colleagues in recognizing the accomplishments of Virginia's small business community and the out-

standing contributions of small businesses nationwide.

#### IN SUPPORT OF EXPANDED COMMODITY CREDITS ABROAD

Mr. DOLE, Mr. President, on April 28, I introduced legislation to permit the extension of favorable commodity credit terms to nonmarket countries, including the Soviet Union and the People's Republic of China. My purpose in proposing this legislation is to expand the overseas market for U.S. grain, and to thereby assist American farmers who are looking for better markets and prices for their produce.

Last Wednesday, the Des Moines Register published a supportive editorial, pointing out the anticompetitive aspects of our current trade policy toward nonmarket countries. The People's Republic of China, which is increasing its purchases of foreign wheat, is turning toward our international competitors who offer more favorable commodity credits. Our own export trade with Communist China has dropped precipitously from a peak of \$819 million in 1974, to \$135 million in 1976. It is time we took a decisive step to improve our export trade with those countries not excluded from our market by the Trading With the Enemy Act. The extension of Commodity Credit Corporation credit terms will enhance our prospects for obtaining better grain markets abroad and, consequently, a better economic return to American farmers for their commendable effort.

Mr. President, I ask unanimous consent that the text of the editorial "Correcting a Mistake," be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### CORRECTING A MISTAKE

Senator Robert Dole (Rep., Kansas) has introduced a bill to permit the U.S. Department of Agriculture (USDA) to offer the People's Republic of China and other Communist countries short-term credit to buy U.S. grain. The bill deserves approval by Congress.

Dole's bill would allow China and the others to once again take advantage of the loan program of the USDA's Commodity Credit Corp. (CCC), which has been operating for over a decade. The recipient countries must pay the loans back within three years at prevailing interest rates.

China and other Communist economies were eligible to participate in the program until late 1974, when the Jackson-Vanik amendment to the 1974 trade act was passed. The amendment bars the extension of most-favored-nation trade status and the granting of most trade credits, including CCC loans, to Communist countries that do not permit free emigration.

China is trying to bolster its poor wheat crop with substantial imports. The Chinese have purchased at least 5.5 million metric tons of wheat from foreign sources this year, but none has come from the U.S. Dole and other farm-state senators believe that China's inability to utilize the credit program was a key reason the U.S. did not receive orders to supply any of this wheat. China is making use of Canadian and Australian credit programs.

Donald Novotny, director of the grain and feed division of the USDA's Foreign Agricultural Service, believes the Chinese will buy

at least another one to two million metric tons of wheat this year. If CCC credit were available, the U.S. would be in a better position to get some of these orders.

The U.S. is expected to export only 25.4 million metric tons of wheat in the 1976-77 marketing year, down from 31.5 million metric tons the previous year. A sale of an additional one to two million metric tons would not boost total sales all that much, or do much to reduce wheat carryover stocks, which are expected to total 30.1 million metric tons at the end of this month. This is the largest carryover of wheat since the early '60s.

But the Dole bill deserves approval as a step in the right direction on trade policy. The Jackson-Vanik amendment was intended to be a club to force the Soviet Union to grant more Jews the right to emigrate. The amendment has had the opposite effect: The number of Jews allowed to emigrate has declined dramatically; much of the Soviet Union's export business has been taken to other Western nations.

There is little reason to continue a trade policy that fails to achieve its purpose and hurts U.S. trade.

#### THE UAW'S BLUEPRINT FOR A FULL EMPLOYMENT ECONOMY

Mr. HUMPHREY, Mr. President, the membership of the United Auto Workers Union has drafted a clear legislative and administrative action plan to move the Nation toward a full employment economy without delay.

At its 25th annual convention in Los Angeles, the UAW adopted a five-point program aimed at providing job opportunities for adult workers able, willing, and seeking work and to create a system of planning to prevent violent swings in the American economy and keep it at full employment.

In adopting its full employment economy resolution, the union recognized that the Carter administration and the Democratic Congress have taken important steps to eliminate the disastrous conditions fostered by the Nixon-Ford administrations when unemployment reached a peak of 9 percent, the highest since the Great Depression and inflation soared to a double-digit figure.

At the same time the UAW recognized that much more needs to be done both in the short and long run to put the Nation's economy in high gear and keep it there.

In drafting and adopting its full employment resolution, the Auto Workers emphasized that many of the programs it advocates to reach this goal are contained in S. 50 and H.R. 50, the Full Employment and Balanced Growth Act of 1977, legislation introduced by me and by Representative AUGUSTUS HAWKINS with wide cosponsorship in Congress.

The union's full employment resolution concluded by urging the early enactment of this bill.

Mr. President, I ask unanimous consent that the United Auto Workers full employment economy resolution be printed in the RECORD so that all Members of Congress will have before them a clear articulation of the Nation's priority needs.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

#### A FULL EMPLOYMENT ECONOMY

The most fundamental need in our economy is to achieve full employment. From the end of World War II to the inauguration of Richard Nixon, the American economy went through four recessions, each of which left millions of workers unemployed. It took the policies of the Nixon-Ford Administration, however, to bring unemployment in America to the highest levels since the Great Depression of the 1930s.

When Richard Nixon became President, unemployment stood at only 3.4% of the workforce. Through his "game plan" policy of creating a recession to reduce inflation, Nixon was able to bring unemployment up to 6.1% in the worst months of 1970 and 1971. A painfully slow recovery was cut short when the Administration continued its tight budget and tight money policies in the face of the higher prices imposed by the food and energy crises. The result was the Great Recession that began in late 1974. Even the Wall Street Journal (November 30, 1976) conceded that the policies of Arthur Burns, Nixon's choice to head the Federal Reserve System, "surely contributed to the economy's deep decline in late 1974 and 1975."

Statistics only begin to describe the depth of that decline. Unemployment reached a peak of 9% in May of 1975. It averaged 8.5% for all of 1975 and was still as high as 7.7% for all of 1976. The Commerce Department has estimated that over those two years the economy produced \$290 billion less in goods and services than it would have produced if unemployment had been held to 4%. That amounts to more than \$1,300 for every man, woman and child in the country.

A slow economic recovery all but stopped completely toward the end of 1976. By December of 1976—the last full month of the Ford Administration—the unemployment rate was still at 7.8%, as high as any month but one from the beginning of World War II to the inauguration of Gerald Ford. The average unemployed worker had been out of a job more than 15 weeks, and 2½ million workers had been out of a job longer than 15 weeks.

Among specific groups the rates were even higher. Nearly 10% of all blue collar workers were unemployed. The unemployment rate for blacks was nearly double that for whites. The rate for teenagers was nearly triple that for those 20 years and older. Among black teenagers in the labor force, fully one third were unemployed, and that rate approached one-half in many of our central cities.

The official unemployment figures do not include those who only worked part time—or who were totally discouraged from seeking work—because of poor job prospects. The Labor Department estimates that there were 2½ million such persons in the last quarter of 1976. Nor do the figures include the social costs of unemployment—the higher rates of mental illness, child abuse, robbery, alcoholism, and suicide that are known to be associated with high unemployment. Professor Harvey Brenner of Johns Hopkins University has shown statistically that each of these social ills tends to increase significantly in response to economic recessions.

The Carter Administration and the Democratic Congress have taken some important steps to break out of the economic stagnation that was the legacy of Nixon and Ford. But much more needs to be done—in the short run, to achieve full employment in the economy, and in the long run, to create a system of planning to prevent violent swings in the American economy and to keep it at full employment.

We urge that the federal government enact legislation assuring useful paid employment at fair rates of compensation for all Americans able and willing to work.

In addition to using the overall tools of fiscal and monetary policy, including tax re-

form, the government must implement more specific actions to produce full employment. Some of those actions are:

Establishment of the federal government's role as "employer of last resort" for those able and willing to work but unable to find employment.

Expansion of programs of public service employment to meet national needs or specific community needs consistent with broad national goals. Among the needs uniquely fitted for public service employment are: cleaning up our cities, developing mass transit, constructing and repairing playgrounds and other public recreational areas, development of child care centers, schools and the school system, public works programs, rebuilding the railroad system, rebuilding the merchant marine, recycling solid wastes, restoring the natural environment destroyed in the construction of road systems etc.

Focusing job creation on areas of high unemployment to avoid the danger that a program of economic stimulus will create new excessive inflationary pressures.

The development of a wide shelf of public works and public service projects ready to be undertaken whenever local unemployment rates threaten to exceed specified levels.

Renewal and expansion of programs of budgetary support for those state and local governments hardest hit by unemployment.

Creation of special youth employment programs, including an expanded Neighborhood Youth Corps and a modern version of the old Civilian Conservation Corps.

Upgrading basic education in present areas of educational poverty.

Enlargement and improvement of public employment service placement and counseling activities, and provision for work-study programs and adequate counseling for teenagers.

Provision of federal subsidies for vocational education in the public school and colleges and for on-the-job training for teenagers who do not go on to college. Continuous job training and retraining programs designed to upgrade job skills, with an acceleration of such programs during local or national recessions. All special public service jobs should have a training component, to upgrade the skills and to foster the mobility of the workers involved. Such programs must be regularly reviewed to insure that they are geared to jobs that do or will exist.

Improving the effectiveness of the private job market by actions such as: (a) eliminating employment discrimination based on race, sex, or age; (b) increasing the overtime premium under the Fair Labor Standards Act, and enacting other legislation to reduce regular work time, so that there will be increased jobs rather than longer working hours; and (c) stabilization activities aimed at those sectors of the economy which show large swings in the number of workers employed.

To achieve a full employment society the UAW supports and urges a rapid enactment of the Full Employment and Balanced Growth Act, the Humphrey-Hawkins bill, which includes many of the programs outlined above.

#### COGENERATION AND WASTE HEAT UTILIZATION ACT

Mr. SASSER. Mr. President, on April 25, Senator HART introduced the Cogeneration and Waste Heat Utilization Act. I am pleased to cosponsor the act.

Cogeneration currently accounts for only 4 percent of the electricity produced in the United States. Twenty-seven years ago, it accounted for 15 percent.

Sweden gets 29 percent of its electricity from cogeneration. West Germany gets a similar amount.

Cogeneration uses wasted steam to generate power. As you know, two-thirds of the process steam produced by American industry is wasted. It floats, unused, up smokestacks into the sky.

We have become profligate users of energy. We have fallen into wasteful habits which we have almost taken for granted. As President Carter said in his speech to the Joint Session of Congress on April 20:

Our energy problems have the same causes as our environmental problems—wasteful use of resources. Conservation helps us to solve both problems at once.

Senator HART's well-constructed and carefully designed bill sets up a cluster of incentives and disincentives which last for only 3 years. The bill orders studies to be completed during this 3-year period.

I call attention to two articles of this bill which recently appeared in two very highly respected publications: "Energy Users Report" and "Energy Research Digest." The articles discuss this pioneering legislation in some detail. And they explain some of the technical details of an energy conservation method for which the time has come.

I ask for unanimous consent that the two articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

#### HART COGENERATION BILL WOULD TAKE EDGE OFF ADMINISTRATION'S PROPOSALS

[From Energy Users Report]

In an effort to promote voluntary rather than mandatory resolutions of cogeneration problems, Senator Gary Hart (D-Colo.) is trying to get the Carter Administration to support his version of waste heat utilization legislation.

To date, however, Carter energy analysts have been noncommittal on Hart's bill (S. 1363), which would not give the Federal Energy Administration power to require cogeneration power at established tariff rates, both of which were proposed by Carter in H.R. 6831, the proposed National Energy Act.

The Hart bill, however, would retain the additional 10 percent refundable investment tax credit incentive for industrial cogeneration facilities and equipment.

It would encourage utilities to purchase surplus cogenerated power by removing the investment tax credit for those which "unreasonably refuse" to purchase. The reasonableness would be determined by the Federal Power Commission under standards prescribed by the Commission. Hart said this incentive was equitable for utilities, because the purchase of cogenerated power reduces utility capital investment requirements.

Finally, S. 1363 would include provisions for federal grants to help state utility commissions update their regulations on cogenerators. All three incentives are designed to expire in three years.

In a statement accompanying the bill as it was introduced, Hart explained that the legislation would delay most major decisions until the Congress has all the facts. This was better, he indicated, than "forcing the Congress and the President into hastily made major policy decisions which may plague us for years to come."

To carry out this policy, the bill would provide a comprehensive series of waste heat recovery and utilization policy analyses to be completed within 30 months. The studies will recommend the most practicable ways to recover and use waste heat, and model legislation and regulations to speed commercialization of cogeneration by industries and utilities.

Each recommendation will be accompanied by at least two alternative proposals. During the course of the study, progress reports will be submitted every six months.

A Hart energy aide said the studies hopefully will illuminate such complex issues as possible "waste heat taxes" or uniform tariff rate for cogenerated power. California, he noted, tried to establish such uniform rates, but found it unfeasible and had to return to a case-by-case approach.

A major study on cogeneration now being prepared for FEA by Resource Planning Associates, of Cambridge, Mass., will not address all the substantive issues, according to the aide. He said the effects of competition in the electric power industry will have to be analyzed, the effect of district heating ascertained, and the various legal questions settled.

He noted that there was a "disturbing trend" encouraging existing cogeneration technology involving less efficient "closed cycle" systems such as steam Rankine turbines. Cogeneration preferably will be brought along with advanced direct coal-fired systems such as fluidized-bed for optimum efficiency, he said. But, in the latest Energy Research and Development Administration budget which will go before the Senate later this week, there is a \$15 million line budget item for demonstrating existing cogeneration technology (196 EUR 23) in the textile, pulp and paper, and chemical manufacturing industries.

According to Princeton University's Center for Environmental Studies, using cogeneration in only three major industries could reduce by half ERDA's estimate for nuclear power needs in the year 2000. Cogeneration could also produce 30 percent of ERDA's total electricity forecast for the year 2000 from only three industries, with a 50 percent fuel savings and could reduce consumer electric bills by over 15 percent in 2000, if other factors remain constant, the same study reports.

#### [From Energy Research Digest]

#### COGENERATION BILL INTRODUCED

A bill directing ERDA to place far more emphasis on smaller-scale heat engines capable of burning heavy oils and fuels derived from coal or shale has been introduced by Sen. Gary Hart (D-Colo.).

The bill, the Cogeneration and Waste Utilization Act of 1977 (S. 1363), appears to incorporate many of the recommendations of the Carter Administration for promoting cogeneration. The bill provides an additional 10 percent investment tax credit to industries who install cogeneration equipment over the next 3½ years. In addition, the bill would take away the investment tax credit from utilities who unreasonably refuse to purchase power.

An identical bill, minus the research and development section, has been introduced in the House by Rep. Richard Ottinger (D-N.Y.). Ottinger plans to promote R&D on cogeneration through another avenue—an amendment to ERDA's 1978 ERDA authorization bill (see ERD, April 25, p. 1). Ottinger's amendments would provide for the demonstration of cogeneration in four industries. He is also considering the addition of small commercial and residential units with heat recovery to the demonstration program he is proposing.

The bill appears to differ from the President's proposal in its greater emphasis on R&D. For example, the bill directs the ERDA administrator to "initiate and carry out a research, development, demonstration and technology transfer program for the purpose of improving the efficiency and performance of industrial and utility site dual-purpose powerplants and providing... the capability to use effectively coal or fuels other

than natural gas or petroleum as a primary energy source."

ERDA technology programs along these lines shall focus on improving the cost effectiveness, performance and efficiency of prime movers and ancillary equipment "of the scale required for dual purpose powerplants," the bill says. "Ancillary equipment development shall emphasize heat recovery components with a view to improving existing powerplants and providing the necessary technology base for optimized heat recovery systems in new powerplants."

The bill also directs ERDA to develop further range alternatives, such as external combustion engines capable of operation with coal and topping cycles. The technologies spelled out for the development very closely match those under development by ERDA's Division of Conservation Research and Technology, which is becoming increasingly active in the area of cogeneration. Current activities planned for fiscal 1978 in CONRRT along these lines include developments in the areas of heat recovery from diesel and combustion turbine generators, combustion turbines in the 10 MW and 100 MW ranges, more efficient small steam turbines, externally-fired heat engines and 40 kW fuel cells.

#### NATIONAL SMALL BUSINESS WEEK

Mr. NELSON. Mr. President, this week May 22 through 28, has been proclaimed National Small Business Week by President Carter. The committee which I chair, the Select Committee on Small Business, takes a special interest in these observances each year. It is, therefore, very gratifying to be able to report that measures initiated, and in some cases already enacted, by this Congress have made this year's Small Business Week a genuine landmark.

More than ever before, Congress has been getting a clear signal that the American people want small and independent businesses to remain a strong part of our economy. In an era of multinational conglomerates and vast urban megalopolises, Americans are looking for renewed commitment to a competitive marketplace and businesses with a human face. Small is indeed becoming beautiful.

Small business' new stature is evident in a number of recent measures. The Senate recently passed unanimously a resolution calling on President Carter to convene a White House Conference on Small Business. Congress increased the authorization for the Small Business Administration in anticipation of a revitalization of that agency's services to small business. A bill now under consideration would set up a network of small business development centers nationwide, to provide technical assistance to small business. But Congress determination to strengthen the small business sector is nowhere more clear than in the tax measure President Carter signed on Monday. For the first time, Congress has passed special economic stimulus provisions aimed at encouraging labor-intensive businesses—such as most small businesses—to put America's unemployed back to work.

This is the fourth major tax reduction to benefit small business in the last year and a half. The estate tax law was

broadened to allow more small businesses to remain in the families of their owners. The corporate tax rate was reduced for small business—and the new tax law extends the reductions through 1978. Eligibility for the used machinery investment credit was greatly liberalized.

This is the first time in a generation taxes have been lowered on small businesses, and it probably would not have had enough support to pass even 5 years ago.

Much of the credit for getting the small business message across must go to the independent business associations of this country. One of the most active and constructive of these groups has been the Independent Business Association of Wisconsin—IBAW, one of whose organizers, Herman Williams, has been named Wisconsin Small Business Person of the Year. Mr. Williams, who built Williams Steel & Supply Co. of Milwaukee into a prosperous small business, has long been a persuasive spokesman for the small business community. His business acumen is demonstrated in the steady growth of his company. His unselfishness is shown in his lifelong interest in public affairs. And some measure of his success in both can be seen in the respect which is accorded his personal testimony before Congress.

Mr. President, it is a great pleasure to honor a man like Herman Williams during this landmark year for small business. I have known him since the 1950's when I was Governor of Wisconsin and he was becoming active in public affairs. I congratulate him on this fitting and suitable recognition he is now receiving. He and his lifelong business partner, his wife Ethel, exemplify American family enterprise at its best.

#### S. 790—WHAT'S AHEAD ON THE TAX-PAYER—IMPROVED WATERWAYS?

Mr. MCCLURE. Mr. President, the American taxpayers have spent several billions of dollars in recent years to construct new and improved inland navigation projects. More projects are on the drawing board. These projects are important to the Nation. But it should be noted that all of these were built at taxpayer expense, but used without charge by the barge industry. In the Senate Report 95-215 on S. 790, this point is made on the relation between inland navigation work and the justification for a system of waterway user charges:

It will be increasingly hard to win taxpayer, and thus political, approval of continued financing for new work on the waterways without some form of user charge. A gradual imposition of a reasonable user charge system meets that problem.

I agree. I believe fairness and expediency both support the need for a reasonable user charge system.

Mr. President, I ask unanimous consent that a partial list, prepared by the Corps of Engineers, of new inland projects finished in the past decade, those under construction, and those authorized, but not yet initiated, be printed in the RECORD. Taken together, this list

covers projects with an initial cost of \$9.8 billion, not including locks and dam 26 or works such as those in the Columbia River Basin.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

#### CORPS OF ENGINEERS INLAND NAVIGATION PROJECTS

##### OPERATIONAL STATUS ATTAINED AFTER JANUARY 1, 1967

| Project:  | Total Federal cost |
|---|--------------------|
| Alabama-Coosa River.....  | \$178,400,000      |
| McClellan-Kerr Arkansas River Navigation System...                        | 1,029,210,000      |
| John Hollis Bankhead Lock and Dam, Black Warrior and Tombigbee River..... | 53,400,000         |
| Calcasieu River Salt Water Barrier, Calcasieu River.....                  | 4,197,000          |
| Cordell Hull Dam and Reservoir, Cumberland River.....                     | 78,100,000         |
| Freshwater Bayou Lock, Freshwater Bayou Channel                           | 7,116,000          |
| Kaskaskia River Navigation.....   | 127,160,000        |
| Opekska Lock and Dam, Monongahela River.....                              | 25,200,000         |
| Hannibal Locks and Dam, Ohio River.....                                   | 87,500,000         |
| Willow Island Locks and Dam, Ohio River.....                              | 76,700,000         |
| Belleville Locks and Dam, Ohio River.....                                 | 62,200,000         |
| Racine Locks and Dam, Ohio River.....                                     | 65,900,000         |
| Cannelton Locks and Dam, Ohio River.....                                  | 97,300,000         |
| Newburg Locks and Dam, Ohio River.....                                    | 106,900,000        |
| Uniontown Locks and Dam, Ohio River.....                                  | 99,100,000         |
| Temporary Lock 52, Ohio River.....  | 10,100,000         |
| Jonesville Lock and Dam, Ouachita/Black Rivers.....                       | 43,700,000         |
| Columbia Lock and Dam, Ouachita/Black Rivers.....                         | 33,300,000         |
| Total .....   | 2,185,483,000      |

##### UNDER CONSTRUCTION

Total estimated Federal cost October 1976 price levels

| Project:   |               |
|--|---------------|
| Bayou La Fourche and La Fourche Jump Waterway.....                       | \$11,500,000  |
| Mississippi River Regulation Works between Ohio and Missouri Rivers..... | 151,000,000   |
| Missouri River, Sioux City to Mouth.....                                 | 450,000,000   |
| Smithland Locks and Dam, Ohio River.....                                 | 243,000,000   |
| Temporary Lock 53, Ohio River.....                                       | 37,200,000    |
| Pelsenthal Lock and Dam, Ouachita/Black Rivers.....                      | 61,420,000    |

SMALL BUSINESS VITAL TO AMERICAN PROSPERITY

Mr. HUMPHREY. Mr. President, on May 22 I had the opportunity to deliver the keynote address to the annual meeting of the Small Business Service Bureau in Worcester, Mass.

I was particularly pleased to participate in this meeting because two good friends and dedicated champions of small business were presented with awards for their work—Senator THOMAS MCINTYRE and Thomas McGee, speaker of the house in Massachusetts.

Both of these outstanding legislators have dedicated themselves tirelessly to the needs of small business enterprises. They have clearly recognized that without a healthy small business sector there is no inflation fighting, innovation producing, competition. That without healthy small business there is no prospect for full employment and financially sound cities and towns. And, that without healthy small business, big business would be forced to close its doors.

Mr. President, I also took the opportunity to outline legislation which Senator MCINTYRE and I are developing and which we will soon introduce. Our proposal would establish a national investment policy for small business, give the SBA Administrator cabinet level rank, and create a division of Advocacy, Economic Research and Analysis to cut through Federal redtape which threatens to strangle our smaller private businesses.

It was also a privilege to be addressing one of the most active and progressive small business groups in America on the first day of National Small Business Week. Under the able and energetic leadership of its president, Mr. Francis Carroll, the Small Business Service Bureau has become a significant and effective force in promoting the legitimate interests of our small business community.

Mr. President, I ask unanimous consent that my address to the Small Business Service Bureau on May 22 in

Worcester, Mass., be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HUBERT H. HUMPHREY

Three years ago I had the honor of being the Small Business Service Bureau's annual meeting keynote speaker. It was a pleasure to perform that role then, and it is with a sense of even greater satisfaction and kinship that I am back with you again this year.

It is a special privilege to participate in honoring Senator McIntyre for his tremendous contribution to and support of American small business.

As a key member of the Senate Small Business Committee and the Senate Banking, Housing and Urban Affairs Committee, Senator McIntyre has proven his friendship to you and his understanding of your problems time and time again. And as Co-Chairman of the Federal Paperwork Commission, his efforts have saved each of you many hours and dollars that otherwise would have been spent filling out useless forms.

No man in Congress has demonstrated his concern for small business more effectively than Tom McIntyre. He has been your champion and he has earned your gratitude. I am delighted that he is being honored by you tonight with your "Outstanding Public Service Award."

I also am pleased that you are honoring Thomas McGee for his consistent and energetic support for small business as the Speaker of the House in Massachusetts. His support for small business in the Bay State certainly warrants his selection as Massachusetts Legislator of the Year.

There are two reasons why I enjoy being with you so much tonight. First, as many of you know, I grew up in and am still the owner of a small business—our family's drugstore. I learned most of my economics and a good deal about government as a small retailer.

Second, like myself, you are activists. When the Small Business Service Bureau, and your energetic leader Frank Carroll, see a problem that hurts small business, you get at it and stay at it until some improvement is made.

You've been presenting your views in a highly effective way to the policy makers who influence small business at the Federal, state and local level. I have been particularly impressed with your outstanding ballot on hospital care cost containment. The information you are developing will be of great value to all of us who must act on this important anti-inflation measure.

As a result of your efforts, many of our governors, state legislators, commerce commissioners, insurance commissioners, SBA directors, members of the Senate and House Small Business Committees, and officials in the Carter Administration are better informed of small business problems and your viewpoint. They hear what you're saying about the urgent need for full employment legislation, for meaningful tax reform for small business, and for an equitable solution to the product liability insurance crisis.

I always am impressed with your ability to get results. But nothing is more convincing than was your ability to arrange with President Carter that National Small Business Week should begin today on the date of your annual meeting.

It's true that Senators Nelson, McIntyre, myself and other introduced the Small Business Week resolution. But you can't convince me that the fact that it begins today was sheer coincidence.

The language of that Resolution clearly indicates why small business is so vital to a prosperous America. Small business employs 100 million Americans and is respon-

sible for nearly half of our total business production.

Without healthy small business there is no inflation fighting, innovation producing, competition. Without healthy small business there is no prospect for full employment and financially sound cities and towns. And, without healthy small business, big business would be forced to close its doors.

That resolution reads in part: "A successful small business is evidence of the independence, initiative and hard work of the man or woman who owns and operates it."

In my judgment this is one of the keys to our economic system. It is hardworking small business people like yourselves who nurture the inventive genius of the nation. Far more than any giant, bureaucracy-ridden corporation, it is small business that spawns the ideas and the devices which equip the nation with new tools to increase productivity and efficiency and make higher standards of living possible for all of us.

Without small business our free enterprise system would vanish overnight, and with it the tremendous benefits it brings to our people. Big business then would be able to divide up the marketplace to the mutual advantage of the Fortune 500.

My Joint Economic Committee Subcommittee recently published a study that said this a little differently. The report was written by Professor George Doyle, Chairman of the Department of Economics and Foreign Affairs of Assumption College. Its title is "Foundations For A National Policy To Preserve Private Enterprise In The 1980's." The heart of that study is the conclusion that the survival of the free enterprise system primarily depends on the survival of small business.

The recommendations of that study, along with a series of important proposals by Senator McIntyre, are now the primary elements of legislation which we soon will introduce.

This bill would establish a national investment policy for small business, give the SBA Administrator cabinet level rank, and create a Division of Advocacy and Economic Research and Analysis to cut through red tape, whether it is SBA's red tape or the red tape of any other Federal agency affecting small business.

Now let me outline the thrust of the major provisions of the bill as it now is being developed.

It would require the President to determine each year the capital investment needs of small businesses and how well they are being met. If we are failing, the President would be required to propose incentives to assure that your credit needs are satisfied.

It would designate the Administrator of SBA as a member of the President's Cabinet and the President's Economic Policy Group. The time is long overdue when you should be directly represented in all of the important White House debates on national economic issues.

The legislation would create the Division of Advocacy, Economic Research and Analysis within SBA. It would have offices and qualified staff located in every region of the country. And its job would be to represent the views and interests of small business before Federal and State departments and agencies whose policies affect small business. Most importantly, this office would be responsible for helping you deal with the Federal Government—any part of it—without getting an interminable run-around.

Our proposals also call for creation of a Small Business Management Institute. It would help you with management advice and training, sales and marketing consulting services, and assistance in developing SBA loan applications. It also would be responsible for proposing changes in OSHA and ERISA regulations that plague the days

and haunt the nights of every small business person.

Neither Senator McIntyre nor I claim that this proposal will solve all your problems. We know better. But we are convinced that it will give you a better chance of getting fair treatment from the Federal government. And we pledge to you our best effort to see that this proposal is enacted.

In the past, Congress has committed itself in legislation to the preservation of one class of small business—the family farm. We have stated repeatedly as broad policy and in specific programs our determination to prevent large corporate farming from taking over American agriculture. We have established this policy not because corporate farms are not efficient, but because they are a serious threat to a system of free enterprise and a way of life that we value.

It is time that Congress fully recognized that the rest of small business—manufacturers, retailers, tradesmen, and the like, should be given the same national policy commitment. Once this policy of assuring the healthy growth of small business is established, we can design our laws to carry out this policy.

Before concluding my remarks, I have three additional points I would like to make. They relate to urgent problems that must be confronted and resolved if you are to be successful in your businesses, proud of your communities, and confident about the future for your children and your nation.

First, America cannot afford to continue the economic waste and social costs of high unemployment. Today nearly seven million Americans, 3.5 million of whom are under the age of 25, are being told that they are not needed, that they have no useful role to play in our society.

I believe small business has a direct and major interest in seeing to it that our economy is restored to stable, vigorous growth. High unemployment means fewer dollars are in consumers' pockets to be spent on your goods and services. High unemployment among young people translates directly into more shoplifting, more vandalism, and more breaking and entering.

The balance sheets of your businesses and that of the Federal Government will be safely out of the red only when we again have full employment. We must commit ourselves to an economy that will provide job opportunities to every American who is able, willing and seeking to work.

Second, America's cities are decaying in a vicious cycle of urban flight, deteriorating services, ugliness and financial collapse. Our cities are becoming the home of the poor, the deprived minorities and the elderly.

If this process is allowed to continue, all of us will lose. Our towns, suburbs and rural areas cannot remain strong when our cities suffer the social and economic cancer of blight and decay.

America's cities require the same kind of bold and imaginative commitment of will and resources that we made to the cities of Europe under the Marshall Plan. We need a National Domestic Development Bank to provide the financing it will take to restore our cities and make them attractive places in which to live and do business.

Can we do less for ourselves than we have done for Europe and now are doing in Africa, Asia and elsewhere through development banks which we finance?

The answer is clear, and we must act now.

Third, particularly for you in New England and for us from the Upper Midwest, the energy crisis is much on our minds. For years we lived under an illusion of limitless supplies of cheap oil and gas. But the lines at the gas pumps in 1973 and the factory closings and cold homes of the past winter are stark reminders that we were wrong.

We must adopt a tough, but fair, and comprehensive national energy policy to put an end to our energy crisis. Without such action, the economic future of our businesses and our states is dark, cold and bleak.

We must make the sacrifices that are needed to guarantee that this does not happen. President Carter's proposals, by and large, make sense and move us in the right direction. He will need your support to translate his proposals into action.

Like America, small business faces serious challenges in the coming years. Yet, we probably are more aware of the nature of these challenges than we ever have been in the past. And we are more committed to resolving them.

There won't be any easy answer or magic formula—there never has been. But, once again we will draw on the basic strength of our people—their common sense and determination to do better. And, as we do, we will emerge a stronger nation and a more just society, by turning our problems into progress and our challenges into achievements.

#### SMALL BUSINESS WEEK

Mr. SASSER. Mr. President, President Carter has designated this week, May 22 through May 28, as Small Business Week. I applaud the President for upholding this tradition which was begun in the midsixties. It is proper that the Nation honor its entrepreneurs in such a manner. Small business is an integral and important part of the economic life of the country. The maintaining of small business must be a top priority of the Federal Government. I intend to do my part to uphold our responsibility, and I am glad to have this opportunity to pay tribute to the accomplishments of the Nation's small business men and women today.

We cannot allow ourselves to forget the important role that small business plays in maintaining a sense of economic stability. Small businesses account for 96.7 percent of the Nation's business concerns. Small businesses provide jobs for more than one half of the private, non-agricultural work force in the country, and contribute 43 percent of the gross national product and 48 percent of the total dollar volume by wholesaling, 73 percent of the total dollar volume by retailing, 54 percent of the total dollar volume by service industries, and 76 percent of the total dollar volume of construction. Mr. President, these figures serve as a reminder of the magnitude of the role of small businesses in our overall economic structure. They should cause the Members of this body to reaffirm our commitment to the progress of small business.

In our democratic society, the Nation's small businesses provide those qualities that are basic and fundamental to that society. The competitive nature of our society is encompassed in the daily transactions of the business community. Large numbers of small, independent businesses help to preserve competition and decrease the likelihood of excessive economic or political control. Small businesses also offer the opportunity for individual expression and growth of initiative, and are frequent sources of new and inventive

products and methods. Small businesses offer the American consumer the freedom to purchase what they want, while allowing for greater price and quality competition. These characteristics of small business are consistent with the freedoms granted by our Founding Fathers in the Bill of Rights. We must provide the means to assure that the freedom of small business is protected.

My State of Tennessee has certainly been a beneficiary of the productivity of small business. We are one of the growing economic centers of the South and the Nation. This could not be the case without the dedication of our small business community. In addition, the leaders of my State in civic, community, and political roles are the leaders of the business community. These leaders bring the same dedication and innovation to their community involvement as they give to their businesses. Not only in Tennessee, but in the Nation, the existence of small business is fundamental to the development and prosperity of our economy. The future of our Nation's free enterprise system is directly related to the long term success of our small businesses. In this week, dedicated to the Nation's small business men and women, I hope that each of us in the Senate will reaffirm our commitment to their future progress.

I thank my colleagues, many of whom have backgrounds in the business community, for the chance to recognize the accomplishments of small business today.

#### FORGOTTEN VETERANS OF "THAT PECULIAR WAR"

Mr. CULVER. Mr. President, it has long been recognized that war veterans have serious economic, social, and psychological problems readjusting to civilian society. These problems are especially acute for our Vietnam veterans. The conflict is over in Southeast Asia, but many of those who served there are still struggling with the lingering personal effects of that war.

Mr. Jan Craig Scruggs, a disabled veteran of Vietnam, has written an excellent article in the Washington Post entitled "Forgotten Veterans of 'That Peculiar War'." Mr. Scruggs has conducted an extensive and rigorous investigation of the sociopsychological impact of the Vietnam war on those who fought it. The results of his questionnaire are disturbing. Soldiers with heavy combat experience have a higher political alienation rate and are 11 times more likely to dream about Vietnam combat than veterans who served in units with no casualties. Only half of the sample and only one of the black respondents feel that Vietnam duty has not caused them psychological problems. Combat veterans have a 30-percent rate of marital separations and divorce. He also points out that the unemployment rate in March for the youngest age group of Vietnam-era veterans was 17.2 percent. Mr. Scruggs' conclusion is both an indictment and a challenge:

The dry statistics of the social sciences (reveal) a sad legacy remaining from a war that this country is trying to forget.

In a spirit of national reconciliation for our divisions and wounds from this tragic conflict, President Carter has pardoned draft evaders and instituted a program for reviewing and upgrading less than honorable discharges during the Vietnam period. The President's efforts at reconciliation make more compelling the need for imaginative and concerted efforts to assist those Vietnam veterans who served our Nation honorably. The administration's \$1.3 billion program to find 200,000 jobs for Vietnam veterans is long overdue. I recently supported an increase in the Veterans' Administrations fiscal year 1978 budget levels, subsequently approved by both Houses of Congress, which will provide more funds to make cost-of-living and other improvements in the Vietnam Era Veterans Readjustment Act of 1974 and the GI bill.

As Mr. Scruggs suggest, however, funds and programs are no guarantee of meaningful results. The administration and the Congress have an obligation to see that the employment programs are effective, and that new programs are designed to redress the many other readjustment problems of Vietnam veterans. As a practical matter, the longer these problems are insufficiently treated, the worse they will become, both for the individual veteran and for our Nation as a whole.

Mr. President, I wish to commend Mr. Scruggs for his valuable work and for reminding us again of the needs of our Vietnam veterans. I ask unanimous consent that his article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORGOTTEN VETERANS OF "THAT PECULIAR WAR"  
(By Jan Craig Scruggs)

Just as the Vietnam war was unique in the way that it was waged—and lost—so that conflict has subjected our youngest-ever corps of war veterans to pressures unparalleled in American military history. The victory parades and hero status awarded to previous generations of military returnees were simply not present. The national turmoil surrounding the war made one's status as a Vietnam veteran a dubious distinction at best.

Probably no aspect of the war has been more exploited, misunderstood and officially neglected than the readjustment problems of Vietnam returnees. In the past two years the psychological and academic communities have finally started taking an interest in the effects of having participated in that conflict. We are seeing research indicating that serious and prolonged adjustment problems exist for many Vietnam veterans.

My personal interest in this topic is rooted in my own experience. When I was a naive teenager, a profound sense of duty compelled me to serve my country during time of war. After my tour, the wounds and medals I received as an infantryman in Vietnam became slowly transformed into reminders of my part in a cruel and meaningless conflict. My naive acceptance of America as a great and noble land gave way to more critical thinking as my conventional beliefs, attitudes and values were shaken by the war. I sometimes felt a deep bitterness toward this country as I reflected back to a quiet Sunday in 1970, when two very special friends of mine, a young black and a Jewish draftee, suddenly

lay dismembered and motionless in the dirt of Vietnam.

During graduate training in counseling psychology at American University, I initiated a long and expensive social psychological investigation of the war's effects upon college veterans. A questionnaire was designed to test the major hypotheses advanced by the scant literature available on this neglected topic. A prominent psychology professor, Dr. Allan Berman, provided excellent professional guidance. Questionnaires were given to 600 Vietnam veterans at local universities. Our 233 replies yielded some important findings about the psychological aftermath of that peculiar war.

The research found that men who served in units with a casualty rate of more than 25 per cent were statistically higher in political alienation. These veterans were also 11 times more likely to report dreaming of Vietnam combat than those who served in units with no casualties. Many evidenced low self-esteem. Only half of the sample did not feel that Vietnam duty had caused them psychological problems. Only one of the black combat veterans did not feel that Vietnam duty had hurt him psychologically. Some veterans who had psychological problems from the war indicated a reluctance to seek help from the Veterans Administration. Combat veterans had a 30 per cent rate of separations and divorce. The dry statistics of the social sciences revealed a sad legacy remaining from a war that this country is trying to forget.

In my present futile search for federal employment, I recently spoke with a civil-service counselor who has talked with several young men who refuse their five-point preferences rather than bear the stigma of being known as Vietnam veterans. One of the biggest and longest running jokes in this town is the special 10-point preference for disabled Vietnam veterans. Ronald Drach, employment director for the Disabled American Veterans and himself an amputee from Vietnam combat, states that it is generally not enforced and that cases exist where it has been intentionally circumvented by federal agencies. Most of the federal employees who have tried to help me and other disabled Vietnam veterans gain employment are also frustrated about this situation. The Department of Labor, which has been given the task of enforcing affirmative-action programs for hiring Vietnam-era veterans, sets a miserable example for private industry. Vietnam-era veterans constitute less than 1 per cent of the department's total work force, one of the lowest for any major federal agency. March unemployment statistics revealed that the unemployment rate for the youngest age group of Vietnam-era veterans has increased one percentage point, to 17.2 per cent. However, the unemployment rate for the same age group of male non-veterans has decreased one point to 10.4 per cent.

My findings are really not surprising. Several years back some leading psychiatrists, including Dr. Peter Bourne and Yale's Dr. Robert J. Lifton, warned that the Vietnam conflict would have serious, delayed consequences for many who served there. The very nature of this odd war—the lack of psychological justification for the soldier engaged in it, and society's indifference upon his return—perhaps made this inevitable.

It is, of course, not recent news that war has adverse effects on the human psyche. We have always known that. What is new, however, is that this country has never before given veterans the shoddy treatment that has been bestowed upon those who served in Vietnam. Many who volunteered or allowed themselves to be drafted did so with vague assurances of future educational benefits and employment. They returned to find that the GI Bill was inadequate and that many jobs

were filled by those who had purposely avoided their military obligation.

The new administration has taken some measures to provide assistance, however, belatedly, to those who became the victims of this nation's foreign-policy mistakes. It is not yet clear how far President Carter is willing to go to alleviate the appalling unemployment rate for veterans. He has, however, demonstrated his wisdom in the appointment of an energetic Vietnam returnee, Max Cleland, as the new chief of the Veterans Administration. Some healthy changes are now taking place to make the VA's services more in keeping with the needs of all veterans. Cleland wants to reverse his agency's poor retention rate for physicians. He wants to expand the drug- and alcohol-treatment facilities. Furthermore, he recognizes the need for the Veterans Administration to provide readjustment counseling, the lack of which has exacerbated the problems of many Vietnam veterans.

My research will soon be reviewed by the Senate and House committees on veterans' affairs. If nothing comes of that, the effort will be buried away in some academic journal. But my findings, as well as those of other researchers, highlight some very real problems that will not go away, for all the haste with which this country may seek to sweep a shameful war under the rug.

There is a major issue here for this country to resolve, for the indifference and lack of compassion that the veterans have received is, to a large degree, a reflection of our lack of a national reconciliation after Vietnam. The fundamental challenge should now be to meet the very real needs of this group as a major step toward America's final recovery from that war. The power—and the responsibility—to make good on the national obligation to Vietnam-era veterans ultimately rests with the President and the Congress. No efforts can provide compensation, of course, to the Americans who made the ultimate sacrifice in Vietnam. For them, perhaps, a national monument is in order to remind an ungrateful nation of what it has done to its sons.

#### REAL WELFARE REFORM

Mr. CURTIS. Mr. President, the administration has recently announced certain principles relative to its formulation of a welfare reform package.

As ranking minority member of the Senate Finance Committee, I have long had an interest in seeing that our public assistance programs are shaped to meet the requirements of the legitimately needy and, at the same time, to reflect a careful allocation of resources so that the taxpayers of this Nation do not bear an intolerable burden. As we begin to move into the subject of welfare reform, we should be guided by certain basic tenets, learned from our experience in the Finance Committee several years ago, and from the successful efforts of a number of States who have demonstrated the essential characteristics of real welfare reform, as a part of their own efforts since that time.

Members of Congress were asked by the Secretary to submit their views on this subject. In my judgment, there are a number of lessons which we can learn from these experiences, and there are several fundamental principles which should guide us in our consideration of this critical issue. Many of the ingredients which I regard as most important were reflected in my response to the Sec-

retary. I ask unanimous consent that this communication be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,

Washington, D.C., March 8, 1977.

HON. JOSEPH A. CALIFANO, JR.,  
Secretary, Department of Health, Education,  
and Welfare, Washington, D.C.

DEAR MR. SECRETARY: I am grateful for your thoughtful letter inquiring into my views on welfare reform.

The overall problem with the present system, in my opinion, is that it fails to differentiate between those legitimately in need and those who either can be, or should be, supporting themselves. I believe that indiscriminate and imprecise eligibility criteria, and insufficient requirements for personal resource utilization, lie at the heart of the problem.

As a result, those legitimately in need—who have no other resource but public assistance—have been short-changed, as benefits remain static, and as both the Federal and State governments face increasing fiscal problems in the face of mounting tax requirements occasioned by the growing caseload.

The key, therefore, in my judgment lies in a very measured, detailed, and analytical refinement of the definition of need: as it relates to income, assets, outside resources, work requirements, and family responsibility. Through this kind of careful differentiation, massive resources can be freed to assist the nation's needy in a more adequate fashion.

California, New York, Michigan, New Hampshire, South Carolina, and a number of other States have had a significant amount of success with the kind of reform I describe. California had not had an increase in AFDC benefits in over thirteen years prior to its welfare reform program. As a part of its welfare reform efforts, that State cut its caseload by approximately 350,000 persons; raised grant levels by approximately 27%; instituted an annual cost-of-living increase, so that now grant levels are approximately 50% above where they were in 1971 (California is one of only two States—the other being Massachusetts—which has such an increase); and saved approximately \$1.5 billion over 3½ years—half of which were Federal funds.

Forty-two of 58 counties in California were able to reduce their property tax rates. Los Angeles County reduced the welfare portion of its property tax rate from \$1.62 to 97c. When caseloads nationally dropped for the first time in history in 1973-74, California was responsible for almost half of the national decline.

Significant potential exists for moving in similar areas federally. Many are outlined in the bill I discussed with you when you appeared before the Finance Committee prior to your confirmation. This bill (S. 1719, 94th Congress), which I cosponsored with nine of the eighteen members of the Senate Finance Committee, suggests numerous ways in which effective controls can be placed upon the AFDC program in particular.

I would point out, as well, that as you undertake steps to bring the caseload in this program under control, you will effect automatic savings in other programs, such as Medicaid, social services, and food stamps.

When you embark upon your welfare reform efforts, I would hope that they represent true welfare reform, particularly as long sought by the nation's taxpayers. With a strong sense of compassion for the needy, they do not seek a crippling of the welfare programs—but they do seek and insist upon careful and precise eligibility criteria, realistic benefit levels, strong work requirements, effective and complete use of outside re-

sources, and stringent and fully operative fraud control measures.

It is much better, in my opinion, to move in the direction I have outlined than to embark upon major, new, wholesale expansions of public assistance in this country. As you are aware, the Senate Finance Committee did not accept the premises of the Family Assistance Plan or a guaranteed annual income approach. I joined with the Chairman in expressing severe misgivings about that plan, for it would have brought even more persons under the mantle of public assistance, undermined initiatives, further weakened already ineffective work requirements, and exacerbated the dependency problem in this country. It is, in fact, the antithesis of real and meaningful welfare reform. I hope that you will reject it, or any approximation of it, as totally destructive to the future well-being of this country.

With every good wish, I am

Sincerely yours,

CARL T. CURTIS,  
United States Senator.

### SMALL BUSINESS PLANNING GUIDE

Mr. CULVER. Mr. President, as a member of the Senate Small Business Committee, I have had the privilege of talking with countless small business persons from Iowa and across the Nation. In chairing numerous hearings concerning the problems of small businesses—most notably the current product liability insurance crisis—I have been exposed to just how difficult it is today for the independent operator to get a successful start in business and maintain a viable company. Not only must the fledgling firm face the bewildering morass of Government regulations, but the uncertainties of our economy make eventual failure a very real danger.

There is no certain recipe for success; of course, none of us can foretell the future. Nevertheless, a carefully thought-out plan will allow the new firm to anticipate those conditions which are most likely to be encountered, and will thereby help to minimize unnecessary risks. I should like to share with my colleagues a list of questions which every prospective entrepreneur should ask before making a commitment to the difficult tasks of setting up his or her own business. These questions, and the accompanying text, are condensed from a new publication by David Bangs and William Osgood, the Business Planning Guide published in the Business Assistance Monograph series by the Federal Reserve Bank of Boston. They are intended to form the basis of a comprehensive business plan, and I believe they are extremely useful as a checklist for identifying the strengths and weaknesses of a new enterprise. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the planning guide was ordered to be printed in the RECORD, as follows:

#### BUSINESS PLANNING GUIDE

##### A. DESCRIPTION OF BUSINESS

Deciding what your business is—and what it will be in five years—is the most important decision you will have to make. A small business may be involved in more than one activity: If so, the judgment of what the central activity is (or what the central activities

are) is crucial. Your entire planning effort is based on your perception of what business you are in. If you make a serious error at this point, your chances of success will be sharply diminished. So, be sure to take the time to think this decision through.

The description of business includes:

1. The type of business: Is your business primarily merchandising, manufacturing, or service?
2. The status of your business: Is your business a start-up? an expansion of a going concern? a take over of an existing business?
3. The business form: sole proprietorship, partnership, corporation? (Your attorney's advice is helpful on this item.)
4. Why is your business going to be profitable?
5. When will (did) your business open?
6. What hours of the day and days of the week will you be (are you) in operation?
7. If yours is a seasonal business, or if the hours will be adjusted seasonally, make sure that the seasonality is reflected in your replies to 5 & 6.

##### For a new business

Your description of the business should contain responses to the following (as well as the seven items previously listed):

1. Why will you be successful in this business?
2. What is our experience in this business?
3. Have you spoken with other people in this kind of business? What was their response?
4. What will be special about your business?
5. Have you spoken with prospective trade suppliers to find out what managerial and/or technical help they will provide?
6. Have you asked about trade credit?
7. If you will be doing any contract work, what are the terms? Reference any firm contract or letter of intent, and include it as a supporting document.
8. How will you offset the slow payment by the customer?

##### For a takeover

1. When and by whom was the business founded?
2. Why is the owner selling it?
3. How did you arrive at a purchase price for the business?
4. What is the trend of sales?
5. If the business is going downhill, why? How can you turn it around?
6. How will your management make the business more profitable?

Some additional thoughts to keep in mind as you check out the business: Have you evaluated and aged the inventory? Checked with trade creditors? aged the receivables? What is the condition and age of operating machinery? does the business owe money—and if it does, will you inherit the liabilities?

Determine what you are buying. You are planning to put your money on the line. Don't be afraid to ask for advice before you commit yourself to any deal. A good attorney is essential at this point to help determine what you are buying and to make sure that the terms of sale are in your favor as much as possible.

##### B. THE MARKET

In order to generate a consistent and increasing sales flow, you must become knowledgeable about your market—the people who will be buying your service, product, or merchandise.

The basic marketing consideration are:

1. Who is your market?
2. What is the present size of the market?
3. What percent of the market will you have?
4. What is the market's growth potential?

5. As the market grows, does your share increase or decrease?

6. How are you going to satisfy your market?

7. How are you going to price your service, product, or merchandise to make a fair profit and, at the same time, be competitive?

8. How will you attract and keep this market?

9. How can you expand your market?

10. What price do you anticipate getting for your product?

11. Is the price competitive?

12. Why will someone pay your price?

13. How did you arrive at the price? Is it profitable?

14. What special advantages do you offer that may justify a higher price (you don't necessarily have to engage in direct price competition)?

In order to make a profit, a business must make more on sales than it spends (both directly, as in cost of goods sold, and indirectly, as in overhead and selling costs). Many businesses flounder because they lose sight of this simple truth.

#### C. COMPETITION

If you have decided on your target market and it is large enough to be profitable and contains reasonable expansion possibilities, the next step is to check out your competition, both direct (similar operations) and indirect. Consider these questions:

1. Who are your five nearest competitors?

2. How will your operation be better than theirs?

3. How is their business: steady? increasing? decreasing? Why?

4. How are their operations similar and dissimilar to yours?

5. What are their strengths and/or weaknesses?

6. What have you learned from watching their operations?

The objective of this section is to enable you to make your business more profitable by picking up the good competitive practices and avoiding the competitors' errors. A common error is opening a business in a market that is already more than adequately serviced. Carefully viewing the competition will sometimes lead you to alter your basic business strategy or change existing operations to compete more effectively. This should be an ongoing practice since markets shift and success attracts competition.

#### D. LOCATION OF BUSINESS

Different businesses have different location needs. If the enterprise is manufacturing or wholesale, low rent and easy access to transportation routes are very important. For most retail operations, exposure to people and accessibility to those people are most important. Traffic studies may be available for the area you are interested in and, if available, may give you the information you need to answer these questions about location. Sources of this information may be the state or local highway agencies, the local library, chambers of commerce, and large stores. Your local banker may well be your most useful reference. Some locations seem to be jinxed, and most likely he will know why and will tell you.

In this section of your business plan, you should answer the following:

1. What is your business address?

2. What are the physical features of your building?

3. Is your building leased or owned? State the terms.

4. If renovations are needed, what are they? What is the expected cost? Get quotes in writing from more than one contractor. Include quotes as supporting documents.

5. What is the neighborhood like? Does the zoning permit your kind of business?

6. What kind of businesses are in the area?

7. Have you considered other areas? Why is this one the desirable site for your business?

8. Why is this the right building and location for your business?

9. How does this location affect your operating costs?

The key to correct site selection is to keep in mind that a bad site can put you out of business, while a good site can increase your profits. Once you get started or if you are already located, keep a constant eye on changes in your location—new roads get built, populations shift from one class to another, people move, zoning ordinances change, and your business needs may alter too. Prepare to anticipate these changes. Compare Census reports over a period of time to see long-range shifts, for example. Try to find other current data that will help you be aware of these changes.

#### E. MANAGEMENT

According to various studies of factors involved in the failures of small business, roughly 98 percent of businesses fail because of managerial weakness; less than 2 percent of the failures are due to factors beyond control of the persons involved.

Your business plan must take this into account. If you are preparing a financing proposal you should make sure that your prospective financing source is aware of what steps you have taken or are taking to correct any weaknesses in your managerial staff (yourself and any other managerial persons involved); if you are to use your business plan to its fullest extent, you should use this segment to highlight both strengths and weaknesses of management for your own sake.

The failure factor breakdown provides a guide:

| (In percent)               |    |
|----------------------------|----|
| Managerial incompetence    | 45 |
| Inexperience in the line   | 9  |
| Inexperience in management | 18 |
| Unbalanced expertise       | 20 |
| Neglect of business        | 3  |
| Fraud                      | 2  |
| Disaster                   | 1  |
| Total                      | 98 |

There is no known cure for incompetence—but there are very direct cures for inexperience or unbalanced experience: 1) get the necessary experience yourself, or 2) find a partner or employee who has the requisite experience. The final three items represent managerial failures because neglect of business, being victimized by fraud, or put out of business by a disaster can almost always have been prevented by foresight. (Think of insurance, for example.)

This segment should include responses to the following questions:

1. What is your business background?

2. What management experience have you had?

3. What education have you had (including both formal and informal learning experiences) which have bearing on your managerial abilities?

4. Personal data: age; where you live and have lived; special abilities and interests; reasons for going into business.

The personal data needn't be a confession, but it should reflect where your motivation comes from. Without a lot of motivation, your chances of success are slight. It pays to be ruthlessly honest with yourself—even if you don't put the results on paper.

5. Are you physically up to the job? Stamina counts.

6. Why are you going to be successful at this venture?

Keep in mind that your family will be affected by your decision to go into business for yourself and try to assess the potential

fallout; while they may be supportive now, will they continue to be?

7. A personal financial statement must be included as a supporting document in your business plan if it is a proposal for financing.

Bankers and other lending sources want to see as much collateral as possible to secure their loan. Be forewarned: Under most circumstances, the personal creditworthiness of the principals will be a major concern of the banker. Also, you will undoubtedly be expected to sign personally for the loan. This means that your personal assets may be taken if the business fails—even if the business is a corporation.

#### Related work experience

This segment is a detailed response to the experience factors mentioned earlier. It includes (but is not limited to) responses to the following:

1. Direct operational experience in this type of business;

2. Managerial experience in this type of business;

3. Managerial experience acquired elsewhere—whether in totally different kinds of businesses, or as an offshoot of club or team membership, civic, or church work etc.

Some managerial skills are transferable; others are not. Unbalanced managerial experience can cause serious problems. For example, the talents required of a financial man are quite different from those of a used-car salesman. Combination of both sets of talents in one individual is rare.

#### F. PERSONNEL

Businesses stand or fall on the strength of their personnel. Good employees can make a marginal deal go; poor employees can destroy the best business. Studies have consistently shown that out of 100 customers who stop patronizing the average store, over 70 do so because they didn't get prompt, courteous attention. Here are some questions to think about in determining your hiring needs:

1. What are your personal needs now? In the near future? In five years?

2. What skills must they have?

3. Are the people you need available?

4. Full or part time?

5. Salaries or hourly wages?

6. Fringe benefits?

7. Overtime?

8. Will you have to train people? If so, at what cost to the business (both time of more experienced workers and money)?

#### G. APPLICATION AND EXPECTED EFFECT OF LOAN OR INVESTMENT

This section is important, whether you are seeking a loan or planning to finance your deal yourself. In determining how much money you'll need and for what purposes it will be used, do not rely on guesses when exact prices or firm estimates are available. If you must make an estimate, specify how you arrived at your figures. It may be helpful to make a three-column list:

##### Bare Bones

What you can just scrape by with—secondhand, make-shift—the bare minimum.

Example: used desk at \$7.

##### Reasonable

What you will most likely get—some new, some used, some fancy, and some plain.

Example: renovated desk at \$25.

##### Optimal

What you'd like if money were no problem and you weren't worried about making a profit.

Example: custom teak desk at \$750.

Fill out the bare bones and optimal columns first, then make your reasonable choice. It may be important to you to have a luxury item or two, but weigh the cost. This tabular worksheet is particularly useful for a start-

up business and can be used whenever a purchase of additional equipment is contemplated.

Make sure that this section contains responses to the following:

1. How is the loan or investment to be spent? This can be fairly general (working capital and new equipment, inventory, supplies).
2. What is the item or items to be bought?
3. Who is the supplier?
4. What is the price?

#### FINANCIAL DISCLOSURE OF SENATOR JAVITS, 1976

Mr. JAVITS. Mr. President, under the Senate rules, I filed with the Secretary of the Senate on May 13, 1977, a "statement of contributions and honorariums" which discloses all contributions or honorariums received by me during the calendar year 1976; also it incorporates by reference all reports of campaign contributions which are on file with the Secretary of the Senate. These reports are public documents.

In addition, on May 13, 1977, I filed, under the Senate rules, with the Comptroller General of the United States a "confidential statement of financial interests" which includes a list of my assets and liabilities in 1976 and my 1976 tax returns. As that report is not available to the public and as I have heretofore followed a policy of annual financial reports for some years, I am publishing a list of my assets and liabilities for calendar year 1976 as filed on May 13, 1977. The listing includes:

First, each of my interests in property having a value of \$10,000 or more;

Second, the assets held in a family trust established in 1937, of which I am the trustee and in which as a beneficiary I have a life interest, each item having a value of \$5,000 or more; and

Third, each of my liabilities having a value of \$5,000 or more.

Finally, I am including a summary of my 1976 Federal income tax returns and the amounts of State and local taxes paid for 1976.

I ask unanimous consent that these items be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

#### INTERESTS IN PROPERTY (1976)<sup>1</sup>

Nature of interest, type of property, and location:

Indian Trail Groves, Ltd., land, Miami, Fla.

Indian Trail Ranch Liquidating Trust—interests in mortgages on land, mortgages, Miami, Fla.

Arrowhead Associate, land, Tyson Corners, Va.

TBV Lessors, land, California.

Municipal Assistance Corp., municipal bond, New York, N.Y.

Molycorp., corporate stock, New York, N.Y.

Marcor, Inc. Installment Debentures, corporate bonds, New York, N.Y.

Watergate West, Inc.—stock, residence, Washington, D.C.

Computer Investors Group, Inc.—stock, corporate stock, New York, N.Y.

L. S. Inc.—stock, corporate stock, New York, N.Y.

American & Foreign Power Co. Debentures, corporate bonds, New York, N.Y.

Terra Bella Vineyards (investor-noncontrol), vineyards, California.

Southgate Associates (investor-noncontrol), land & buildings, Chicago, Ill.

Checking Account, Cash, First National City Bank, New York City.

West Indies and Caribbean checking account, development debentures, stock, cash, National Commercial Bank and Trust Company, Schenectady, N.Y.

Paintings, art works, objects and household furnishings, Watergate West, Washington, D.C.

#### BENEFICIAL INTEREST IN TRUSTS (1976)<sup>2</sup>

Name of trust of fiduciary interest: Ida Javits Trust.

Name of trustee or other fiduciary: Jacob K. Javits, trustee.

Address of trustee or other fiduciary: 322 East 57th Street, New York, N.Y.

Trust holdings:

Belco Oil & Gas Fund, land interest.

East Hampton Property, land interest.

Loxahatchee Real Estate, land interest.

Amex, Inc., bonds.

American Telephone & Telegraph Co., bonds.

Bartell Media, bonds.

Carolina Telephone & Telegraph Co., bonds.

Cavenham USA, Inc., bonds.

Government Employees Corp., bonds.

Government Employees Financial Corp., bonds.

Israel Savings, bonds.

Marcor, Inc., bonds.

N.Y.S. Power Authority, bonds.

N.Y.S. Tax Anticipation Notes, bonds.

Sachar Properties, bonds.

U.S. Treasury Bills, short-term paper.

American Standard, Inc., stocks.

Anderson Clayton & Co., stocks.

Arlen Realty & Development, stocks.

Bankers Securities Corp., stocks.

Canadian Cellulose Ltd., stocks.

Carolina Power & Light, stocks.

Cenco Instruments, stocks.

Citicorp, stocks.

Cities Service Corp., stocks.

Cone Mills, stocks.

Continental Illinois Properties, stocks.

Corporate Property Investors, stocks.

Corporate Realty Consultants, stocks.

Criterion Insurance Co., stocks.

Crown Zellerbach Corp., stocks.

Decicom, stocks.

Del Labs, stocks.

Duke Power Co., stocks.

Federal Paper Board Co., stocks.

Freeport Mineral, stocks.

Government Employees Financial Corp., stocks.

Government Employees Insurance Co., stocks.

Government Employees Life Insurance Co., stocks.

Graham Newman, stocks.

Great Northern Nekoosa Corp., stocks.

IBM, stocks.

ICM Realty SBI, stocks.

IDB Bank Holding, stocks.

IMC Magnetic Corp., stocks.

Inland Container Co., stocks.

Kennecott Copper, stocks.

Magic Marker Corp., stocks.

Molycorp, stocks.

Royal Palm Beach Colony, stocks.

Tishman Realty & Construction, stocks.

Transamerica Corp., stocks.

Tubos de Acero de Mexico, stocks.

United Brands, stocks.

Western Pacific Industries, stocks.

Westvaco Corp., stocks.

White Shield Exploration, stocks.

White Shield Indonesia Oil, stocks.  
Other property held for investment, paintings.

#### LIABILITIES (1976)

(Not including current trade bills)

Name of creditor, location of creditor, and type of liability.

1. Ida Javits Trust, c/o Jacob K. Javits, 322 East 57th Street, New York, New York, income advances unliquidated.

2. Citibank, New York, New York, contingent liability on partnership loan re Southgate Associates.

3. Citibank, New York, New York, personal short-term loan.

4. Northwestern Life Insurance Company, Travelers Insurance Company, Union Labor Life Insurance Company, Equitable Life Assurance Society, New York Life Insurance Company, Massachusetts Mutual Life Insurance Company, Mutual of New York, various loans on life insurance policies secured by cash surrender value of policies.

5. Samuel Friedland, Miami, Florida, non recourse secured by Florida orange grove interest.

#### Summary of 1976 Federal income tax return of Senator Jacob K. Javits

|               |          |
|---------------|----------|
| Senate salary | \$44,600 |
| Dividends     | 19,962   |
| Interest      | 452      |

|   |        |
|---|--------|
| Income other than wages, dividends and interest (includes rents and royalties, articles and lectures, investments and buy out of interest in law firm (Javits, Trubin, Stillcocks & Edelman) from which Senator Javits retired September 30, 1971); deductions appropriate to this item | 28,279 |
|---|--------|

|       |        |
|-------|--------|
| Total | 93,293 |
|-------|--------|

|   |        |
|---|--------|
| Other deductions (includes charitable contributions of \$4,169) | 49,866 |
| Federal tax   | 16,564 |

|                        |       |
|------------------------|-------|
| State and local taxes: |       |
| New York State Tax     | 5,133 |
| New York City Tax      | 1,528 |

|       |        |
|-------|--------|
| Total | 22,225 |
|-------|--------|

#### UNIONIZATION OF THE MILITARY

Mr. THURMOND. Mr. President, there appeared in the May 21, 1977, edition of the Washington Post an article by Harold J. Logan entitled, "Soldiers Fight Bill To Bar Organizing of Military."

This article points out that there is an effort within the military itself to gather support against legislation prohibiting military unions. I urge my colleagues here in the Senate to continue to support legislation which would ban military unions in any form. As I have stated on many previous occasions, unionization of the military can only have disastrous results on the security of this country.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### SOLDIERS FIGHT BILL TO BAR ORGANIZING OF MILITARY (By Harold J. Logan)

Five present and former soldiers, including one masked GI and an ex-paratrooper who contends he was kicked out of the Army for military union-organizing activities, yes-

<sup>1</sup> In all cases these are for normal investment only and do not represent any element of control or of relative major size.

<sup>2</sup> In all cases these are for normal investment only and do not represent any element of control or of relative major size.

terday presented a petition calling on Congress to defeat efforts to ban military unions.

Just over 1,900 service men and women from bases around the world have signed the petition presented to an aide to Sen. James Abourezk (D-S.D.) by the Enlisted People's Organizing Committee, a Washington-based group that advocates unionization of the military rank-and-file.

The aide, Megan Wahl, said Abourezk does not favor a union at this time, but does support the right of service personnel to work for one.

The petition's main target, the group said, is a bill introduced by Sen. Strom Thurmond (R-S.C.) and 43 cosponsors, that would make it illegal to join or form a military union. The bill is pending in the Senate Armed Services Committee.

The union that the petitioners are advocating would be unusual because it would forsake the most powerful weapon in the arsenal of most American labor organizations: the right to strike.

"Unions do not need the right to strike," said a Washington-area soldier who wore a white mask covering all but his eyes, nose and mouth because he said he fears reprisals from his superiors. He and his four colleagues held a news conference on Capitol Hill.

"They could assist in filing suits, both individual and class action," he said. "They could organize, have meetings, participate in personnel management on a policy level, serve as a check to ensure the NCO [non-commissioned officers] corps properly performs its management function, and, in cases of extreme mismanagement involving human abuse, stage protests."

The group's principal spokesman was Thomas Doran of Spring Lake, N.C., an ex-paratrooper who has sued the Army, alleging his discharge last December was a result of his efforts to organize a military union at Ft. Bragg.

Doran insisted a military union would not detract from the armed forces' ability to function in wartime.

At least two existing unions have taken steps toward recruiting members from the services. The American Federation of Government Employees, an AFL-CIO affiliated organization with 300,000 members, voted in September to amend its constitution to admit service personnel.

When some AFGE members objected to the prospect of military members because their presence might dilute the union's attention to the concerns of its civilian members, AFGE decided to poll its membership on the question.

The poll should be completed by October, said a union spokesman.

Meanwhile, the Association of Civilian Technicians, a group that represents about 6,000 National Guard and Reserve employees, has recruited "a couple of thousand" service personnel, said association president Vincent Paterno.

Paterno said the association has temporarily halted its recruiting activities, pending the fate of Thurmond's bill.

President Carter and Defense Secretary Harold Brown have said they oppose the idea of a military union but do not support legislation prohibiting unions for fear of overreacting to the concept.

#### SURFACE MINING CONTROL AND RECLAMATION ACT

Mr. BAYH. Mr. President, last week the Senate passed S. 7, the Surface Mining Control and Reclamation Act of 1977, hopefully ending almost a decade of Senate debate on strip mining practices.

Now that the Congress is acting, ending the uncertainty that the mining industry has lived with for years, we can get on with the development of our Nation's vast coal resources assured that increased coal production will not result in the ravaging of our land.

The environmental protections incorporated into S. 7 are especially timely now, as we turn toward coal to help meet our energy needs. In 1976, over 60 percent of the coal produced in the United States came from surface mines, disturbing some 1,000 acres of land each week. As demand for coal grows, the acreage disturbed will increase further. This certainty makes the need for balanced, uniform national standards and special protections for unclaimable lands more important than ever. Once damaged, our non-renewable natural resources—farm lands, water, parks, and wilderness areas—cannot be restored.

Mr. President, we have enough coal in this country to last us for hundreds of years. In most cases, existing technologies have been developed to reclaim stripped land economically and efficiently. What the strip mine bill provides are national guidelines to make sure we proceed responsibly and require operators in all States to meet similar minimum environmental protections. We must not act hastily now to meet our energy needs, only to find ourselves without adequate food, water, and recreational areas in the 21st century.

Mr. President, my State of Indiana will be vitally affected by this legislation and I have given the key issues raised by S. 7 a great deal of thought in the last few months.

Despite large underground reserves, virtually all of Indiana's coal comes from surface mines. Stripping is going on in 16 of Indiana's 92 counties, with 95 percent of total State production concentrated in 7 counties in the southwest corner of the State. Over 127,000 acres in these seven counties have been affected by mining operations, totaling about 7 percent of the total land area there.

These counties also contain large tracts of prime farmland, crucial to the Nation's food and trade needs, along with the well-being of people all around the world. Over 736,000 acres of prime farmland in southwestern Indiana with strip-minable coal are likely future targets for surface mine activities, accounting for 46 percent of the prime farmland there. Other States in the Midwest share similar dilemmas. We must make sure that if this land is stripped, it will once again provide the corn and soybeans and other foodstuffs so badly needed by our own citizens and those elsewhere in the world. The same assurances are needed for our western alluvial valleys, which provide scarce water for western farming and ranching operations.

In addressing the problem of competing food and energy needs, the Senate and House enacted different provisions affecting prime farmlands.

As passed by the Senate, S. 7 will require a case by case review process, involving the Secretaries of Agriculture

and Interior, as well as the State regulatory authority, for all mining plans which include more than 10-percent prime farmland. During the review, operators must demonstrate that they will be able to restore the land to its prior agricultural productivity in order to get a permit to mine the land. All mining operations with permits issued prior to the time President Carter signs the strip mining bill, and all operations later granted revisions or renewals of such permits, will be exempt from this requirement.

As originally introduced, this exemption from a special review process would have treated Indiana inequitably, because under Indiana State law technically there are only new annual permits and no renewals, even though operators meeting the conditions of their permit routinely get a new or renewed permit upon application.

I was very gratified that the author of the prime farmland amendment, my distinguished colleague, Senator CULVER of Iowa, modified his prime farmland amendment at my suggestion, to give ongoing Indiana stripping operations the same protections afforded operations in other States despite the unusual procedures mandated by our State's law.

The strip mining bill that passed the House of Representatives included different protections than S. 7 for prime farmland which, on balance, I would have favored.

The surface mining bill that passed the House allows mining on prime farmlands without a prior review process, but requires operators to follow very specific reclamation procedures which agronomists and soil specialists agree can return farmland to its prior productivity. These procedures require separation of topsoil and subsoil horizons, protective storage of these materials, and ultimate replacement of the soil horizons with proper compaction and uniform depth over the regraded spoil material.

Mr. President, I agree that protection of prime farmlands must be a national priority to assure our future food supplies. However, after studying the House and Senate bills, I have concluded that the language contained in the House bill meets this need without risking the administrative bottlenecks that may develop if the language in S. 7 prevails in conference. Experts consulted at the agriculture school at Purdue University and the Department of Agriculture's Soil Conservation Service feel the same way. I hope the conferees will take a very hard look at this issue before making a final decision.

Finally, Mr. President, I was very satisfied with the way the Senate resolved most of the other controversial issues raised by S. 7.

One of the most important features of S. 7 is the requirement that strip miners conduct their blasting operations in such a manner that there will not be damage outside of the permitted area. Strip mine blasting practices have become a major problem for people living near Appalachian and Midwestern coalfields. It is estimated that strip mine blasting caused damages of over \$200 million in these regions in 1975 alone.

In my home State of Indiana, blasting has caused serious difficulties for those who live near mining operations, particularly in Warrick County. A survey conducted by Jack Barnes, professor of geology at Indiana State University, indicates that there was structural damage caused by blasting to 89 percent of the buildings within a 2½-mile radius of the Ayrshire mine in that county. In other areas, blasting has caused serious harm to health, property, and the environment in the form of dust and fly rock.

I was very gratified that the Senate adopted my amendment to strengthen the blasting provisions of the strip mining bill. My amendment will require the strip miner to set out his plans for blasting in his application, so that the regulatory authority can know in advance if there will be adequate protection of the local community's health, property, and environment. Only with such information can potential problems be nipped in the bud. Further, a blasting plan will enable the public to gain a fuller understanding of the mining operation being proposed for their community at the outset. Without question, the citizens who will be most effected by mining operations deserve to know exactly what those operations will entail. This amendment should protect our citizens from the suffering others have experienced in the past in connection with strip blasting.

Other provisions of S. 7 with which I am particularly pleased are the protections provided for alluvial valleys in the West, which provide scarce water for western farming and ranching operations; the program passed to reclaim abandoned mines, which plague hundreds of thousands of acres of land in the eastern section of the country; and the program set up to provide assistance to coal mining research institutes. The research institutes in my own State have been of great help to both myself and others in Indiana and around the country trying to grapple with the many issues surrounding the use of coal as a major source of energy. In addition, I feel that the treatment afforded small miners in S. 7 is equitable. In acting to exempt miners producing less than 100,000 tons of coal annually from compliance with S. 7, the Senate recognized the real cash flow problems small operators face without, at the same time, allowing operators able to absorb reclamation costs sooner to skirt their responsibilities.

In closing, Mr. President, let me reiterate once again my satisfaction that the Congress has finally enacted minimum Federal standards for surface mining. My own State of Indiana has been way ahead of the Federal Government on the issue of strip mining control. In 1967, Indiana enacted strong and pioneering legislation to control strip mining operations within the State. Under S. 7, States will have the opportunity to administer and enforce their own State programs as long as they meet Federal guidelines. In addition, they will receive Federal assistance in order to improve their regulatory and enforcement efforts.

Given Indiana's early recognition of the need for environmental protection, its relatively long experience with regulating mining activities and the Federal assistance S. 7 will provide, Indiana should not experience any disruption in mining activities as a result of S. 7. Nor should other States which take advantage of the long lead time provided in this legislation for developing satisfactory State programs.

With these environmental protections on the books, I am looking forward to working with the administration and my colleagues here in the Senate toward increasing domestic coal production to meet the President's goal of a two-thirds production increase by 1985.

#### NATIONAL SMALL BUSINESS WEEK

Mr. ROTH. Mr. President, I would like to take this opportunity to remind the Senate that this week has been designated as National Small Business Week. Small business makes a tremendous contribution to American society, and I think it is appropriate to take this time to remind the Senate of the potentials of small business and to urge the Senate to provide greater recognition to the problems of small business.

Directly or indirectly, small business provides the livelihoods for 100 million Americans. Approximately 97 percent of all business organizations are classified as small, and 43 percent of this country's gross national product is produced by small business men and women. In addition, small businesses employ more than half of all working Americans.

Yet despite its importance to our economy, small business is struggling under Government overregulation—endless paperwork and reporting requirements and an excessive tax burden that has become topheavy with complexity and tax forms.

Although the recent tax bill did extend through 1978 the small business tax reductions enacted in 1975, small businesses are still being stifled by an excessive tax burden. I believe an across-the-board tax reduction, for individuals and businesses, will breathe life into our free enterprise system and provide small business with the capital needed to expand and grow. Lower tax rates on small business will stimulate job-producing investments and unharness the individual incentive and creativity that built this Nation. Permanent tax cuts will allow the private economy to grow and prosper, and they will help offset the increasing inflationary pressures in the economy.

Congress must also take steps to control the enormous deficit spending practices of the Federal Government. The Federal budget deficit for the upcoming fiscal year is projected to be nearly \$65 billion, one of the largest in the Nation's history, and I am deeply concerned that this type of excessive spending will only result in increased taxes, higher inflation, and more unemployment.

One of the most far-reaching proposals to reform Federal spending is the sunset legislation which I developed last

year with Senator EDMUND MUSKIE and which we have reintroduced in this Congress.

This legislation would give Congress a handle on Federal spending by forcing Congress for the first time to review all spending in the same function together. Federal programs would have to demonstrate that they are effective and worthwhile or face termination. Sunset will give Congress a method to weed out outmoded programs and consolidate duplicative ones. Each program would be subjected to review at least once every 5 years.

One of the most aggravating problems for the small businessman is keeping up with Federal paperwork requirements. Most small businesses do not have the time or resources to keep up with extensive reporting requirements imposed by Federal agencies to keep track of taxes, wages, pensions, equal employment opportunity, health and safety rules, and so forth. The owner-operated business cannot afford the accountants, consultants, advisers and lawyers that large firms hire to handle complicated Federal forms.

What is being done? Fortunately, there is a concerted effort today to eliminate needless forms. The Commission on Federal Paperwork is concluding a 2-year review of the more than 5,000 approved Federal forms and is making its recommendations to Congress.

The Commission has already recommended several key changes to exempt firms with fewer than 100 employees from OSHA requirements to keep a log of illnesses and injuries and to eliminate recordkeeping requirements where employee safety or health is not affected. The Congress, acting upon a Commission recommendation, last year moved to eliminate the quarterly wage reports required by the Internal Revenue Service. A major simplification of IRS' "Circular E—The Employer's Tax Guide"—has also been suggested. The Internal Revenue Service now imposes the largest amount of paperwork requirements on small businesses, and steps must be taken to reduce the number and complexity of IRS forms.

The Senate Finance Committee is currently holding hearings on the impact of the 1974 pension reform law. The existing regulatory structure for the administration of the pension law has resulted in excessive paperwork and redtape, particularly for small business. Legislation now being developed by the Finance Committee will reduce the paperwork burden by requiring that only a single annual form with a single filing date be submitted every year by pension plans.

The small businesses that survive Federal taxes and Federal redtape and paperwork face a formidable adversary from the goliath of Federal regulation.

Federal regulation has crept into all phases of private enterprise and a small businessman is often faced with a Hobson's choice of high compliance costs or stiff penalties for infractions.

The rules themselves are often developed in Washington without much con-

cern for business realities facing small firms.

The truth is that Government regulation is an enormous drag on the economy. It results in higher taxes, higher prices for goods and services, diversion of resources, and the stifling of private incentives for business growth and development.

The General Accounting Office places the annual price tag for Federal regulation at over \$60 billion—and that figure does not include the costs of compliance in the private sector. The Office of Management and Budget estimates that 8.1 percent of the American gross national product is devoted to Federal regulation costs. Businesses have to contend with a regulatory bureaucracy of over 100,000 people in 80 different regulatory offices.

Detailed Government specifications for contracts is another source of business frustration. A firm competing for a Federal mousetrap contract has to comply with a 120,000 word product specification. For every product purchased by the Government there is a product specification text which often runs more than a hundred pages.

Despite the constant drain of dollar resources due to Federal regulation, there is an even greater cost to the future of our private enterprise system.

The freedom for private enterprise and the incentives for individual initiative are being stifled by Government. The gradual intrusion of bureaucratic rule into our lives and commerce is driving the small entrepreneur out of business. It is sad but often true that only big business can afford to compete with big Government. We must assure that the backbone of our economy is the entrepreneur not the bureaucrat.

#### ENDANGERED SPECIES

Mr. STEVENS. Mr. President, I wish to address the Senate on a matter of grave importance to us all. There has been a great deal of talk recently about the deterioration of the environment and the number of species that are disappearing from the face of the Earth due to the wastefulness and greed of man. I would like to discuss the near demise of yet another breed which seems to be joining the list of endangered species. This particular breed differs, however, from most that we hear mentioned. For despite its obviously declining state, it has been offered little in the way of protection or consideration. It is, in fact, being stifled by the actions of people in both the public and private sectors, which makes it a wonder that it has managed to survive this long. The endangered species of which I speak is the small businessman.

Our Nation was originally a free and competitive environment in which small business flourished. The opportunity to engage in private business, unhampered by a restrictive political, social, or economic system was a great attraction to many immigrants. The spirit of free enterprise, as well as our democratic process, lured many an independent entrepreneur to settle in America and con-

tribute his innovative and inventive skills to a growing country. The private entrepreneurial spirit and the self-satisfaction and pride derived from ownership became part of the "American Dream." This dream was the motivating drive behind the rapid and enduring prosperity the United States enjoyed in its early years.

The role of small business in the creation of the most highly respected and most often emulated nation on Earth cannot be underestimated. The values of small business are those esteemed to be "American": Independence, competitiveness, free enterprise. These are the traits which led to the success of small business and the Nation.

Despite the impressive record of the small businessman and our country's economic need of his services, the atmosphere of freedom necessary for the continued success of small business has been allowed to deteriorate over the past 30 years. Albeit, with the best of intentions, our political system has become a heavy burden, encasing the small businessman in an environment detrimental to his survival. Government encroachment upon the self-determination of the private entrepreneur is making it increasingly difficult to stay in business. An unfair tax structure plagues the small businessman and the regulatory rigamarole which must be endured is comparable to slow strangulation. The source of the impetus, competition, and freedom is slowly disappearing. And yet, despite its being harassed, chided, and virtually ignored, small business still makes up 97 percent of all commercial and industrial enterprises. They employ 60 percent of the labor force, produce 48 percent of output, and contribute 43 percent to GNP. The afflictions imposed upon small businesses have proved to be crippling but not lethal. At least, not yet. The ability of small business to survive is due to its inherent independence and propelling competitiveness. As Adam Smith in his "Wealth of Nations:"

The uniform, constant, and uninterrupted effort of every man to better his condition, the principle from which public and national, as well as private opulence is originally derived, is frequently powerful enough to maintain the natural progress of things toward improvement in spite of both the extravagance of government and the greatest errors of administration.

The growing intervention and extravagance of Government can be seen in some of the actions of the ICC, FCC, FTC, and so on. The intricate web of rules and regulations have greatly complicated the life of the businessman. He has become overburdened with OSHA, IRS, and ERISA regulations. The amount of paperwork and time that is demanded of the small businessman in order to comply with these agencies' rulings adds an incredible cost to the operation of an enterprise. And, although all businesses are required to comply, the supervisory sting felt by big business has the effect of a headache, while that felt by the small businessman is comparable to a brain tumor. Errors of administration are exhibited in an unfair and burdensome tax structure which is actually a disincen-

tive for the formation of independent firms. The regimentation of Government intervention is injurious to the health of small business and to the principles upon which it was founded. The intricacies and complexities of the present-day regulatory maze would probably discourage even Adam Smith from entering the marketplace. Imagine his astonishment, after noting that the Declaration of Independence was written in 300 words, and Lincoln felt his Gettysburg Address adequate with its 266 words, that a recent Government order setting the price of cabbage contained no less than 26,911 words.

The time has come when we can no longer ignore the plight of the small businessman. It is imperative that we recognize the interdependence of small business and the rest of the economy. The fate of small business is intrinsically tied to the fate of the Nation. We cannot assume that small business will forever be able to withstand the efforts of Government to drain them of their spirit. And, what would be the outcome if businessmen and women no longer felt it worth their while to struggle against regulatory restraints? What would happen to the multitude of small towns and villages, to the large corporations, and Government itself if the organization upon which they all so heavily depend should become extinct? I suggest that we face up to reality and change our course of action before it is too late to remove small business from the list of endangered species.

#### NATIONAL SMALL BUSINESS WEEK

Mr. NUNN. Mr. President, I believe it is very important to give credit where credit is due. It is, therefore, always a pleasure for me to join several of my colleagues at this time of year in marking the occasion of National Small Business Week, and in acknowledging the great contributions to our Nation which are provided by our small businessmen.

America's free enterprise system stands at the very foundation of our country's greatness. Its preservation, upon which our individual freedom, our economic welfare, and even our national defense depend, relies to a great degree on the initiative and perseverance of the small businessman. In these troubled times, when our Nation faces some of the most difficult domestic challenges we have ever had to deal with, particularly in the energy field, small businessmen, with their continued dedication to those traditional American values of thrift, self-reliance, and resourcefulness, provide an excellent example for all of us to follow.

Mr. President, if I appear to be more pleased than usual to be noting Small Business Week this year, I have a good reason. His name is Larry Comer, and he has been named National Small Business Person of the Year in a ceremony at the White House on Tuesday afternoon.

Larry, a Navy veteran with 2 years active duty, is President of Metalux Corp. of Americus, Ga. He is past president of the Americus and Sumter County Chamber of Commerce, a director of the Americus and Sumter County Industrial De-

velopment Authority, and a member of the Young President's Organization. Perhaps more importantly, he is an outstanding example of what the small businessman can accomplish.

Metalux, a manufacturer of fluorescent lighting fixtures and equipment, had its beginnings in 1964. The new company, which received an SBA-bank guarantee loan for \$160,000 to help get it started, had three employees. Larry did not begin to show a profit until 1968; today, however, it is a different story. Last year, Metalux had sales of \$25 million, up from \$800,000 10 years earlier, and the company is now the fifth largest lighting manufacturer in the United States, with 375 employees.

I was honored to be with Larry when he was named the Georgia Small Business Person of the Year. I am sure that all Georgians join me in congratulating him on a job well-done. I join with all Americans in extending the same congratulations to the small businessmen of our country, whom Larry Comer so ably exemplifies.

#### NATIONAL SMALL BUSINESS WEEK

Mr. WALLOP. Mr. President, this week has been designated by President Carter as "National Small Business Week." It is fitting that tribute be paid to the people operating small business across the country who symbolize one of the pillars of the American way of life.

Small business is the basic strength and the hope of the American future. Enthusiasm for the individual or family-owned operation has manifested itself at all levels of business. The origin of this feeling is based on the thought that craftsmen and artisans could take pride in creating a product or providing a service. They could be proud they were self-sufficient and were contributing to America. Today, small firms are labor intensive and any growth in sales translates immediately into jobs that provide either directly or indirectly for the livelihood of over 100 million Americans.

A recent study shows that small independent businesses, not large corporations, are the social and economical backbone of local cities and towns across America. They will continue to produce if they are not burdened with taxes, paperwork and overregulation. These hard-working people know their markets and do not need the Government to tell them their business and to bog them down in redtape. Without excessive Government regulation these business people will continue to be the heart of America.

National Small Business Week is an appropriate time to pay tribute to the people who produce over half of the important industrial inventions and innovations in the United States. It is my privilege to join the President and many others in saluting the millions of Americans participating in small business throughout the United States.

#### INTERDEPENDENCE, THE UNITED STATES AND THE THIRD WORLD: THE NEW DIMENSIONS OF FOREIGN POLICY

Mr. HUMPHREY. Mr. President, recently I had the privilege to address commencement exercises at the University of Pennsylvania.

The experience was unique in many respects. As we enter the third century of our existence as the world's oldest democracy, the class of 1977 faces a world of increasingly complex problems. However, a new era of global relationships offers this generation unparalleled challenges and extraordinary opportunities to truly come to grips with the historic plagues of mankind—the bondage of hunger, disease, and illiteracy.

Although interdependence has become a common part of our lexicon, it is all too little understood. Yet, it is in our national interest to define the parameters of interdependence and understand its implications for our own country.

As I noted in my remarks:

The problems of energy, material resources, environment, employment, inflation, population, hunger, disease, and illiteracy; the question of the uses of space and the seas; and the trends in nuclear proliferation and terrorism—all these issues threaten the national security of our country as much as the possibility of nuclear confrontation with the Soviet Union.

In dealing with the growing pressures of interdependence, I pointed out it was also important to understand:

... that no one nation dominates the international scene. Our relations with the developing countries are fast becoming a major element of our foreign policy.

It is also clear that the importance of America's economic relations with developing countries continues to grow. Our nation sells more of its goods to developing countries than to the European Economic Community, Eastern Europe, and the Soviet Union combined. And developing countries provide us with critical raw materials and essential consumer goods.

But, I further emphasized to the class of 1977 that it was:

... an exciting time to be alive. The frontiers of science and technology are always being pushed forward. But it is in the political, economic and social fields where mankind's ingenuity and inventiveness must now be directed.

Who are we to be afraid of trying? Experimentation and change are a part of the American character and of our history.

Somehow, the American people, and their elected Representatives in the Congress, have to reestablish a sense of challenge and vigor into our policy deliberations. Too often we concern ourselves with a narrow and oftentimes parochial view of the world. Interdependence demands of us a greater understanding and appreciation of the global problems confronting us and a greater sense of mission in seeking their resolution.

As Franklin Delano Roosevelt noted during one of the darker periods of our Nation's history:

The only limit to our realization of tomorrow will be our doubts of today. Let us

move forward with a strong and active faith.

This concluding charge to the University of Pennsylvania graduates is also appropriate for Members of the Congress.

Mr. President, I ask unanimous consent that the full text of my remarks be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

#### REMARKS OF SENATOR HUBERT HUMPHREY

This year marks the celebration of our nation's entrance into its third century and establishes us as the world's oldest democracy. This in itself makes the Class of 1977 unique in many respects.

Many of you will move directly into the mainstream of American economic life. Others will continue your education pursuits, seeking advanced degrees. But all of you are part of a world of increasingly complex problems, unparalleled challenges and extraordinary opportunity.

My remarks today are directed toward defining the world you stand to inherit. And I do mean "world," not just "nation." Because the fact is that we no longer can talk about American foreign policy as an isolated subject, sufficient unto itself.

What happens, or fails to happen, in America has an impact on the rest of the world. And surely what happens in other parts of the world—the Middle East, Africa, Western Europe, Asia and the Soviet bloc—can have, and does have, a significant impact on our well-being and security.

The basic reality of today is that we are solidly entrenched in an era of interdependence—an era in which domestic and global distinctions have become increasingly blurred. And we are fast approaching the time when domestic and foreign policy concerns will be inseparable.

Interdependence has become the catchword of the 1970's. And while it is all too commonly used, it is all too little understood.

The post World War II foreign policy of this nation has focused on the maintenance of the balance of power between the U.S. and the Soviet Union. As we enter our third century, protection against military threats still remains a major foreign policy focus of our nation.

However, our national security also is endangered by events outside the political-military sphere of major powers. The advances of modern technology have reduced the time and spatial distances between peoples and nations to relative insignificance. In so doing, it has increased the magnitude and importance of interaction among nations—and we are no longer immune from this interaction.

The problems of energy, material resources, environment, employment, inflation, population, hunger, disease, and illiteracy; the question of the uses of space and the seas; and the trends in nuclear proliferation and terrorism—all these issues threaten the national security of our country as much as the possibility of nuclear confrontation with the Soviet Union.

The international economic system created after World War II has shown itself to be inadequate for addressing the changing patterns of economic development and the increasing interdependence among nations.

Both the developed and the developing countries agree on the need for major changes in the existing international economic and political system. This process of renegotiating the world order already is underway in a variety of forums, where a

changing political climate is evidenced by the demands of the developing nations for a greater role in global decision-making.

We are compelled to recognize that no one nation dominates the international scene. Our relations with the developing countries are fast becoming a major element of our foreign policy.

It also is clear that the importance of America's economic relations with developing countries continues to grow. Our nation sells more of its goods to developing countries than to the European Community, Eastern Europe and the Soviet Union combined. And developing countries provide us with both critical raw materials and essential consumer goods.

With only six percent of the world's population, we consume nearly 40 percent of the world's resources. By 1985, the United States will depend on imports for more than one-half of our supplies of nine out of the thirteen critical minerals necessary to maintain our industrial economy. By the year 2000 we will be dependent primarily on foreign sources for our supply of each of the thirteen critical raw materials.

The demands of the developing countries and the requirements of the developed countries are a permanent feature of our evolving international relations. And how we respond will have a major impact on world peace, prosperity and stability for decades.

The major decisions in the world no longer can be made by a handful of Western leaders sharing a similar view of the world. These decisions increasingly are made in global forums, unwieldy in their size and torn by radically different perceptions of the world.

The inability to reach agreement at the protracted Law of the Sea Conference is just one example of likely future frustrations the industrial nations will suffer if they refuse to understand the concerns of developing nations and encourage their cooperation.

Failure, frustration and stalemate on vital issues will persist until we change the very nature of our decision-making process to reflect the democratization of world leadership.

The industrial nations quite understandably are reluctant to accept major changes in the present world system of relatively free trade and capital movements under which they have done so well for so long. However, it is equally understandable why the developing countries, frustrated so often in their attempts to improve their standards of living, are convinced that the current economic system has worked to their disadvantage.

The poorer countries no longer are willing to be dependent upon foreign aid alone for their progress, particularly where this assistance is subject to the uncertainties of the political climate in the richer countries. Instead, they want a more predictable foundation for their economic growth through the assurance of reasonable prices for their exports and guaranteed access to the world markets for their goods.

In essence, the developing countries are insisting upon a genuine commitment by the industrial nations to the principle of economic equity among all nations.

But the demand for change—yes, fundamental and radical change—has been coming. It is like a gathering storm and it has now arrived in all its fury. We have hoped that it might pass away or that minor adjustments would be sufficient to weather the storm. This is understandable. Change does not come easy. And change on a global basis is threatening, unsettling and revolutionary.

But the fact is that the balance of this century will continue to be a period of incredible, massive change in political, economic and social institutions.

The question is, will we, by our positive efforts, help to direct and affect this global upheaval in a direction consistent with our

values and beliefs. Or will we merely resist it? Will we design our future, or will we simply resign ourselves to it?

If the United States is to develop an effective, positive response to the demands of the less developed nations, we must first undertake some basic changes in our own thinking. These changes are likely to be far more difficult than devising the particular vehicles to implement economic and social reforms.

The first required change in our outlook is to recognize that we are not necessarily dealing with situations in which one side must lose for the other to gain.

For example, commodity agreements can stabilize prices and assure the supply of critical raw materials to the benefit of both producers and consumers. Resource transfers can help developing nations and also mean more exports of U.S. goods, and thus more jobs at home.

Second, we must understand that it is highly improbable that the developing nations will develop as did the West. There simply are not the resources, least of all the cheap energy, that will permit little copies of the United States to spring up around the world.

Perhaps the hardest adjustment in our thinking is to face the fact that our own society is likely to undergo far-reaching, even drastic, changes in the next few decades—quite apart from the demands of the developing countries—as we attempt to adapt our own lifestyle to a more realistic planetary scale.

The wastefulness that has been characteristic of our country cannot continue. Conservation must become priority national policy—both public and private.

This is the economic side of the concerns which we face. However, it is the human dimension of these problems which is even more threatening.

Today, there are 700 million adults in the world unable to read or write.

Today, there are 1.5 billion people in the world without effective health care.

Today, more than 500 million people in the world suffer from severe hunger and malnutrition.

And without a major effort by the international community, some 800 million of the world's poorest cannot expect any improvement in their condition of life for the rest of the decade.

These are some of the facts of our time. And these cruel, ugly facts are as threatening to our future as an uncontrolled arms race. These are time bombs which threaten global peace.

As Pope John XXIII so dramatically emphasized:

"In a world of constant want, there is no peace . . ."

Therefore, we must be as willing to respond to these threats as we are willing to face these of military aggression.

Last year the development assistance programs of the entire free world to the developing countries totaled only \$17 billion. In the same time span, more than \$285 billion was spent in the world for guns, bombers, and missiles.

The question we must decide is whether or not the conditions of social and economic injustice—poverty, illiteracy, and disease, are a real threat to our security. I think they are.

And they require the same commitment of policy, will, and resources as our so-called conventional national defense.

World hunger cannot be solved merely by American charity, but by technology and improved production of food and fiber on a world-wide basis. It can be done.

Disease can be conquered or at least its ravages minimized. The modern world knows how to do this if we have the will and provide the means.

The basic changes in our international financial institutions, which were designed for a world of yesterday, can provide much of the capital which is needed for development.

A war-torn Europe was rebuilt by the Marshall Plan. Yes, planning, resources, and management accomplished its goal.

A highly nationalistic Europe was brought together in the European Economic Community by strong political leadership, motivated by economic necessity.

It is possible to make changes. We have demonstrated there are few, if any, physical or technological barriers that this country is incapable of overcoming, provided that we are willing to make a national commitment to do so.

And remember, we are not alone.

There is a whole world of skill, talent and resources that must be called to the task.

What is needed is American leadership that understands and proclaims interdependence—the simple fact that we need each other; that no one is safe until all are secure.

What an exciting time to be alive. The frontiers of science and technology are always being pushed forward. But it is in the political, economic and social fields where mankind's ingenuity and inventiveness must now be directed.

Who are we to be afraid of trying? Experimentation and change are a part of the American character and of our history.

The message of the United States is not nuclear power, arms sales, and resistance to change. The message of the United States is a spiritual message. A statement of high ideals and perseverance in their achievement. It is the message of human dignity; it is the message of the freedom of ideas, speech, press, the right to assemble, to worship, and the message of freedom of movement of peoples.

It is the message of the Bill of Rights. It is the message of the Declaration of Independence where we boldly proclaimed to a world dominated by monarchs and tyrants that "all men are created equal, endowed by their Creator with certain inalienable rights, and among these are life, liberty and the pursuit of happiness."

This is the message of America. This is the source of our power. This is the source of our strength.

Our nation's security lies in the strength of our people—our people at work, in prosperous communities, in sound mental and physical health. This is where our true national security lies. This is the source of our strength—moral, political and economic.

America's leadership and concern in the area of human rights can't be exclusive, restrictive, or narrow in definition. For what are your human rights if you have no job? What are your human rights if your children are hungry? What are your human rights if you have no opportunity for education? What are your human rights if you are forced to live in decaying slums?

America must champion all human rights, be they economic, social, or political. In essence, our democratic institutions are threatened by an acceptance of the blight of poverty in a nation characterized by its tremendous wealth.

Yet, this concern does not stop at our nation's shores. We cannot proclaim democracy, social and economic justice at home and abandon these principles abroad.

We have made significant strides in recent months. Support of human rights has become a central tenet of American foreign policy.

A sense of moral values should be an imperative of our foreign policy. Unless it is, we will find it difficult to gain the support of peoples around the world who look to us for moral support in their struggles for freedom.

While it is true that we don't have the right to interfere in the internal affairs of another country, this does not mean we should not remind the world that human rights are of the highest priority of our government and our people, and that our policies will be directed accordingly.

When our Founding Fathers met here in Philadelphia two hundred years ago, they gave us and the world a set of promises—promises toward a more perfect, not the perfect union. America is a promise and a hope in the minds and hearts of all those who cherish liberty, justice and opportunity.

We live by hope. We do not always get all we want when we want it. But we have to believe that someday, somehow, someday it will be better and that we can make it so.

Surely we will not succumb to the predictions of the naysayers.

America will provide world leadership by drawing on its greatest strength—the common sense of its people. And we will turn challenges into accomplishments and idealism, crises into opportunities, and problems into progress.

My message to you today is simply this. We face great problems in America and in the world today. But, we can, and we will, overcome them.

We can launch a global assault on the historic plagues of mankind—the bondage of hunger, disease, and illiteracy—if we have the will to do so.

And as we do, we will move closer to fulfilling the promise of America—a life with dignity in the pursuit of happiness in a free society for our own people and for those throughout the world.

As Franklin Delano Roosevelt so dramatically noted during one of the darker periods of our nation:

"The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with a strong and active faith."

#### NATIONAL SMALL BUSINESS WEEK

Mr. DOLE. Mr. President, the week of May 22-28 has been designated by President Carter as National Small Business Week. In Washington and across the country, the week will be marked by speeches and ceremonies noting the important social and economic role of independent business.

In addition, the Small Business Administration—SBA—selects a "Small Business Person of the Year" in each State at this time of the year. Kansas' 1977 representative is Mercurio Mascorro, president of the Grain Spouting and Elevators of Kansas, Inc. of Hutchinson, a manufacturer of grain elevator material, handling equipment, and air pollution devices.

Each one of the winners is an individual who has made a success of his business, while at the same time receiving aid or benefit from the Small Business Administration. Generally, he is an individual who has built his business from a meager beginning into a successful proprietorship.

Mr. Mascorro, or "Merk" as he is known, truly exemplifies this criteria as he is a Spanish-American who started from scratch in Hutchinson and made

such a success of his grain spouting and elevator business that he won the honor of representing all small businessmen from the State of Kansas.

Of course, not only "Merk" but all small businessmen can feel honored this week and all year long, for they are truly the backbone of the American free enterprise system. According to SBA statistics and definitions, 96.7 percent of Kansas businesses are small businesses and they account for 55 percent of the total Kansas business employment.

In 1976 in Kansas there were 4,628 small business manufacturers; 2,696 of them employed fewer than 10 persons and 1,296 employed between 10 and 49 persons. According to the U.S. Chamber of Commerce, every 100 manufacturing jobs create 69 employees in other fields such as service and retailing. This serves as one example of how a small manufacturer can contribute to a town's economic growth by bringing more people to an area and getting those people involved in various jobs and activities in the community. Of course, this is true for all small businesses, not only manufacturing.

However, since this year's winner of the "Small Business Person of the Year" award is a manufacturer, a look at a few other manufacturing statistics and what small manufacturers can do for a local community would be appropriate.

The role of small business according to the most recent comprehensive Kansas SBA report from April of 1975, every new 100 factory workers brings a total of 359 more people to an area, 97 more households, 79 more schoolchildren, \$490,000 in bank deposits, and one more retail establishment. It also increases retail sales per year by \$565,000, employs 68 more people in non-manufacturing jobs, and increases personal income per year to a total of \$1,336,000.

Clearly, the social and economic importance of small business to American society is evident. Just as small business plays a major role in the economic health of Kansas, it occupies an important place on the national scene. There are a total 13 million businesses in the United States and about 97 percent of those are small businesses.

Small business accounts for 43 percent of the gross national product and 48 percent of the gross business product, excluding Government and farm portions. In addition, small business provides for 55 percent of the total U.S. employment, less farms.

It can be said that either directly or indirectly, small business accounts for the livelihood of 100 million Americans.

Another important fact about small business is that the number of small businesses has increased annually without interruption for the past 30 years. This trend shows the promise of a bright future for small business, and certainly for America. With more Americans getting involved in business for themselves and becoming part of our free enterprise system, the country can only continue to grow and prosper if only the Congress has enough wisdom to create a healthy atmosphere for small business.

It is evident that small business plays a tremendous role in keeping America growing and improving. Small business provides jobs for Americans which leads to improvement of the surrounding society, which in turn helps the economy and the Nation.

I view small business as the backbone of the Nation's business world. Let us honor the small businessman not only during this specially designated week but all year long, to show him how much we appreciate what he has done by supplying jobs for America's people and economic growth to the Nation.

#### RURAL HEALTH HEARING

Mr. CLARK. Mr. President, on March 29, the Senate Rural Development Subcommittee conducted a hearing in Washington on the subject of medicare reimbursement for rural health clinic services. The hearing was a useful tool to gauge the impact of a restrictive medicare policy upon health care delivery in small towns and rural areas.

Witnesses from every corner of the Nation told the subcommittee that medicare should permit payment for primary care services provided by nurse practitioners and physician assistants. Their testimony, and that submitted by hundreds of persons from across the country, gave us a better understanding of the type of corrective legislation that is needed to remove a clear inequity from the medicare program.

In order to assist the Senate Finance Committee in its deliberations on this matter, my staff has written a report that summarizes the proceedings of the March 29 hearing. The report concludes with several recommendations for changes in S. 708, a bill that Senator LEAHY and I have introduced and that now has 51 other cosponsors.

The major recommendations are:

First. The term "physician extender" should be changed to "primary health care practitioner."

Second. Payment for rural health clinic services should go to the person or entity with responsibility for the provision of clinic services.

Third. Payment should be allowed for primary care services provided by physicians, in addition to those provided by primary health care practitioners.

Fourth. The term "clinic" should also encompass physician practices that utilize primary health care practitioners either onsite or in satellite settings.

Fifth. Provisions that deal with physician supervision should be clarified to emphasize that it involves arrangements for protocols for medical care and treatment and periodic review of medical services.

I ask unanimous consent that the entire report be printed in the RECORD, so that my colleagues will benefit from the insights we gained through the rural health hearing.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SUMMARY AND RECOMMENDATIONS OF THE SENATE RURAL DEVELOPMENT SUBCOMMITTEE HEARING ON RURAL HEALTH CLINICS

SUMMARY

Background

Field hearings by the Senate Rural Development Subcommittee conducted in Iowa and Vermont last year disclosed a common problem with health care in rural communities. Small clinics staffed by nurse practitioners and physician assistants are not reimbursed for their services by Medicare. As a result, these clinics, whose income will always be marginal, may have to close when private and public sources of funding end. For some clinics in Appalachia and the South, that day will come this year.

S. 708 would amend the Medicare Act, Part B, Supplemental Medical Insurance to include rural clinic services. The key elements of the bill are as follows:

1. The clinic itself, rather than any particular provider within the clinic, would be reimbursed for primary health care services.

2. The reimbursement would be based upon the costs—rather than charges—of providing those services.

3. While S. 708 does not require the continual presence of a physician at the clinic it does allow reimbursement to clinics where physicians and other primary health care practitioners are simultaneously providing care.

4. The clinic must serve a rural, medically underserved population.

Dick Warden, speaking for the Department of Health, Education and Welfare, pointed out that in most states, the supply of physicians concentrate in Standard Metropolitan Statistical Areas (SMSAs). Figures collected by the Department show that of the 45.7 million persons who live in areas designated as medically underserved, 31.6 million—or fully two-thirds—live outside SMSAs. Others noted that urban residents of such areas experience inconvenience, but travel is not as great a problem as it is for rural residents of underserved areas.

To address the problem, over 500 of the 3400 rural medically underserved areas have organized small clinics with the help of public and foundation grants. Urban areas have an additional 225 clinics. These clinics are staffed by nurse practitioners and physician assistants who are trained to provide primary health care under some type of physician supervision. In some clinics, doctors also staff the clinics.

Vernon Wilson, Vice Chancellor for Medical Affairs of Vanderbilt University, challenged the DHEW suggestion that urban be included within this legislation. Speaking from Tennessee's experience with 70 such clinics, Wilson felt "that in fact rural clinics take a different kind of approach to the medical care problems; and to confuse the two would wind up doing neither as well as it should be."

Others, speaking on behalf of the "rural only" position, cited experience with other federal programs that permit urban and rural mix. In those cases the sophistication of users of urban programs helps them to get most of the benefits.

One physician, Dr. Corbett, who is practicing in a network of rural Virginia clinics, explained that Medicare should pay for what is provided, not who provides it. In his opinion reimbursing both urban and rural clinics would increase the supply of care in the cities and force the physicians to move out to the more rural areas in order to avoid intense competition. Ms. Dykstra a nurse practitioner, cited the North Carolina experience to counter this suggestion.

Opponents of urban also cited the need for more and tighter regulations if urban clinics were included, referring to the recently publicized information on "Medicaid Mills." Dr. Pickel, a practicing Iowa physician pointed

out that "a satellite in the city is not a good thing; there is too much temptation for over-utilization."

Definition

The terms "physician extender," "supervision" and "clinic" drew heavy reaction. None of the professional groups liked the term "physician extender." Alternatives proposed were: "nurse practitioner and physician assistant," "clinical nurse practitioner and nurse clinician," "health care practitioners," and "non-physician primary health providers."

The term "supervision" stirred mixed reactions. In all of the states, in all of the clinics represented, there was some physician participation in the care rendered by extenders. In none were the physicians required to be physically present when services were rendered, directly overseeing the care provided. Yet participation of both the physician and the physician extender in the preparation of protocols, or standing orders, was favored by all the witnesses, except the representative of the AMA, Edgar Beddingfield, M.D. In his opinion, the protocols would be prepared by the physician. Many of the witnesses pointed out that some of the services provided are nursing services, that can legally be offered without physician supervision. All agreed that the bill should in no way require direct oversight by physicians of all care needed in the clinics.

All of the witnesses were in favor of insuring that the clinics exercised some type of quality control. Many suggested internal audits, or audits conducted by local teams. Several echoed the recommendation of Eugene Corbett that the physician should be available to the clinic when help was needed. Dr. Ewell from Oregon included for the record the standards for his state, which spell out the type of relationship between the nurse practitioner and the method of quality control to be applied.

The question most frequently asked about the word "clinic" was whether or not it was intended to include a private physician's office. None of the witnesses objected to the specific requirements for clinic services, except the American Medical Association, which argued that this was creating a new and artificial provider. Instead, AMA asked that the bill simply expand the definition of physician to include the services of nurse practitioners and physicians assistants provided under the supervision of physicians.

Clinic sizes

Representatives testifying on behalf of clinics cited towns of 5,000 and fewer in size. Oregon and Georgia representatives told of repeated attempts to attract and hold physicians in such towns, only to lose them to others that had hospitals and could support group practices. Iowans repeated the story and the nurse practitioners from Vermont stressed the fact that most of the care that was needed in these sparsely settled areas was of the nature that was best handled by a non-physician. Bob Ewell from Oregon confirmed their suggestion, pointing out that the utilization of the small clinics in Oregon actually increased when physicians were replaced by nurse practitioners, because the care became more appropriate to the setting. The distance to nearby and referring physicians ranged from 10 to 30 miles, increasing as the terrain became less a barrier. All of the clinics reported high populations of elderly patients—18 to 30 percent.

Impact

Faye Henning, a nurse practitioner from Georgia and Sally Sundberg, a consumer from Iowa, reflected one of the clinics' major benefits—care closer to home caused people to use more preventive health care services. Others suggested that this resulted in less frequent hospitalization among clinic users. John Runyan, M.D., of Tennessee, confirmed this with data from 26 clinics in Shelby

County. His data compare favorably with data from both Kentucky's Frontier Nursing Service and the Los Angeles County Health Department.

Cost of care

Average costs per visit reported by the witnesses were in the \$10 to \$15, with the higher costs reflecting inclusion of laboratory and prescription services. Most of the witnesses favored the cost-related reimbursement. However, Senator Bellmon proposed that the current Medicare rates be continued and increased from 80 percent to 115 percent for providers in rural medically underserved areas, as an incentive to attract practitioners.

Offering the benefit of their experience with cost reimbursement, Steve Canfield of UMW and Oliver Fifield of New Hampshire-Vermont Blue Cross/Blue Shield both agreed that this could be done with a minimum of paperwork. In the past year, Fifield has been reimbursing two clinics in Vermont on this basis. UMW has been in the business for 20 years, and from that experience, Mr. Canfield made several suggestions for controls on this type of reimbursement, i.e. including:

1. Compensation for personnel should be adequate to retain them in the rural area.

2. The reimbursing must have productivity standards—low productivity is the major hazard with this type of reimbursement.

3. Eligible costs should include continuing education, recruitment and quality control.

Cost of S. 708

The cost to implement this bill would vary with both the number of clinics and the scope of eligible areas. If it is confined, as written, to rural medically underserved areas, the FY 1977 cost would be \$20 million, according to estimates from the Social Security Administration. By 1982, the number of clinics would be expected to increase to 950, and the costs to \$60 million. If the DHEW recommendations to include urban MUA clinics is accepted, the FY 1977 cost would be \$25 million for 725 clinics, and the number of clinics would increase to 1,952 by 1982, costing \$115 million.

Both estimates took into consideration the fact that physicians' offices would want to qualify as "clinics" and apply for cost reimbursement.

Recognition of physician extenders

The two exams proposed for credentialing of physician extenders under the bill troubled a number of the witnesses. Nurse practitioners complained that the ANA exam is given infrequently, only in major population centers, and excludes those who have not specifically trained as family or adult practitioners (such as pediatric nurse practitioners). Physician assistants were content with the American Academy of Physicians Exams, but were concerned that they would not be eligible for reimbursement until the date they passed the exam. Most witnesses favored deference to state laws in this regard. An exception was DHEW, which preferred crippled the concept of some minimum standards.

Other Suggestions

Many of those who testified requested that be set by the secretary. All witnesses supported home visits and nursing home visits be included as eligible for reimbursement when performed by a nurse practitioner or physician assistant.

RECOMMENDATIONS

The March 29 hearing allowed the Rural Development Subcommittee to hear from citizens on ways in which S. 708 should be improved. We conclude that S. 708 should be enacted as a separate piece of legislation, distinct from other Medicare reform legislation, and exclusively directed to rural, medically underserved Americans.

We further recommend that S. 708 be

modified, or committee report language be included, to clarify the following issues:

1. Throughout the bill, the term "physician extender" should be replaced by "primary health care practitioner".

2. Report language pertaining to page 1, lines 6 and 7, should state that payment for rural health clinic services should go to the person or entity with responsibility for the provision of clinic services.

3. Page 2, line 5 through 11 should allow payment for primary care services provided by physicians, in addition to those provided by primary health care practitioners.

4. Page 2, line 12, should be clarified in report language, so that a "clinic" would also encompass physician practices that utilize primary health care practitioners either on site or in satellite settings.

5. Provisions on page 2, lines 16 through 25, that deal with physician supervision should be retained, but clarified in report language to emphasize:

(a) That supervision would not require the physical presence of a physician where care is rendered; and

(b) That supervision should take the form of arrangements for standard orders for medical care and treatment and periodic review of medical services.

6. The bill should be amended on page 3, line 22, to state that clinics receiving reimbursement in areas that lose their designations as "medically underserved" should continue to receive reimbursement.

7. The bill should be amended on page 4, line 6, in the following two ways:

(a) Reimbursement for primary health care practitioner services should be permitted prior to full certification of the practitioner, in states where services may be provided by those practitioners; and

(b) The Secretary should review the certification requirements one year from the date of passage, and if necessary to insure high quality health care, set new standards of eligibility.

#### THE TERRORIST SITUATION IN THE NETHERLANDS

Mr. CASE. Mr. President, the situation in the Netherlands, where South Moluccan terrorists are holding school children hostage, is becoming increasingly outrageous. Terrorism in any form is deplorable. It is even worse when the target is school children, of whatever nationality. I have not followed in detail the cause of the Moluccans, but I can say that they are hurting, not helping, their cause. My deep sympathy goes to the children, their families and friends.

The incident shows the dangers of having let the virus of terrorism grow. It underscores the need for the civilized nations of the world to continue working toward bringing the problem under control.

I ask unanimous consent to place into the RECORD an editorial from today's Baltimore Sun on the subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

##### DESPAIR AND TERROR

When the siege of school and train in the northern Netherlands is ended and the fate of the few terrorists resolved, the Dutch will need to think fundamentally about the position of the Ambonese or South Moluccans in their midst. So will the leaders of that isolated community.

The whole world knows the destructive power of a nationalism unappeased. A particularly painful variant is the nationalism for which there is no place, the enduring dream of the nation which never was and cannot be. Such is the cause of the Republic of the South Moluccas, for which young men born in the Netherlands are prepared to die and to kill.

The people on Ambon in the South Moluccas, between New Guinea and the Celebes in eastern Indonesia, were created by empire from other ethnic groups. More Westernized than most, many became servants of the empire, officials and soldiers of the Dutch administration. Twenty-seven years ago, ex-colonial troops on Ambon mutinied against the troubled new giant of Indonesia and declared the Republic of the South Moluccas. A summer of destructive fighting put them down. The Netherlands took some 13,000 as refugees. What the Indonesian regime saw as the cancer of Moluccan nationalism was removed.

Too Dutch to be Indonesian, too Moluccan to be Dutch, these people clung to a refugee camp mentality even after spreading into the countryside near the town of Assen in the northern Netherlands, where their numbers have grown to 40,000. The Netherlands like other fallen empires has assimilated with varying ease people of different hues and cultures, from places it once ruled into the cosmopolitan culture of its cities. The Ambonese stayed near Assen without fitting in, dreaming of return to the islands where the younger ones have never been.

For the elders, nurturing the national dream holds off despair. For youths thus discouraged from facing Dutch realities, it creates despair. This most recent of several outrages of terrorism disturbs a broader peace. The terrible threat against innocent children provoked the possibility of retribution against the Ambonese neighbors innocent of terror.

It is time for those who kept the illusion of a South Moluccan nation alive to admit that they renounced Indonesia for a Dutch haven for themselves and a Dutch future for their children. Dutch leaders and Ambonese elders alike must encourage the young to full participation in Dutch national life, to avoid more horrors such as this one.

#### SMALL BUSINESS WEEK

Mr. CHAFEE. Mr. President, it is appropriate that this week is set aside to honor the outstanding contributions of the American small business community to our economy and our way of life.

The enterprising spirit of our independent small businessmen and women accounts for 95 percent of the businesses in the United States, and provides over 55 percent of our labor force with jobs. In addition, it is responsible for a substantial amount of the technological innovation that keeps American firms viable in domestic and world markets.

Mr. President, I would like to extend special congratulations to Mr. Samuel Forte, Rhode Island's Small Businessman of the Year. Mr. Forte is president of Fort, Inc., a jewelry manufacturing firm in East Providence, R.I. In 32 years, his company has grown from a 3-man operation to the 180 men and women who are employed there today.

Mr. Forte was selected for this distinction by the U.S. Small Business Administration because he exemplifies the spirit and qualities that small business contributes to America.

Also, Mr. President, I would like to commend the Senate Select Committee on Small Business for its legislative leadership and support of the small business community.

#### ADDRESS BY ACTION'S SAM BROWN TO THE WOMEN'S NATIONAL DEMOCRATIC CLUB

Mr. KENNEDY. Mr. President, recently I had the opportunity to read a significant address made last April by Sam Brown, Director of ACTION, to the Women's National Democratic Club.

Mr. Brown's remarks are inspiring to all of us who believe in ACTION and its concept of volunteer service at home and overseas, and who have worked in recent years to keep its programs alive.

Now, there is fresh cause for optimism. Under the leadership of the Carter administration and Mr. Brown, ACTION is coming in from the cold, and I look forward to a new era of activities and initiatives in its many vital programs.

In the course of his remarks, Mr. Brown speaks at length about the record and opportunities of the Peace Corps. Of special interest is his discussion of the role of the Peace Corps in helping to define the emerging concept of "appropriate technology" in foreign aid. As Mr. Brown states, the collective experience of the thousands of volunteers over the past 16 years is now being compiled in a series of monographs and manuals that are causing a "quiet revolution in international development."

Mr. President, I believe that Mr. Brown's remarks will be of interest to all of us concerned about ACTION's programs, and I ask unanimous consent that his address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### REMARKS BY SAM BROWN BEFORE THE WOMEN'S NATIONAL DEMOCRATIC CLUB, APRIL 14, 1977

Good afternoon. It is a pleasure to be back at the Women's National Democratic Club where I last spoke seven years ago.

I got a letter the other day from a volunteer who had served two years in India. He suggested I could relieve the tensions of the job through "sitting meditation." "It will do wonders for your head," he said.

No wonder I feel at home with the Peace Corps, I thought. The one way in which I don't feel quite at home is the size of the budget. At \$200 million, it is enough for rounding error at the Pentagon. By the standards of the anti-war movement, it would have been enough to stop the fighting in 1967.

But the war is over and I am at ACTION. And ACTION is more than the Peace Corps. It is the federal agency which promotes and supports the concept of voluntarism as well as the actual delivery of services through volunteers. The diversity of the agency's 10 programs allows for part- or full-time service for up to two years, with some people serving on a stipend. Domestically more than 230,000 Americans currently serve. People like Foster Grandparent Pearl Williams, our oldest volunteer who will celebrate her 108th birthday in May.

Whatever their programs or wherever they happen to serve, these volunteers have one

thing in common: they are working to alleviate the enormous human burdens of poverty, ignorance and powerlessness which are endemic to most of the world, including our own country.

Since its controversial inception in 1971, ACTION has come under increasing criticism for not being responsive to the constituencies which it is supposed to serve. Programs have been branded as being unnecessary duplications of successful locally-based efforts. ACTION leadership has been accused of trying to do away wholesale with programs for the aging, for having politicized the agency staff and for making the Peace Corps and VISTA prime candidates for the headman's axe.

I reserved most of what I had heard for judgment after my appointment. Now, after a month and a half of learning by doing, I know that ACTION has been badly mismanaged; its effectiveness dulled. Many of its programs have suffered from neglect and, at times, active management antagonism.

The agency has been over-organized to the point where it operates like a person with advanced arteriosclerosis. The free flow of ideas is constricted; communication among offices inevitably destined to short-circuit.

This is the direct result of the hiring and personnel practices initiated soon after the election of 1972. As detailed in a recent report on reform of the Civil Service by a group of public interest lawyers, there was a concerted attempt to gain political control of ACTION. The guiding premise was "you cannot hope to achieve policy, program or management control until you have achieved political control. This is the difference between ruling and reigning."

The most popular method of carrying out this cynical directive was through "layering." New positions were added to duplicate and supersede the functions performed by employees who were not considered "members of the team." In what must have been a record of its kind, 61 new positions were created like this in one day.

No wonder ACTION programs have been criticized. No wonder the morale of the agency has been very low. I believe that President Carter's commitment to revitalizing ACTION's programs—programs that best represent the contemporary spirit of idealism among Americans—has picked up that morale, and so it should.

So I've been talking to people both inside and outside ACTION to find out what's going on. How they feel. What the reaction has been to the change in leadership. At this point, ACTION's Deputy Director, Mary King, and I have met with almost half of the Washington employees in roundtable discussion groups of about 20 people each. These sessions have been very helpful. People seem to be excited about the changes they think can happen now.

ACTION is full of good, dedicated people who have strong ideas on what should be done to strengthen the agency and further its programs. They've got ideas about revitalizing the Peace Corps; about opening up the lines of communication with other federal agencies; about our domestic programs. The roundtables have been invaluable in helping to judge the health of the agency as well as the general public's interest in what is going on. The mail room tells me, for instance, that the volume of correspondence to the director's office is running three to five times heavier than under my predecessor.

This tells me that there is an enormous reservoir of good will and interest in ACTION programs. People are ready to be turned on again to the idea of voluntarism. They want to participate and I intend to help them do it.

A lot of my time has been spent searching for the most qualified people to run VISTA, the Older American programs, the Peace Corps, and our other programs. These appointees will reflect the diverse constituencies we serve. We are committed in our hiring to affirmative action at every level of responsibility, not because it is a federal directive, but because it is the best way to find the people who can make our programs more responsive and effective.

To keep them from working in a vacuum, a major review of our domestic volunteer programs and the management systems which support them has been initiated. This review, which has the direct support of the President, has two purposes: (1) to inventory existing programs as they relate to community needs; and (2) to review the current status of agency structures and systems in the field. The information generated will enable us to make better, more informed decisions about the substance of future programs and how best to implement them. As President Carter has said, "The combination of efficient management practices with the understanding and compassion of the volunteer spirit is not incompatible."

The review will be conducted by citizens' review committees in each of our 10 regions. Members will include seven or more local individuals familiar with the broad spectrum of regional volunteer projects, both urban and rural. Three of them will be officials of ACTION-sponsoring organizations.

These groups will be served by a staff of three, one of whom will be on detail from Washington and who will serve as liaison. The other two staffers will be from the local region. The committee members and their staffs will review a variety of volunteer projects. Simultaneously, members of 10 of the nation's largest, most reputable management consultant/accounting firms, donating their professional services in the public interest, will review systems now operating at the regional level to determine their effectiveness, efficiency and responsiveness to program purposes and needs. Project reports will be on my desk by June 1.

I want to stress that this entire project is designed to let us know what is out there; what our strengths are and where our weaknesses lie. It is not a witch hunt but a positive attempt to build for the future. It stems from the conviction that revitalized ACTION programs which reflect our strong national heritage of voluntarism can be a force for constructive change in thousands of communities and neighborhoods and institutions across America.

On the international side, the Peace Corps is in a state of flux after almost eight years of hostility from the previous administrations. Yet the basic idea has managed to survive, despite the lack of White House support. Now, with President Carter's active backing, it is on the verge of revitalization.

In my five trips to testify before the Congress to date, I have received a very cordial reception from the Senators and Representatives who have defended the Peace Corps through the years; who have restored its budgets when they have been cut; who have assured its existence when it has been threatened. The interest on the Hill for a renewed Peace Corps is substantial. But it must be a renewal which acknowledges the dramatic economic, social and political changes which have occurred in the world during the 16 years since the Peace Corps was founded.

For too long, emphasis at the Peace Corps has been on the highly trained professional person as the ideal answer to the requests by developing countries for increasingly sophisticated volunteer workers. Aside from

the fact that recruitment for these types of volunteers was extremely difficult, their performance in the field was not the unqualified success ACTION leadership had predicted it would be. The problems of adjustment, job satisfaction, living conditions, professional advancement and the like served to point up the gap between expectation and reality.

So now we find ourselves at a turning point in the history and fortunes of the Peace Corps. Confronted with markedly changed global realities, we must recruit a volunteer population which can be as flexible as the traditional generalist but as technically able as the recruited professional. And these volunteers must be fully cognizant of and responsive to the interdependent nature of today's world. It is a difficult task but one we can accomplish through a realistic evaluation of our past achievements and our future goals.

This summer the Peace Corps hopes to place 2,700 volunteer trainees throughout the 64 countries where its programs function. This is the highest number of requests from host country governments we had in the last five years. Several weeks ago I asked the staff at Peace Corps if it would be possible to top this goal for the summer by 500 additional trainees, an 18 per cent increase. Their response was terrific and the eagerness and intensity with which they tackled the job very reassuring.

The review and planning for the future of the Peace Corps involves a good deal of looking at our 16 years of experience in international development in a new way.

When the Peace Corps was founded by President Kennedy in 1961, there was immediate enthusiasm for the idea. The President struck a responsive chord in many. He was giving people the chance not only to do something for their country, but for other countries, too.

The head of the VFW cabled the President, saying, "This farsighted step in constructive Americanism will, we are sure, serve the cause of freedom and understanding among men everywhere . . ."

This was the sentiment of 16 years ago. Unfortunately, no one at the time had the faintest idea about the implications and long term effects of the intercultural experience.

The Peace Corps viewed itself strictly as a volunteer-sending organization. Its time and money were spent on selecting, training and supporting X-number of volunteers for a minimum of two years. Little comprehensive thought was given to utilizing the volunteer's specialized linguistic, cultural, technical, social and economic learning beyond the two-year term of service. Yet the collective experience of almost 76,000 past and present volunteers represents an enormous resource of specialized work in what is known now as appropriate technology.

Appropriate technology involves light capital investment and low maintenance costs, promotes local employment, utilizes local materials, is ecologically sound, and is compatible with the local culture and values. It is not massive amounts of money, sophisticated machinery nor complex technologies injected from foreign sources into countries which cannot possibly utilize them properly.

As a tool, appropriate technology has proven to be one of the most effective means of improving the quality of life among the neediest people in the world. To their credit, Peace Corps volunteers have been among its prime practitioners.

But the Peace Corps has rarely shared what its volunteers have learned with anyone, including itself. Now, however, an embryonic system has been devised to classify and review all Peace Corps-generated information concerning appropriate technology, from

teaching plans to technical designs to construction plans to manuscripts on the cultivation of dryland cereals.

It is significant that this system which is at once so powerful yet so simple an idea did not have the direct support of ACTION management. That it has been able to do so much with so little is indicative of the ability, the imagination, and the drive of the staff.

In a little more than 18 months, 20 monographs and several manuals have been published. And they are causing a quiet revolution in international development.

Other agencies are beginning to turn to the Peace Corps because of the tangible development information we possess. Significantly, none of these organizations, though they may fund millions of dollars worth of aid projects a year, have a network of people working in appropriate technology at the local level. This is the crucial difference between them and the Peace Corps.

It is why a manual such as "Small Farm Grain Storage," which is a compilation of the Peace Corps' experience worldwide in dealing with the problems of grain loss, is so valid. It contains successful, field-tested examples of appropriate technology as modified and utilized by volunteers in scores of countries over the years.

Since 75 percent of the world's grain remains in the areas where it is grown and up to 30 percent of this is destroyed each year by rats, mildew and other causes, widespread introduction of the appropriate technology in "Small Farm Grain Storage" could do much to alleviate one of the prime causes of world hunger. The farmer in Afghanistan and the one in Chad can be helped to solve their common problems in ways applicable to their common experience. This is fundamentally different development work from that which has built more fertilizer plants to produce more grain to feed more rats.

As the largest worldwide network of volunteers working in appropriate technology, Peace Corps is not a program for the marginal relief of the lower middle classes. It is a concerted fight against hunger, disease, ignorance and the other afflictions which bow down the world's poorest, neediest people.

The appropriate technology approach should not only make possible an improvement in the quality of life for the poorest people of the world, but should make possible a re-integration of the productive roles of women in developing nations. For example, small scale manufacturing enterprises, explicitly oriented to producing improvements which facilitate women's work, can be an important step in helping women to maintain or regain the roles they have traditionally held in subsistence economies.

The tangible contributions of Peace Corps can make to the solution of basic human problems are enormous. Not only abroad but at home. Appropriate technology is valid not only for our poor and hungry but for our dying cities and choking suburbs. In our rush to incorporate technological advances for their own sake, we have often not understood their potential impact on our culture. We have allowed our life style to undergo rapid and radical change without much regard for the side effects.

The perfect example of this is the development of waste disposal plants during the last 20 years. Popular thinking had it that with the expenditure of a few thousands or millions of dollars we could put up structures which would cleanse our rivers and streams overnight while they got rid of waste. Not true. What we bought with our money were hundreds of very efficient manufacturing plants. Nobody ever thought about the tons of sludge they produce annually. Now one of

our major ecological battles is to find ways to dispose of these sludge wastes.

Somewhere along the line we have got to begin to think things through in a more rational, deductive fashion. We have got to rid ourselves of our crisis mentality; a way of thinking that permits the paving over of an area equal to four states so we can drive bigger, faster and more energy wasteful automobiles while it lets a much more efficient form of transportation—the railroads—literally rot away.

We must begin to understand that appropriate technology is a two-way street from which we can derive very substantial benefits. This means we will have to get over our cultural arrogance that convinces us we are the only ones who can foster development. As long as we have ghetto dwellers who have more in common with street families in Calcutta than with other Americans, I believe we cannot afford such thinking.

There are numerous examples of the way in which this two-way developmental street operates. A tube well drilling program on an Indian reservation in Arizona and a mid-wifery program at Georgetown are direct, replicable offshoots of appropriate technology learned by PCVs in India and Africa.

I am not touting appropriate technology as an instant panacea for the world's ills. But I think it has great merit.

No longer can a volunteer in Nepal or one in Tonga be left to the microcosm of the individual experience. The volunteer is more than a one-on-one development worker. He or she has much to learn and impart through an informal communications network we are just beginning to understand.

Using this network to help people get control over their own lives is what the Peace Corps, VISTA and ACTION's other volunteer programs should be about. Appropriate technology is a key to that control.

Too frequently in recent years, people who have been fighting for control over their own lives have been accused of being unpatriotic. That simply isn't true. Patriotism is the struggle for social change. Patriotism in the 70's is a willingness to get back to work on the important human problems that we see all around us, both home and abroad.

In today's world the volunteer willing to dedicate a part of his or her lives to that work is the most patriotic of us all.

For those of you who want to come join us, we've got plenty for you to do.

#### SENATOR ROBERT C. BYRD MEETS THE PRESS

Mr. ROBERT C. BYRD. Mr. President, on May 22, 1977, I appeared on Meet the Press, an NBC television program. I ask unanimous consent that the transcript of this program be placed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD as follows:

#### TRANSCRIPT

Mr. HARTZ. Our guest on "Meet the Press" today is the Majority Leader of the United States, Senator Robert C. Byrd of West Virginia. Senator Byrd succeeded Mike Mansfield in January of this year as leader of the Senate Democrats and we will have the first question now from Judy Woodruff of NBC News.

Ms. WOODRUFF. Senator, earlier this year the White House seemed to be doing everything it could to pass the \$50 tax rebate proposal and then abruptly it was dropped. The President suggested maximum agricultural price support. Then under pressure he raised

them some more. And the President has strongly indicated at one time that he wanted to kill some 30 water projects and then he backed off on more than half of them.

With policy reversals like these in these early months, is the Administration developing a credibility problem with the Congress?

Senator BYRD. I don't think so. I think it indicates that Mr. Carter is flexible in the face of changing conditions. I think it might not have been wise to approach the water projects as was done but as to the rebate I believe it indicated that, in the face of the changing economic conditions, Mr. Carter was reasonable and flexible, and I think that at that time and under the circumstances he did the right thing.

Ms. WOODRUFF. Well, in addition to the energy legislation the White House has already sent to the Congress social security legislation, legislation to control hospital costs and you are soon going to be getting an environmental package, significant tax reform legislation, welfare reform legislation.

Speaker O'Neill has said that the White House is, in his words, throwing too many balls in the air at one time.

Would you agree that the President is trying to do too much, too soon?

Senator BYRD. He made a good many commitments during his campaign and he is trying to fulfill those commitments. Obviously, the Congress can only act so fast on the priorities that are sent up and Congress will take first things first, but I don't think the President should be criticized for sending up a good many packages.

I have also said the same as Mr. O'Neill that you can only put so much sausage in the meatgrinder at one time. It will only take so much. But he will pace his legislation, I am sure.

The tax reform legislation will not come up until next year, I don't believe, and welfare reform late this year so I am very well satisfied with the pace at which he is sending it up.

Ms. WOODRUFF. Well, the President has said he wants the Congress to complete action on tax reform this year in addition to the hospital cost legislation and social security.

How much of this can the Congress complete?

Senator BYRD. I don't think the President has said that the Congress should complete action on tax reform this year. That is going to be a massive bill. That won't be ready until next year. There may be some minor items of tax reform that will be taken care of this year, but we are going to take first things first and the energy legislation will be the top priority legislation.

Mr. BRODER. Senator, when President Truman fired General MacArthur there was a great uproar in Congress.

Do you anticipate any criticism of President Carter for relieving General Singlaub of his command?

Senator BYRD. No.

Mr. BRODER. What is your own attitude toward the firing?

Senator BYRD. I think he did what he had to do. And he didn't exactly fire him, he just relieved him of his responsibility as Chief of Staff in Korea. He will be reassigned somewhere else. I think he had no other choice but to do this.

Mr. BRODER. All the reports indicate that General Singlaub was just saying publicly what a good many other military men both American and Korean out there believe, that it would be a mistake to pull American troops out of Korea on the schedule the President has announced.

Do you support that troop withdrawal?

Senator BYRD. Yes, I do on the basis of a gradual withdrawal, as I understand it, and it will be over a period of 4 or 5 years. The exact modalities and timing of the withdrawal have not been determined. These will be discussed, as I understand it, within the next few days, but I agree that the time has come in view of the strong state of the Korean economy and the very strong forces that the South Koreans have, that it is time to withdraw our ground force role there. We are going to leave our air units there, and we are going to stand by our commitments to resist any attack upon South Korea.

Ms. ANGLE. Senator, you have already indicated that President Carter's energy package will be the top priority on the Hill for the moment. It appears the rebate aspects of that plan are in some trouble and you are one of those who has expressed reservations about the wisdom of rebating any gasoline tax or gas guzzler tax.

Do you think that part of the plan is dead?

Senator BYRD. I wouldn't say it is dead but I think certainly Congress ought to take a good look at the President's proposal. The President is showing flexibility in considering the suggestions that have been made with respect to utilizing the gas guzzler tax and possibly some of the other energy taxes for energy conservation projects. I think this would be a wise approach. I think that the rebate is a short-term benefit, whereas, if these taxes—if they are indeed enacted—are placed into energy conservation projects, they give the nation long-term benefits from the standpoint of environmental protection, employment, and also fuel conservation.

Ms. ANGLE. Don't you think most taxpayers would rather get the money back than see the government hang on to it for energy conservation?

Senator BYRD. Well, I am not sure that a rebate mechanism, except in the case of home heating fuels, is the wise way to attack our energy problem. I see problems with respect to giving rebates to purchasers of fuel-efficient cars. After all, we have a law that mandates fuel efficiency in the production of automobile engines. We would also have problems in connection with rebates on imported cars, so it seems to me we would avoid that problem and at the same time deal with the energy problem if we put these moneys into the rehabilitation of our railroads, into mass transit systems and so on, which are energy-conservation projects.

Mr. GERMOND. Senator, some of your colleagues, your Democratic colleagues in the Senate, particularly the liberals, Senator Kennedy, Senator McGovern, Senator Cranston—have been complaining about that. President Carter has his priorities on crooked, that he is giving too much attention to trying to achieve a balanced budget in his first term and not enough to social programs, to welfare reform, health insurance and the like.

What do you think about that? Do you think the balanced budget should be the first priority of this Administration?

Senator BYRD. I don't think the President has really said that a balanced budget will be the first priority. I think that he has made that a top priority. I can understand the feelings of Senator McGovern and Senator Kennedy, who have long shown concerns for various social programs. Mr. Kennedy is, in my judgment, the foremost expert in the Senate with respect to health and medical services legislation. He probably has his name on more legislation in that field than has any other Senator. I can understand his concern, and I must say I think there have been some changing signals that have come from the White House that have been confusing, but I think the President has now come for-

ward to say that he is going to send up a health insurance bill next year and it would seem to me that, all of these things being interrelated, the President should be commended on making a balanced budget a priority but at the same time he is not denigrating the necessity for phasing in some kind of health insurance program and other social service programs.

Mr. GERMOND. All of these programs, though—isn't he timing all of these programs so there will be no fiscal impact in the first term?

Senator BYRD. I think he is just being realistic. After all, the Congress can handle only so much legislation. We are going to try to deal with the energy priority legislation this year. This does not mean that there will not be other very important legislation that we will have to deal with, but at the same time, we cannot take tax reform, we cannot take welfare reform and do all these things the first year.

Mr. GERMOND. Do you think as a practical matter that he has any chance of achieving a balanced budget by 1981?

Senator BYRD. I think as a practical matter he has a chance. I think it will be pretty difficult to do it, but I commend him for at least having that as one of his goals.

Ms. WOODRUFF. Senator, would you agree with Federal Reserve Board Chairman Arthur Burns that inflation is a more serious economic problem right now than unemployment?

Senator BYRD. I think that inflation is a serious problem. Unemployment is a serious problem, but unemployment has an impact on inflation, so I think that the President and the Congress, the Democrat leadership in the Congress, are attempting to deal with inflation by lowering unemployment, by improving the economic growth rate, and by stimulating consumer and business confidence. All of these things have an impact on inflation.

Ms. WOODRUFF. If the President's rather modest anti-inflation program isn't working, isn't doing the job, say, six months down the road, would you foresee the President asking for and the Congress granting him broader powers to deal with inflation? For example, wage and price control authority?

Senator BYRD. Well, I think we have to wait and see whether or not the programs are working.

Ms. WOODRUFF. If they are not working?

Senator BYRD. I think the President's withdrawal of the \$50 tax rebate had as one of its bases the inflationary aspects. I think the President is dealing with this in a reasonable way, and Congress, I think, through its budget reform process, is also doing the same.

Ms. WOODRUFF. What if it doesn't work six months down the road?

Senator BYRD. Let's wait and see if it works.

Mr. BRODER. Senator, you have had occasion two or three times to chide the President semi-publicly for his failure to consult with Members of Congress. Do you think he has learned that lesson?

Senator BYRD. Yes, I think we have to keep in mind that this is a new administration. It has had virtually no experience in dealing with Washington. The President did not have any experience in serving in Congress as did a good many of his predecessors. It was trying—it had been trying to establish itself, and it has had the growing pains of any new administration. I think that he is a good learner; he is a good listener; and I think he is flexible, and I think he is reasonable, and I think some of the earlier problems probably can be understood and will not be repeated.

Mr. BRODER. You have used the word flexible I think three times now in describing him. What is the difference between a President who is flexible and a President who backs away whenever he sees a fight?

Senator BYRD. Well, of course, the implication there is that the President has backed away because of a fight. It might not be a bad idea to back away to avoid a skirmish today in order to win the war tomorrow.

I don't think the President has backed away, on the basis of the economic circumstances, and they do change. They were different in March from what they were last fall. The President, I think, did the right thing in withdrawing his \$50 rebate.

Now you can say he is flexible or inflexible or you can say he is backing away, but I think he did the right thing under the circumstances.

Mr. BRODER. Do we have congressional government in Washington today?

Senator BYRD. We have a tripartite system of government in which the legislative branch is equal and coordinate with the other branches of the government.

Ms. ANGLE. Senator, you have already mentioned the heavy list of bills that Congressmen deal with and the impossibility of getting all that meat through the sausage grinder this year. Couldn't Congress get a lot more done if it would spend more time in Washington? You are about to go out for a Memorial Day recess of 10 days, and there is the Fourth of July, and there is a month in August, and you are talking about quitting for the year in October.

Senator BYRD. I welcome that question. Congress also has a responsibility to go back to the people. It is the people's branch; it is the people's forum; and one of the reasons for these holiday periods is to allow Congressmen to get back to their home base and talk with the people.

Now, Congress is doing its work. Last week, the Senate enacted a military procurement bill in two days, and in the past we have seen that take six weeks or longer. It enacted the President's Department of Energy bill. It enacted a surface mining bill, and next week we will take up the farm bill.

In the final analysis, Congress will have a good record. We are going to deal with the top priorities. I have given the committees in the Senate every opportunity to meet and do the committee work, and now the bills are getting on the calendar, and we will get the work done, but Congress does have its responsibility to meet with, look the people in the eye, talk with them, and hear their concerns, and that is the purpose of these periods.

Ms. ANGLE. Well, don't many members spend those periods of nonlegislative work campaigning for reelection in one sense or another?

Senator BYRD. Well, I suppose it is a definition of terms, here. One always campaigns for reelection when he is in Congress. Every day. But in doing so, he is listening to the people; he is talking to the people; he is responding to their viewpoints and hearing theirs. One might call it campaigning, or one may call it whatever he wishes, but I think you would have to admit that the representatives of the people ought to get back and see the people.

During the last nonlegislative day period, I spent four days out of that whole period dealing with the flood problems of southern West Virginia, meeting with Federal agency representatives who have jurisdiction over programs to assist people in the flood stricken areas. That is just one example. Other members may catch up on the work in their offices; they may convene hearings either in

May 26, 1977

Washington or in the country, but there has to be some time taken away from the Floor duties to do some of the other responsibilities of Members of Congress.

Mr. GERMOND. Senator, if there is anybody having more trouble with Congress this year than President Carter, it is labor. They were beaten on common situs picketing, apparently on the Hatch Act; they are not happy with the jobs program, don't think it goes far enough. They are not happy with the delay on health insurance. Now the AFL-CIO is spending close to \$1 million on a campaign for repeal of 14(b) of the Taft-Hartley Act right-to-work clause.

And your support to that would be critical to them. Do you think that is a do-able thing this year; would you support it?

Senator BYRD. 14(b) will not be called up in the Senate this year. It might be called up next year.

Mr. GERMOND. When did you decide that? Senator BYRD. Several weeks ago.

Mr. GERMOND. You just don't have the votes; is that it?

Senator BYRD. I didn't say that. I said several weeks ago, when the situs picketing bill failed of action in the House of Representatives, that I would not call up that bill at all, this year or next, but that—and that I would not call up 14(b) this year. It is simply a matter of priorities, as I have said repeatedly. We take first-things first. We have got to do the energy legislation. We have to do the Clean Air Act. We have to do the mine safety bill. We have to do the appropriations bills, and it is a matter of taking its place on the priorities. It may be called up next year.

Mr. GERMOND. Is your prime concern then a worry about a filibuster?

Senator BYRD. I think there is no doubt that there would be a filibuster, but that is not the prime concern. As I say, we have only so much time; we have a calendar crunch; and we are going to deal with first things first. That is not to say that labor is being neglected. We are going to also have up a bill dealing with the minimum wage.

As for the Hatch Act, that, as I understand it, is probably still going to be called up in the House.

Ms. WOODRUFF. How about the minimum wage since you brought it up? How much higher should it be than what the Administration has suggested.

Senator BYRD. The Administration has suggested I believe \$2.50. The labor leaders—Mr. Meany wants \$3.00. I think Mr. Dent in the House has introduced legislation that would make it something like \$2.80 or \$2.85. I think it will be something between \$2.50 and \$3.00 figure.

Ms. WOODRUFF. You disagree with the Administration proposal?

Senator BYRD. I simply say I think it will be somewhere between the two figures.

Ms. WOODRUFF. The White House just announced this week an agreement with Japan to limit import of television sets to 1.75 million a year. That agreement is to be approved by Congress within 90 days. Would you favor it?

Senator BYRD. It doesn't require approval by Congress, as I understand it. It is a matter that will go into effect if Congress does not disapprove it within 60 days. Yes, I favor the agreement. I commend the Administration on this agreement.

Ms. WOODRUFF. Does it sufficiently protect domestic television manufacturing—

Senator BYRD. I don't think it does. It goes a long way. It does reduce the number of completed sets and unassembled sets that will be brought in from Japan, which last year had 80 percent of the imports of television sets assembled and unassembled.

I think there is a possibility at least that predatory pricing may be going on, and I have asked the Attorney General to investigate the possibility of this unfair pricing charge that we have heard. So while the agreement doesn't deal with that, the Justice Department will be looking into it.

Mr. BRODER. Senator, you are from a great coal-producing state. Are the goals and timetables that the President has set for conversion of industry and utilities from oil and gas to coal practical goals?

Senator BYRD. I doubt that, under the circumstances, we can see the doubling of coal production by 1985. There are those who would disagree with me on that. I think there are environmental problems; there are problems in connection with railway transportation; there are problems in connection with the production, itself, at the mine.

In the face of these problems, while I think it is a goal that we ought to try to achieve—and I would not say it is unachievable—I think it is going to be difficult.

Mr. HARTZ. We have three minutes left. Mr. BRODER. If the coal program is probably unachievable, if the gasoline tax is probably not going to be passed by Congress, what is going to be left of this energy program?

Senator BYRD. The Congress will take a look at all of the President's energy proposals. It will make some changes therein, but we will enact an energy package. I think we have to understand that this package, while it is purportedly tough, is not going to deal with the energy problem in the long run. I think we are going to have to see Congress come back time and time again to deal with the energy problem as we see it develop in the coming years. I think this is a good starting point, and the President is to be commended with having come up with a comprehensive proposal.

Ms. ANGLE. Senator, we have already mentioned the fact that the Hatch Act revision is in trouble in the House. There is another part of Carter's election reform package, the instant voter registration, which seems to be equally under fire. Could either one of those bills get through the Senate today?

Senator BYRD. They couldn't get through the Senate today, but they might get through the Senate after some period of discussion.

Ms. ANGLE.

Senator BYRD. The Hatch has passed the Senate twice. Right now, the House, I think, is further along in its consideration of these measures. We don't even have the Hatch Act on the Senate calendar yet. As of now, we are putting other things ahead of it.

Mr. HARTZ. We have about a minute-and-a-half left.

Mr. GERMOND. I would just like to go back to Dave Broder's question.

You said Congress will take a look at the energy program, which would seem to me to be the minimum that you have to do.

Which element of that program, important elements are likely to get through, are there any of them?

Senator BYRD. Yes, and Congress is already moving in that direction. We will have the Outer Continental Shelf legislation coming along; we will have the coal conservation legislation coming along. We passed the cornerstone of the legislation this past week when we enacted the President's Department of Energy bill. The Finance Committee will be dealing with the tax aspects. The House Committee on Ways and Means, under the Constitution, certainly has first crack at that. Senator Jackson will be moving the other part of the legislation quickly. Hearings have already begun, and I see the Congress acting this year on the package.

Mr. HARTZ. I am sorry to interrupt but our time is up.

Thank you, Senator, for being with us today on "Meet the Press."

(This concludes additional statements submitted today.)

## CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

## LEGISLATIVE SCHEDULE

Mr. ROBERT C. BYRD. Mr. President, looking down the road following the recess, I think it would contribute to a more orderly legislative process and would alert committees with respective jurisdictions over the measures if at this time we could agree on a sequential ordering of certain measures which will be coming up following action on the Clean Air Act. I would suggest the following, and I propose my suggestion by way of a unanimous-consent request:

That upon the disposition of the Clean Air Act the Senate then proceed to the consideration of Calendar Order No. 152, S. 1340, the bill authorizing appropriations for ERDA; that upon the disposition of that measure, the Senate proceed to the consideration of Calendar Order No. 133, H.R. 5262, an act to provide for increased participation by the United States in the International Bank for Reconstruction and Development; that upon the disposition of that act, the Senate proceed to the consideration of Calendar Order No. 135, S. 1520, a bill to amend the Foreign Assistance Act of 1961.

This is all with the understanding that no time agreements are entered thereon, but that this is merely a sequential ordering of the measures.

That following the disposition of that measure, the Senate proceed to the consideration of Calendar Order No. 169, S. 1160, a bill to amend the Foreign Assistance Act of 1961 and the Arms Export Control Act. That following the disposition of that measure, the Senate proceed to the consideration of Calendar Order No. 168, H.R. 6689, an act to authorize fiscal year 1978 appropriations for the Department of State; that upon the disposition of that measure, the Senate proceed to the consideration of Calendar Order No. 167, H.R. 6179, an act to amend the Arms Control and Disarmament Act; that upon the disposition of that measure, the Senate proceed to the consideration of Calendar Order No. 154, S. 717, the mine safety measure; and that that be followed with Calendar Order No. 165, S. 1529, the omnibus rivers and harbors bill; to be followed with Calendar Order No. 183, S. 1539, a bill to authorize appropriations for fiscal year 1978 for intelligence activities; to be followed by Calendar Order No. 156, S. 208, the Urban Mass Transportation Act.

Mr. BAKER. Mr. President, reserving

the right to object, and I shall not object, I, on the contrary, commend the distinguished majority leader for propounding this unanimous-consent request at this time. I am sure I betray no confidence when I apprise my colleagues of the fact that the distinguished majority leader saw fit to confer with the minority in this respect and to study in detail the calendar of bills available for consideration of the Senate and in some cases to anticipate measures that might be presented for the Senate's consideration.

At this time then, Mr. President, in keeping with this reservation, I express my appreciation of the majority leader for this method of handling proposed legislation. I think it is an extraordinarily effective way to approach the legislative agenda for the Senate. I think it is orderly. I think it is likely to contribute to the prompt dispatch of the legislative responsibilities of this body, and I think it is likely to minimize the prospects of conflict.

This is in no way an effort to limit the rights and opportunities of any Member to support or to oppose any of these issues. There is no limitation, as the majority leader points out, on the time for debate. There is no relinquishment of any rights by any Senator. There is no creation of any new rights on behalf of any Senator.

I think the very fact, though, that we are now scheduling 12 measures for consideration in sequence after we return from the Memorial Day nonlegislative period is a substantial step forward in the effective operation of the Senate, and I reiterate, Mr. President, not only do I not object, but I commend the majority leader for this effort and particularly for his consultation with the minority in trying to arrive at this legislative agenda.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader for his observations. I think it is in the interest of our proceeding ultimately toward the achievement of the hoped for October adjournment date, that this procedure be followed.

This recognizes the fact that some of these measures or most of them are measures which will require some time for debate. There will be amendments offered to them. Some of them will be somewhat controversial. But at some point in time, the leadership feels that the Senate is going to have to face up to these measures and act on them—one way or the other—and clear the decks for the energy legislation; and a number of the measures that are set forth in this sequential order are energy related.

There will come a time down the road when the Energy Committee and the Finance Committee will be bringing out legislation that will require considerable time for debate. All or most of it will be controversial. But we have to put first things first, and try the best we can to have an orderly procedure for disposing of the measures which are considered to be "must" legislation.

CXXIII—1064—Part 14

We have to remember also that there are 13 regular appropriation bills which will be coming along from the House of Representatives in the latter part of June, and, hopefully, most of those appropriation bills will be completed before the Fourth of July non-legislative-day period.

I should say, moreover, while I am on my feet, that following the Memorial Day nonlegislative period, there will be only 4 weeks prior to the Fourth of July Independence Day holiday period. Following that, there will be only 4 weeks prior to the August recess. Following the August recess, there will be only 4½ weeks prior to the October 8 hoped for adjournment date.

That means that there are only 12½ weeks of Senate floor work prior to the hoped for adjournment date of October 8.

I say this to alert all Senators that there will be very difficult scheduling problems that will confront the leadership, and there will undoubtedly be long daily sessions. There will very likely have to be some Saturday sessions between now and the hoped for October 8 adjournment.

All of this will mean that from time to time it will be incumbent upon the leadership—and I say this most respectfully toward all Members on both sides of the aisle—to schedule measures which will inconvenience some Senators, perhaps, individually, but in the interest of conveniencing the Senate—and by so doing acting in the interests of all Members—the leadership will feel it imperative to go ahead with scheduling matters so as to waste no precious time in order to complete the work of the Senate prior to the hoped for October 8 adjournment.

I wish to express appreciation to the distinguished minority leader for his fine cooperation, his understanding, and his courtesy in working closely with me in this regard. I likewise express appreciation to all Members of the Senate for the understanding that they have shown up to this point, and for the splendid cooperation that the leadership has had in moving the measures along thus far.

I think the Senate has established a good record thus far. That record appeared in the CONGRESSIONAL RECORD yesterday. It will show that the Senate has demonstrated an ability to come to grips with difficult measures already this year, and to expedite the floor action thereon. It demonstrates a fine cooperative attitude on the part of Senators, and I personally again thank all Senators, and I beg their indulgence as time moves forward, and ask for their understanding and cooperation, because we will have to have longer sessions and some Saturday sessions.

I hope, therefore, that Members will, in making commitments for engagements from this day forward, keep in mind the fact that it is the Senate which must come first; that when a Member is inconvenienced the leadership regrets it, but that the Senate is larger than all of its component parts, and it is the Senate and the people who must be served in the final analysis, and sometimes to the

disadvantage of some of the Members individually.

There will be a time, and I do not think it is going to be far off, when the leadership will have to decline consent for committees to meet during the session of the Senate except in accordance with the provisions of the Stevenson resolution. There will be committees that will, by necessity, have to meet, and some have standing consent to do so, such as the Appropriations Committee and the Budget Committee; and other committees will have to meet to deal with energy problems, such as the Finance Committee and the Energy Committee. Other committees that feel bound to meet may meet, of course, when the Senate is not in session, but there will come a time soon I think, that if we really mean business in striving to adjourn in October and get the work done in the meantime, that the committees are just going to have to put the brakes on with respect to meetings.

I would be of the opinion, may I emphasize, that that time is not far off. So I think it appropriate and useful at this moment to say these things for the record, so that Senators will have had ample advance notification.

Mr. BAKER. Mr. President, I thank the distinguished majority leader for his further insights into our job yet before us this session. I join with him in urging that we take account of the fact that there is a heavy schedule, and that it will require diligence, dedication, great effort, and no doubt long hours for us to accomplish that purpose.

I am also pleased, Mr. President, that in arriving at this agenda of 12 items for consideration after Memorial Day, we were able to check with the ranking Republican members on each jurisdictional committee, or the representatives of those members, and ascertain that they, too, were agreeable to the sequence of these measures. I believe that shows a high degree of cooperation on their part and dedication to moving the schedule of the Senate.

#### ORDER FOR RECOGNITION OF SENATOR ALLEN ON MONDAY, JUNE 6, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Monday, June 6, 1977, after the two leaders or their designees have been recognized under the standing order, Mr. ALLEN be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### CLARIFICATION OF UNANIMOUS-CONSENT AGREEMENT—CLEAN AIR ACT (S. 252)

Mr. ROBERT C. BYRD. Mr. President, I call attention to the unanimous-consent agreement as printed in the calendar of business with respect to the Clean Air Act. There was a part of that agreement which provided for time on a motion to recommit with instructions by Mr. ALLEN of 1½ hours. That provi-

sion was in the agreement, it is in the CONGRESSIONAL RECORD, but it was inadvertently left out of the printed unanimous-consent agreement on the calendar. I call attention to that fact so that the calendar for the next day of session may be corrected accordingly.

The PRESIDING OFFICER. The calendar has been corrected.

Mr. ROBERT C. BYRD. Mr. President, in connection with the agreement that was entered into on the Clean Air Act, I inadvertently overlooked one amendment with respect to that measure. It is an amendment by Mr. HART. I was asked to get a time limitation of not to exceed 4 hours on that amendment, to be equally divided and controlled in accordance with the usual form. I ask unanimous consent at this time to amend the time agreement on the Clean Air Act accordingly.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### TRANSFER OF MEASURE BACK TO GENERAL ORDERS CALENDAR—S. 701

Mr. ROBERT C. BYRD. Mr. President, there is one measure on the Unanimous-consent Calendar in connection with which I believe there will be some amendments offered. Therefore, I ask that the clerk refer Calendar Order No. 116 back to the General Orders Calendar.

The PRESIDING OFFICER. The measure will be so transferred.

#### ORDER FOR RECESS UNTIL 10 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until the hour of 10 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ORDER FOR CONSIDERATION OF H.R. 6010 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow morning, after the two leaders

or their designees have been recognized under the standing order, the Senate proceed to the consideration of Calendar Order No. 202, H.R. 6010, an act to amend title XIII of the Federal Aviation Act of 1958 to expand the types of risks which the Secretary of Transportation may insure or reinsure, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### COMMITTEE MEETINGS DURING SENATE SESSION TOMORROW

Mr. CRANSTON. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ORDER FOR RECORD TO REMAIN OPEN UNTIL 6 P.M.

Mr. CRANSTON. Mr. President, I ask unanimous consent that Senators may have until 6 p.m. tonight to insert appropriate matters in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### RECESS UNTIL 10 A.M. TOMORROW

Mr. CRANSTON. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 10 a.m. tomorrow.

The motion was agreed to; and at 3:40 p.m. the Senate recessed until tomorrow, Friday, May 27, 1977, at 10 a.m.

#### NOMINATIONS

Executive nominations received by the Senate May 26, 1977:

##### DEPARTMENT OF STATE

Marvin L. Warner, of Ohio, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Switzerland.

##### INTERNATIONAL MONETARY FUND

Thomas Byron Crawford Leddy, of Virginia, to be U.S. Alternate Executive Director of the International Monetary Fund for a term of 2 years expiring October 22, 1979 (reappointment).

##### DEPARTMENT OF THE TREASURY

John Gaines Heimann, of New York, to be Comptroller of the Currency, vice James E. Smith, resigned.

##### APPALACHIAN REGIONAL COMMISSION

Robert Walter Scott, of North Carolina, to be Federal Cochairman of the Appalachian Regional Commission, vice Donald W. Whitehead.

##### IN THE AIR FORCE

The following officer under the provisions of title 10, United States Code, section 8066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 8066, in grade as follows:

##### To be lieutenant general

Maj. Gen. Thomas M. Ryan, Jr., xxx-xx-xx... FR (brigadier general, Regular Air Force), U.S. Air Force.

##### IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

##### To be general

Lt. Gen. Donn Albert Starry, xxx-xx-xxxx, Army of the United States (major general, U.S. Army).

The following-named officer to be placed on the retired list in grade indicated under the provisions of title 10, United States Code, section 3962:

##### To be lieutenant general

It. Gen. Samuel Vaughan Wilson (age 53), xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

##### IN THE NAVY

Vice Adm. Joe Williams, Jr., U.S. Navy, for appointment to the grade of vice admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

## HOUSE OF REPRESENTATIVES—Thursday, May 26, 1977

The House met at 10 o'clock a.m. Bishop J. O. Patterson, Church of God in Christ, Memphis, Tenn., offered the following prayer:

Gracious and Eternal God, having been enjoined by the Holy Scriptures to pray for kings, governors, rulers, and men of authority that we may live a quiet and peaceful life—

We pray for our President, that God will give him the wisdom and strength to lead this great Nation remembering that "Those who rule over men must be just."

Heavenly Father, bless this Congress and all legislative and judicial branches of our Government. In all of their deliberations may they learn to never lean upon their limited human understanding,

for you have said, "If any man lack wisdom let him ask of God who giveth freely and upbraideth not."

May the dove of peace hover over all of the nations of the world, and we soon learn to study war no more is my prayer. Amen.

#### THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

#### MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a bill and concurrent resolution of the House of the following titles:

H.R. 6752. An act to amend the Water Resources Planning Act (79 Stat. 244) as amended; and

H. Con. Res. 229. Concurrent resolution providing for an adjournment of the House from May 26 to June 1, and a recess of the Senate from May 27 to June 6, 1977.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is

requested, bills of the House of the following titles:

H.R. 2992. An act to authorize appropriations for fiscal year 1978 for carrying out the Comprehensive Employment and Training Act of 1973 as amended;

H.R. 3722. An act to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978;

H.R. 4746. An act to extend certain authorities of the Secretary of the Interior with respect to water resources research and saline water conversion programs, and for other purposes;

H.R. 6774. An act to make certain technical and miscellaneous amendments to provisions relating to higher education contained in the Education Amendments of 1976; and

H.R. 6823. An act to authorize appropriations for the United States Coast Guard for fiscal year 1978, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 4746) entitled "An act to extend certain authorities of the Secretary of the Interior with respect to water resources research and saline water conversion programs, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. GRAVEL, Mr. BENTSEN, and Mr. DOMENICI to be the conferees on the part of the Senate.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 4088) entitled "An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MAGNUSON, Mr. HOLLINGS, Mr. STEVENSON, Mr. FORD, Mr. GOLDWATER, and Mr. SCHMITT to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 11. An act to provide for the appointment of additional district and circuit judges, for the creation of a new 5th judicial circuit and a new 11th judicial circuit, and for other purposes;

S. 1131. An act to authorize appropriations to the Nuclear Regulatory Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and section 305 of the Energy Reorganization Act of 1974, as amended, and for other purposes;

S. 1184. An act to amend section 7(e) of the Fishermen's Protection Act of 1967, and for other purposes; and

S. 1316. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out State cooperative programs under the Endangered Species Act of 1973.

#### BISHOP J. O. PATTERSON

(Mr. FORD of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FORD of Tennessee. Mr. Speaker,

I rise today with great pride and thanksgiving for having with us here in our Chamber of the 95th Congress the inspirational Bishop J. O. Patterson. This distinguished Eighth District constituent and dear friend of mine who rose from his first pastorate at a church with only eight members, now presides over the massive Church of God in Christ. As of November 1976, at the church's annual convention, he was elected to his third term as presiding Bishop of that nationwide denomination. Currently the bishop is overseeing plans to build a \$20 million Saint's Center in the downtown area of Memphis.

My fellow colleagues, I am extremely elated and honored to have the bishop in our midst and to share with us the spiritual message and leadership that exalt him as a humanitarian and religious servant. As we continue with the legislative mission that each of us in this Chamber has been mandated to execute, let us recall with vigor Bishop Patterson's morning prayer and be guided by its charge.

#### PERMISSION FOR SUBCOMMITTEE ON MINORITY ENTERPRISE AND GENERAL OVERSIGHT OF COMMITTEE ON SMALL BUSINESS TO SIT DURING MORNINGS OF JUNE 1, AND 2, 1977, DURING 5-MINUTE RULE

Mr. ADDABBO. Mr. Speaker, I ask unanimous consent that the Subcommittee on Minority Enterprise and General Oversight of the Committee on Small Business may be permitted to sit during the mornings of June 1 and 2, 1977, during deliberations of the House under the 5-minute rule.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

#### APPOINTMENT OF CONFEREES ON H.R. 4991, NATIONAL SCIENCE FOUNDATION AUTHORIZATION ACT, FISCAL YEAR 1978

Mr. THORNTON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 4991) authorizing appropriations to the National Science Foundation for fiscal year 1978, with a Senate amendment thereto, disagree to the Senate amendment, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas? The Chair hears none, and appoints the following conferees: Messrs. TEAGUE, THORNTON, FUQUA, HARKIN, KRUEGER, WYDLER, and HOLLENBECK.

#### SOME COGENT COMMENTARY ON THE CODE OF OFFICIAL CONDUCT

(Mr. ICHORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ICHORD. Mr. Speaker, there is a legislative maxim to the effect that it is not possible to legislate morality and integrity. Yet we have attempted to do so by our code of official conduct.

I have checked with sources unmarred by the influence of special interests and have verified that under clause 4 a lobbyist can wine and dine a Congressman every day of the year as long as the cost does not exceed \$35 per day. According to my calculations a lobbyist could thus spend \$12,775 on a Congressman without violating the law. Yet, if he spends \$35.01 for 3 meals on only 3 days of the year or a total of \$105.03, an offense would be committed.

In order to strictly comply with the law, to avoid recordkeeping, and also to avoid being sandbagged, I have devised a handy certificate which I intend to carry in my pocket and require any person inviting me to any function, who may be interested in legislation, to sign the certificate before I accept his hospitality. The certificate reads:

This is to certify that any food, beverage, or other sustenance to be provided to Congressman RICHARD H. ICHORD on this day is in full conformity with House Rule XLIII of the code of official conduct, and has not cost in excess of \$35.00. (Signed/date)

I would suggest that my other colleagues might prudently follow the same course. Such course could not only keep you out of jail, you might also avoid having to attend so many functions.

#### THE SUCCESS OF THE SENIOR CITIZEN INTERN PROGRAM

(Mr. KOSTMAYER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOSTMAYER. Mr. Speaker, as I am sure my colleagues are aware, for the past ten days we have been ably assisted here in Washington by a group of 92 senior citizen interns from throughout the country.

The senior citizen intern program is designed to educate older Americans about the various services the Federal Government offers. More importantly, it gives senior citizens an opportunity to tell those of us in Washington how these services can be improved. It is their chance to educate us.

Mr. Speaker, the two senior citizens serving in my office, Mrs. Blanche Rothman of Buckingham, Pa., and Mr. Kenneth Satchell of Pennel, Pa., have asked me to read to the House the following letter on behalf of all the senior citizens participating this year:

To the Honorable Members of Congress:

We Senior Interns of 1977 express our appreciation for so many services given to us by the honorable Members of Congress and their staff personnel.

We feel that the Congressional Senior Citizens program is adequate in all pertinent areas.

Now, we are prepared to be helpful when we return home. Thanks also for your courteous, patient and warm attention to our needs.

Sincere blessing to all of you!

THE 92 INTERNS OF '77.

I think I can safely speak for all my colleagues, Mr. Speaker, by acknowledging the vigorous spirit exhibited by the interns during these 2 weeks and wishing them much success and happiness in future endeavors.

#### A TRIBUTE TO FORMER SPEAKER CARL ALBERT

(Mr. WRIGHT asked and was given permission to address the House for 1 minute.)

Mr. WRIGHT. Mr. Speaker, I think all Members will want to take note of the presence in our Chamber today of one of our most beloved former colleagues. He who served in these vineyards for, lo, these many years and never made an enemy, but always made a friend. His word was as good as his bond. He compiled certainly one of the most distinguished records ever performed by any person who ever served in this Chamber. He is as down-to-earth as shoestrings, as brilliant as the noonday sun, and as friendly as a country hound pup from southern Oklahoma. He is the little giant from little Dixie, the former Speaker of the House of Representatives, your friend and mine, Carl Albert.

#### COLLIER AWARD DISRUPTION

(Mr. McDONALD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. McDONALD. Mr. Speaker, I was appalled on Tuesday night while attending the annual Robert J. Collier Award Banquet to find that a gathering designed to honor American technological achievement was disrupted and then made a vehicle for an attack on America's defense capabilities by a radical activist parroting Soviet propaganda with the consent of the organizers of the Collier Award ceremony.

The result of this rash, quixotic decision to grant time for a 5-minute harangue to Terry Provance, a Philadelphia-based professional organizer for the anti-B-1 smear campaign who is a willing collaborator and mouthpiece for the U.S.S.R.'s World Peace Council, was that those who gathered to honor American achievement were subjected to an anti-American diatribe.

The Collier organizers apparently did not stop to consider that their so-called free speech gesture was in fact a violation of free speech. Provance, a collaborator with a movement which denies free speech in the areas under its control, took advantage of his enemies' weakness to obtain a captive audience for his harangue.

American businesses, particularly the defense industries, show a lack of perception in differentiating between their friends and their enemies. They certainly should understand that appeasement does not moderate the enemies of freedom: It only encourages them in further disruptions. There is no doubt that we will see escalated disruptive actions by the enemies of American national defense and the friends of Soviet military aggression.

I refer my colleagues for more details to my Extension of Remarks of yesterday which appeared on pages 16776-16777.

#### PERSONAL EXPLANATION

(Mr. MIKVA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MIKVA. Mr. Speaker, I had to catch a plane back to my district yesterday afternoon and missed a number of rollcalls. Had I been present, I would have voted "yes" on roll No. 280, a proposed amendment to the international foreign assistance bill which sought to reduce the military sales authorization by \$103 million. I would have voted "no" on roll No. 281, a motion to recommit the bill. On passage of the measure itself, roll No. 282,

I also would have cast a "yes" vote on roll No. 283, the rule under which the Clean Air Act amendments were considered.

#### PROVIDING FOR EXPENSES OF INVESTIGATIONS AND STUDIES CONDUCTED BY AD HOC COMMITTEE ON ENERGY

Mr. THOMPSON. Mr. Speaker, pursuant to the order of the House on yesterday, May 25, 1977, I call up a privileged resolution (H. Res. 531) to provide for the expenses of investigations and studies to be conducted by the Ad Hoc Committee on Energy, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

#### H. RES. 531

Resolved, that on April 21, 1977, the expenses of investigations and studies to be conducted by the Ad Hoc Committee on Energy, acting as a whole or by subcommittee, not to exceed \$212,833, including expenditures for the employment of investigators, attorneys, and clerical, and other assistants, and for the procurement of services of individual consultants or organizations thereof pursuant to section 202(1) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(1)), shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration. Not to exceed \$12,000 of the total amount provided by this resolution may be used to procure the temporary or intermittent services of individual consultants or organizations thereof pursuant to section 202(1) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(1)); but this monetary limitation on the procurement of such services shall not prevent the use of such funds for any other authorized purpose.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House; and the chairman of the Ad Hoc Committee on Energy shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 3. The authorization granted by the resolution shall expire immediately prior to noon on January 3, 1978.

SEC. 4. Funds authorized by this resolution

shall be expended pursuant to regulations established by the Committee on House Administration in accordance with existing law.

Mr. THOMPSON (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the resolution be dispensed with and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. THOMPSON. Mr. Speaker, House Resolution 531 which is in the amount of \$212,833, was considered by the Subcommittee on Accounts, chaired by our distinguished colleague, the gentleman from Pennsylvania (Mr. DENT) and was reported out unanimously by the subcommittee and by the full Committee on House Administration.

Mr. DEVINE. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON. I yield to our distinguished colleague, the gentleman from Ohio (Mr. DEVINE).

Mr. DEVINE. Mr. Speaker, I thank the gentleman for yielding to me. I merely wanted to point out that the minority joins in the request of the gentleman from New Jersey and supports the resolution.

Mr. THOMPSON. Mr. Speaker, I thank the gentleman from Ohio.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

#### JOHN W. McCORMACK AWARD TO GILMAN G. UDELL

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BRADEMAS. Mr. Speaker, I rise at this time to announce that this morning there was presented the annual John W. McCormack Award of Excellence to Congressional Employees, to the superintendent of the House document room, Gilman G. Udell. Gil has served with the House of Representatives for over 30 years—longer than all but five Members of the House—under five Speakers from both parties. He is a native of Wisconsin who came to the House of Representatives in 1946 as an assistant in the document room after having served 4 years in the Army during World War II. He was promoted to assistant superintendent on February 5, 1949, and became superintendent on July 25, 1957.

This award, Mr. Speaker, was presented to Mr. Udell by the Speaker of the House of Representatives, the gentleman from Massachusetts (Mr. O'NEILL). It was encouraging that there was also on hand the former Speaker of the House, our distinguished colleague, Mr. Albert of Oklahoma.

This award is well deserved by Gil Udell and is, I hope, a tribute in which all Members of the House of Representatives will join.

Gil Udell was chosen for special recognition this year by a committee of of-

ficers of the House because of his long and exceptional service in a demanding job that affects the operation of the entire House. I only wish we could honor all of the thousands of men and women who have dedicated themselves to public service through work in the House of Representatives.

Gil Udell is the seventh recipient of the John W. McCormack Award, which is named for our former Speaker who served in the House for 42 years. The first to be honored was our late Parliamentarian, Lew Deschler, who received the award for 1970. The other distinguished winners over the years were Turner N. Robertson, chief page, for 1971; Bob Menaugh, superintendent of the Radio-TV Gallery, for 1972; Ernest Petinaud, headwaiter of the House dining room, for 1973; Charles A. Henlock, administrative officer of the Architect's office, for 1974; and Tom Iorio, Deputy Sergeant at Arms and pair clerk for the majority, for 1975. Now Gil Udell's name will be added to this distinguished roster, whose names are inscribed just outside the Speaker's rooms on the second floor of the Capitol.

Mr. O'NEILL. Mr. Speaker, will the gentleman yield?

Mr. BRADEMAs. I am delighted to yield to the distinguished Speaker of the House of Representatives.

Mr. O'NEILL. Mr. Speaker, I am delighted and honored to be here at the presentation of the John W. McCormack Award for Excellence to Gilman Udell, superintendent of the House document room.

The late Speaker, Sam Rayburn, often used to say that the most beautiful word in the English language was "service." And Gil Udell has given to this House of Representatives 31 years of dedicated service, devotion to duty, and faithful performance of all his responsibilities.

Gil, you are not only a truly outstanding employee of the House of Representatives, but you possess, in addition, personal qualities that all of us in public life admire and respect so much. You are kind, friendly, conscientious, hard working and really love the House of Representatives. Gil, you treat everyone equally: You are so thorough in the performance of your duties as superintendent of the document room that whenever a Member or staff person calls for material from the document room, he knows that you will make sure that his request receives prompt attention. You have been so good to me and members of my staff and Gil, I just want to say from the bottom of my heart, thank you. I am especially grateful for your assistance in helping us establish the "whip packets," containing bills and committee reports of floor legislation which are delivered weekly to every Democratic office.

Gil, you have had a very active and diversified career and have been involved in several extracurricular activities—educated in public schools in Wisconsin, Gil was graduated from La Crosse State Teachers College.

A veteran of World War II, a former vice president of Northern Virginia Catholic Youth Organization, Gil organized and was later president of St. Anthony Catholic Youth Organization.

He has coached Little League and Babe Ruth baseball teams and girls basketball and softball teams.

Joining the document room as an employee on February 4, 1946, Gil became assistant superintendent on February 5, 1949, and was appointed superintendent on July 25, 1957.

Those of us who have known and served with you, Gil take this opportunity to thank you for a job well done, and, Gil we want you to know how much we have appreciated your devotion to duty over the years. We all admire and pay tribute to your accomplishments, and more significantly, to you. I know that your lovely wife, Elizabeth and your children and friends who are here to share this moment with you are mighty proud of all your achievements.

I can think of no one more deserving of this award than Gil Udell. Congratulations.

Mr. ADDABBO. Mr. Speaker, I am very delighted that this year's recipient of the John McCormack Award, which goes to an outstanding Capitol employee on an annual basis, is superintendent of the document room, Gillman G. Udell. I cannot think of a better choice. Mr. Udell, in his 31 years of outstanding and dedicated service to the House of Representatives, has proved to be a marvel of time and time again.

Mr. Udell, his lovely wife Betty, and his son Gillman Udell, Jr., who is a member of the Capitol Police bomb squad force, his daughters Karen Parker and Toni Udell and his grandchildren Erik and Heather, are undoubtedly proud of him as a recipient of this award, and they have every right to be.

Mr. Udell was born in Bangor, Wis., where he attended the public elementary and secondary schools. He attended LaCrosse State Teachers College and served 4 years in the U.S. military service during World War II.

Then at the age of 24, he was named assistant to the document room, where he served until February 1949, when he was named Superintendent of the document room.

As we all know, the activities of the Capitol have increased mightily in the last 28 years and no section of the Capitol has received such strain as has the document room, which has managed, somehow, to keep up with the pace of congressional work.

That the document room has flourished so well in a rapidly changing world is due primarily to the dedication and administrative abilities of Mr. Udell.

I congratulate Gillman Udell on this prestigious award he has received today. The men who have been named recipients of the John McCormack Award have been outstanding public servants and the selection of Mr. Udell today holds to that fine high tradition, which this award represents.

I congratulate him as well as his family and I wish him well in the days ahead.

#### GENERAL LEAVE

Mr. BRADEMAs. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the

subject of the John W. McCormack Award to Gilman G. Udell.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

#### AUTHORIZING ADDITIONAL APPROPRIATIONS FOR THE DEPARTMENT OF STATE FOR FISCAL YEAR 1977

Mr. FASCELL. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 5040) to authorize additional appropriations for the Department of State for fiscal year 1977, together with the Senate amendments thereto, and concur in Senate amendments Nos. 1, 2, 3, 4, 5, 6, 8, 9, and 10, and concur in Senate amendment No. 7 with an amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 2, strike out lines 2 to 8, inclusive, and insert:

Sec. 2. Section 3 of the Act entitled "An Act to provide certain basic authority for the Department of State", approved on August 1, 1956 (22 U.S.C. 2670), is amended by—

(1) striking out "and" at the end of subsection (h);

(2) striking out the period at the end of subsection (i) and inserting in lieu thereof a semicolon and "and"; and

(3) inserting at the end thereof the following new subsection:

"(j) provide emergency medical attention and dietary supplements, and other emergency assistance, for United States citizens incarcerated abroad who are unable to obtain such services otherwise, such assistance to be provided on a reimbursable basis to the extent feasible."

Page 3, line 11, after "Relations" "insert: ", and by inserting "upon recommendations of the majority and minority leaders of the Senate" immediately after "President of the Senate."

Page 3, strike out lines 17, 18, and 19, and insert:

"The Chairman or Vice Chairman of the House delegation shall be a Member from the International Relations Committee, and, unless the President of the Senate, upon the recommendation of the Majority Leader, determines otherwise, the Chairman or Vice Chairman of the Senate delegation shall be a Member from the Foreign Relations Committee."

Page 4, line 2, after "Relations" "insert: ", and by inserting "upon recommendations of the majority and minority leaders of the Senate" immediately after "President of the Senate."

Page 4, line 7, strike out all after "sentence:" down to and including "Committee." in line 9 and insert: "The Chairman or Vice Chairman of the House delegation shall be a Member from the International Relations Committee, and, unless the President of the Senate, upon the recommendation of the Majority Leader, determines otherwise, the Chairman or Vice Chairman of the Senate delegation shall be a Member from the Foreign Relations Committee."

Page 4, line 20, after "House" "insert: ", and by inserting "upon recommendations of the majority and minority leaders of the Senate" immediately after "President of the Senate."

Page 4, strike out line 21 and insert: (3) by striking out in the third sentence "five" and inserting in lieu thereof "seven"; and

Page 4, line 23, strike out all after "sec-

tion:" down to and including "Relations." in line 25 and insert: "The Chairman or Vice Chairman of the House delegation shall be a Member from the International Relations Committee, and, unless the President of the Senate, upon the recommendation of the Majority Leader, determines otherwise, the Chairman or Vice Chairman of the Senate delegation shall be a Member from the Foreign Relations Committee."

Page 5, strike out all after line 23 over to and including line 4 on page 7 and insert:

(3) Such Act is further amended by adding at the end thereof the following new sections:

"Sec. 4. Senate delegates to each conference of the Interparliamentary Union, and to all other parliamentary conferences, shall be designated by the President of the Senate upon recommendations of the majority and minority leaders of the Senate. Unless the President of the Senate, upon the recommendations of the majority leader, determines otherwise, the Chairman or Vice Chairman of the Senate delegation shall be a member from the Foreign Relations Committee. Not fewer than two Senators designated to be in the Senate delegation to each conference of the Interparliamentary Union shall be members of the Committee on Foreign Relations."

"Sec. 5. After December 31, 1977, the executive secretary of the American group of the Interparliamentary Union shall be an officer or employee of the Senate or the House of Representatives and shall be appointed—

"(1) by the Chairman of the Senate delegation upon recommendations of the majority and minority leaders of the Senate for service during odd-numbered Congresses; and

"(2) by the Chairman of the House delegation for service during even-numbered Congresses."

"Sec. 6. The certificate of the Chairman of the respective delegation to the Interparliamentary Union (or the certificate of the executive secretary of the American group if the Chairman delegates such authority to him) shall be final and conclusive upon the accounting officers in the auditing of all accounts of the House and Senate delegations to the Interparliamentary Union."

(4) The second sentence of the nineteenth undesignated paragraph under the general heading "DEPARTMENT OF STATE" in title I of the Third Deficiency Appropriation Act, fiscal year 1937 (22 U.S.C. 276b) is deleted.

Page 7, after line 4, insert:

#### INTERNATIONAL AGREEMENTS

Sec. 5. (a) Section 112b, title I, United States Code, is amended by adding at the end thereof the following: "Any department or agency of the United States Government which enters into any international agreement on behalf of the United States shall transmit to the Department of State the text of such agreement not later than twenty days after such agreement has been signed."

(b) The second sentence of such section is amended by deleting the words "Foreign Affairs" and inserting in lieu thereof the words "International Relations".

The Clerk read the House amendment to the Senate amendment numbered 7, as follows:

In lieu of the matter proposed to be inserted by Senate amendment No. 7, insert the following:

(3) by amending the third sentence to read as follows: "Not more than seven of the appointees from the Senate shall be of the same political party."; and

Mr. FASCELL (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the Senate amendments and the House amendment to Senate amendment No. 7 be dispensed

with and that they be printed in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

Mr. BUCHANAN. Reserving the right to object, Mr. Speaker, will the gentleman explain the Senate amendments and the House amendment.

Mr. FASCELL. Mr. Speaker, will the gentleman yield?

Mr. BUCHANAN. I yield to the gentleman from Florida.

Mr. FASCELL. I thank the gentleman for yielding. Mr. Speaker, I rise to propose further House action on H.R. 5040, the State Department supplemental authorization for fiscal year 1977, which originally passed the House on March 24. The Senate subsequently approved the House bill with 10 amendments.

Senate amendments 1 through 6 and 8 through 10 contain alterations acceptable to the Committee on International Relations. Senate amendment No. 1 provides formal authorization, but no authorization figure, for assistance to Americans incarcerated abroad by amending the act providing the basic authority for the State Department. The House bill authorized \$150,000 for the purpose. However, as there was no timely executive request, there were no funds specifically provided in the fiscal 1977 supplemental appropriation for the purpose. Therefore, the House authorization figure is unnecessary and the Senate provision is preferable. There should be sufficient funds available for the Department to utilize this new legal authority.

Senate amendments 2 through 6, 8, and 9 concern the changes regarding Senate participation in Interparliamentary Conferences and are analogous to the House changes. No substantive alterations were made in the House provisions.

Senate amendment No. 10 is a new section added by the Senate requiring departments or agencies entering into international agreements on behalf of the United States to transmit the text to the State Department within 20 days after the agreement has been signed. This section was added with the agreement of the chairman of the Committee on International Relations and complements the requirement of existing law which provides that the State Department submit such texts to the Congress within 60 days of receipt. Apparently, agencies have been slow to send the texts to the State Department, which in turn has made the Department slow in sending the agreements to Congress.

The Committee on International Relations finds the amendments I have described acceptable and recommends that the House agree to amendments 1 through 6 and 8 through 10.

Senate amendment No. 7 is a provision added to the act relating to the North Atlantic Assembly delegation which the House bill does not contain. As the Members may recall, we increased the num-

ber of participants in the NATO delegation to 24 from 18, thereby authorizing 12 delegates from each House. The Senate amendment sets a ratio for the House and Senate delegations which the International Relations Committee and the Speaker feel impinges unnecessarily on the prerogatives of the House. Therefore, I urge my colleagues to concur in Senate amendments 1 through 6, 8 and 10, and concur in Senate No. 7 with an amendment which retains the ratio for the Senate, which the Senate specified, but contains no ratio for the House.

Mr. BUCHANAN. Further reserving the right to object, Mr. Speaker, I would simply point up, just to make it clear, that it is the custom in the Senate to have set ratios. It is not the custom in the House because the composition of the House frequently changes and a ratio set into law would become unfair one way or the other in a short period of time.

Mr. FASCELL. If the gentleman will yield further, the gentleman, of course, is correct, and that is the reason for the change.

Mr. BUCHANAN. However, I would say to the distinguished Speaker that the present ratio for the North Atlantic Assembly is 6 to 3—6 Democrats and 3 Republicans. With the new arrangement that this will provide, it is my profound hope that the Speaker in his wisdom will see fit to make that arrangement 8 to 4, which is 2 to 1. I would simply point up that 8 to 4 is a lot closer to 2 to 1 plus than is 9 to 3, which would be a 3-to-1 ratio. So I hope the Speaker will see fit, in line with the traditions of the House, to keep the ratio on these assembly groups close to the ratio in the whole House and to continue that arrangement as it basically is in the present delegation.

Mr. Speaker, I withdraw my reservation of objection.

Mr. BUCHANAN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

A motion to reconsider was laid on the table.

#### REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 6967, PEACE CORPS AUTHORIZATION, FISCAL YEAR 1978

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Rept. No. 95-368) on the resolution (H. Res. 600) providing for the consideration of the bill (H.R. 6967) to authorize appropriations for the Peace Corps for fiscal year 1978, which was referred to the House Calendar and ordered to be printed.

#### REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 7010, VICTIMS OF CRIME ACT OF 1977

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Rept. No. 95-368) on the

resolution (H. Res. 601) providing for the consideration of the bill (H.R. 7010) to provide for grants to States for the payment of compensation to persons injured by certain criminal acts and omissions, and for other purposes, which was referred to the House Calendar and ordered to be printed.

#### CLEAN AIR ACT AMENDMENTS OF 1977

Mr. ROGERS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Florida (Mr. Rogers).

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. THONE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 380, nays 1, answered "present" 1, not voting 51, as follows:

[Roll No. 288]

| Diggs           | Pressler     |               |

So the motion was agreed to.

The result of the vote was announced as above recorded.

#### IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 6161, with Mr. DANIELSON in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Wednesday, May 25, 1977, the Clerk had read through line 12, on page 357.

The Clerk will read section 201.

The Clerk read as follows:

#### LIMITATION ON INDIRECT SOURCE REVIEW AUTHORITY

SEC. 201. (a) Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "INDIRECT SOURCE REVIEW PROGRAM STUDY

"Sec. 318. The Administrator shall conduct a study to determine if, and under what conditions, indirect source review programs (as defined in section 124(a)) contained in, or which could be contained in, State implementation plans are necessary to, and are likely to be effective to reduce, or prevent or minimize any projected increase in, emissions of any mobile source-related air pollutant or otherwise assist in attaining or maintaining any national primary ambient air quality for such pollutant. Not later than one year after the date of enactment of the Clean Air Act Amendments of 1977, the Administrator shall report to the Congress the results and findings of the study conducted under this section. In carrying out this section, the Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences for an independent study to be conducted by the Academy. In conducting such study, the Administrator shall consult with other appropriate governmental agencies. In making the report under this section, the Administrator shall consider the study and advice of the Academy and of other appropriate governmental agencies. Of the funds authorized to be appropriated to the Administrator by this Act, such amounts as are required shall be available to carry out such independent study."

(b) Section 110(a) of such Act is amended by adding at the end thereof the following new paragraph:

"(5) Except as may be otherwise provided under paragraph (2)(I) and section 124—

"(A) no applicable implementation plan, nor any amendment or revision thereof, shall be required under any provision of this Act, as a condition of approval of such plan under paragraph (2), to include, and no plan promulgated by the Administrator shall include, any indirect source review program (as defined in section 124(g)), and

"(B) any State may revise an applicable implementation plan approved under section 110(a) to suspend or revoke any such program included in such plan.

This paragraph shall not prevent the Administrator from approving any such program if it is adopted and submitted by a State as part of an applicable implementation plan."

(c) Section 110(a)(2) of such Act is amended by striking out the period at the end of section 110(a)(2)(H) and inserting in lieu thereof a semicolon and by adding the following new subparagraph at the end thereof:

"(I) it includes an indirect source review program meeting the requirements of section 124 if the Administrator determines—

"(i) as provided under section 124(a), that such program would be necessary in an air quality control region, or portion thereof, in the State in order to assist in attaining or maintaining a national primary ambient air quality standard, and

"(ii) as provided under section 124(b), that such program is likely to be effective in reducing emissions of a mobile source-related air pollutant, in preventing or minimizing any projected increase in such emissions, or otherwise assisting in attaining or maintaining any national primary ambient air quality standard for such pollutant;"

(d) Title I of the Clean Air Act is further amended by adding at the end thereof the following new section:

**"LIMITATIONS ON INDIRECT SOURCE CONTROLS"**

"SEC. 124. (a) Regulations promulgated by the Administrator under subsection (c) shall not require a State to include in the State implementation plan, as a condition of approval of such plan, an indirect source review program for any air quality control region, or portion thereof, unless, after notice and opportunity for public hearing, he determines, on the basis of the study conducted under section 318 (together with such other information as may be available to the Administrator) that such a program would be necessary to assure attainment of the national primary ambient air quality standards for mobile source-related pollutants by the primary standard attainment date of such pollutant or to assure maintenance of such standards thereafter assuming the following conditions existed—

"(1) Light-duty motor vehicles and engines manufactured during and after model year 1975 had achieved a reduction in emissions of carbon monoxide and hydrocarbons of 90 per centum from the emissions of such pollutants allowable under standards under section 202 applicable to model year 1970, and such vehicles and engines manufactured during and after model year 1976 had achieved a reduction in emissions of oxides of nitrogen of 90 per centum from the emissions of such pollutant allowable under such standards applicable to model year 1971.

"(2) All practicable emission limitations and transportation control measures in the applicable implementation plan had been implemented as provided in such plan.

"(b) (1) Regulations promulgated by the Administrator under section (c) shall not require a State to include in the State implementation plan, as a condition of approval of such plan under section 110(a) (2), an indirect source review program for any air quality control region, or portion thereof, unless, after notice and opportunity for public hearing, he determines, on the basis of the study conducted under section 318 (together with such other information as may be available to the Administrator), that such program is likely to be effective in such State to reduce emissions of a mobile source-related air pollutant, to prevent or minimize any projected increases in such emissions, or otherwise to assist in attaining or maintaining any national primary ambient air quality standard for any such pollutant—

"(A) in general,

"(B) under any specified set of conditions, or

"(C) in any designated air quality control region, or portion thereof.

"(2) If the Administrator makes the determination in paragraph (1) (B) or (C), then any such regulations may apply only in any air quality control region where the conditions specified in paragraph (1) (B) exist or in any region designated in paragraph (1) (C).

"(c) (1) (A) Within three months after the date required for completion of the study conducted under section 318, the Administrator shall publish proposed regulations requiring adequate State indirect source review programs to be included in appropriate State plans, as a condition of approval of such plans, subject to the limitations of subsections (a) and (b). Not later than three months after proposal of such regulations, the Administrator shall promulgate final regulations with appropriate modifications. Regulations promulgated under this section may be revised from time to time.

"(B) Within nine months after the later of (i) promulgation of final regulations under subparagraph (A) or (ii) determinations made under subsections (a) and (b), each State required to include an indirect source review program in the applicable implementation plan as a condition of approval under section 110(a) (2) shall submit to the Administrator a plan revision containing such a program.

"(C) under any specified set of conditions, or submission of a plan revision under subparagraph (B), the Administrator shall approve or disapprove so much of the implementation plan as provides for the implementation of, enforcement of, or variance from, such indirect source review program. The Administrator shall approve such provisions of such plan if he determines that the plan revision meets the requirements of regulations prescribed under this subsection. The Administrator may not disapprove any indirect source review program which he has previously approved unless he determines that the State in a substantial number of instances, has failed to carry out the requirements of such program in accordance with the provisions of this section. No determination of disapproval under the preceding sentence shall take effect for a period of three months following the date of such determination.

"(2) Regulations (or revisions thereof) published or promulgated under this subsection shall specify each State implementation plan with respect to which a plan revision will be required to comply with such regulations at the time such regulations (or revisions) are promulgated.

"(3) No indirect source (other than a parking facility which the Administrator determines will be used predominantly as part of a park-and-ride portion of a public transportation system which will assist in reducing regional air pollution concentrations) shall commence construction or modification after the date three months after the date required under paragraph (1) (C) for approval or disapproval of a State plan revision submitted under paragraph (1) (B) in any air quality control region for which the State is required to submit such a revision, unless the State's plan revision has been approved by the Administrator and such construction or modification complies with such approved plan.

"(d) (1) Except as provided in paragraph (2), any violation of a term or condition of any indirect source review program contained in an approved State plan (or in a plan promulgated under section 110(c), as permitted under subsection (e) (3)), any violation of a term or condition of any permit or variance under such an indirect source review program, and any violation of subsection (c) (3) of this section shall be treated as a violation of a requirement of an applicable implementation plan for purposes of this Act.

"(2) No person who has received a permit to construct or modify an indirect source

from a governmental unit with an approved indirect source review program and who complies with the terms and conditions of such permit shall be deemed to be in violation of an applicable implementation plan under this subsection with respect to such construction or modification and no such permit may be withdrawn or revoked by the Administrator.

"(3) The regulations promulgated under subsection (c) may not require any indirect source which commences construction or modification before the date six months after any revision of an applicable implementation plan required by reason of a revision or amendment of the regulations promulgated under subsection (c) to comply with any requirement of such revised or amended implementation plan.

"(e) (1) Except as provided in paragraph (3) of this subsection, the Administrator shall have no authority to promulgate, implement, or enforce regulations under section 110(c) (1) relating to an indirect source review program for any air quality control region or any portion thereof located in any State.

"(2) In the event an indirect source review program is required for any air quality control region or part thereof in any State and such State fails to adopt a program which meets the requirements of this section, the State's indirect source review program shall be disapproved by the Administrator.

"(3) Paragraph (1) shall not apply to promulgation, implementation, or enforcement of regulations respecting indirect source review programs which apply only to federally assisted highways, airports, and other major federally assisted indirect sources and federally owned or operated indirect sources. Nothing in this section shall be construed to limit the authority of the Administrator to conduct preconstruction or premodification review of a federally assisted highway, airport or other major federally assisted indirect source or federally owned or operated indirect source, which commences construction or modification on or before the date three months after the date required under subsection (c) (1) (C) for approval or disapproval of a State plan revision.

"(f) (1) The regulations promulgated by the Administrator under subsection (c) shall provide that variances may be granted by the Governor of a State with an approved indirect source review program permitting construction (or modification) and operation of an indirect source notwithstanding the requirements of the indirect source review program in any case in which such variance will encourage development of long-term transportation patterns and modes which will—

"(A) improve, in the long term, air quality and protect public health, and

"(B) be energy efficient, or which will prevent any requirement of the indirect source review program from creating any economic advantage or disadvantage for urban, suburban, or rural areas.

"(2) Except for a variance granted under this section, a plan promulgated under section 110(c) in conformance with subsection (e) (3) of this section, or a plan revision under section 110(a) (3) or 110(a) (5) (B), no variance, extension, compliance order, plan revision, or other action deferring or modifying a requirement of an applicable implementation plan may be taken with respect to any indirect source by the State or by the Administrator.

"(3) Any variance granted under this section shall terminate not later than Janu-

ary 1, 1985. Upon termination of any variance under this section, the indirect source to which such variance was granted shall be subject to all requirements and limitations of the applicable implementation plan.

"(4) A variance may be granted under this subsection only if the Governor determines that—

"(A) emissions from vehicles attracted to the indirect source with respect to which such variance is granted will not cause or contribute to air pollution concentrations in excess of any national primary ambient air quality standard for any mobile source-related pollutant in any part of the air quality control region in which such source is located upon expiration of such variance or thereafter (taking into account all other variances previously granted under this subsection),

"(B) any new indirect source receiving such a variance will be located so as to be (upon expiration of the variance) compatible with, and conveniently and economically served by, public transportation and such location will be compatible with any comprehensive public transportation measures under section 123(b)(5),

"(C) such indirect source will be designed and constructed so as to minimize emissions of mobile source-related pollutants from vehicles attracted to such source and will use the best practicable traffic flow measures, and

"(D) such indirect source as newly constructed or modified will become compatible with transportation control measures provided in the applicable implementation plan. No subsequent variance may be granted under this subsection if the Administrator determines, after notice and opportunity for public hearing, that variances have been granted without regard to the requirements of this paragraph in a substantial number of instances. The prohibition contained in the preceding sentence shall be for such period as the Administrator deems necessary to assure compliance with such requirements.

"(g)(1) For purposes of this section the term 'indirect source review program' means the facility-by-facility review of indirect sources of air pollution, including such measures as are necessary to assure, or assist in assuring, that a new or modified indirect source will not attract mobile sources of air pollution, the emissions from which would cause or contribute to air pollution concentrations—

"(A) exceeding any national primary ambient air quality standard for a mobile source-related air pollutant after the primary standard attainment date, or

"(B) preventing maintenance of any such standard after such date.

"(2) Such term shall include measures which—

"(A) require a prior permit for construction (or modification) of any such indirect source and require operation of such source in the manner approved pursuant to such permit; and

"(B) limit the issuance of any such permit to indirect sources which will not have the effects referred to in subparagraph (A) or (B) of paragraph (1)."

(e) Section 302 of such Act is amended by adding the following new subsections at the end thereof:

"(j) The term 'indirect source' means a facility, building, structure, installation, real property, road, or highway which attracts, or may attract, mobile sources of pollution. Such term includes parking lots, parking gar-

ages, and other facilities subject to any measure for management of parking supply (within the meaning of section 110(c)(2)(D)(ii), including regulation of existing on- and off-street parking). Direct emissions sources or facilities at, within, or associated with, any indirect source shall not be deemed indirect sources for the purpose of this Act.

"(k) The term 'mobile source-related air pollutant' means any air pollutant which is subject to regulation under section 202, 211(c)(1)(A), or 231 of this Act."

(f) Section 110(a)(2)(B) of such Act is amended by striking out "land-use and" and by inserting after "transportation controls" the following: "air quality maintenance plans, and preconstruction review of direct sources of air pollution".

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 201 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 357, strike out line 13 and all that follows down through line 20 on page 433, and insert in lieu thereof the following:

#### LIMITATION ON INDIRECT SOURCE REVIEW AUTHORITY

SEC. 201. (a) Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "INDIRECT SOURCE REVIEW PROGRAM STUDY

"SEC. 318. The Administrator shall conduct a study to determine if, and under what conditions, indirect source review programs (as defined in section 124(g)) contained in, or which could be contained in, State implementation plans are necessary to, and are likely to be effective to reduce, or prevent or minimize any projected increase in, emissions of any mobile source-related air pollutant or otherwise assist in attaining or maintaining any national primary ambient air quality for such pollutant. Not later than one year after the date of enactment of the Clean Air Act Amendments of 1977, the Administrator shall report to the Congress the results and findings of the study conducted under this section. In carrying out this section, the Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences for an independent study to be conducted by the Academy. In conducting such study, the Administrator shall consult with other appropriate governmental agencies. In making the report under this section, the Administrator shall consider the study and advice of the Academy and of other appropriate governmental agencies. Of the funds authorized to be appropriated to the Administrator by this Act, such amounts as are required shall be available to carry out such independent study."

(b) Section 110(a) of such Act is amended by adding at the end thereof the following new paragraph:

"(5) Except as may be otherwise provided under paragraph (2)(I) and section 124—

"(A) no applicable implementation plan, nor any amendment or revision thereof, shall be required under any provision of this Act, as a condition of approval of such plan

under paragraph (2), to include, and no plan promulgated by the Administrator shall include, any indirect source review program (as defined in section 124(g)), and

"(B) any State may revise an applicable implementation plan approved under section 110(a) to suspend or revoke any such program included in such plan.

This paragraph shall not prevent the Administrator from approving any such program if it is adopted and submitted by a State as part of an applicable implementation plan."

(c) Section 110(a)(2) of such Act is amended by striking out the period at the end of section 110(a)(2)(H) and inserting in lieu thereof a semicolon and by adding the following new subparagraph at the end thereof:

"(I) it includes an indirect source review program meeting the requirements of section 124 if the Administrator determines—

"(i) as provided under section 124(a), that such program would be necessary in an air quality control region, or portion thereof, in the State in order to assist in attaining or maintaining a national primary ambient air quality standard, and

"(ii) as provided under section 124(b), that such program is likely to be effective in reducing emissions of a mobile source-related air pollutant, in preventing or minimizing any projected increase in such emissions, or otherwise assisting in attaining or maintaining any national primary ambient air quality standard for such pollutant;"

(d) Title I of the Clean Air Act is further amended by adding at the end thereof the following new section:

#### "LIMITATIONS ON INDIRECT SOURCE CONTROLS

"SEC. 124. (a) Regulations promulgated by the Administrator under subsection (c) shall not require a State to include in the State implementation plan, as a condition of approval of such plan, an indirect source review program for any air quality control region, or portion thereof, unless, after notice and opportunity for public hearing, he determines, on the basis of the study conducted under section 318 (together with such other information as may be available to the Administrator), that such a program would be necessary to assure attainment of the national primary ambient air quality standards for mobile source-related pollutants by the primary standard attainment date for such pollutant or to assure maintenance of such standards thereafter assuming the following conditions existed—

"(1) Light-duty motor vehicles and engines manufactured during and after model year 1975 had achieved a reduction in emissions of carbon monoxide and hydrocarbons of 90 per centum from the emissions of such pollutants allowable under standards under section 202 applicable to model year 1970, and such vehicles and engines manufactured during and after model year 1976 had achieved a reduction in emissions of oxides of nitrogen of 90 per centum from the emissions of such pollutant allowable under such standards applicable to model year 1971.

"(2) All practicable emission limitations and transportation control measures in the applicable implementation plan had been implemented as provided in such plan.

"(b)(1) Regulations promulgated by the Administrator under subsection (c) shall not require a State to include in the State implementation plan, as a condition of approval of such plan under section 110(a)(2), an indirect source review program for any air quality control region, or portion thereof, unless, after notice and opportunity for public hearing, he determines, on the basis of the study conducted under section 318 (together with

such other information as may be available to the Administrator), that such program is likely to be effective in such State to reduce emissions of a mobile source-related air pollutant, to prevent or minimize any projected increases in such emissions, or otherwise to assist in attaining or maintaining any national primary ambient air quality standard for any such pollutant—

"(A) in general,

"(B) under any specified set of conditions, or

"(C) in any designated air quality control region, or portion thereof.

"(2) If the Administrator makes the determination in paragraph (1) (B) or (C), then any such regulations may apply only in any air quality control region where the conditions specified in paragraph (1) (B) exist or in any region designated in paragraph (1) (C).

"(c) (1) (A) Within three months after the date required for completion of the study conducted under section 318, the Administrator shall publish proposed regulations requiring adequate State indirect source review programs to be included in appropriate State plans, as a condition of approval of such plans, subject to the limitations of subsections (a) and (b). Not later than three months after proposal of such regulations, the Administrator shall promulgate final regulations with appropriate modifications. Regulations promulgated under this section may be revised from time to time.

"(B) Within nine months after the later of (i) promulgation of final regulations under subparagraph (A) or (ii) determinations made under subsections (a) and (b), each State required to include an indirect source review program in the applicable implementation plan as a condition of approval under section 110(a) (2) shall submit to the Administrator a plan revision containing such a program.

"(C) Within eight months from the date required for submission of a plan revision under subparagraph (B), the Administrator shall approve or disapprove so much of the implementation plan as provides for the implementation of, enforcement of, or variance from, such indirect source review program. The Administrator shall approve such provisions of such plan if he determines that the plan revision meets the requirements of regulations prescribed under this subsection. The Administrator may not disapprove any indirect source review program which he has previously approved unless he determines that the State in a substantial number of instances, has failed to carry out the requirements of such program in accordance with the provisions of this section. No determination of disapproval under the preceding sentence shall take effect for a period of three months following the date of such determination.

"(2) Regulations (or revisions thereof) published or promulgated under this subsection shall specify each State implementation plan with respect to which a plan revision will be required to comply with such regulations at the time such regulations (or revisions) are promulgated.

"(3) No indirect source (other than a parking facility which the Administrator determines will be used predominantly as part of a park-and-ride portion of a public transportation system which will assist in reducing regional air pollution concentrations) shall commence construction or modification after the date three months after the date required under paragraph (1) (C) for approval or disapproval of a State plan revision submitted under paragraph (1) (B) in any air quality control region for which the State is required to submit such a revision, unless the State's plan revision has been approved by the Administrator and such con-

struction or modification complies with such approved plan.

"(d) (1) Except as provided in paragraph (2), any violation of a term or condition of any indirect source review program contained in an approved State plan (or in a plan promulgated under section 110(c), as permitted under subsection (e) (3)), any violation of a term or condition of any permit or variance under such an indirect source review program, and any violation of subsection (c) (3) of this section shall be treated as a violation of a requirement of an applicable implementation plan for purposes of this Act.

"(2) No person who has received a permit to construct or modify an indirect source from a governmental unit with an approved indirect source review program and who complies with the terms and conditions of such permit shall be deemed to be in violation of an applicable implementation plan under this subsection with respect to such construction or modification and no such permit may be withdrawn or revoked by the Administrator.

"(3) The regulations promulgated under subsection (c) may not require any indirect source which commences construction or modification before the date six months after any revision of an applicable implementation plan required by reason of a revision or amendment of the regulations promulgated under subsection (c) to comply with any requirement of such revised or amended implementation plan.

"(e) (1) Except as provided in paragraph (3) of this subsection, the Administrator shall have no authority to promulgate, implement, or enforce regulations under section 110(c) (1) relating to an indirect source review program for any air quality control region or any portion thereof located in any State.

"(2) In the event an indirect source review program is required for any air quality control region or part thereof in any State and such State fails to adopt a program which meets the requirements of this section, the State's indirect source review program shall be disapproved by the Administrator.

"(3) Paragraph (1) shall not apply to promulgation, implementation, or enforcement of regulations respecting indirect source review programs which apply only to federally assisted highways, airports, and other major federally assisted indirect sources and federally owned or operated indirect sources. Nothing in this section shall be construed to limit the authority of the Administrator to conduct preconstruction or premodification review of a federally assisted highway, airport or other major federally assisted indirect source or federally owned or operated indirect source, which commences construction or modification on or before the date three months after the date required under subsection (c) (1) (C) for approval or disapproval of a State plan revision.

"(f) (1) The regulations promulgated by the Administrator under subsection (c) shall provide that variances may be granted by the Governor of a State with an approved indirect source review program permitting construction (or modification) and operation of an indirect source notwithstanding the requirements of the indirect source review program in any case in which such variance will encourage development of long-term transportation patterns and modes which will—

"(A) improve, in the long term, air quality and protect public health, and

"(B) be energy efficient, or

which will prevent any requirement of the indirect source review program from creating any economic advantage or disadvantage for urban, suburban, or rural areas.

"(2) Except for a variance granted under this section, a plan promulgated under sec-

tion 110(c) in conformance with subsection (e) (3) of this section, or a plan revision under section 110(a) (3) or 110(a) (5) (B), no variance, extension, compliance order, plan revision, or other action deferring or modifying a requirement of an applicable implementation plan may be taken with respect to any indirect source by the State or by the Administrator.

"(3) Any variance granted under this section shall terminate not later than January 1, 1985. Upon termination of any variance under this section, the indirect source to which such variance was granted shall be subject to all requirements and limitations of the applicable implementation plan.

"(4) A variance may be granted under this subsection only if the Governor determines that—

"(A) emissions from vehicles attracted to the indirect source with respect to which such variance is granted will not cause or contribute to air pollution concentrations in excess of any national primary ambient air quality standard for any mobile source-related pollutant in any part of the air quality control region in which such source is located upon expiration of such variance or thereafter (taking into account all other variances previously granted under this subsection),

"(B) any new indirect source receiving such a variance will be located so as to be (upon expiration of the variance) compatible with, and conveniently and economically served by, public transportation and such location will be compatible with any comprehensive public transportation measures under section 123(b) (5),

"(C) such indirect source will be designed and constructed so as to minimize emissions of mobile source-related pollutants from vehicles attracted to such source and will use the best practicable traffic flow measures, and

"(D) such indirect source as newly constructed or modified will become compatible with transportation control measures provided in the applicable implementation plan. No subsequent variance may be granted under this subsection if the Administrator determines, after notice and opportunity for public hearing, that variances have been granted without regard to the requirements of this paragraph in a substantial number of instances. The prohibition contained in the preceding sentence shall be for such period as the Administrator deems necessary to assure compliance with such requirements.

"(g) (1) For purposes of this section the term 'indirect source review program' means the facility-by-facility review of indirect sources of air pollution, including such measures as are necessary to assure, or assist in assuring, that a new or modified indirect source will not attract mobile sources of air pollution, the emissions from which would cause or contribute to air pollution concentrations—

"(A) exceeding any national primary ambient air quality standard for a mobile source-related air pollutant after the primary standard attainment date, or

"(B) preventing maintenance of any such standard after such date.

"(2) Such term shall include measures which—

"(A) require a prior permit for construction (or modification) of any such indirect source and require operation of such source in the manner approved pursuant to such permit; and

"(B) limit the issuance of any such permit to indirect sources which will not have the effects referred to in subparagraph (A) or (B) of paragraph (1)."

(e) Section 302 of such Act is amended by adding the following new subsections at the end thereof:

"(j) The term 'indirect source' means a facility, building, structure, installation, real property, road, or highway which attracts, or may attract, mobile sources of pollution. Such terms includes parking lots, parking garages, and other facilities subject to any measure for management of parking supply (within the meaning of section 110 (c) (2) (D) (ii), including regulation of existing on- and off-street parking). Direct emissions sources or facilities at, within, or associated with, any indirect source shall not be deemed indirect sources for the purpose of this Act.

"(k) The term 'mobile source-related air pollutant' means any air pollutant which is subject to regulation under section 202, 211 (c) (1) (A), or 231 of this Act."

(f) Section 110(a) (2) (B) of such Act is amended by striking out "land-use and" and by inserting after "transportation controls" the following: "air quality maintenance plans, and preconstruction review of direct sources of air pollution".

#### EXTENSION OF TRANSPORTATION CONTROL COMPLIANCE DATES

Sec. 202. Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

#### EXTENSION OF TRANSPORTATION CONTROL COMPLIANCE DATES

"Sec. 123. (e) (1) Upon application submitted by the Governor of a State, the Administrator may extend the date required for compliance with any transportation control measure adopted by a State and included in an applicable implementation plan.

"(2) Upon application submitted by the chief executive officer of a general purpose unit of local government which is carrying out responsibility delegated under section 110(c) (3), or on his own motion, the Administrator may extend the date required for compliance with any transportation control measure which was promulgated by the Administrator under section 110(c). In the case of an application submitted by such officer, such extension shall apply only to the extent that such measure applies within the jurisdiction of such unit.

"(b) (1) (A) No extension may be granted under subsection (a) with respect to any transportation control measure unless such measure is applicable in an air quality control region in which the State or unit of local government (or the Administrator, as the case may be) has implemented within such jurisdiction all requirements (except as provided in subparagraph (B)) of the applicable implementation plan which are required to be implemented as of the date of application and are intended to control any mobile source-related pollutant. Such implementation includes initiating and diligently pursuing enforcement actions to bring noncomplying persons into compliance.

"(B) For purposes of subparagraph (A), the State or unit of local government (or Administrator) shall not be required, as of the date on which such extension is granted, to have implemented:

"(i) transportation control measures with respect to which a finding has been made under paragraph (2), and

"(ii) requirements for indirect source review programs (as defined in section 124).

"(2) No extension may be granted under subsection (a) for any transportation control measure unless—

"(A) the Administrator finds that implementation of such measure on the required date would (i) cause, or contribute to, a failure to meet basic transportation needs of the area, (ii) be infeasible, or (iii) otherwise cause seriously disruptive and widespread economic or social effects,

"(B) the Administrator states with reasonable specificity the factual basis of the finding made under subparagraph (A), and

"(C) the applicant has submitted (or the Administrator has prepared, if acting on his own motion)—

"(i) a detailed planning study identifying and quantifying the respect (if any) in which the basic transportation needs of the area could not be met if the applicable measure were not extended, the seriously disruptive and widespread economic or social effects (if any) of not extending such measure, the respects (if any) in which implementation of such measure would be infeasible, and the effects on public health and welfare expected to result from the continued air pollution associated with the extension,

"(ii) an examination of measures (including establishment, improvement, or expansion of public transportation) other than those measures for which an extension is sought, which could be implemented and used to attain and maintain national ambient air quality standards as expeditiously as practicable, and

"(iii) a detailed description of the measures to be undertaken during all such extensions to minimize any risk to public health.

"(3) No extension may be granted under subsection (a) unless there has been prior notice and opportunity for public hearing.

"(4) No finding may be made under paragraph (2) (A) (i) unless the Administrator finds that implementation of public transportation (or other means) which would meet such needs by such required date would be impracticable.

"(5) (A) Except as provided in subparagraph (B) of this paragraph, each transportation control measure for which an extension is granted under subsection (a) shall be required to be implemented (under a compliance schedule containing increments of progress prescribed pursuant to such extension) as expeditiously as practicable but not later than January 1, 1980.

"(B) Such measure shall be required to be implemented as expeditiously as practicable but not later than January 1, 1985, if the applicable implementation plan is revised within the one-year period specified in paragraph (6)—

"(i) to include comprehensive measures (including compliance schedules containing increments of progress) to, as expeditiously as practicable, establish, expand, or improve public transportation to meet basic transportation needs while implementing transportation control measures necessary to attain and maintain national ambient air quality standards, and

"(ii) to meet the requirements of paragraphs (1) and (2) of subsection (d).

"(6) No extension for any transportation control measure under subsection (a) shall remain in effect for more than one year after such extension is granted unless, before such date, the applicable implementation plan is revised to include—

"(A) requirements to use (insofar as necessary), for the purpose of implementing the transportation control measures with respect to which such extension was granted, funds which are reasonably available to the State or local government; and

"(B) in the case of an area which has been granted an extension beyond January 1, 1980, requirements to use (insofar as necessary), for the additional purpose of implementing the comprehensive public transportation measures required under paragraph (5) (B), funds which are reasonably available to the State or local government.

"(c) In the case of any applicable implementation plan containing measures requiring—

"(1) retrofits on other than commercially owned in-use vehicles, or

"(2) gas rationing which the Administrator finds would have seriously disruptive and widespread economic or social effects if implemented before January 1, 1985,

the Administrator may, after notice and opportunity for public hearing, approve elimination of such measures from the plan notwithstanding the requirements of section 110(a). No later than nine months after approval of the elimination of any such measure is granted with respect to any applicable implementation plan, a revised plan must be submitted (as provided in section 110(a) (2) (H)) to meet such requirements.

"(d) Not later than one year after date of enactment of this section, the Administrator shall complete a review of all applicable implementation plans for mobile source-related pollutants to determine whether or not such plans would be adequate as of such date to attain, by the date required under section 110, the national primary ambient air quality standards for such pollutants and maintain them thereafter if no extensions, exemptions, or variances had been granted under sections 111(f), 118, 119, 121, 124, and this section. Unless the Administrator determines that any such plan would be adequate (within the meaning of the preceding sentence) he shall require revision of such plan. The revised plan shall be such as would be adequate (within the meaning of the first sentence of this subsection). The Administrator shall promptly notify the State when any plan revision is required under this subsection and shall require submission of such revised plan on such date (not sooner than sixty days or later than six months after such notice) as he may determine. Such revised plan shall—

"(1) identify and provide for implementation of the remaining emission reductions necessary for the plan to be adequate within the meaning of this subsection with respect to mobile source-related pollutants and the measures to be implemented to accomplish these reductions;

"(2) identify the financial and manpower resources necessary to carry out such measures, and commit the State or local government to provide those resources; and

"(3) include emission limitations, applicable to stationary sources which emit any mobile source-related air pollutant in significant amounts, requiring reduction of such emissions to the maximum extent technologically feasible (for a finding that any such emission limitation not so included is not necessary for the plan to be adequate within the meaning of this subsection and a justification for such finding). If the Administrator determines that a proposed plan revision does not incorporate the most expeditious practicable date for achievement of adequacy within the meaning of this subsection, he shall notify the Governor of the deficiencies in the proposed revision. This notification shall include the Administrator's judgment as to the additional control strategies that should be incorporated, and the most expeditious dates which are practicable for implementing the measures included or to be included in the plan. The notification shall also specify a date for submission of the modified plan revision not more than one hundred and twenty days from the date of notification.

"(e) Except for a compliance date extension issued under this section, a plan revision under section 110(a) (3), or an elimination approved under subsection (c), no extension, compliance order, plan revision, or other action deferring or modifying a requirement of an applicable implementation plan may be taken with respect to any transportation control measure by the State or by the Administrator.

"(f) (1) For purposes of this section and section 110 (a) (2) (B), the term 'transportation control measure' does not include any measure for management of parking supply (as defined in section 110(c) (2) (D) (ii) except that such definition shall be applied without regard to whether or not a facility

is new) or any indirect source review program (as defined in section 124).

"(2) For purposes of subsection (b) (6), the term 'funds which are reasonably available' means—

"(A) grants which have been made to a State or local government under Federal law,

"(B) funds which have been appropriated under State or local law, or

"(C) any combination of such grants, and funds, which may, consistent with the terms of the legislation providing for such grant or making such appropriation, be used for the purposes referred to in such subsection (b) (6)."

#### LIGHT-DUTY MOTOR VEHICLE EMISSIONS

SEC. 203. (a) Subparagraph (A) of section 202(b) (1) of the Clean Air Act is amended to read as follows:

"(A) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1977 through 1979 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.5 grams per vehicle mile of hydrocarbons and 15.0 grams per vehicle mile of carbon monoxide. The regulations under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines manufactured during or after the model year 1980 shall contain standards which provide that such emissions do not exceed 9.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of hydrocarbons from light-duty vehicles and engines manufactured during or after model year 1980 shall contain standards which require a reduction of at least 90 per centum from emissions of such pollutant allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970."

(b) Subparagraph (B) of section 202(b) (1) of such Act is amended to read as follows:

"(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1977 through 1981 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per mile. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured after the model year 1981 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.0 grams per mile except in the case of a revision or waiver by the Administrator under paragraph (5) or (6)."

(c) Section 202(b) of such Act is amended by striking out paragraph (5) thereof and substituting the following:

"(5) (A) Upon the petition of any manufacturer or on his own motion, the Administrator, after notice and opportunity for public hearing, shall revise the standard required under subparagraph (B) of paragraph (1) with respect to light-duty vehicles and engines manufactured during any period of two or more model years beginning after the model year 1981 if he determines that such standard should be revised due to (i) the lack of available, practicable, emission control technology to meet such standard during such period, (ii) the cost of compliance with such standard, and (iii) the impact of such standard on motor vehicle fuel consumption. No such revision may be made if the Administrator determines that such revision would endanger public health.

"(B) A revised standard established under this paragraph shall provide for such reduction of emissions of oxides of nitrogen from light-duty vehicles and engines as the Administrator deems appropriate based on

(i) technology which is available and practicable during the period for which such standard applies, (ii) the cost of compliance, (iii) the impact on motor vehicle fuel consumption, and (iv) the need to protect public health. No such standard shall permit emissions of oxides of nitrogen in excess of 2.0 grams per vehicle mile.

"(C) A revised standard promulgated under this paragraph shall apply for a period of not less than two model years.

"(D) A revised standard established under this paragraph shall take effect beginning with the third model year which begins after the model year during which it is promulgated. In the case of a petition submitted by a manufacturer under this paragraph within such period as may be appropriate for purposes of this subparagraph, the Administrator shall promulgate a revision, or refuse to promulgate such a revision within ninety days after the receipt of such petition.

"(6) (A) Upon the petition of any manufacturer, the Administrator, after notice and opportunity for public hearing, may waive the standard required under subparagraph (B) of paragraph (1) for any class or category of light-duty vehicles and engines manufactured by such manufacturer during any period of four or more model years beginning after the model year 1981 if he determines that such waiver is necessary to permit the use of an innovative power train technology in such class or category which use can produce a substantial energy saving for such class or category as compared to conventional power trains incorporating spark ignited, gasoline, internal combustion engines. No such waiver may be granted if the Administrator determines that such waiver would endanger public health.

"(B) Upon granting a waiver under this paragraph respecting any class or category of vehicles or engines, the Administrator shall promulgate an interim standard applicable to such class or category such as will (i) permit the use of the innovative power train technology on the basis of which such waiver was granted and (ii) take into account the need to protect public health. No such interim standard shall permit emissions of oxides of nitrogen in excess of 2.0 grams per vehicle mile.

"(C) A waiver under this paragraph shall apply for a period of not less than four model years.

"(D) An interim standard promulgated under this paragraph shall take effect beginning with the third model year which begins after the model year during which it is promulgated. In the case of a petition submitted by a manufacturer under this paragraph within such period as may be appropriate for purposes of this subparagraph, the Administrator shall grant a waiver or refuse to grant such a waiver within ninety days after the receipt of such petition.

"(7) (A) Following each model year, the Administrator shall report to the Congress respecting the motor vehicle fuel consumption consequences, if any, of the standards applicable for such model year in relationship to the motor vehicle fuel consumption associated with the standards applicable for the immediately preceding model year.

"(B) The Secretary of Transportation and the Federal Energy Administration shall each submit to Congress, as promptly as practicable following submission by the Administrator of the fuel consumption report referred to in subparagraph (a), separate reports respecting such fuel consumption."

#### EMISSION STANDARDS FOR HEAVY DUTY VEHICLES OR ENGINES AND CERTAIN OTHER VEHICLES OR ENGINES

SEC. 204. (a) Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(3) (A) (i) The Administrator shall pre-

scribe regulations under paragraph (1) of this subsection applicable to emissions of carbon monoxide, hydrocarbons, and oxides of nitrogen from classes or categories of heavy-duty vehicles or engines manufactured during and after model year 1979. Such regulations applicable to such pollutants from such classes or categories of vehicles or engines manufactured during model years 1979 through 1984 shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to the cost of applying such technology within the period of time available to manufacturers and to noise, energy, and safety factors associated with the application of such technology.

"(ii) Unless a different standard is temporarily promulgated as provided in subparagraph (B) or unless the standard is changed as provided in subparagraph (E), regulations under paragraph (1) of this subsection applicable to emissions from vehicles or engines manufactured during and after model year 1985 shall contain standards which require a reduction of at least 65 percent in the case of oxides of nitrogen and a reduction of at least 90 percent in the case of carbon monoxide and hydrocarbons from the average of the actually measured emissions from heavy-duty gasoline-fueled vehicle weight, horsepower or such other factors as may be factored during the baseline model year.

"(iii) In establishing classes or categories of vehicles or engines for purposes of regulations under this subsection, the Administrator may base such classes or categories on gross vehicle weight, horsepower, or such other factors as may be appropriate.

"(iv) For the purpose of this paragraph, the term 'baseline model year' means, with respect to any pollutant emitted from any vehicle or engine, or class or category thereof, the model year immediately preceding the model year in which Federal standards applicable to such vehicle or engine, or class or category thereof, first applied with respect to such pollutant.

"(B) During the period of June 1 through December 31, 1979, and during each period of June 1 through December 31 of each third year after 1979, the Administrator may, after notice and opportunity for a public hearing promulgate regulations revising any standard prescribed as provided in subparagraph (A) (i) for any class or category of heavy-duty vehicles or engines. Such standard shall apply only for the period of three model years beginning five model years after the model year in which such revised standard is promulgated. In revising any standard under this subparagraph for any such three model year period, the Administrator shall determine the maximum degree of emission reduction which can be achieved by means reasonably expected to be available for production of such period and shall prescribe a revised emission standard in accordance with such determination.

"(C) Action revising any standard for any period may be taken by the Administrator under subparagraph (B) only if—

"(i) he finds that compliance with the emission standards otherwise applicable for such model year cannot be achieved by technology, processes, operating methods, or other alternatives reasonably expected to be available for production for such model year without increasing cost or decreasing fuel economy to an excessive and unreasonable degree; and

"(ii) the National Academy of Sciences has not, pursuant to its study and investigation under subsection (c), issued a report substantially contrary to the findings of the Administrator under clause (i).

"(D) A report shall be made to the Congress with respect to any standard revised under subparagraph (B) which shall contain—

"(i) a summary of the health effects found, or believed to be associated with, the pollutant covered by such standard,

"(ii) an analysis of the cost-effectiveness of other strategies for attaining and maintaining national ambient air quality standards and carrying out regulations under section 160 (relating to significant deterioration) in relation to the cost-effectiveness for such purposes of standards which, but for such revision, would apply,

"(iii) a summary of the research and development efforts and progress being made by each manufacturer for purposes of meeting the standards promulgated as provided in subparagraph (A) (ii) or, if applicable, subparagraph (E), and

"(iv) specific findings as to the relative costs of compliance, and relative fuel economy, which may be expected to result from the application for any model year of such revised standard and the application for such model year of the standard, which, but for such revision, would apply.

"(E) (i) The Administrator shall conduct a continuing pollutant-specific study concerning the effects of each air pollutant emitted from heavy-duty vehicles or engines on the public health and welfare. The results of such study shall be published in the Federal Register and reported to the Congress not later than June 1, 1979, and before June 1 of each third year thereafter.

"(ii) On the basis of such study and such other information as is available to him (including the studies under sections 214 and 216), the Administrator may, after notice and opportunity for a public hearing, promulgate regulations under paragraph (1) of this subsection changing any standard prescribed in subparagraph (A) (ii) (or revised under this subparagraph) or previously changed under this subparagraph. No such changed standard shall apply for any model year before the model year five years after the model year during which regulations containing such changed standard are promulgated.

"(F) For purposes of this paragraph, motorcycles and motorcycle engines shall be treated in the same manner as heavy-duty vehicles and engines unless the Administrator promulgates a rule reclassifying motorcycles as light-duty vehicles within the meaning of this section or unless the Administrator promulgates regulations under subsection (a) applying standards applicable to the emission of air pollutants from motorcycles as a separate class or category."

(b) Section 202(b)(3) of such Act is amended by adding the following new subparagraph at the end thereof:

"(C) The term 'heavy duty vehicle' means a truck, bus, or other vehicle manufactured primarily for use on the public streets, roads, and highways (not including any vehicle operated exclusively on a rail or rails) which has a gross vehicle weight (as determined under regulations promulgated by the Administrator) in excess of six thousand pounds. Such term includes any such vehicle which has special features enabling off-street or off-highway operation and use."

(c) Section 312 of such Act is amended by inserting "AND STUDIES OF COST-EFFECTIVENESS ANALYSES" at the end of the heading thereof and by adding the following new subsection at the end thereof:

"(c) Not later than January 1, 1979, the Administrator shall study the possibility of increased use of cost-effectiveness analyses in devising strategies for the control of air pollution and shall report its recommendations to the Congress, including any recommendations for revisions in any provision of this Act. Such study shall also include an analysis and report to Congress concern-

ing whether or not existing air pollution control strategies are adequate to achieve the purposes of this Act."

(d) Part A of title II of such Act is amended by inserting after section 216 the following new section:

#### "STUDY OF PARTICULATE EMISSIONS FROM MOTOR VEHICLES"

"Sec. 217. (a) (1) The Administrator shall conduct a study concerning the effects on health and welfare of particulate emissions from motor vehicles or motor vehicle engines to which section 202 applies. Such study shall characterize and quantify such emissions and analyze the relationship of such emissions to various fuels and fuel additives.

"(2) The study shall also include an analysis of particulate emissions from mobile sources which are not related to engine emissions (including, but not limited to tire debris, and asbestos from brake lining).

"(b) The Administrator shall report to the Congress the findings and results of the study conducted under subsection (a) not later than two years after the date of the enactment of the Clean Air Act Amendments of 1977. Such report shall also include recommendations for standards or methods to regulate particulate emissions described in paragraph (2) of subsection (a)."

(e) Section 206 of such Act (relating to compliance testing and certification) is amended by adding the following new subsection at the end thereof:

"(f) (1) In the case of any class or category of heavy-duty vehicles or engines or motorcycles to which a standard promulgated under section 202(a) of this Act applies, except as provided in paragraph (2), a certificate of conformity shall be issued under subsection (a) and shall not be suspended or revoked under subsection (b) for such vehicles or engines manufactured by a manufacturer notwithstanding the failure of such vehicles or engines to meet such standard if such manufacturer pays a nonconformance penalty as provided under regulations promulgated by the Administrator after notice and opportunity for public hearing.

"(2) No certificate of conformity may be issued under paragraph (1) with respect to any class or category of vehicle or engine if the degree by which the manufacturer fails to meet any standard promulgated under section 202(a) with respect to such class or category exceeds the percentage determined under regulations promulgated by the Administrator to be practicable. Such regulations shall require such testing of vehicles or engines being produced as may be necessary to determine the percentage of the classes or categories of vehicles or engines which are not in compliance with the regulations with respect to which a certificate of conformity was issued and shall be promulgated not later than one year after the date of enactment of the Clean Air Act Amendments of 1977.

"(3) The regulations promulgated under paragraph (1) shall, not later than one year after the date of enactment of the Clean Air Act Amendments of 1977, provide for nonconformance penalties in amounts determined under a formula established by the Administrator. Such penalties under such formula—

"(A) may vary from pollutant-to-pollutant;

"(B) may vary by class or category or vehicle or engine;

"(C) shall take into account the extent to which actual emissions of any air pollutant exceed allowable emissions under the standards promulgated under section 202;

"(D) shall create incentives for the development of production vehicles or engines which achieve the required degree of emission reduction; and

"(E) shall remove any competitive disad-

vantage to manufacturers whose engines or vehicles achieve the required degree of emission reduction."

#### AIRCRAFT EMISSIONS STANDARDS

Sec. 205. Section 231(c) of the Clean Air Act is amended to read as follows:

"(a) Any regulations in effect under this section on date of enactment of the Clean Air Act Amendments of 1977 or proposed or promulgated thereafter, or amendments thereto, with respect to aircraft shall not apply if disapproved by the Secretary of Transportation, after notice and opportunity for public hearing, on the basis of a finding that any such regulation would create a hazard to aircraft safety. Any such finding shall include a reasonably specific statement of the basis upon which the finding was made."

#### ASSURANCE OF PROTECTION OF PUBLIC HEALTH AND SAFETY

Sec. 206. (a) Section 202(a) of the Clean Air Act is amended by inserting "paragraph (1) of" before "this subsection" in paragraph (2) thereof and by adding a new paragraph at the end thereof:

"(4) (A) Effective with respect to vehicles and engines manufactured after model year 1978, no emission control device, system, or element of design shall be used in a new motor vehicle or new motor vehicle engine for purposes of complying with standards prescribed under this subsection if such device, system, or element of design will cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation or function.

"(B) In determining whether an unreasonable risk exists under subparagraph (A), the Administrator shall consider, among other factors, (i) whether and to what extent the use of any device, system, or element of design causes, increases, reduces, or eliminates emissions of any unregulated pollutants; (ii) available methods for reducing or eliminating any risk to public health, welfare, or safety which may be associated with the use of such device, system, or element of design, and (iii) the availability of other devices, systems, or elements of design which may be used to conform to standards prescribed under this subsection without causing or contributing to such unreasonable risk. The Administrator shall include in the consideration required by this paragraph all relevant information developed pursuant to section 214."

(b) Section 206(a) of such Act is amended by adding at the end thereof the following:

"(3) (A) A certificate of conformity may be issued under this section only if the Administrator determines that the manufacturer (or in the case of a vehicle or engine for import, any person) has established to the satisfaction of the Administrator that any emission control device, system, or element of design installed on, or incorporated in, such vehicle or engine conforms to applicable requirements of section 202(a)(4).

"(B) The Administrator may conduct such tests and may require the manufacturer (or any such person) to conduct such tests and provide such information as is necessary to carry out subparagraph (A) of this paragraph. Such requirements shall include a requirement for prompt reporting of the emission of any unregulated pollutant from a system, device, or element of design if such pollutant was not emitted, or was emitted in significantly lesser amounts, from the vehicle or engine without use of the system, device, or element of design."

(c) (1) Section 206(b)(2)(A)(i) of such Act is amended by inserting "and with the requirements of section 202(a)(4)" after "conformity was issued."

(2) Section 206(b)(2)(A) of such Act is amended by inserting "and requirements" after "such regulations" in each place it appears.

## TEST PROCEDURES FOR MEASURING EVAPORATIVE EMISSIONS

SEC. 207. Section 202(b)(1) of the Clean Air Act is amended by adding a new subparagraph (C) as follows:

"(C) Effective with respect to vehicles and engines manufactured after model year 1978 (or in the case of heavy-duty vehicles or engines, such later model year as the Administrator determines is the earliest feasible model year), the test procedure promulgated under paragraph (2) for measurement of evaporative emissions of hydrocarbons shall require that such emissions be measured from the vehicle or engine as a whole. Regulations to carry out this subparagraph shall be promulgated not later than two hundred and seventy days after date of enactment of this subparagraph."

## VEHICLE INSPECTION AND MAINTENANCE

SEC. 208. (a) Section 110(a)(G) of the Clean Air Act is amended by inserting the following before the semicolon at the end thereof: ", and it complies with applicable provisions of section 215 respecting the annual inspection and maintenance of motor vehicles registered in such State."

(b) Part A of title II of the Clean Air Act is amended by inserting the following new section after section 214:

## "INSPECTION AND MAINTENANCE"

"Sec. 215. (a) (1) Each applicable implementation plan which, as in effect on June 30, 1975, contained transportation control measures applicable to any air quality control region in a State, shall provide for the annual inspection and maintenance, and may provide for the testing, of all light-duty vehicles (other than new vehicles) to which this section applies which are registered in such region by any person whose residence or principal place of business (or both) is located in such air quality control region. Such program of inspection, and maintenance (and, if applicable, testing) shall be conducted in accordance with regulations of the Administrator which—

"(A) shall require that emission control systems and devices are properly installed and operative,

"(B) may require that the vehicle or engine components which are necessary for the proper operation of such systems and devices are restored to the settings specified by the manufacturer, and

"(C) may require that inoperative or malfunctioning parts which are necessary for the proper operation of such systems and devices are replaced.

Such plan shall, except as permitted under subparagraph (A) or (B) of paragraph (2), prohibit the registration and operation of vehicles (other than new vehicles) subject to such inspection and maintenance (and, if applicable, testing) in such State unless such vehicles comply with such program.

"(2) The regulations of the Administrator shall—

"(A) provide for the exemption from the inspection and maintenance (and, if applicable, testing) required under this section of such antique and other vehicles as the Administrator deems appropriate, and

"(B) authorize the operation of vehicles which have not met the requirements of regulations under paragraph (1) for such temporary period as may be appropriate to repair or adjust the vehicle in order to meet such requirements.

"(b) For purposes of complying with the provisions of subsection (a), the plan may require testing for emissions using testing procedures and equipment approved by the Administrator and shall permit the use of existing State motor vehicle inspection and testing facilities and procedures so long as they are consistent with such requirement. The Administrator shall approve testing procedures and equipment for purposes of this paragraph only if he determines that such

procedures and equipment comply with such standards respecting calibration, instrumentation, and maintenance as he deems appropriate.

"(c) (1) Each applicable implementation plan required under subsection (a) to prohibit the registration and operation of non-complying vehicles may permit the registration and operation of any such vehicle if—

"(A) following the inspection and maintenance (and, if applicable, testing) by reason of which such vehicle was determined to be a noncomplying vehicle, any measures required under the regulations promulgated under subsection (a) (1) have been taken with respect to such vehicle.

"(B) with respect to such vehicle, any nonconformity covered by section 207 (a), (b), or (c) has been remedied,

"(C) such vehicle has (for purposes of providing statistical information only) been reinspected and, if testing was originally required, retested under this section following the actions referred to in subparagraphs (A) and (B) of this paragraph. Nothing in the preceding sentence shall be construed to prohibit the Administrator from approving any implementation plan which contains any requirement prohibiting the registration and operation of any noncomplying vehicles.

"(2) The requirements or authority contained in this section shall not be deemed to affect or impair any requirement contained in any other provision of this Act.

"(d) Regulations of the Administrator under this section shall provide for retest of any vehicle which initially was tested and failed to meet applicable requirements of the program."

(c) Section 210 of such Act is amended by adding the following at the end thereof: "Grants may be made under this section by way of reimbursement in any case in which amounts have been expended by the State before the date on which any such grant was made. Any grant under this section may be reduced or suspended by the Administrator upon his determination, following notice and opportunity for a public hearing, that a State vehicle inspection and maintenance program it not equal to or more stringent than the requirements established pursuant to section 215."

(d) Not later than six months after the date of enactment of this Act, the Administrator shall notify each State which will be required to revise the applicable implementation plan to include an inspection and maintenance program for purposes of compliance with the amendments made by this section, and each such State shall, within nine months after receiving such notice, submit to the Administrator a revision of such plan. Within three months after the date required for submission of such revision, the Administrator shall approve or disapprove the revision if he determines that it complies with the amendment made by this Act and was adopted after reasonable notice and hearings. The provisions which are required under section 215 to be included in such plan shall be implemented not later than two years after the date of enactment of this Act.

## WARRANTIES AND MOTOR VEHICLE PARTS CERTIFICATION

SEC. 209. (a) Section 207(b)(2) of the Clean Air Act is amended by adding the following at the end thereof: "No such warranty shall be invalid on the basis of any part used in the maintenance or repair of a vehicle or engine if such part was certified as provided under subsection (a) (2)."

(b) Section 207(a) of such Act is amended by striking out "(1)" and "(2)" and inserting in lieu thereof "(A)" and "(B)" respectively, by inserting "(1)" after "(a)" and by adding the following new paragraph at the end thereof:

"(2) In the case of a motor vehicle part or motor vehicle engine part, the manu-

facturer or rebuilder of such part may certify that use of such part will not result in a failure of the vehicle or engine to comply with emission standards promulgated under section 202. Such certification shall be made only under such regulations as may be promulgated by the Administrator to carry out the purposes of subsection (b). The Administrator shall promulgate such regulations no later than two years following the date of the enactment of this paragraph."

(c) Section 207(b) of such Act is amended by striking out "its useful life (as determined under section 202(d))" in each place it appears and inserting in lieu thereof "a period of eighteen months or eighteen thousand miles (or the equivalent), whichever first occurs".

(d) Section 207(c)(3) of such Act is amended by inserting after the first sentence thereof the following: "The manufacturer shall provide in boldface type on the first page of the written maintenance instructions notice that maintenance, replacement, or repair of the emission control devices and systems may be performed by any automotive repair establishment or individual using any automotive part which has been certified as provided in subsection (a) (2)."

(e) Section 207 of such Act is amended by adding the following new subsection at the end thereof:

"(g) Nothing in this section shall be construed to provide that any labor required to be provided at the cost of the manufacturer pursuant to warranty under regulations under subsection (b) (2) may be performed by any persons other than persons specified by the manufacturer or that any part required to be provided at the cost of the manufacturer under such warranty may be other than a part specified by the manufacturer."

(f) Section 207(a)(1) of such Act, as designated by subsection (b) of this section, is amended by adding the following at the end thereof: "For purposes of clause (1) (B) of this subsection the term 'defect' means a defect which existed at the time of sale of the new motor vehicle or motor vehicle engine to the ultimate purchaser."

(g) Section 214 of such Act is amended by adding the following new paragraph at the end thereof:

"(7) The term 'emission control device or system' means, for purposes of section 207, a catalytic converter, thermal reactor, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions. Such term shall not include those vehicle components which were in general use prior to model year 1968."

## PARTS STANDARDS; PREEMPTION OF STATE LAW

SEC. 210. Section 209 of the Clean Air Act (relating to State standards) is amended by redesignating subsection (c) as (d) and by inserting after subsection (b) the following new subsection:

"(c) Whenever a regulation with respect to any motor vehicle part or motor vehicle engine part is in effect under section 207(a) (2), no State or political subdivision thereof shall adopt or attempt to enforce any standard or any requirement of certification, inspection, or approval applicable to the same aspect of such part. The preceding sentence shall not apply in the case of a State with respect to which a waiver is in effect under subsection (b)."

## PROTECTION OF COMPETITION; ASSURANCE OF CONSUMER FREEDOM OF CHOICE

SEC. 211. (a) Section 207 of the Clean Air Act is amended by adding the following new subsection at the end thereof:

"(g) If, after a review of the manufacturers' practices respecting the discharge of his emission control warranty responsibilities under this Act, the Attorney General finds that such practices are resulting in unfair or anticompetitive conditions, the Attorney General shall submit such finding,

together with his reasons therefor, to the Administrator. Upon receipt of such finding and reasons, the Administrator may, after notice and opportunity for a public hearing, promulgate such rules and take such other actions as may be necessary—

"(1) to minimize or eliminate such unfair or anticompetitive conditions; or

"(2) to protect or enhance consumer freedom of choice in the implementation of any requirement of this section."

(b) Section 203(a)(4) of such Act is amended by inserting the following at the end thereof:

"(D) to fail or refuse to comply with any requirement under section 207(g),

or for any person other than a manufacturer to fail or refuse to comply with any requirement under section 207."

#### TAMPERING

"Sec. 212. (a) Section 203(a)(3) of the Clean Air Act is amended by inserting "(A)" after "(3)" and by adding the following new subparagraph (B) at the end thereof:

"(B) for any person engaged in the business of repairing, servicing, selling, leasing, or trading motor vehicles or motor vehicle engines, or who operates a fleet of motor vehicles, knowingly to remove or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title following its sale and delivery to the ultimate purchaser, or."

(b) Section 203(a) of such Act is amended by adding the following at the end thereof: "Nothing in paragraph (3) shall be construed to require the use of manufacturer parts in maintaining or repairing any motor vehicle or motor vehicle engine. For the purposes of the preceding sentence, the term 'manufacturer parts' means, with respect to a motor vehicle engine, parts produced or sold by the manufacturer of the motor vehicle or motor vehicle engine."

(c) Section 205 of such Act is amended to read as follows:

#### PENALTIES

"Sec. 205. Any person who violates paragraph (1), (2) or (4) of section 203(a) or any person, manufacturer, or dealer who violates paragraph (3)(A) of section 203(a) shall be subject to a civil penalty of not more than \$10,000. Any person who violates paragraph (3)(B) of such section 203(a) shall be subject to a civil penalty of not more than \$2,500. Any such violation with respect to paragraph (1), (3), or (4) of section 203(a) shall constitute a separate offense with respect to each motor vehicle or motor vehicle engine."

#### COST OF VAPOR RECOVERY SYSTEMS TO BE BORNE BY OWNER OF RETAIL OUTLET

SEC. 213. (a) Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "COST OF EMISSION CONTROL FOR CERTAIN VAPOR RECOVERY TO BE DONE BY OWNER OF RETAIL OUTLET"

"Sec. 320. (a) The regulations under this Act applicable to vapor recovery with respect to mobile source fuels at retail outlets of such fuels shall provide that the cost of procurement and installation of such vapor recovery shall be borne by the owner of such outlet (as determined under such regulations). Except as provided in subsection (b), such regulations shall provide that no lease of a retail outlet by the owner thereof which is entered into or renewed after the date of enactment of the Clean Air Act Amendments of 1977 may provide for a payment by the lessee of the cost of procurement and installation of vapor recovery equipment. Such regulations shall also provide that the cost of procurement and installation of vapor recovery equipment may be recovered by the owner of such outlet by means of price increases in

the cost of any product sold by such owner, notwithstanding any provision of law.

"(b) The regulations of the Administrator referred to in subsection (a) shall permit a lease of a retail outlet to provide for payment by the lessee of the cost of procurement and installation of vapor recovery equipment over a reasonable period (as determined in accordance with such regulations), if the owner of such outlet does not sell, trade in, or otherwise dispense any product at wholesale or retail at such outlet."

(b) Section 113(b)(3) of such Act is amended by inserting "or section 320" before the semicolon.

(c) Title III of such Act is amended by adding the following new section at the end thereof:

#### "VAPOR RECOVERY FOR SMALL BUSINESS MARKETERS OF PETROLEUM PRODUCTS"

"Sec. 324. (a) Except as provided in subsection (b) the regulations under this Act applicable to vapor recovery from fueling of motor vehicles at retail outlets of gasoline shall provide, with respect to independent small business marketers of gasoline, for a three-year phase-in period for the installation of such vapor recovery equipment under which such marketers shall have—

"(1) 33 percent of their outlets in compliance at the end of the first year during which such regulations apply to such marketers,

"(2) 66 percent at the end of such second year, and

"(3) 100 percent at the end of the third year.

"(b) (1) The regulations referred to in subsection (a) shall not apply to independent small business marketers of gasoline before the expiration of the period ending two years after the date of enactment of this section or the period ending six months after the date of submission of the report under paragraph (3), whichever is later.

"(2) The Federal Trade Commission shall study, and not later than one year after the date of enactment of this section report to the Administrator on, the effect the application to independent small business marketers of gasoline of the regulations referred to in subsection (a) will have on the ability of such marketers to compete in gasoline marketing. In the course of such study, the Commission shall provide opportunity for a public hearing and for submission of written views, data, and argument and shall request the participation in such hearing of other interested departments and agencies (including the Federal Energy Administration).

"(3) Not later than eighteen months after the date of enactment of this section, the Administrator shall submit a report to the House Interstate and Foreign Commerce Committee and to the Senate Public Works Committee, which analyzes (A) the effect referred to in subsection (b)(2); (B) the need for such regulations to be applied to independent small business marketers of gasoline to assist in attaining or maintaining national ambient air quality standards or in preventing significant deterioration of air quality; and (C) the availability of means for eliminating or minimizing any effects referred to in subsection (b)(2) which are detrimental. The analysis required under clause (C) shall include a discussion of the measures referred to in subsection 202(a)(5) (pertaining to fill pipe standards) and 202(a)(6) (pertaining to onboard hydrocarbon technology). The Administrator's report under this paragraph shall include his conclusions as to whether, and to what extent, such regulations (or such other regulations relating to vapor recovery from fueling of motor vehicles at retail outlets of gasoline) should apply to independent small business marketers of gasoline.

"(4) The Administrator may, on the basis

of the conclusions contained in the report under paragraph (3), promulgate regulations—

"(A) exempting independent small business marketers of gasoline, or any class thereof, from the duty to comply with the regulations referred to in subsection (a);

"(B) deferring or modifying the regulations referred to in subsection (a) in the case of independent small business marketers of gasoline, or any class thereof;

"(C) containing provisions to eliminate or minimize any effects referred to in subsection (b)(2) which are detrimental; or

"(D) taking any combination of the actions referred to in subparagraphs (A) through (C).

Regulations under this paragraph may be promulgated by the Administrator only upon a finding that such regulations are necessary in order to assure that application of the regulations referred to in subsection (a) to independent small business marketers of gasoline will not cause each independent marketer to be unable to compete in gasoline marketing.

"(5) The Administrator and the Federal Trade Commission shall keep confidential the commercial or financial information obtained under this section, except that such information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act or when relevant in any proceeding under this Act.

"(c) For purposes of this section, an independent small business marketer of gasoline is a person engaged in the marketing of gasoline who would be required to pay for procurement and installation of vapor recovery equipment under section 320 of this Act or under regulations of the Administrator, unless such person (1) is a refiner, or (2) controls, is controlled by, or is under common control with, a refiner, or (3) is otherwise directly or indirectly affiliated (as determined under the regulations of the Administrator) with a refiner or with a person who controls, is controlled by, or is under a common control with a refiner (unless the sole affiliation referred to in (3) is by means of a supply contract or an agreement or contract to use a trademark, trade name, service mark, or other identifying symbol or name owned by such refiner or any such person). For the purpose of this section, the term 'refiner' shall not include any refiner whose total refinery capacity (including the refinery capacity or any person who controls, is controlled by, or is under common control with, such refiner) does not exceed 65,000 barrels per day. For purposes of this section, 'control' of a corporation means ownership of more than 50 percent of its stock."

#### HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

SEC. 214. (a) Section 203(a) of the Clean Air Act is amended by adding the following at the end thereof: "No action with respect to any element of design referred to in paragraph (3) (including any adjustment or alteration of such element) shall be treated as a prohibited Act under such paragraph (3) if such action will not adversely affect the emission control performance of the vehicle or engine."

(b) Part A of title II of such Act is amended by inserting the following new section after section 214:

#### "HIGH ALTITUDE PERFORMANCE ADJUSTMENTS"

"Sec. 215. (a)(1) Any action taken with respect to any element of design installed on or in a motor vehicle or motor vehicle engine (manufactured before the 1978 model year) in compliance with regulations under this title (including any alteration or adjustment of such element), shall be treated for purposes of section 203(a) as not adversely affecting the emission control performance of the vehicle or engine if such action is per-

formed in accordance with high altitude adjustment instructions provided by the manufacturer under subsection (b) and approved by the Administrator.

"(2) If the Administrator finds that adjustments or modifications made pursuant to instructions of the manufacturer under paragraph (1) will not insure emission control performance at least equivalent to that which would result if no such adjustments or modifications were made, he shall disapprove such instructions. Such finding shall be based upon minimum engineering evaluations consistent with good engineering practice. In any case in which emissions of one or more pollutants are increased by reason of adjustments or modifications made to reduce emissions of one or more other pollutants, emission control performance may be found by the Administrator to be equivalent for purposes of this subsection if the aggregate effect of emission control performance resulting from such adjustments or modifications will be more protective of health and welfare than the effect of emission control performance if no such adjustments or modifications had been made.

"(b) (1) Instructions respecting each class or category of vehicles or engines to which this title applies providing for such vehicle and engine adjustments and modifications as may be necessary to insure emission control performance at different altitudes shall be submitted to the Administrator pursuant to regulations promulgated by the Administrator. If the Administrator does not disapprove such instructions on or before the sixtieth day following submission to him by the manufacturer, such instructions shall be treated as approved for purposes of this section.

"(2) If any instructions provided by a manufacturer for purposes of this section are disapproved by the Administrator, not later than sixty days after such disapproval, the manufacturer shall revise the instructions (in accordance with such requirements as the Administrator determines necessary for approval) and shall make the revised and approved instructions available to any person upon request.

"(3) Any knowing violation by a manufacturer of requirements of the Administrator under paragraph (1) or (2) shall be treated as a violation by such manufacturer of section 203(a) (3) for purposes of the penalties contained in section 205.

"(c) No instructions under this section respecting adjustments or modifications may require the use of any manufacturer parts (as defined in section 203(a)) unless the manufacturer demonstrates to the satisfaction of the Administrator that the use of such manufacturer parts is necessary to insure emission control performance."

(c) Section 202 of such Act is amended by adding the following new subsection at the end thereof:

"(f) (1) Section 307(d) of this Act shall apply to any high altitude regulation pertaining to light duty vehicles or engines manufactured during model year 1978 and thereafter and sold to ultimate purchasers for principal use in high altitude areas (as defined by the Administrator), and notwithstanding paragraph (1) thereof, such section 307(d) shall apply whether proposal of such regulation is before or after the date of the enactment of this subsection.

"(2) In promulgating any high altitude regulation referred to in paragraph (1), the Administrator shall consider and make findings with respect to—

"(A) the economic impact upon consumers, individual high altitude dealers, and the automobile industry of any such regulation, including the economic impact which was experienced as a result of the regulation imposed during model year 1977 with respect to high altitude certification requirements;

"(B) the present and future availability of emission control technology capable of meeting the applicable vehicle and engine emission requirements without reducing model availability;

"(C) the likelihood that the adoption of such a high altitude regulation will result in any significant improvement in air quality in any area to which it shall apply."

#### FILL PIPE STANDARDS

SEC. 215. Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(5) (A) If the Administrator promulgates final regulations which define the degree of control required and the test procedures by which compliance could be determined for gasoline vapor recovery of uncontrolled emissions from the fueling of motor vehicles, the Administrator shall prescribe, by regulations, fill pipe standards for new motor vehicles in order to insure effective connection between such fill pipe and any vapor recovery system which the Administrator determines may be required to comply with such vapor recovery regulations. In promulgating such standards the Administrator shall take into consideration limits on fill pipe diameter, minimum design criteria for nozzle retainer lips, limits on the location of the unleaded fuel restrictors, a minimum access zone surrounding a fill pipe, a minimum fill pipe or nozzle insertion angle, and such other factors as he deems pertinent.

"(B) Regulations prescribing standards under subparagraph (A) shall not become effective until the introduction of the model year for which it would be feasible to implement such standards, taking into consideration the restraints of an adequate leadtime for design and production.

"(C) Nothing in subparagraph (A) shall (i) prevent the Administrator from specifying different nozzle and fill neck sizes for gasoline with additives and gasoline without additives or (ii) permit the Administrator to require a specific location, configuration, modeling, or styling of the motor vehicle body with respect to the fuel tank fill neck or fill nozzle clearance envelope.

"(D) Any standards promulgated under subparagraph (A) or amendments thereto, may be prescribed only after consultation with the Secretary of Transportation in order to assure appropriate consideration for vehicle safety.

"(E) For the purpose of this paragraph, the term 'fill pipe' shall include the fuel tank fill pipe, fill neck, fill inlet, and closure."

#### ONBOARD HYDROCARBON TECHNOLOGY

SEC. 216. Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(6) (A) The Administrator shall determine the feasibility and desirability of requiring new motor vehicles to utilize onboard hydrocarbon control technology which would avoid the necessity of gasoline vapor recovery of uncontrolled emissions emanating from the fueling of motor vehicles. The Administrator shall compare the costs and effectiveness of such technology to that of implementing and maintaining vapor recovery systems (taking into consideration such factors as fuel economy, economic costs of such technology, administrative burdens, and equitable distribution of costs). If the Administrator finds that it is feasible and desirable to employ such technology, he shall prescribe, by regulations, standards which shall not become effective until the introduction to the model year for which it would be feasible to implement such standards, taking into consideration compliance costs and the restraints of an adequate lead time for design and production.

"(B) Any regulations promulgated under subparagraph (A), or amendments thereto, shall not apply if disapproved by the Secre-

tary of Transportation, after notice and opportunity for public hearing, on the basis of a finding that any such regulations would create a hazard to vehicle safety. Any such finding shall include a reasonably specific statement of the basis upon which the finding was made."

#### CARBON MONOXIDE INTRUSION INTO SUSTAINED USE VEHICLES

SEC. 217. (a) The Administrator, in conjunction with the Secretary of Transportation, shall study the problem of carbon monoxide intrusion into the passenger area of sustained-use motor vehicles. Such study shall include an analysis of the sources and levels of carbon monoxide in the passenger area of such vehicles and a determination of the effects of carbon monoxide upon the passengers. The study shall also review available methods of monitoring and testing for the presence of carbon monoxide and shall analyze the cost and effectiveness of alternative methods of monitoring and testing. The study shall analyze the cost and effectiveness of alternative strategies for attaining and maintaining acceptable levels of carbon monoxide in the passenger area of such vehicles. Within one year the Administrator shall report to the Congress respecting the results of such study.

(b) For the purpose of this section, the term "sustained-use motor vehicle" means any diesel or gasoline fueled motor vehicle (whether light or heavy duty) which, as determined by the Administrator (in conjunction with the Secretary), is normally used and occupied for a sustained, continuous, or extensive period of time, including buses, taxicabs, and police vehicles.

#### IMPLEMENTATION OF MOTOR VEHICLE EMISSION WARRANTIES

SEC. 218. Section 203(a) (4) of the Clean Air Act is amended by inserting after subparagraph (c) the following:

"(C) to fail or refuse to comply with the terms and conditions of the warranty under section 207 (a) or (b) with respect to any vehicle or to fail or refuse to comply with any requirement under subsection (b) (5) or (b) (6) of section 207, or"

#### TESTING OF FUELS AND FUEL ADDITIVES

SEC. 219. Section 211 of the Clean Air Act is amended by inserting a new subsection to read as follows:

"(e) (1) Not later than one year after date of enactment of this subsection and after notice and opportunity for a public hearing, the Administrator shall promulgate regulations which implement the authority under subsection (b) (2) (A) and (B) with respect to each fuel or fuel additive which is registered on the date of promulgation of such regulations and with respect to each fuel or fuel additive for which an application for registration is filed thereafter.

"(2) Regulations under subsection (b) to carry out this subsection shall require that the requisite information be provided to the Administrator by each such manufacturer—

"(A) prior to registration, in the case of any fuel or fuel additive which is not registered on the date of promulgation of such regulations; or

"(B) not later than three years after the date of promulgation of such regulations, in the case of any fuel or fuel additive which is registered on such date.

"(3) In promulgating such regulations, the Administrator may—

"(A) exempt any small business (as defined in such regulations) from or defer or modify the requirements of, such regulations with respect to any such small business;

"(B) provide for cost-sharing with respect to the testing of any fuel or fuel additive which is manufactured or processed by two or more persons or otherwise provide for

shared responsibility to meet the requirements of this section without duplication; or
